OFFICE OF ADMINISTRATIVE LAW JUDGES

In the Matter of **Illumina, Inc.,** **a corporation,** **and** **GRAIL, Inc.,** **a corporation.**	**DOCKET NO. 9401**

RESPONDENTS' REPLY TO COMPLAINT COUNSEL'S POST-TRIAL PROPOSED FINDINGS OF FACT AND CONCLUSIONS OF LAW

TABLE OF CONTENTS

Page

INTRODUCTION

Respondents respectfully submit the following Reply to Complaint Counsel's Post-Trial Proposed Findings of Fact and Conclusions of Law, which distort the factual record, misstate the governing law and seek relief for which there is no justification in fact, law or common sense. Respondents incorporate into each of the responses their own Proposed Findings of Fact and Conclusions of Law as if set forth expressly herein. Respondents also incorporate herein their opening and reply post-trial briefs, which further demonstrate that Complaint Counsel's Proposed Conclusions of Law are, in all material respects, baseless. Consistent with the Court's Order on Post-Trial Filings, Respondents have "use[d] the same outline headings as used by [Complaint Counsel]" in this Reply to Complaint Counsel's Proposed Findings of Fact and Conclusions of Law. As evident from the substance of Respondents' detailed responses to the individual proposed findings and conclusions, Respondents do not agree with many of Complaint Counsel's headings.

I. BACKGROUND

A. ILLUMINA

1. Illumina is a publicly traded, for-profit Delaware corporation founded in 1998, with its headquarters in San Diego, California. (PX0061 at 004 (Illumina 2020 Form 10-K)).

Response to Finding No. 1:

Respondents have no specific response.

2. Illumina's principal product offerings are short-read NGS instruments used for DNA sequencing and associated consumables, analytical software, and ancillary service contracts. (PX0061 at 005 (Illumina 2020 Form 10-K)).

Response to Finding No. 2:

Respondents have no specific response except to note that the cited page of PX0061 (Illumina) does not mention "ancillary service contracts".

3. The majority of Illumina's revenue comes from the sale of NGS instruments and consumables. (PX0061 at 007-08 (Illumina 2020 Form 10-K)).

Response to Finding No. 3:

Respondents have no specific response.

1. Illumina Is a Dominant Provider of Next-Generation Sequencing Platforms

4. Illumina describes itself as "the global leader in sequencing- and array-based solutions for genetic and genomic analysis." (PX0061 at 005 (Illumina 2020 Form 10-K)).

Response to Finding No. 4:

Respondents have no specific response.

5. Illumina has "an extensive intellectual property portfolio," including ownership or exclusive licenses to over 900 U.S. patents and 600 pending U.S. patent applications. (PX0061 at 009 (Illumina 2020 Form 10-K)).

Response to Finding No. 5:

Respondents have no specific response except to note that the cited source also observes that Illumina's issued and pending patents, which cover various aspects of Illumina's arrays, assays, sequencing technology, instruments, and software, "have terms that expire between 2021 and 2041". (PX0061 (Illumina) at 009.) With respect to patents relating to Illumina's sequencing technology, Respondents incorporate PFF ¶ 588.2 and their responses to CCFF ¶ 341 herein.

6. [redacted] (PX5027 (Illumina) at 009 [redacted] (*in camera*)).

Response to Finding No. 6:

The proposed finding is not supported by the cited source. Nowhere does it indicate that the gross margins described on the cited slide are Illumina's actual gross margins and the source at the bottom of the slide indicates that the data is based on [redacted]

[redacted] (PX5027 (Illumina) at 009.) Additionally, Dr. Joydeep Goswami, Illumina's SVP of Corporate Development and Strategic Planning, testified that [redacted] (PX7087 (Goswami (Illumina) Dep. at 155.))

7. [redacted] (PX5027 (Illumina) at 009 [redacted] (*in camera*)).

Response to Finding No. 7:

Respondents have no specific response except incorporate their responses to CCFF ¶ 6 herein.

8. Illumina sells a variety of NGS sequencing instruments, including the "high-throughput" NovaSeq model; "mid-throughput" NextSeq models; and "low-throughput" MiSeq, MiniSeq, and iSeq models. (PX0091 (Illumina) at 011-013 (Illumina Source Book, August 2020); *see* PX0114, Illumina Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Feb. 4, 2022) (listing Illumina sequencing platforms).

Response to Finding No. 8:

Respondents have no specific response.

9. Illumina's instruments are "based on [Illumina's] proprietary technologies." (PX0061 at 007 (Illumina 2020 Form 10-K)).

Response to Finding No. 9:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 5 herein.

10. [redacted] (PX6056 (Illumina) at 018 (Illumina, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 10:

Respondents have no specific response.

11. In 2020, Illumina's instrument sales accounted for 13 percent of Illumina's total revenue. (PX0061 at 007 (Illumina 2020 Form 10-K)).

Response to Finding No. 11:

Respondents have no specific response.

12. Illumina offers consumables, which include reagents, flow cells, and microarrays. (PX0061 at 007 (Illumina 2020 Form 10-K)).

Response to Finding No. 12:

Respondents have no specific response.

13. There are two primary types of consumables involved in NGS: library preparation or sample preparation reagents, and core consumables. (PX7045 (Chudova (Guardant) IHT at 83-84)).

Response to Finding No. 13:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

14. Library preparation reagents are used to prepare a sample for testing, for example by replicating DNA of interest so that it may be more easily examined. (PX7040 (Getty (Guardant) IHT at 63-64)).

Response to Finding No. 14:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross-examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also note that Illumina technology need not be, and often is not, used for library preparation. (Berry (Illumina) Tr. 815 (stating that the library preparation step "is very unique and specific to the particular test provider's sort of approach of methodology" and that there are "hundreds and hundreds of library preparation methods" and "potentially hundreds of providers of library preparation technology or kits".))

15. Core consumables are reagents that must be used together with an instrument to implement a sequencing assay, such as a flow cell. (PX7063 (Berry (Illumina) IHT at 28); PX7045 (Chudova (Guardant) IHT at 83-84)).

Response to Finding No. 15:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

16. Dr. Aravanis of Illumina testified that consumables are "the materials that are actually consumed in a sequencing run" and explained that for "every sequencing run you need a new set of consumables, but you use the same instrument." (Aravanis (Illumina) Tr. 1845-46).

Response to Finding No. 16:

Respondents have no specific response.

17. According to Illumina's Nicole Berry, Illumina is "the only supplier of the core consumables that run on [Illumina's] instrumentation." (PX7063 (Berry (Illumina) IHT at 28)).

Response to Finding No. 17:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

18. Illumina's consumables are "based on [Illumina's] proprietary technologies." (PX0061 at 007 (Illumina 2020 Form 10-K)).

Response to Finding No. 18:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 5 herein.

2. Formation of Grail

a) Illumina Began Researching MCED Test as Part of a Larger Exploration of cfDNA Technology

19. In early 2013, Illumina acquired Verinata Health, Inc. ("Verinata"). (DeSouza (Illumina) Tr. at 2420).

Response to Finding No. 19:

Respondents have no specific response.

20. Verinata was a provider of non-invasive prenatal tests that utilized NGS technology. (Chudova (Guardant) Tr. at 1143-44).

Response to Finding No. 20:

Respondents have no specific response.

21. Around the time of Illumina's acquisition of Verinata, NIPT companies including Natera and Sequenom had observed cancer signals when performing NIPTs. (PX7060 (Naclerio (Illumina) IHT at 33-34, 35-37)).

Response to Finding No. 21:

The proposed finding presents an incomplete picture of the relevant events. For example, the signal that had been observed at this time was a late stage cancer signal, not an early stage one; and Dr. Naclerio also testified that, even if it was beginning to be understood that detecting cancer in the blood at a late stage was a technical possibility, the notion that there could be a "blood screen test that would discover cancer while it was still localized and treatable" was "a pretty radical idea. . . . that most people said, you know, may be possible someday ten years from now" but was a moonshot concept. (PX7060 (Naclerio (Illumina) IHT at 192-193.) Dr. Aravanis, who was also instrumentally involved in the creation of GRAIL, similarly testified that he was not aware of any company exploring the development of an NGS-based multicancer screening detection test at that time. (Aravanis (Illumina) Tr. at 1870.)

Respondents further note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

22. Subsequent to its acquisition of Verinata, Illumina observed cancer signals in its NIPT tests. (PX2184 (Illumina) at 001 (E-mail from R. Klausner, Illumina, to N. Naclerio, Illumina, Mar. 8, 2014)).

Response to Finding No. 22:

Respondents have no specific response.

23. In mid-2015, a team within Illumina including Jay Flatley assembled a presentation proposing the creation of a new company to develop a blood-based cancer detection test. (PX2007 (Illumina) at 013 (Illumina, ScreenCo Opportunity Overview, July 30, 2015)). The presentation stated: "Illumina is uniquely positioned to pioneer this field today. Forward pricing to ScreenCo enables the R&D to sequence at depths that are cost-prohibitive to others[.]" (PX2007 (Illumina) at 013 (Illumina, ScreenCo Opportunity Overview, July 30, 2015)).

Response to Finding No. 23:

The proposed finding is irrelevant because any special pricing and other benefits Illumina may have provided to GRAIL in its original supply agreement when GRAIL was formed and controlled by Illumina are irrelevant to evaluating the effects of the Transaction on competition. (PFF ¶ 979.) At the time of GRAIL's formation, the objective of creating a cancer screening test was a moonshot concept, and Illumina believed that without deep discounting, it would be impossible for GRAIL to develop a cancer screening test. (PFF ¶¶ 980–980.4.)

The proposed finding is also incomplete and misleading. Although the cited source is from July 2015, the proposed finding appears to suggest that, even today, more than seven years after the cited document was generated, the amount of sequencing required for an MCED test renders it cost prohibitive without "forward pricing". This is incorrect.

As Illumina's contemporaneous internal documents noted, in 2015, Illumina believed that "no customer has the ability to implement a pan-cancer screening test responsibly and economically anytime in the next 5 years"; therefore, to accelerate the growth of the segment, Illumina "felt an imperative to organize an entity" focused on that moonshot mission. (PFF

¶ 980.2 (RX1088 (Illumina) at 7; (PX7079 (Flatley (Illumina) Dep. at 111–12.))) These considerations from the time of GRAIL's formation no longer exist for many reasons, including because the cost of sequencing has come down substantially since 2015. (PFF ¶¶ 21, 981.)

The proposed finding also suggests that cancer detection today requires "sequenc[ing] at depths", which is likewise wrong and outdated. Illumina's assumptions in 2015 about the volume of sequencing required to develop a cancer screening test were significantly higher than what is actually required (PFF ¶ 981 (PX7079 (Flatley (Illumina) Dep. at 118–20.))) For example, GRAIL's Galleri test does not use "ultra-deep sequencing", but relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 981, 1289.)

In addition, the proposed finding is incorrect to the extent it suggests that "ScreenCo" (now GRAIL) required and received "forward pricing" to complete its development of Galleri. That is not true. As Dr. Aravanis explained, "the pricing benefits that GRAIL had during the first year [of its existence], which were then eliminated for the majority of its life, ended up having . . . minimal benefit" because "[i]t turned out that the sequencing cost was not that significant in the development of these tests". (PX7065 (Aravanis (Illumina) IHT at 63–64.) In fact, the prices that Illumina charged GRAIL during the time frame of Galleri's development after Illumina no longer held a controlling stake in GRAIL, and today, as well as the price reductions it modelled for GRAIL as part of its modelling the Transaction, serve as the basis for the pricing now available to all test developers through the Open Offer and its universal grid. (PFF ¶ 1023.6.) [redacted]

[redacted] (PFF ¶ ¶ 886–97.)

The proposed finding is also incorrect to the extent it suggests that GRAIL receives more favorable pricing than other putative MCED test developers today. Any customer that signs the Open Offer "shall have access to Volume-Based Net Prices (under Appendix 1)" for sequencing instruments and core consumables "that are no less favorable (i.e., the same or better) than the Volume-Based Net Prices provided to GRAIL". (PFF ¶¶ 1013, 1021.1; deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) If a customer chooses Universal Pricing, it will receive "most favored nation" pricing relative to other customers: that customer's prices will be no less favorable than the pricing any other equivalent customer receives. (Berry (Illumina) Tr. 893; PX0064 (Illumina) at 7–8.) Further, if an equivalent customer receives a discretionary discount higher than those listed in the Open Offer, then that discount will be offered to all other equivalent customers. (Berry (Illumina) Tr. 893–94; RX6002 (Guerin-Calvert Trial Dep. at 38–39.)) As an additional protection, under the Open Offer if GRAIL (or another customer) receives more favorable pricing than another customer, then Illumina is required to notify that other customer promptly and to refund any difference. (Berry (Illumina) Tr. 894, 914.)

b) Illumina Formed Grail in 2015-2016

24. Illumina's leadership considered several reasons to form Grail as a separate company, rather than a unit within Illumina. (PX2005 (Illumina) at 012 (Illumina, ScreenCo: Early Cancer Detection on a Global Scale, 2015)). According to a 2015 Illumina presentation, forming a new startup would enable Grail to "retain[] and attract[] best-in-class people through equity, culture, and quality of the science." (PX2005 (Illumina) at 012 (Illumina, ScreenCo: Early Cancer Detection on a Global Scale, 2015)).

Response to Finding No. 24:

Respondents have no specific response except to note that Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial

in this case, (CC Exhibit Index at 4), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate PFF ¶¶ 40–50 herein.

25. In a July 14, 2015, e-mail, Rick Klausner, Illumina's Chief Medical Officer, wrote to other Illumina executives that creating a separate company would also protect Illumina. (PX2006 (Illumina) at 001 (E-mail from R. Klausner, Illumina, to M. Stapley et al., Illumina, July 14, 2015)).

Response to Finding No. 25:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 4) and did not elicit any testimony regarding the cited language, either from Dr. Klausner or any other witness who was shown this document in any deposition or IH, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate PFF ¶¶ 40–50 herein.

26. Klausner wrote that creating a separate company would protect Illumina by "[n]ot competing with [Illumina's] customers"; "[b]eing able to fail without consequences to Illumina stock"; and "[b]eing able to create a novel clinical and consumer brand." (PX2006 (Illumina) at 001 (E-mail from R. Klausner, Illumina, to M. Stapley et al., Illumina, July 14, 2015)).

Response to Finding No. 26:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 25 herein. Respondents also incorporate PFF ¶¶ 40–50 herein.

27. Forming a separate company would allow Illumina to attract additional investment for Grail. (PX2006 (Illumina) at 001 (E-mail from R. Klausner, Illumina, to M. Stapley et al., Illumina, July 14, 2015)).

Response to Finding No. 27:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 25 herein. Respondents also incorporate PFF ¶¶ 40–50 herein.

28. Illumina's leadership assessed that creating a separate company would allow Grail to be "more nimble": "make decisions more quickly [and] . . . change directions more quickly." (PX7089 (Naclerio (Illumina) Dep. at 253)).

Response to Finding No. 28:

The proposed finding is incomplete and misleading. Dr. Naclerio later testified that the considerations surrounding GRAIL's formation would not apply today in the context of this Transaction: "[i]t's a very different situation today. I mean now GRAIL is a big, mature, multibillion-dollar company". (PX7089 (Naclerio (Illumina) Dep. at 274.)) Further, Dr. Naclerio testified that the reunification of Illumina and GRAIL "makes a lot of sense for Illumina. And obviously GRAIL thinks it's a good idea, too, otherwise they wouldn't have proposed it". (PX7089 (Naclerio (Illumina) Dep. at 276–77.)) Respondents also incorporate PFF ¶¶ 40–50 herein.

29. In January 2016, Illumina formed Grail as a separate corporate entity. (PX2543 (Illumina) at 001 (Illumina, Grail FAQs, Jan. 11, 2016)). At the time of Grail's creation, Illumina held a controlling stake in Grail. (PX2543 (Illumina) at 001 (Illumina, Grail FAQs, Jan. 11, 2016)).

Response to Finding No. 29:

Respondents have no specific response. Respondents also incorporate PFF ¶¶ 40–50 herein.

30. While Illumina controlled Grail, Illumina provided Grail with "forward pricing." (PX7089 (Naclerio (Illumina) Dep. at 250)). "Forward pricing" meant that Illumina charged Grail what Illumina expected its prices to be a number of years in the future. (PX7089 (Naclerio (Illumina) Dep. at 250)). The impact of providing forward pricing to Grail was that Illumina gave Grail discounts on reagents. (PX7089 (Naclerio (Illumina) Dep. at 251)). Dr. Naclerio negotiated Grail's initial supply agreements for Illumina. (PX7089 (Naclerio (Illumina) Dep. at 250)). Dr. Naclerio stated that it would have been difficult for Grail to develop its MCED test without forward pricing. (PX7060 (Naclerio (Illumina) IHT at 201-202)).

Response to Finding No. 30:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 23, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

31. Illumina formed Grail or "ScreenCo" because the "complexity of cancer biology, number of cancers, combined with multiple technical approaches [would] require significant R&D investment." (PX2005 (Illumina) at 018 (ScreenCo: Early Cancer Detection on a Global Scale Presentation, 2015)).

Response to Finding No. 31:

Respondent have no specific response. Respondents also incorporate PFF ¶¶ 40–50 herein.

32. Illumina incorporated Grail in Delaware in September 2015 as a wholly-owned subsidiary of Illumina. (PX4082 (Grail) at 167, 211 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 32:

Respondents have no specific response.

33. Grail subsequently raised $100 million in Series A financing from investors including Illumina, Arch Ventures, Bill Gates, and Jeff Bezos. (RX0667 (Illumina) at 002 (Email from J. Flatley, Illumina, to W. Rastetter, Illumina, attaching "Illumina Forms New Company to Enable Early Cancer Detection via Blood Based Screening," Jan. 10, 2016; PX2069 (Illumina) at 005 (Python Board Approval, Dec. 20, 2015)).

Response to Finding No. 33:

Respondents have no specific response.

34. By forming Grail, Illumina assessed that it could "capitalize on [the] screening market years earlier AND own a substantial portion of the value created." (PX2069 (Illumina) at 018 (Python Board Approval, Dec. 20, 2015)).

Response to Finding No. 34:

The proposed finding is incomplete in that it omits that, as stated on the cited slide, Illumina also assessed that its formation of GRAIL would "accelerate[] development of the market" years earlier than it otherwise might have developed, possibly by "10 years". (PX2069 (Illumina) at 018 (Python Board Approval, Dec 20, 2015.)) As Jay Flatley, Illumina's CEO in 2015, testified, "we wanted to accelerate it for two reasons. Obviously we had economic advantage to accelerate it, but back to our earliest discussion today, it's the advantage of saving lives. The earlier we can get this to market, the more lives we're going to save and it's going to bend the curve of cancer mortality dramatically in our view". (PX7079 (Flatley (Illumina) Dep. at 111–112).) Respondents also incorporate PFF ¶¶ 40–50 herein.

35. [redacted] (PX2069 (Illumina) at 005-006 (Python Board Approval, Dec. 20, 2015) (*in camera*)).

Response to Finding No. 35:

Respondents have no specific response.

36. In an internal 2015 document, Illumina identified preferential, low-cost access to Illumina sequencing technology as a competitive advantage for Grail: Grail "is uniquely positioned to pioneer this field . . . at depths that are cost prohibitive for others." (PX2005 (Illumina) at 009 (ScreenCo: Early Cancer Detection on a Global Scale, 2015); *see* PX2069 (Illumina) at 018 (Python Board Approval, Dec. 20, 2015) (identifying the "cost of sequencing" as the first among four "most significant barriers and drivers of liquid biopsy innovation and adoption")).

Response to Finding No. 36:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 23, which Respondents incorporate herein.

37. Illumina initially offered a 75 percent discount on Illumina products for use in Grail's "Foundational Study and commercial screening." (PX2557 (Illumina) at 017 (Minutes of the Meeting of the Board of Directors of Illumina, Inc., Dec. 20, 2015).

Response to Finding No. 37:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 23, which Respondents incorporate herein.

Respondents also note that Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 23), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

38. Illumina forecast that the 75 percent discount offered to Grail would generate approximately "$100M savings to Python [Grail] over [the] first 3 years." (PX2557 (Illumina) at 017 (Minutes of the Meeting of the Board of Directors of Illumina, Inc., Dec. 20, 2015)).

Response to Finding No. 38:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 23, which Respondents incorporate herein.

Respondents further note that Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 23), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

39. As set forth in Section VII.D.1. below, contemporaneous statements and testimony from Illumina executives as well as ordinary course documents show that Illumina identified tools that could favor its then-subsidiary Grail relative to its rivals and that the Illumina-Grail relationship changed from collaborator to customer following the spinoff of Grail.

Response to Finding No. 39:

The proposed finding is inaccurate, incomplete and misleading for numerous reasons, including because there were no rivals to GRAIL at the time (PFF ¶ 980.2); any special pricing Illumina provided to GRAIL at that time was a benefit of its vertical integration, not a harm, that

has helped accelerate patient access to an MCED test by years (PFF ¶¶ 980.2–980.4.); Complaint Counsel confuses the facts and mischaracterizes the documents relating to Illumina's collaboration with GRAIL prior to the spin-off (PFF ¶¶ 979–81.); and the Open Offer ensures that no customer is anticompetitively disadvantaged as a result of the Transaction (*See* PFF ¶¶ 1000–57.1.) To the extent Complaint Counsel relies on its Proposed Findings in Section VII.D.1 (CCFF ¶¶ 3669–3748), Respondents incorporate their responses to those Proposed Findings herein.

3. Spin-off of Grail (Reducing Ownership to Less Than 50%)

40. [redacted] (PX4082 (Grail) at 211 (Email from B. Cornelius, Latham & Watkins, to C. Gartin, Morgan Stanley, attaching Grail 2020 S-1/Amended, Sept. 2020); PX6049 (Grail) at 103 (Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 40:

The proposed finding is vague and ambiguous as to the definition of [redacted]. To position GRAIL for its moonshot objective, Illumina seeded GRAIL with the talent, R&D capabilities, development plans and data it would need to investigate how to use NGS technology for multi-cancer early detection through foundational, population-scale trials. (PFF ¶ 47; PX7107 (deSouza (Illumina) Dep. at 182–83.))

41. [redacted] (PX6049 (Grail) at 103 (Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 41:

Respondents have no specific response.

42. [redacted] (PX0054 (Grail Closes Over $900 Million Initial Investment in Series B Financing to Develop Blood Tests to Detect Cancer Early, Mar. 1, 2017 (*in camera*)); *see also* deSouza (Illumina) Tr. 2202).

Response to Finding No. 42:

Respondents have no specific response.

43. [redacted] (deSouza (Illumina) Tr. 2202, 2453; PX6049 (Grail) at 103 (Narrative Response to Second Request, Mar. 1, 2021 (*in camera*)); PX2541 (Illumina) at 004 (Interim Review: K2-Grail, Feb. 2, 2017) (*in camera*)).

Response to Finding No. 43:

Respondents have no specific response except note that although Illumina reduced its investment in GRAIL in 2017, Illumina remained invested in GRAIL's success, not just through its equity stake in GRAIL (around 12% of GRAIL's outstanding shares on a fully diluted basis before the Transaction closed), but also in that Illumina has a long-term agreement to supply GRAIL with NGS instruments and reagents for its genomic testing needs, pursuant to which, prior to the close of the Transaction, Illumina had the right to receive approximately [redacted] of all future net sales of any GRAIL oncology products or services. (PFF ¶ 50; [redacted] *see also* Aravanis (Illumina) Tr. 1876–77; RX3984 (Illumina) at 14–15.))

44. Illumina sold Grail to outside investors in 2017 because the amount of investment required to develop Grail's MCED test was "untenable." (PX7057 (Flatley (Illumina) IHT at 157-60)).

Response to Finding No. 44:

The proposed finding is incomplete and misleading to the extent it suggests that the only reason the Illumina sold GRAIL to outside investors is because of the amount of investment required. Further, Illumina remained invested in GRAIL's success, not just through its equity stake in GRAIL (around 12% of GRAIL's outstanding shares on a fully diluted basis before the Transaction closed), but also in that Illumina has a long-term agreement to supply GRAIL with

NGS instruments and reagents for its genomic testing needs, pursuant to which, prior to the close of the Transaction, Illumina had the right to receive approximately [redacted] of all future net sales of any GRAIL oncology products or services. (PFF ¶ 50; [redacted] *see also* Aravanis (Illumina) Tr. 1876–77; RX3984 (Illumina) at 14–15.))

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate PFF ¶¶ 40–50 herein.

45. Illumina CEO Francis deSouza testified that Illumina's 2017 reduction of its interest in Grail changed Illumina's relationship from an affiliate relationship to a customer relationship. (DeSouza (Illumina) Tr. 2207).

Response to Finding No. 45:

Respondents have no specific response except incorporate their responses to CCFF ¶ 43 herein. Respondents also incorporate PFF ¶¶ 40–50 herein.

46. After the 2017 financing round, Illumina ceased providing special discounts to Grail. (DeSouza (Illumina) Tr. 2207).

Response to Finding No. 46:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 23, which Respondents incorporate herein.

The proposed finding is also vague and ambiguous as to the meaning of "special". Mr. deSouza testified that Illumina provided GRAIL with "deeper" discounts before the 2017 financing round. (deSouza (Illumina) Tr. 2207.)

47. An Illumina investor Q&A document reviewed by Jay Flatley states that Illumina's reduction of its stake in Grail "actually leveled the playing field" for Illumina's other customers. (PX2406 (Illumina) at 005 (E-mail from J. Flatley, Illumina, to F. deSouza et al., Illumina, Jan. 2, 2017)).

Response to Finding No. 47:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 23 and 46, which Respondents incorporate herein.

The proposed finding is also incomplete and misleading because it omits Mr. Flatley's testimony concerning what he meant by the quoted language. Mr. Flatley explained that what he meant with this language is that "if GRAIL has the constraints taken off it in terms of field of use, it could now compete against customers where in the earlier format [before the spin-off] they could not have because the field was constrained". (PX7079 (Illumina) Dep. at 174.) Mr Flatley went on to explain that, prior to the spin-off, the question regarding the creation of an entity that would compete with customers more broadly in liquid biopsy was not a consideration because GRAIL was constrained to developing only an MCED test, "there were no customers in the screening market" and "there was a market that didn't exist and still doesn't, so there are no customers in the screening market". (PX7079 (Illumina) Dep. at 175.)

The proposed finding is also misleading to the extent it suggests that GRAIL will receive access to sequencing instruments and core consumables, as well as associated services, that are unavailable to other putative MCED test developers. This is incorrect. Any customer that signs the Open Offer shall have the same access to services that GRAIL or any other For-Profit Entity has access to, at the same prices. (PFF ¶ 1004; [redacted] Berry (Illumina) Tr. 865–66; deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.).) Similarly, the Open Offer provides customers the same access to purchase sequencing instruments and core consumables to which GRAIL has access. (PFF ¶ 1005; [redacted]; Berry (Illumina) Tr. 878–79; deSouza (Illumina) Tr. 2434–35, 2437–38; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) Further, the timing of the access to these

services and sequencing products shall be the same for GRAIL as it is for its putative rivals: the Open Offer requires that "Customer shall have access to the Supplied Products for purchase that GRAIL . . . has access, within 5 days of when GRAIL . . . is offered such access (if not earlier) for purchase". (PFF ¶ 1005.1; RX3935 (Illumina) at 2.)

Respondents also note that in the context of this document, [redacted] (PX7107 (deSouza (Illumina) Dep. at 225-26).)

48. Prior to Illumina's reduction in its interest in Grail, "[Grail] had access to technology and pricing that was preferential to [Illumina's] customers." (PX2406 (Illumina) at 005 (E-mail from J. Flatley, Illumina, to F. deSouza et al., Illumina, Jan. 2, 2017)).

Response to Finding No. 48:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 23 and 47, which Respondents incorporate herein.

49. After Illumina's reduction of its stake in Grail, Grail had "access to technology on [the] same terms and price as [Illumina's] other large customers." (PX2406 (Illumina) at 005 (E-mail from J. Flatley, Illumina, to F. deSouza et al., Illumina, Jan. 2, 2017)). The Illumina Q&A document states that Illumina "believe[d] that this [would] accelerate the liquid biopsy market for all." (PX2406 (Illumina) at 005 (E-mail from J. Flatley, Illumina, to F. deSouza et al., Illumina, Jan. 2, 2017)).

Response to Finding No. 49:

The proposed finding is irrelevant because any special pricing and other benefits Illumina may have provided to GRAIL in its original supply agreement when GRAIL was formed and controlled by Illumina are irrelevant to evaluating the effects of the Transaction on competition. (PFF ¶ 979.) At the time of GRAIL's formation, the objective of creating a cancer screening test was a moonshot concept, and Illumina believed that without deep discounting, it would be impossible for GRAIL to develop a cancer screening test. (PFF ¶¶ 980–980.4.)

The proposed finding is incomplete and misleading. Respondents incorporate their responses to CCFF ¶ 47 herein.

50. By 2017, Grail had expanded its clinical trials from one study involving 50,000 individuals to five clinical trials involving over a million individuals. (PX2149 (Illumina) at 002-003 (Email from M. Stapley, Illumina, to D. Moriarty, Illumina, attaching Grail white paper, Sep. 24, 2016)).

Response to Finding No. 50:

Respondents have no specific response.

51. As a result of Grail expanding its clinical trials, Grail's research and development projections moved back by two years and its associated costs increased from approximately $400 million to $1.5 billion. (PX7057 (Flatley (Illumina) IHT at 158-159)).

Response to Finding No. 51:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate PFF ¶¶ 40–50 herein.

52. According to former CEO and Board Chairman, Mr. Jay Flatley, in light of Illumina's control of Grail, Grail's increased spending without corresponding revenues would have significantly diluted Illumina's reported earnings. (PX7079 (Flatley (Illumina) Dep. at 146-147)).

Response to Finding No. 52:

Respondents have no specific response. Respondents also incorporate PFF ¶¶ 40–50 herein.

53. According to former Illumina CEO and board chairman Jay Flatley, Illumina's board determined that that its shareholders would not have tolerated this magnitude of dilution from Grail spending without corresponding revenues. (PX7057 (Flatley (Illumina) IHT at 159)).

Response to Finding No. 53:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 52, and PFF ¶¶ 40–50 herein.

54. In a November 4, 2016 email, Mr. Flatley explained to a Grail executives that "[Illumina had] concerns that relinquishing control of Grail could result in the "[l]oss of [h]uge [u]pside potential in market value of GRAIL," the "[l]oss of [r]oyalty future value to [Illumina]," and a potential "[i]mpact to [Illumina's] external credibility." (PX2411 (Illumina) at 002 (Email from J. Flatley, Illumina, to J. Huber, Grail, et al., Nov. 4, 2016)).

Response to Finding No. 54:

The proposed finding is not supported by the cited source because the cited evidence does not contain the words "concerns that relinquishing control of Grail could result in the". Respondents also incorporate PFF ¶¶ 40–50 herein.

55. Francis deSouza stated publicly in June 2017:

> There are 70-plus players now in the liquid biopsy space. We want to encourage them to look at all different avenues because this is important and the outcome's terrific for mankind. There are different points of view. There are companies that believe it's going to be a combination of ultra-deep screening of the blood samples plus tissue, whole transcriptome analysis to identify tissue of origin. And to be honest, I think people are approaching it slightly differently and the market will sort of determine where the biology is and what the right answer is. In every case though, we're talking about a lot of sequencing.

(PX0376 at 007 (Illumina Inc. at Goldman Sachs Global Healthcare Conference, FD (Fair Disclosure) Wire, Conference Call Transcript, June 13, 2017)).

Response to Finding No. 55:

Respondents have no specific response except to note that, to the extent the proposed finding is meant to imply that today—five years after Mr. deSouza's quoted statement—the landscape for liquid biopsy testing is the same as it was in 2017, the implication is false and there is no support for it. Respondents also note that Complaint Counsel chose not to discuss this

document at trial, (CC Exhibit Index at 3), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

56. At the same conference, deSouza stated of the liquid biopsy market: "[W]e want to encourage that market because that market, I think, is very promising from a patient perspective, but it uses a lot of sequencing." (PX0376 at 007 (Illumina Inc. at Goldman Sachs Global Healthcare Conference, FD (Fair Disclosure) Wire, Conference Call Transcript, June 13, 2017)).

Response to Finding No. 56:

Respondents note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 3), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

57. Mr. Flatley testified that, prior to the spin-off of Grail, Illumina was hesitant to "go after markets . . . using a subsidiary of Illumina . . . that could compete more favorably with existing customers [Illumina] had in the marketplace." (PX7057 (Flatley (Illumina) IHT at 166)).

Response to Finding No. 57:

The proposed finding is incomplete and misleading in that it omits and mischaracterizes Mr. Flatley's testimony and the relevant facts. Mr. Flatley made it clear that he was not talking about the MCED space when referring to Illumina's hesitancy to "go after markets . . . using a subsidiary of Illumina". Rather, he explained that this concern related to Illumina competing with customers in mature, existing markets, but those same considerations did not apply to a nascent space like the MCED space. As to the MCED space, Mr. Flatley explained that, "this market did not exist – it still doesn't exist" and Illumina "had decided that we were going to focus on enabling new markets in – and in those cases Illumina could put application and sample prep products into the market. And we've done that in our history. We did it in, you know – in the DTC area. We did it with a company called Helix that we spun out. We were doing it here.

And those activities were to create markets where they otherwise would not get created or take many, many more years to get created. And so that's why" Illumina participated in nascent markets but not in mature markets. (PX7057 (Flatley (Illumina) IHT at 165–68.)

Further, the Proposed Finding is incomplete and misleading because Illumina's views at the time of the spin-off of GRAIL in 2017 are irrelevant to evaluating the effects of the Transaction on competition today, including because the evidence shows Illumina firmly believes the Transaction will not harm any of its customers, Illumina has no incentive to harm any customer, and the terms of the Open Offer guarantee Illumina cannot anticompetitively disadvantage any for profit oncology customer. (PFF ¶¶ 847–51, 1000–57.) The surge of investment in NGS-based liquid biopsy tests since the announcement of the Illumina/GRAIL merger agreement further rebuts any notion that the Transaction risks deterring Illumina customers from developing tests for Illumina's platform. (PFF ¶¶ 927–42.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

58. According to Illumina's former CEO and board member Jay Flatley, Illumina determined that its customers might not want to participate in markets where Illumina had a presence, in part "because they'd believe that Illumina could always underprice them if we wanted to." (PX7057 (Flatley (Illumina) IHT at 167).)

Response to Finding No. 58:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 23 and 57, which Respondents incorporate herein.

59. In a 2017 presentation to Sands Capital Management, Illumina told investors "We spun out Grail to encourage investment into many different NGS-based companies focused on early cancer detection to have as many shots on goal as possible." (PX2561 (Illumina) at 017 (Email from J. Cunningham, Illumina, to F. deSouza, Illumina, Oct. 30, 2020, attaching Sands Capital Management Call); deSouza (Illumina) Tr. 2204-5).

Response to Finding No. 59:

The proposed finding is incomplete and misleading. Mr. deSouza testified that early cancer detection screening companies would have "shots on goal" independent of whether Illumina spun GRAIL out or not. (deSouza (Illumina) Tr. 2204.) He further clarified that this language referred to the fact that Illumina wanted to see which scientific and technical approach to early cancer screening would be the "right way to go" because, at the time, given the nascent nature of the endeavor, it was not clear to any market participant what the best way to proceed was. (deSouza (Illumina) Tr. 2204.)

60. [redacted] (Respondents' Pretrial Brief at 2, Aug. 18, 2021; *see also* PX4291 (Grail) [redacted] (*in camera*) [redacted]

Response to Finding No. 60:

Respondents have no specific response.

61. Illumina stated in internal Q&A bullets that divesting Grail would "accelerate the liquid biopsy market for all." (PX2406 (Illumina) at 005 (email from J. Flatley, Illumina, to E. Endicott, Illumina, Jan. 2, 2017, attaching Illumina/Grail Q&A, Jan. 2, 2017)).

Response to Finding No. 61:

The proposed finding is incomplete and misleading. Mr. deSouza testified that he understood the language quoted by Complaint Counsel to refer to the fact that by investing in a company that was developing a liquid biopsy test Illumina signaled to the investment community that liquid biopsy was a valid investment. (deSouza (Illumina) Tr. 2206–208.) Such a signal from a company of Illumina's reputation would encourage further investment in the space, thereby accelerating the market for all. (deSouza (Illumina) Tr. 2206–208.) Respondents also incorporate their responses to CCFF ¶¶ 57 and 59, and PFF ¶¶ 40–50 herein.

62. [redacted] (*in camera*); PX6049 (Grail) at 031 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)). [redacted] (RX1371 (Illumina) at 010–12 [redacted] (*in camera*)).

Response to Finding No. 62:

Respondents have no specific response.

63. As noted in Illumina's Board Minutes, when Illumina owned a majority stake in Grail Illumina provided Grail with preferential terms and agreed not to "launch, invest in, or provide special discounts to competitive business[es]." (PX2557 (Illumina) at 017 (Minutes of the Meeting of the Board of Directors of Illumina, Inc., Dec. 20, 2015); PX2541 (Illumina) at 008 (Interim Review K-2 Grail presentation, Feb. 2, 2017)).

Response to Finding No. 63:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 23 and 47, which Respondents incorporate herein.

Respondents further note that Complaint Counsel did not present PX2557 to any fact witness during discovery or at trial in this case, (CC Exhibit Index at 23), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

64. As an independent company, Grail will move from a "collaborator" in assay development and software and data analysis to merely a "customer." (PX2541 (Illumina) at 008 (Interim Review K-2 Grail presentation, Feb. 2, 2017)).

Response to Finding No. 64:

The proposed finding is incomplete and misleading.

First, the only witness questioned about the cited document was Mr. deSouza, and as to that document, he testified: [redacted]

[redacted]

Second, Dr. Aravanis made clear in his testimony that the K2 collaboration referenced in the cited exhibit was not an MCED test, but a potential therapy selection test. As Dr. Aravanis explained, [redacted] Therefore, to be [redacted] "the technical improvements that GRAIL made to this one technical approach around these names here, K2/Napa, would be shared with Illumina so as to not have redundant research and development around that approach". (PX7065 (Aravanis (Illumina) IHT at 56–60.) Dr. Aravanis also explained that, to achieve those operational efficiencies, Illumina made "some minor alterations to the reagents for the purposes of developing this assay", and ultimate, "the discussion about the K2/Napa activity was a very minor, minor part of the R&D activities at GRAIL and a very minor, minor part of the R&D activities at Illumina when put in context of the overall R&D activities and overall activities of the company almost – again, kind of a very early, minor activity in the company's history . . . ." (PX7065 (Aravanis (Illumina) IHT at 60–61); *see also* PX7048 (Klausner (GRAIL) IHT at 120–121, 128 (describing agreement between GRAIL and Illumina whereby GRAIL agreed to finish work related to a therapy selection test that Illumina

(now GRAIL) employees had been working on prior to GRAIL's spinoff and deliver the results back to Illumina).)

Third, there is nothing anticompetitive about Illumina collaborating with GRAIL in ways it has not and would not with an arm's-length customer; to the contrary, that is an efficiency of vertical integration that benefits competition and consumers. To the extent the proposed finding is meant to suggest otherwise, it is wrong. Further, under the Open Offer, upon customer request, Illumina must enter into a development agreement on commercially reasonable terms relating to the design or modification of sequencing products to optimize interoperability with the customer's tests. (*See* PFF ¶¶ 1005, 1008, 1010.) Illumina has not historically collaborated with customers on such optimization, and so, in this regard, customers who see value in optimization are better off under the Open Offer than they were under the pre-Transaction status quo. (PFF ¶¶ 1010.3–10.10.)

Respondents also incorporate their responses to CCFF ¶ 47 herein.

65. Prior to Illumina spinning Grail out, Illumina treated Grail as a "collaborator" co-developing Grail's project development process, assay development workflow, software and data analysis, and designed a kit specially for Grail. (PX2541 (Illumina) at 008 (Interim Review K-2 Grail presentation, Feb. 2, 2017)).

Response to Finding No. 65:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 64, which Respondents incorporate herein.

66. Illumina's ordinary course documents charted the "[c]hanging business dynamic" between Illumina and Grail after the spinoff. The "[c]hanging business dynamic will result in Illumina functioning as a supplier compared to a product development partner," noting that Grail will shift from being a "collaborator" to a "customer." In this relationship, Illumina would limit their assistance in Grail's project development process, assay development workflow, and software and data analysis. (PX2541 (Illumina) at 008, 010 (Interim Review K-2 Grail presentation, Feb. 2, 2017 ("Illumina and Grail no longer collaborating on developing [library prep] and sequencing kits"))).

Response to Finding No. 66:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 64, which Respondents incorporate herein.

67. After the spinoff, Illumina provided Grail "RUO kits" instead of the customized kits Grail was originally receiving. (PX2541 (Illumina) at 008, 014 (Illumina, Interim Review K-2 Grail presentation, Feb. 2, 2017)).

Response to Finding No. 67:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 64, which Respondents incorporate herein.

68. [redacted] (Berry (Illumina) Tr. 988 (*in camera*)).

Response to Finding No. 68:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' response to CCFF ¶ 64, which Respondents incorporate herein.

B. GRAIL

69. Grail's principal office and laboratory is located in Menlo Park, CA. (PX4082 (Grail) at 130 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 69:

Respondents have no specific response.

70. Aaron Freidin, Grail SVP of Finance, testified that Grail has completed four separate rounds of financing. (Freidin (Grail) Tr. 3015-16).

Response to Finding No. 70:

Respondents have no specific response.

71. [redacted] (PX4082 (Grail) at 086 (Email attaching Grail 2020 S-1/Amended, Sept. 2020); Freidin (Grail) Tr. 3015-16; PX5023 (Illumina) at 003 (Illumina, Project Grail, Phil Febbo & Corporate Development, Mar. 2020) (*in camera*)).

Response to Finding No. 71:

Respondents note that PX5023 (Illumina) was never used at trial (CC Exhibit Index at 54), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

[redacted] In order for GRAIL, and now Illumina, to [redacted] (PX7138 (Scott Morton Trial Dep. at 319.) Mr. Freidin testified that the Transaction would allow GRAIL to feel secure about its future funding and it would de-risk capital needs and accelerate GRAIL's ability to put capital to work. (Freidin (GRAIL) Tr. 2999.) As a witness from Morgan Stanley testified to at trial, [redacted] (Strom (Morgan Stanley) Tr. 3495-3500.) Even if GRAIL were to successfully raise capital through the capital markets, it would not come with all the expertise and infrastructure that Illumina has. (Freidin (GRAIL) Tr. 3008-10.)

72. [redacted] (PX5045 (Grail) at 014 (Grail, Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*)).

Response to Finding No. 72:

Respondents have no specific response.

73. Grail has employees across a diverse range of functions including R&D, sales, market access, and government and regulatory affairs. (RX0874 (Grail) at 001 (Grail Organizational Structure, Aug. 26, 2020)).

Response to Finding No. 73:

The proposed finding is incomplete and misleading. RX0874 (GRAIL) does not show how many people report to the individuals listed in the organizational chart. (RX0874 (GRAIL) at 001.) The organizational chart also shows that, as of August 26, 2020, GRAIL was still searching for a Vice President of Marketing. (RX0874 (GRAIL) at 001.)

Moreover, several witnesses have testified to GRAIL's relatively small team. Dr. Deverka testified**:** [redacted] Mr. Freidin testified that GRAIL only has about 10-20 employees in the U.K. facilitating their only international study. (Freidin (GRAIL) Tr. 3008.)

1. Grail's Galleri MCED Test

74. Grail's flagship test is its MCED test, called Galleri. (RX3256 (Grail, *Our Products*, https://grail.com/our-products) (last visited Aug. 12, 2021); RX3255 (Grail, *The Galleri Test,* https://www.galleri.com/the-galleri-test) (last visited Aug. 12, 2021)).

Response to Finding No. 74:

Respondents have no specific response except to note that RX3255 (GRAIL) and RX3256 (GRAIL) were never used at trial (Resps.' Exhibit Index at 153), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

a) Galleri Is an MCED Test Designed To Be Used by Asymptomatic Individuals

75. [redacted] (PX6049 (Grail) at 012 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*); *see also* PX4572 (Grail) at 006, 032 (Grail, Early Cancer Detection: Investor Presentation, Dec. 2020) (*in camera*)).

Response to Finding No. 75:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX4572 (GRAIL) and PX6049 (GRAIL) at trial, (CC Exhibit Index at 53, 55), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

76. Dr. Ofman testified that the Galleri test is intended to be used as a screening test for asymptomatic populations. (Ofman (Grail) Tr. 3431.)

Response to Finding No. 76:

Respondents have no specific response.

77. [redacted] (RX3255 (Grail, *The Galleri Test,* https://www.galleri.com/the-galleri-test) (last visited Aug. 12, 2021); (Jamshidi (Grail) Tr. 4042-43 (*in camera*)).

Response to Finding No. 77:

Respondents have no specific response, except to note that Galleri also uses DNA methylation patterns to predict where the cancer came from in the body (*i.e.*, the molecular cancer signal of origin.) (Ofman (GRAIL) Tr. 3287.) "[Galleri] looks at over a million of these methylation sites in over a hundred thousand regions of the genome. And so then you take these patterns, and [subject them] across cancer types and across cancer stages to train a machine learning algorithm to discriminate what is a cancer signal from what is a noncancer signal. And we made sure that the control group had lots of confounding indications and diseases to create a lot of biological noise so that our classifier was effectively trained and we didn't have models

that were overfit. So once you subject these patterns to the machine learning algorithm, it will classify the pattern as either a cancer-like signal or a noncancer signal. And then if a cancer signal gets detected, the patterns then get subjected to a second step, which is another classifier, which looks and weights different features from these patterns to predict the tissue of origin or where this cancer signal came from in the body, so we call it a cancer signal origin or a tissue of origin"..) Respondents also note that Complaint Counsel chose not to discuss RX3255 (GRAIL) at trial (Resps.' Exhibit Index at 153), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

78. [redacted] (Jamshidi (Grail) Tr. 4032 (*in camera*)).

Response to Finding No. 78:

Respondents have no specific response.

79. Grail claims that Galleri has the ability to detect over 50 cancers from a single blood draw. (RX3256 (Grail, *Our Products*, https://grail.com/our-products) (last visited Aug. 12, 2021); RX3255 (Grail, *The Galleri Test,* https://www.galleri.com/the-galleri-test) (last visited Aug. 12, 2021); *see infra* Section X, Appendix B (Galleri Has Not Been Clinically Shown to Provide Early Detection of More Than 50 Cancers in an Asymptomatic Population))).

Response to Finding No. 79:

Respondents have no specific response except to note that the use of the term "claim" is misleading. GRAIL has demonstrated that the Galleri test can identify over 50 cancer types, over 45 of which lack recommended screenings. (PX0043 (GRAIL) at 5, 97; *see also* Ofman (GRAIL) Tr. 3312; PFF, Section I.A.) To the extent Complaint Counsel relies on its Proposed Findings in CCFF Section X, Appendix B (CCFF ¶¶ 6206–6394), Respondents incorporate their responses to those Proposed Findings herein.

Respondents also note that Complaint Counsel chose not to discuss RX3255 (GRAIL) and RX3256 (GRAIL) at trial (Resps.' Exhibit Index at 153), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

80. Grail has not presented clinical evidence that Galleri can provide "early detection" of more than 50 cancer types. (*See* Section X, Appendix B (Galleri Has Not Been Clinically Shown to Provide Early Detection of More Than 50 Cancers in an Asymptomatic Population) below)).

Response to Finding No. 80:

The proposed finding is incorrect, incomplete, misleading and contrary to the weight of the evidence. To the extent Complaint Counsel relies on its Proposed Findings in CCFF Section X, Appendix B (CCFF ¶¶ 6206–6394), Respondents incorporate their responses to those Proposed Findings herein.

81. To date, Grail has presented clinical evidence that the Galleri test can detect seven types of Stage I-III cancer in an asymptomatic screening population. (Cote Tr. 4000-01; RX3041 at 005 (Interim Results of Pathfinder, June 4, 2021) (showing seven cancers as being detected in stages one through three: head and neck, liver/bile duct, lung, lymphoma, ovary, pancreas, and small intestine); *see generally* Section X, Appendix B (Galleri Has Not Been Clinically Shown to Provide Early Detection of More Than 50 Cancers in an Asymptomatic Population) below)).

Response to Finding No. 81:

The proposed finding is incorrect, incomplete, misleading and contrary to the weight of the evidence. Respondents incorporate their responses to CCFF Section X, Appendix B (CCFF ¶¶ 6206–6394) herein.

82. [redacted] (PX6049 (Grail) at 014 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 82:

The proposed finding is incomplete and misleading. Dr. Ofman testified at trial that [redacted] Illumina is highly experienced in obtaining FDA approval. (RX6001 (Deverka Trial Dep. 62–64, 65); Febbo (Illumina) Tr. 4319, 4338–43, 4347, [redacted]; Qadan (Illumina) Tr. 4113–14.) Numerous Illumina and GRAIL fact witnesses testified that the reunion of Illumina and GRAIL will accelerate Galleri's path to FDA approval. (Aravanis (Illumina) Tr. 1945, 1948; Febbo (Illumina) Tr. 4345–46, 4360; Flatley (Illumina) Tr. 4082; Bishop (GRAIL) Tr. 1417; [redacted]; Friedin (GRAIL) Tr. 2980); [redacted] Echoing this unrefuted fact testimony, Dr. Deverka testified that the reunion of Illumina and GRAIL will accelerate FDA approval. (RX6001 (Deverka Trial Dep. at 62–64, 81; RX3867 (Deverka Expert Report ¶ 121.))

83. [redacted] (PX6049 (Grail) at 014 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 83:

The Respondents have no specific response, except to note [redacted]

[redacted]

b) Galleri Launched as an LDT in April 2021

84. [redacted] (PX4171 (Grail) at 030 (Grail Board of Directors Meeting Presentation, Aug. 20, 2019) (*in camera*)).

Response to Finding No. 84:

Respondents have no specific response, except to note Dr. Ofman's testimony that breakthrough device designation does not guarantee approval from the FDA for a device. (Ofman (GRAIL) Tr. 3305.)

85. [redacted] (PX4213 (Grail) at 005 [redacted] (*in camera*); *see* PX4160 (Grail) at 094 (Grail, Board Session Meeting Materials, Nov. 10, 2020) (*in camera*) [redacted]).

Response to Finding No. 85:

The proposed finding is incomplete and misleading. [redacted]

Respondents also incorporate their responses to CCFF ¶ 83 herein.

Respondents note that Complaint Counsel chose not to discuss PX4160 (Grail) with any fact witness at trial (CC Exhibit Index at 38), or in any deposition, and therefore, the document

should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

86. [redacted] (PX6061 (Grail) at 013 (Grail, Responses and Objections to the Federal Trade Commission's First Set of Interrogatories, May 3, 2021) (*in camera*)).

Response to Finding No. 86:

The proposed finding is incomplete and misleading. Galleri was offered on a limited basis in April 2021 and was launched as an LDT in June 2021. (RX3279 (GRAIL) at 2-3); Bishop (GRAIL) Tr. 1322.)

87. [redacted] (PX6049 (Grail) at 020 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*); *see also* PX5044 (Grail) at 003 (Grail LRP Review, Aug. 20, 2020) (*in camera*) [redacted]

Response to Finding No. 87:

The proposed finding is incomplete and misleading. Several fact witnesses testified about how GRAIL has encountered delays and may encounter substantial delays in its clinical studies which may make it unable to complete its clinical studies on the timelines it expects. That could materially and adversely impact its ability to launch its products and seek regulatory clearance or approval. (PX0043 (GRAIL) at 11, [redacted] PX7104 (Aravanis (Illumina) Dep. at 75–76, 268–69); [redacted]

88. To sell the Galleri test as an LDT, Grail is targeting large, self-insured employers; concierge medicine practices; executive health programs; and other physicians whose clients have the financial means to enroll in preventative health programs. (PX4082 (Grail) at 009, 011 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 88:

Respondents have no specific response, except to note that it is in GRAIL's interest to seek wider adoption of Galleri and Illumina can help GRAIL reach that goal. (Bishop (GRAIL) Tr. 1405–06.) Widespread market access to Galleri will depend on FDA, CMS and payor approval. (Bishop (GRAIL) Tr. 1343–45); Conroy (Exact/Thrive) Tr. 1734–35; Gao (Singlera) Tr. 2889–91; [redacted] Rabinowitz (Natera) Tr. 298–99.) Although GRAIL would prefer to sell to a wider audience, at present, Galleri is currently selling for $950, a price that many individuals cannot afford. (deSouza (Illumina) Tr. 2342.) [redacted]

89. [redacted] (PX6061 (Grail) at 043 (Grail, "Responses and Objections to the Federal Trade Commission's First Set of Interrogatories," May 3, 2021) (*in camera*)).

Response to Finding No. 89:

The proposed finding is incomplete and misleading. [redacted]

90. As of trial, Grail [redacted] (Ofman (Grail) Tr. 3372, 3374-75 (*in camera*); *see also* Bishop (Grail) Tr. 1332-33 [redacted]

Response to Finding No. 90:

Respondents have no specific response, except to note that at the time of trial, GRAIL had only sold around 3,000 Galleri tests. (Freidin (GRAIL) Tr. 2969.) [redacted]

91. [redacted] (Della Porta (Grail) Tr. 464; Ofman (Grail) Tr. 3372 (*in camera*); *see also* Bishop (Grail) Tr. 1333 [redacted]

Response to Finding No. 91:

Respondents have no specific response, except to note that at the time of trial, GRAIL had only sold around 3,000 Galleri tests. (Freidin (GRAIL) Tr. 2969.)

92. At trial, Illumina and Grail's CEOs testified that Grail's Galleri test cost $949 out of pocket. (Bishop (Grail) Tr. 1322, 1404; deSouza (Illumina) Tr. 2342).

Response to Finding No. 92:

Respondents have no specific response except incorporate their responses to CCFF ¶ 88.

93. In the September 21, 2020 investor call where Illumina CEO Francis deSouza announced that Illumina would acquire Grail, deSouza stated that the price of Galleri would start at $1,200. (PX2575 (Illumina) at 070 (Illumina M&A Call, Sept. 21, 2020)).

Response to Finding No. 93:

The proposed finding is incomplete and misleading. During the September 21, 2020 Illumina M&A Call, Mr. deSouza made various assumptions in connection with the price of Galleri. Specifically, he stated on that call: "[The cancer screening] market is expected to grow quickly to about 150 million tests in 2035, a 75% CAGR, to approximately $46 billion. This assumes an ASP that starts around $1,200 and trends to about $300 in 2035 as we scale and drive

adoption with increasingly accessible pricing". (PX2575 (Illumina) at 070.) In this statement, Mr. deSouza did not state that the price of Galleri would start at $1,200, as the proposed finding suggests. On the contrary, he specifically indicated that the goal is to provide "increasingly accessible pricing". (PX2575 (Illumina) at 070.) Mr. deSouza even testified at trial that the Transaction would lead to lower prices for customers because of Illumina's ability to buy products more cheaply. (deSouza (Illumina) Tr. 2370.)

94. Grail Chief Medical Officer Joshua Ofman testified: "we don't expect that large U.S. payers are going to provide coverage for the [Galleri] test without FDA approval." (Ofman (Grail) Tr. 3319-20.)

Response to Finding No. 94:

Respondents have no specific response.

95. [redacted] (Ofman (Grail) Tr. 3352-54 (*in camera*) [redacted] PX4209 (Grail) at 004-008 (Grail, Market Access Strategy, June 2020) (*in camera*) [redacted]).

Response to Finding No. 95:

The proposed finding is incomplete and misleading. [redacted]

[redacted]

96. [redacted] (PX7062 (Kollu (Grail), IHT at 166-167) (*in camera*)).

Response to Finding No. 96:

Respondents have no specific response.

97. Grail's Chief Medical Officer, Dr. Josh Ofman, testified at trial that Grail has assembled a capable team in Washington, D.C., to advocate for accelerated Medicare coverage of Galleri and MCED tests. (Ofman (Grail) Tr. 3356-57, 3450).

Response to Finding No. 97:

The proposed finding is incomplete and misleading. Dr. Ofman testified that [redacted] Respondents further note that the proposed finding is not supported by the citation to Dr. Ofman's testimony on pages 3356–57. [redacted] Contrary to the proposed finding, Dr. Deverka testified that [redacted]

[redacted] Specifically, a novel test like Galleri "needs to have a premarket authorization, so clearance by the FDA . . . . [F]or the Medicare pathway, it's actually a requirement to have an FDA-approved or cleared test". (RX6001 (Deverka Trial Dep. at 39.) [redacted]

c) [redacted]

98. [redacted] (Bishop (Grail) Tr. 1441 (*in camera*)).

Response to Finding No. 98:

Respondents have no specific response, except to note [redacted]

99. [redacted] (PX5044 (Grail) at 006-007 (Grail LRP Review, Aug. 20, 2020) (*in camera*)).

Response to Finding No. 99:

The proposed finding is misleading and incomplete. Mr. Della Porta testified that [redacted]

[redacted]

100. [redacted] (PX5044 (Grail) at 010-11 (Grail LRP Review, Aug. 20, 2020) (*in camera*)).

Response to Finding No. 100:

Respondents have no specific response except incorporate their responses to CCFF ¶ 98 herein.

101. [redacted] (Bishop (Grail) Tr. 1441-43 (*in camera*)).

Response to Finding No. 101:

Respondents have no specific response except incorporate their responses to CCFF ¶ 98 herein.

102. [redacted] (PX5044 (Grail) at 023 (Grail LRP Review, Aug. 20, 2020) (*in camera*)).

Response to Finding No. 102:

Respondents have no specific response except incorporate their responses to CCFF ¶ 98 herein.

103. [redacted] (PX5044 (Grail) at 024 (Grail LRP Review, Aug. 20, 2020) (*in camera*)).

Response to Finding No. 103:

Respondents have no specific response except incorporate their responses to CCFF ¶ 98 herein.

104. [redacted] (PX4016 (Grail) at 025 (Grail,

Grail Strategy Planning Roadmap (Workshop #2), Sept. 2, 2020) (*in camera*) [redacted]); PX4491 (Grail) at 007, 035-043 (Grail, Board of Directors Meeting, Apr. 30, 2019) (*in camera*)).

Response to Finding No. 104:

The proposed finding is incomplete and misleading. GRAIL has only one laboratory and limited experience in operating that laboratory. (deSouza (Illumina) Tr. 2370); Bishop (GRAIL) Tr. 1376; Aravanis (Illumina) Tr. 1892.) [redacted]

Combining Illumina and GRAIL will allow GRAIL to benefit from Illumina's laboratory operations capability. (deSouza (Illumina) Tr. 2371–72); Aravanis (Illumina) Tr. 1961); Flatley (Illumina) Tr. 4086); Bishop (GRAIL) Tr. 1405.) Specifically, Illumina's previous work with Verinata in NIPT and its experience in running laboratories and processing tests can facilitate GRAIL's efforts to improve its centralized scaled laboratory operations. (Freidin (Grail) Tr. 3007-08.) Respondents also note that Complaint Counsel chose not to discuss PX4016 (Grail) and PX4491 (Grail) at trial (CC Exhibit Index at 34, 50), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

105. [redacted] (PX5044 (Grail) at 003 (Grail LRP Review, Aug. 20, 2020) (*in camera*)).

Response to Finding No. 105:

The proposed finding is incomplete and misleading. [redacted]

[redacted] Mr. Della Porta testified that [redacted]

106. [redacted] (PX5044 (Grail) at 003 (Grail LRP Review, Aug. 20, 2020) (*in camera*)).

Response to Finding No. 106:

Respondents have no specific response.

107. [redacted] (Ofman (Grail) Tr. 3351 (*in camera*); PX7069 (Bishop (Grail) IHT at 193-94); PX4082 (Grail) at 011 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 107:

The proposed finding is incomplete and misleading. GRAIL is inexperienced in obtaining FDA approval. [redacted]; Freidin (GRAIL) Tr. 2980; Aravanis (Illumina) Tr. 1943, 1947); RX3867 (Deverka Expert Report) ¶ 113.)) [redacted]

[redacted] (Ofman (GRAIL) Tr. 3351.)

Respondents incorporate their responses to CCFF ¶ 82 herein.

Respondents also note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

108. [redacted] (Ofman (Grail) Tr. 3351 (*in camera*); *see* PX7069 (Bishop (Grail) IHT at 193-4); PX4082 (Grail) at 011 (Email attaching Grail 2021 S-1/Amended, Sept. 2020); *see also* Febbo (Illumina) Tr. 4430 (*in camera*) [redacted]).

Response to Finding No. 108:

Respondents have no specific response except incorporate their responses to CCFF ¶¶ 82 and 107 herein.

109. [redacted] (PX5044 (Grail) at 018 (Grail LRP Review, Aug. 20, 2020) (*in camera*)).

Response to Finding No. 109:

Respondents have no specific response except incorporate their responses to CCFF ¶ 98 herein.

d) [redacted]

110. Dr. Joshua Ofman, Grail's Chief Medical Officer, testified that the clinical study program Grail has launched as an independent company is "one of the largest I've seen." (Ofman (Grail) Tr. 3445).

Response to Finding No. 110:

The proposed finding is misleading. Neither Dr. Ofman nor Complaint Counsel used the term "as an independent company" in the context of the cited evidence.

111. As of September 2021, Grail has enrolled over 130,000 participants in clinical studies. (PX0390 (ClinicalTrials.gov Search Results for "Grail," Sept. 23, 2021)).

Response to Finding No. 111:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX0390 at trial (CC Exhibit Index at 4), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

112. Grail has partnered with the Mayo Clinic, Cleveland Clinical, and Henry Ford Health System for clinical studies. (Qadan (Illumina) Tr. 4263).

Response to Finding No. 112:

Respondents have no specific response.

113. Grail began its clinical study program with the Circulating Cell-Free Genome Atlas ("CCGA") study, which Grail initiated "after Grail was spun out of Illumina and their – the R&D was externalized." (Ofman (Grail) Tr. 3291-92).

Response to Finding No. 113:

Respondents have no specific response.

114. [redacted] (PX4430 (Grail) at 021 [redacted] (*in camera*); PX6049 (Grail) at 015 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 114:

The proposed finding is incomplete and misleading. The CCGA is a prospective, multicenter (142 sites), case-control, observational study with longitudinal follow-up. (RX3430 (Liu, et al., 2020) at 3; Ofman (GRAIL) Tr. 3291–95; [redacted] RX0744 (GRAIL) at 47–48.) Respondents also note that Complaint Counsel chose not to discuss PX4430 at trial (CC Exhibit Index at 48), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

115. In observational studies, test results are not returned to the patients but rather, the patients are tracked over the duration of the study, and Grail compares the results of its tests with the patients' cancer diagnoses at the conclusion of a predetermined period. (PX7092 (Ofman (Grail) Dep. at 255-257)).

Response to Finding No. 115:

Respondents have no specific response.

116. [redacted] (PX6049 at 015 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 116:

Respondents have no specific response.

117. The CCGA study comprises three substudies: CCGA-1, CCGA-2, and CCGA-3. (PX7069 (Bishop (Grail) IHT at 79)).

Response to Finding No. 117:

Respondents have no specific response.

118. Grail used CCGA-1 and CCGA-2 to develop Galleri and gather information about Galleri's performance. (PX7069 (Bishop (Grail) IHT at 80); PX6049 (Grail) at 016 (Grail, Narrative Response to Second Request, Mar. 1, 2021 [redacted] (*in camera*)).

Response to Finding No. 118:

Respondents have no specific response.

119. [redacted] (PX6049 (Grail) at 014 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 119:

Respondents have no specific response.

120. [redacted] (PX7092 (Ofman (Grail) Dep. at 252); PX6049 (Grail) at 016 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 120:

Respondents have no specific response.

121. [redacted] (PX6049 (Grail) at 015 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 121:

Respondents have no specific response.

122. [redacted] (RX3410 (National Institutes of Health, U.S. National Library of Medicine, The Circulating Cell-free Genome Atlas Study (CCGA), https://clinicaltrials.gov/ct2/show/NCT02889978) (last visited Jan. 3, 2022); PX6093 (Navathe Rebuttal Report) at 026-29 (*in camera*)).

Response to Finding No. 122:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss RX3410 (Resps.' Exhibit Index at 166) or PX6093 (CC Exhibit Index at 56) at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

123. Shortly after Grail launched the CCGA study, it launched "two very large cohort studies," STRIVE and SUMMIT. (Ofman (Grail) Tr. 3293).

Response to Finding No. 123:

Respondents have no specific response.

124. [redacted] (PX6049 (Grail) at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 124:

Respondents have no specific response.

125. [redacted] (PX7092 (Ofman (Grail) Dep. at 255-256); *see* PX6049 (Grail) at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 125:

Respondents have no specific response, except to note Dr. Ofman's testimony that GRAIL does not need the results of STRIVE to prove that Galleri works. (Ofman (GRAIL) at 3295.)

126. [redacted] (PX6049 (Grail) at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 126:

Respondents have no specific response except incorporate their responses to CCFF ¶¶ 107 and 125 herein.

127. [redacted] (Ofman (Grail) Tr. 3294-95; PX4430 (Grail) at 021 (*in camera*); PX7092 (Ofman (Grail) Dep. at 256-257); PX6049 (Grail) at 017-18 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 127:

Respondents have no specific response, except to note that Complaint Counsel chose not to discuss PX4430 (GRAIL) at trial (CC Exhibit Index at 48), or in any deposition, and therefore,

the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

128. [redacted] (PX4430 (Grail) at 021 [redacted] (*in camera*); PX6049 (Grail) at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 128:

Respondents have no specific response, except to note that Complaint Counsel chose not to discuss PX4430 (GRAIL) at trial (CC Exhibit Index at 48), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

129. [redacted] (PX6049 (Grail) at 018 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 129:

Respondents have no specific response.

130. [redacted] (PX6049 at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 130:

Respondents have no specific response.

131. Grail's PATHFINDER 1 study is an interventional, real-world, clinical practice study of 6,600 individuals with no suspicion of cancer. (Ofman (Grail) Tr. 3293).

Response to Finding No. 131:

Respondents have no specific response.

132. [redacted] (PX6049 (Grail) at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

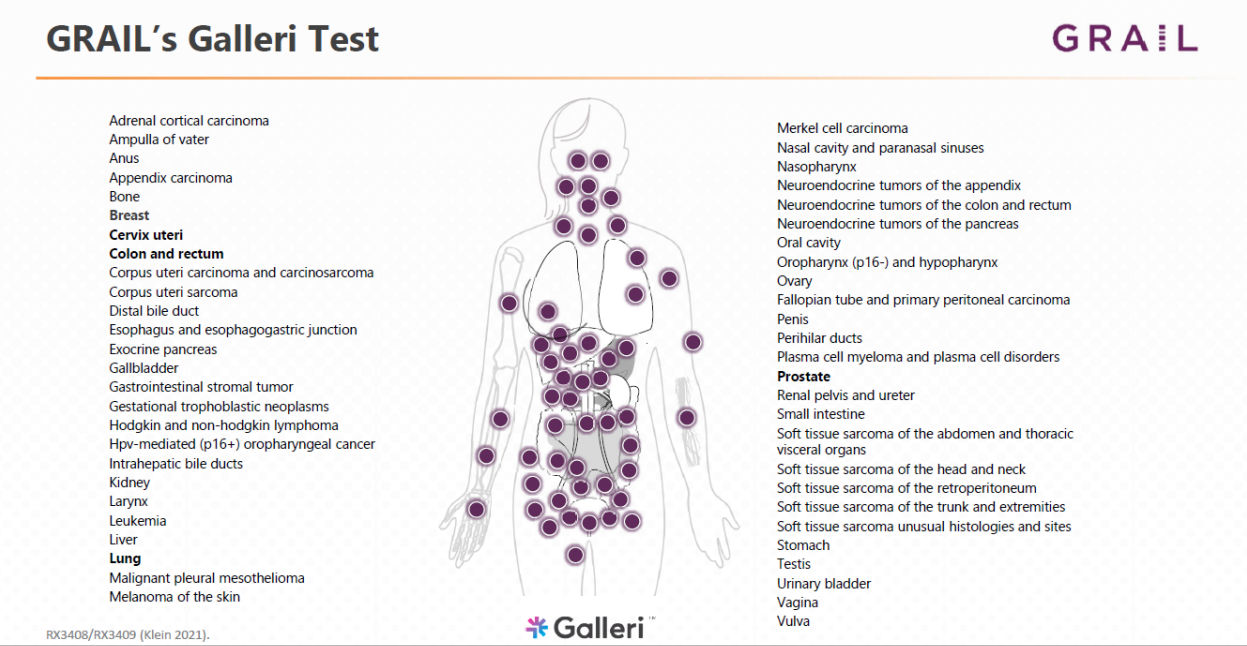
Response to Finding No. 132:

Respondents have no specific response.

133. Based on the PATHFINDER study, the Galleri test has been shown to detect seven types of stage one through three cancer in an asymptomatic screening population. (Cote Tr. 4000-01; RX3041 at 005 (Interim Results of Pathfinder, June 4, 2021) (showing 7 cancers as being detected in stages one through three: head and neck, liver/bile duct, lung, lymphoma, ovary, pancreas, and small intestine).

Response to Finding No. 133:

The proposed finding is incomplete and misleading. There is ample evidence from multiple clinical trials that the Galleri test can detect many more than seven types of early stage cancers in asymptomatic screening populations. In clinical studies, Galleri has detected over 50 types of cancers, of which 45 do not currently have a recommended screening procedure in the US. (PFF ¶¶ 39, 343, 1296; Bishop (GRAIL) Tr. 1373, 1391; RX3285 (GRAIL) at 1; RX3286 (GRAIL) at 2; RX3287 (GRAIL) at 1; Aravanis (Illumina) Tr. 1894–95, 1902; Cote Tr. 3791.) Specifically, the results of the CCGA2 study, published in Annals of Oncology in March 2020, showed that Galleri was capable of detecting more than 50 cancer types at a specificity of 99.3% and a false-positive rate of less than 1% across the more than 50 cancer types. (PFF ¶ 388; RX3430 (Liu, et al., 2020) at 1, 10.) Similarly, CCGA3 ultimately reported that GRAIL's Galleri v2 test achieved a specificity of 99.5% across more than 50 cancer types, a false-positive rate of 0.5%, sensitivity of 51.5% for all cancers, and a signal of origin prediction accuracy of 88.7%. (PFF ¶ 392; RX3408 (Klein, et al., 2021) at 10; RX3869 (Cote Expert Report) ¶ 144.)



(RDX0014-42.)

Independent analysts and external observers have also concluded that Galleri has been clinically shown to detect 50 types of cancers. For instance, a report on the liquid biopsy market from Cowen notes that GRAIL has "conducted systematic clinical studies" and that Galleri "has been shown to be capable of identifying >50 types of cancers by scanning methylation patterns". (PFF ¶ 717.1; PX2022 (Cowen) at 27.)) In addition, Dr. Cance of the American Cancer Society testified that Galleri can detect 50 types of cancer. (Cance (ACS) Tr. 633.)

As Dr. Cote testified at trial, PATHFINDER was never intended to provide clinical evidence of Galleri's ability to screen for more than 50 types of cancer in an asymptomatic population. (Cote Tr. 4001.) PATHFINDER was not designed to show that GRAIL could detect 50 cancers in a real-world population, because to do so a study would require enrollment of hundreds of thousands of people. (Ofman (Grail) Tr. 3298.) PATHFINDER was designed to understand the specificity and positive predictive value of Galleri. (Ofman (Grail) Tr. 3298.)

Nevertheless, Dr. Ofman testified that GRAIL was "thrilled that there was such a diversity of cancers that were found in PATHFINDER". (Ofman (Grail) Tr. 3298.)

Respondents also note that Complaint Counsel chose not to discuss RX3041 at trial (Resps.' Exhibit Index at 136), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

134. Accordingly, the PATHFINDER test does not provide clinical evidence of Galleri's ability to screen for more than 50 types of cancer in an asymptomatic screening population. (Cote Tr. 4000-02.)

Response to Finding No. 134:

The proposed finding is incomplete and misleading. As Dr. Cote testified at trial, PATHFINDER was never intended to provide clinical evidence of Galleri's ability to screen for more than 50 types of cancer in an asymptomatic population. (Cote Tr. 4001.) PATHFINDER was not designed to show that GRAIL could detect 50 cancers in a real-world population, because to do so a study would require enrollment of hundreds of thousands of people. (Ofman (Grail) Tr. 3298.) PATHFINDER was designed to understand the specificity and positive predictive value of Galleri. (Ofman (Grail) Tr. 3298.) Nevertheless, Dr. Ofman testified that GRAIL was "thrilled that there was such a diversity of cancers that were found in PATHFINDER". (Ofman (Grail) Tr. 3298.) Respondents also incorporate their responses to CCFF ¶ 133 herein.

135. [redacted] (PX4074 (Grail) at 031 (Grail, Science, Medicine, and Technology Board Subcommittee Meeting Pre-Read, Mar. 2, 2020) (*in camera*).)

Response to Finding No. 135:

The proposed finding is misleading. [redacted] (PX4074 (GRAIL) at 031.)

136. [redacted] (Ofman (Grail) Tr. 3293-94; PX7092 (Ofman (Grail) Dep. at 123); PX6049 (Grail) at 019 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 136:

Respondents have no specific response.

137. [redacted] (PX6049 (Grail) at 019 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 137:

Respondents have no specific response.

138. [redacted] (PX6049 (Grail) at 019 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 138:

Respondents have no specific response.

139. [redacted] (PX4430 (Grail) at 022 (*in camera*); PX6049 (Grail) at 019 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*) [redacted]

Response to Finding No. 139:

Respondents have no specific response, except to note that Complaint Counsel chose not to discuss PX4430 (Grail) at trial (CC Exhibit Index at 48), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

140. [redacted] (PX6049 (Grail) at 019 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 140:

Respondents have no specific response.

141. According to Dr. Patricia Deverka, one of Respondents' retained expert witnesses, the UK NHS study, as a "pragmatic clinical trial," will generate "important evidence of clinical utility" of the Galleri test. (RX6001 (Deverka Trial Dep. at 98)).

Response to Finding No. 141:

Respondents have no specific response.

142. Dr. Ofman testified that the U.K. NHS study is the "largest, real-world, what we call a pragmatic, randomized clinical trial" ever in genomics. (Ofman (Grail) Tr. 3293-94; *see also* Freidin (Grail) Tr. 3008, 3161).

Response to Finding No. 142:

Respondents have no specific response.

143. Grail negotiated its agreement with NHS before Illumina acquired Grail. (Freidin (Grail) Tr. 3161; *see also* Qadan (Illumina) Tr. 4263-64 (testifying that Grail accomplished its partnership with NHS as an independent company without assistance from Illumina)).

Response to Finding No. 143:

The proposed finding is incomplete and misleading. Dr. Febbo testified that while GRAIL's engagement with NHS in the United Kingdom is important, it does not demonstrate that GRAIL can expand internationally just as easily without Illumina: Dr. Febbo explained that the United Kingdom is particularly forward-thinking with genomics, and in Illumina's

experience, success there does not automatically lead to success in other countries. (Febbo (Illumina) Tr. 4354–55.)

144. [redacted] (PX6049 (Grail) at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 144:

Respondents have no specific response.

145. [redacted] (PX4430 (Grail) at 021-022 [redacted] (*in camera*)).

Response to Finding No. 145:

Respondents have no specific response, except to note that Complaint Counsel chose not to discuss PX4430 (Grail) at trial (CC Exhibit Index at 48), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

146. [redacted] (PX6049 (Grail) at 017 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 146:

Respondents have no specific response.

147. [redacted] (RX3134 (National Institutes of Health, U.S. National Library of Medicine, Development Of A Blood Test To Improve The Performance Of Breast Cancer Screening, https://clinicaltrials.gov/ct2/show/NCT03372902) (last visited Jan. 3, 2022); PX6093 (Navathe Rebuttal Report) at 026-29 (*in camera*); PX6049 (Grail) at 020 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 147:

Respondents have no specific response, except to note that Complaint Counsel chose not to discuss RX3134 (Resps.' Exhibit Index at 143) at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

148. [redacted] (PX6049 (Grail) at 019 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 148:

Respondents have no specific response.

149. [redacted] (PX6049 (Grail) at 019 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*) [redacted]).

Response to Finding No. 149:

Respondents have no specific response.

2. [redacted]

150. [redacted] (PX7069 (Bishop (Grail) IHT at 45) (*in camera*)).

Response to Finding No. 150:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

151. [redacted] (PX6049 (Grail) at 013 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 151:

Respondents have no specific response.

152. Diagnostic Aid to Cancer ("DAC") tests are designed to confirm a cancer diagnosis by using genomic data to predict the likelihood that a patient has a particular cancer. (PX7069 (Bishop (Grail) IHT at 69-70); PX7072 (deSouza (Illumina) IHT at 160-61)).

Response to Finding No. 152:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

153. [redacted] (PX6049 (Grail) at 021 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 153:

Respondents have no specific response.

154. [redacted] (PX7069 (Bishop (Grail) IHT at 45) (*in camera*)).

Response to Finding No. 154:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

155. Minimal Residual Disease ("MRD") tests are designed to determine whether remnants of cancer remain in a patient who has been treated for cancer. (PX7092 (Ofman) Dep. at 94); PX7069 (Bishop) IHT at 71-72); PX6049 (Grail) at 013 (Grail, Narrative Response to Second Request, Mar. 1, 2021) [redacted] (*in camera*)).

Response to Finding No. 155:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

156. [redacted] *See* (PX7069 (Bishop (Grail) IHT at 45, 69-72) (*in camera*)).

Response to Finding No. 156:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross-examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

157. [redacted] (PX6049 (Grail) at 013 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 157:

Respondents have no specific response.

158. [redacted] (PX6049 (Grail) at 021 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 158:

Respondents have no specific response.

3. Grail's Intellectual Property Holdings

159. Grail owns or co-owns "more than 170 pending patent applications globally, including more than 90 pending U.S. non-provisional and provisional patent applications." (PX4082 (Grail) at 128 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 159:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this portion of the document (CC Exhibit Index at 36) at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

160. Grail holds "exclusive licenses to more than 230 issued or granted patents and more than 200 pending patent applications globally, including 30 issued U.S. patents." (PX4082 (Grail) at 128 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 160:

Respondents have no specific response except incorporate their responses to CCFF ¶ 159 herein.

161. Grail has entered into five license agreements with the Chinese University of Hong Kong, pursuant to which the Chinese University of Hong Kong granted Grail "exclusive, worldwide intellectual property licenses . . . . for the use of certain nucleic acid sequencing and analysis technologies in all fields under one license and in all field except prenatal diagnostics, prognostications, or analysis under four licenses." (PX4082 (Grail) at 129 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 161:

Respondents have no specific response except incorporate their responses to CCFF ¶ 159 herein.

162. Grail's acquisition of Cirina was a building block for its patent portfolio: "In June 2017, we acquired Hong Kong-based Cirina Limited, founded on the basis of the work of Dr. Dennis Lo, a pioneer in clinical applications of cfDNA sequencing, which provided us with a number of patents and exclusive licenses to patents related to the use of cfDNA for early detection of cancer." (PX4082 (Grail) at 086 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)

Response to Finding No. 162:

The proposed finding is not supported by the cited evidence. The term "building block" is not used in PX4082 (Grail.) Respondents incorporate their responses to CCFF ¶ 159 herein.

163. [redacted] (Freidin (Grail) Tr. 3079) (*in camera*).

Response to Finding No. 163:

Respondents have no specific response.

164. [redacted] (Freidin (Grail) Tr. 3079-80) (*in camera*).

Response to Finding No. 164:

Respondents have no specific response.

165. A May 2017 Grail board presentation stated that the acquisition of Cirina will "[e]nable GRAIL to enforce early IP against GRAIL's competitors." (PX4620 (Grail) at 015 (Project Knight – Board Update II, May 10, 2017)).

Response to Finding No. 165:

The proposed finding is incomplete and misleading to the extent it suggests that a May 2017 GRAIL board presentation from nearly five years ago reflects Illumina's IP enforcement strategy today. Respondents also incorporate their responses to CCFF ¶ 159 herein.

166. The May 2017 Grail board presentation recognized how the Cirina IP acquisition prevents Grail from the burden of an "expensive litigation/expensive settlement if GRAIL were to infringe." (PX4620 (Grail) at 015 (Project Knight – Board Update II, May 10, 2017)).

Response to Finding No. 166:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶ 165 herein.

167. The May 2017 Grail board presentation stated that "Cirina's Intellectual Property assets protect GRAIL's commercial strategy and may constrain competitors." (PX4620 (Grail) at 004 (Project Knight – Board Update II, May 10, 2017)).

Response to Finding No. 167:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶ 165 herein.

168. The Cirina transaction provided Grail with exclusive access to additional IP when Dr. Dennis Lo agreed to join Grail's Scientific Advisory Board, providing Grail with "rights to future Lo IP also going to GRAIL (rather than competitors) – e.g., joining forces with Lo, rather than competing with Lo[.]" (PX4620 (Grail) at 015 (Project Knight – Board Update II, May 10, 2017)).

Response to Finding No. 168:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶ 165 herein.

169. Grail's pre-Cirina IP related to specific barcode techniques. (PX4620 (Grail) at 015 (Project Knight – Board Update II, May 10, 2017)).

Response to Finding No. 169:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶ 165 herein.

4. Grail Prepared To Go Public Prior to Acquisition

170. Grail successfully raised $300 million as part of an "oversubscribed" Series C financing round in May 2018, bringing its total equity raised to more than $1.5 billion. (PX0051 at 001 (Grail Announces $300 Million Raised in Oversubscribed Series C Financing, May 21, 2018)).

Response to Finding No. 170:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. But for the Transaction, GRAIL may have failed to obtain additional financing and may be unable to expand its commercialization efforts with respect to Galleri and DAC and develop additional products. (PFF ¶ 68.7; PX0043 (GRAIL) at 29; Bishop (GRAIL) Tr. 1372; 1418-19; [redacted].) Respondents also incorporate their responses to CCFF ¶ 71 herein.

171. Grail successfully raised $390 million as part of a Series D financing round in May 2020, bringing its total equity raised to more than $1.9 billion. (PX0052 at 001-002 (Grail Announces $390 Million Series D Financing, May 6, 2020)).

Response to Finding No. 171:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. Respondents also incorporate their responses to CCFF ¶¶ 71 and 170 herein.

Respondents also note that Complaint Counsel chose not to discuss PX0052 (GRAIL) at trial (CC Exhibit Index at 1), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

172. [redacted]
(PX4341 (Grail) at 001 (Email from H. Bishop (Grail) to B. Nelson (Grail), Aug. 21, 2020) (*in camera*)).

Response to Finding No. 172:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. But for the Transaction, GRAIL may have failed to obtain additional financing and may be unable to expand its commercialization efforts with respect to Galleri and DAC and develop additional products. (PFF ¶ 68.7; PX0043 (GRAIL) at 29; Bishop (GRAIL) Tr. 1372; 1418-19; [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 71 and 170 herein.

Respondents also note that Complaint Counsel chose not to discuss PX4341 (GRAIL) at trial (CC Exhibit Index at 45), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

173. Matthew Strom, Morgan Stanley Managing Director in the Healthcare Investment Banking Group, testified that Morgan Stanley was "the exclusive financial advisor to Grail" in its acquisition by Illumina. (Strom (Morgan Stanley) Tr. 3473).

Response to Finding No. 173:

Respondents have no specific response.

174. Morgan Stanley was "tasked to help GRAIL negotiate the transaction with Illumina, evaluate potential alternatives, including an IPO, as well as complete due diligence and help the board think about valuation and put the transaction in context from a financial perspective for the board to -- other transactions as well as other alternatives." (Strom (Morgan Stanley) Tr. at 3474).

Response to Finding No. 174:

Respondents have no specific response.

175. Morgan Stanley was the lead underwriter for Grail's planned IPO. (Strom (Morgan Stanley) Tr. 3591-92).

Response to Finding No. 175:

Respondents have no specific response.

176. Morgan Stanley assisted Grail in preparing of its Form S-1, which is the registration statement filed by a private company that enables it to sell public securities. (Strom (Morgan Stanley) Tr. 3591-92).

Response to Finding No. 176:

Respondents have no specific response.

177. Grail filed its S-1 registration statement on September 9, 2020. (PX0053 (Grail Announces Filing of Registration Statement for Proposed Initial Public Offering, Sept. 9, 2020)).

Response to Finding No. 177:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. Respondents incorporate their responses to CCFF ¶ 172 herein. Respondents also note that Complaint Counsel chose not to discuss PX0053 (GRAIL) at trial (CC Exhibit Index at 1), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

a) [redacted]

178. [redacted] (PX4175 (Grail) at 029 (Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*)).

Response to Finding No. 178:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. Respondents incorporate their responses to CCFF ¶ 172 herein. The cited evidence also does not support the proposed finding. [redacted]

179. [redacted] (PX4175 (Grail) at 029 (Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*)).

Response to Finding No. 179:

The proposed finding is incomplete and misleading. [redacted] Moreover, Dr. Ofman and Mr. Freidin testified that even if GRAIL chose the path of an IPO, it would not have helped GRAIL achieve the same scale, expertise and infrastructure as it would with Illumina. (Ofman (GRAIL) Tr. 3283; Freidin (GRAIL) Tr. 3008-10.) Respondents also incorporate their responses to CCFF ¶ 172 herein.

180. [redacted] (Strom (Morgan Stanley) Tr. at 3565 (*in camera*)).

Response to Finding No. 180:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

181. [redacted] (PX4175 (Grail) at 029 (Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*)).

Response to Finding No. 181:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

182. [redacted] (PX4175 (Grail) at 030 (Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*)).

Response to Finding No. 182:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

183. [redacted] (PX4175 (Grail) at 030 (Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*); *see also* PX8463 (Morgan Stanley) at 007 [redacted] (*in camera*) [redacted]).

Response to Finding No. 183:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

184. [redacted] (PX4175 (Grail) at 030 (Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*); *see* PX8463 (Morgan Stanley) at 007 [redacted] (*in camera*) [redacted]

Response to Finding No. 184:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

185. [redacted] (PX4175 (Grail) at 030 (Grail Board Session Meeting Materials, Sept. 10, 2020) (*in camera*); *see also* PX8463 (Morgan Stanley) at 007 [redacted] (*in camera*) [redacted]

Response to Finding No. 185:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

b) [redacted]

186. [redacted] (Strom (Morgan Stanley) Tr. at 3532 (*in camera*)).

Response to Finding No. 186:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

187. [redacted] X4137 (Grail) at 008 (The Roundtable, Sep. 30, 2020); *see also* PX7108 (Freidin (Grail) Dep. at 54-55) (*in camera*)).

Response to Finding No. 187:

The proposed finding is incomplete and misleading. Respondents have no specific response except incorporate their responses to CCFF ¶¶ 172 and 179 herein.

Respondents also note that Complaint Counsel chose not to discuss PX4137 (Grail) at trial (CC Exhibit Index at 38), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

188. Because Illumina and Grail entered into an acquisition agreement on September 20, 2020, Grail never went public. (PX7108 (Freidin (Grail) Dep. at 113)).

Response to Finding No. 188:

Respondents have no specific response.

c) [redacted]

189. [redacted] (Freidin (Grail) Tr. 3072 (*in camera*)).

Response to Finding No. 189:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. But for the Transaction, GRAIL may have failed to obtain additional financing and may be unable to expand its commercialization efforts with respect to Galleri and DAC and develop additional products. (PFF ¶ 68.7; PX0043 (GRAIL) at 29; Bishop (GRAIL) Tr. 1372; 1418-19; [redacted].) Respondents also incorporate their responses to CCFF ¶ 71 herein. [redacted] However, the Transaction has closed.

[redacted]

[redacted]

190. [redacted] (Freidin (Grail) Tr. 3072 (*in camera*)).

Response to Finding No. 190:

The proposed finding is incomplete and misleading. [redacted]

191. [redacted] (Freidin (Grail) Tr. 3073 (*in camera*)).

Response to Finding No. 191:

The proposed finding is incomplete and misleading. [redacted]

192. [redacted] (Freidin (Grail) Tr. 3073-74 (*in camera*)).

Response to Finding No. 192:

Respondents do not have a specific response, except to note that [redacted]

193. Grail did not approach any other life sciences companies that have successfully obtained PMA approval for IVD tests about partnering or merging with Grail. (Ofman (Grail) Tr. 3447-49).

Response to Finding No. 193:

Respondents have no specific response, except to note that Illumina's regulatory team has extensive expertise obtaining FDA clearances and approvals for diagnostic tests. Illumina has successfully obtained 510(k) clearance for a cystic fibrosis test and a PMA in cancer treatment selection for an extended RAS panel called Praxis. (Febbo (Illumina) Tr. 4338–43.) [redacted] Illumina also has experience bringing its next-generation sequencing products through FDA clearance. (Febbo (Illumina) Tr. 4338–39.)

194. [redacted] (Strom (Morgan Stanley) Tr. at 3573-75 (*in camera*); PX8472 (Morgan Stanley) at 028 [redacted] (*in camera*)).

Response to Finding No. 194:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. But for the Transaction, GRAIL may have failed to obtain additional financing and may be unable to expand its commercialization efforts with respect to Galleri and DAC and develop additional products. (PFF ¶ 68.7; PX0043 (GRAIL) at 29; Bishop (GRAIL) Tr. 1372; 1418-19; [redacted].) None of these alternative companies in the proposed finding made an offer for GRAIL. Mr. Freidin testified that [redacted] this is because [redacted] (Fredin (GRAIL) Tr. 3073–74.) [redacted] (Freidin (GRAIL) Tr. 3072–

73.) [redacted] (Freidin (GRAIL) Tr. 3073.)

195. If the Illumina-Grail transaction is unwound, investors have expressed interest "in making a more significant investment in GRAIL should [GRAIL] choose to access the capital markets." (*See, e.g.,* PX4468 (Grail) at 002 (Email from N. Cornell, Bluewater Life Science Advisors, to J. Craighead, Grail, Apr. 13, 2021)).

Response to Finding No. 195:

The proposed finding is based on hearsay and should be accorded little weight.

Respondents also incorporate their responses to CCFF ¶¶ 172 and 179 herein.

Respondents also note that Complaint Counsel chose not to discuss PX4468 (Grail) at trial (CC Exhibit Index at 49), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

196. Grail's VP of Investor Relations, John Craighead, told investors that Grail will be "well positioned for any outcome" with the Illumina transaction. (PX4468 (Grail) at 001 (Email from J. Craighead, Grail, to N. Cornell, Bluewater Life Science Advisors, Apr. 16, 2021)); *see* PX4467 (Grail) at 002 (Text message exchange between V. Demas, Grail, and H. Kiarie, Grail, Mar. 31, 2021) (noting that "we can still IPO" if the Proposed Acquisition falls through).

Response to Finding No. 196:

The proposed finding is incomplete and misleading. Complaint Counsel cites no evidence that Vasiliki ("Vicky") Demas, former Platform Product Manager and New Products Program Lead at GRAIL, had any involvement in the IPO process at GRAIL. Moreover, PX4467 (Grail) is dated the day after Complaint Counsel filed suit in federal court and before the Commission. Other portions of the message exchange which show how Ms. Demas was "disappointed" and "hope[d] [that] it w[ould] all work out in the ned [sic]". ((PX4467 (GRAIL) at 001.) She writes: "I think there is still a chance that logic and desire to help patients will

prevail[,] but if FTC really messes this up, I am sure that we can still IPO". (PX4467 (GRAIL) at 002.) Respondents also incorporate their responses to CCFF ¶¶ 172 and 179 herein.

Respondents also note that Complaint Counsel chose not to discuss PX4467 (GRAIL) and PX4468 (Grail) at trial (CC Exhibit Index at 49), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

C. THE TRANSACTION

197. On September 20, 2020, Illumina entered into an Agreement and Plan of Merger to acquire Grail for total consideration of $8 billion, consisting of $3.5 billion in cash and $4.5 billion in shares of Illumina common stock, subject to a collar. (PX0061 at 005 (Illumina 2020 Form 10-K); *see also* Bishop (Grail) Tr. 1353 (stating that the total transaction value for the Grail acquisition was approximately $8 billion "[a]s measured by the common accounting standards"); deSouza (Illumina) Tr. 2215; PX5048 at 002-03 (Grail, Notification and Report Form, Oct. 9, 2020) (stating that on September 20, 2020, Respondents entered into an Agreement and Plan of Merger for Illumina to acquire all of Grail's outstanding voting shares, for a combination of cash and stock consideration valued at about $7.1 billion)).

Response to Finding No. 197:

Respondents have no specific response.

198. [redacted] (Freidin (Grail) Tr. 3070-71 (*in camera*)).

Response to Finding No. 198:

The proposed finding is misleading to the extent it suggests that GRAIL would be successful without the Transaction. But for the Transaction, GRAIL may have failed to obtain additional financing and may be unable to expand its commercialization efforts with respect to Galleri and DAC and develop additional products. (PFF ¶ 68.7; PX0043 (GRAIL) at 29; Bishop (GRAIL) Tr. 1372; 1418-19; [redacted].) Respondents also incorporate their responses to CCFF ¶¶ 172 and 179 herein.

199. [redacted] (Freidin (Grail) Tr. 3071 (*in camera*)).

Response to Finding No. 199:

Respondents have no specific response.

200. Illumina consummated its acquisition of Grail on August 18, 2021. (deSouza (Illumina) Tr. 2234; Bishop (Grail) Tr. 1353; Berry (Illumina) Tr. 857).

Response to Finding No. 200:

Respondents have no specific response.

201. Illumina filed an 8-K report with the Securities and Exchange Commission as a result of consummating the acquisition of Grail. (deSouza (Illumina) Tr. 2234).

Response to Finding No. 201:

Respondents have no specific response.

202. Illumina has now paid Grail the $8 billion consideration owed under the merger agreement. (deSouza (Illumina) Tr. 2239)

Response to Finding No. 202:

Respondents have no specific response.

203. [redacted] (deSouza (Illumina) Tr. 2282 (*in camera*)).

Response to Finding No. 203:

Respondents have no specific response.

204. "Once the deal closed," Illumina eliminated patent-related royalties that Grail previously paid to Illumina. (deSouza (Illumina) Tr. 2358-59).

Response to Finding No. 204:

The proposed finding is incomplete and misleading and not supported by the cited evidence insofar as it suggests that GRAIL paid "patent-related" royalties to Illumina prior to the Transaction. The royalties GRAIL owed Illumina were not related to any patent rights; rather, [redacted]

[redacted]

Mr. deSouza's cited testimony does not indicate that the royalties GRAIL owed to Illumina were "patent-related" and his earlier testimony indicates that the royalty was based on GRAIL's future sales. (deSouza (Illumina) Tr. 2334 ("[B]efore [Illumina] signed the agreement or the intent to acquire [GRAIL], we were an -- a part-owner, so an equity investor in GRAIL, and they were a customer of ours, and we had an arrangement where we received a royalty on tests they would sell in the future"..)) [redacted]; RX6000 (Carlton Trial Dep. at 68–69); PX7073 (Aravanis (Illumina) IHT at 27.))

205. When Illumina completed its acquisition of Grail, Illumina immediately eliminated the royalty that Grail had been required to pay on all future sales. (Aravanis (Illumina) Tr. 1959).

Response to Finding No. 205:

Respondents have no specific response except to note that the [redacted] Respondents also incorporate their responses to CCFF ¶ 204.

1. [redacted]

206. [redacted] (PX2488 (Illumina) at 009 [redacted] (*in camera*)).

Response to Finding No. 206:

The proposed finding is misleading and incomplete. Those same documents show that the downstream profit pool shifts and estimated revenue projected from clinical testing services will not reach the levels described in the proposed finding until 2035, and the evidence uniformly shows that Illumina's NGS business will remain its core business and will account for most of its profits for "many, many years". (PFF ¶¶ 869–872 (deSouza (Illumina) Tr. 2382–83, 2386.))) Further, Complaint Counsel overlooks the significance of these projections; as [redacted] (PFF at ¶ 910.) [redacted] Respondents further incorporate their responses to CCFF ¶ 3107 herein.

207. Jay Flatley, Chairman of the Illumina Board at the time of the acquisition, testified that increasing shareholder value was one reason the Board approved the acquisition. (Flatley (Illumina) Tr. 4095-96). Mr. Flatley expects the acquisition to increase both revenue and profits once the Galleri test "got into the marketplace." (Flatley (Illumina) Tr. 4096-97).

Response to Finding No. 207:

Respondents have no specific response except to note that only "after 2026" will Illumina get "its first dollar of profit" from GRAIL. (PFF ¶¶ 871–72 (deSouza (Illumina) Tr. 2382–83.)) Respondents further incorporate their responses to CCFF ¶¶ 206, 3107 herein.

208. [redacted] (PX2316 (Illumina) at 008 (Email from J. Goswami, Illumina, to A. Qadan et al., Illumina, attaching "Board of Directors M&A Landscape," Apr. 29, 2020) (*in camera*).

Response to Finding No. 208:

The proposed finding is incomplete and misleading. Nothing in the cited source supports the proposition that [redacted] (*See* PX2465 (Illumina) at 12 [redacted]

209. Internal Illumina documents indicate that Illumina intends to use its acquisition of Grail to [redacted] (PX2465 (Illumina) at 003 [redacted] (*in camera*)).

Response to Finding No. 209:

The proposed finding is misleading. Dr. Goswami provided the following context when shown this slide:

[redacted]

210. Illumina's Strategic Plan for 2021-2025 declares, [redacted]

(PX2169 (Illumina) at 045 (Illumina, "Illumina Strategic Plan 2021-2025, Board Discussion Document," Oct. 23, 2020) (*in camera*)).

Response to Finding No. 210:

The proposed finding is misleading. As Mr. deSouza explained, "the testing business for many, many years will not have a profit, will lose business, and that's very typical in clinical testing businesses". (PFF ¶ 869 (deSouza (Illumina) Tr. 2386.)) [redacted] It is only "after 2026" that Illumina gets "its first dollar of profit" from GRAIL, but "it's not until 2030 where we've recouped the losses we've made in GRAIL", and therefore, "about the next decade even, we really need and are really fueled by the profit pools associated with our sequencers". (PFF ¶ 871.)

[redacted]

Respondents further incorporate their responses to CCFF ¶¶ 206, 3107 herein.

211. According to Illumina's internal documents, [redacted] X2465 (Illumina) at 003 [redacted] (*in camera*)).

Response to Finding No. 211:

The proposed finding is misleading to the extent it suggests that [redacted] Illumina has already organically developed its own clinical testing applications through its therapy selection test, TSO-500. (PFF ¶ 964.) Respondents also note that Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses at trial (CC Exhibit Index at 20), nor did it elicit any testimony regarding the specific language it relies upon in the source cited when it showed the exhibit to Dr. Goswami at his deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it (PX7087 (Goswami (Illumina) Dep. at 140–56.)

Respondents further incorporate their responses to CCFF ¶¶ 206, 3107 herein.

212. [redacted] (PX2488 (Illumina) at 009 [redacted] (*in camera*)).

Response to Finding No. 212:

Respondents have no specific response except to note that [redacted] (PFF ¶ 849.1.) Because Illumina's "core business is to sell sequencers and consumables", its "strong incentive is to continue to be successful selling sequencers and consumables into the market segments that we serve". (PFF ¶ 849.1.)

Respondents further incorporate their responses to CCFF ¶¶ 206, 3107 herein.

213. [redacted] (PX2488 (Illumina) at 009 [redacted] (*in camera*)).

Response to Finding No. 213:

Respondents have no specific response except to note that NGS costs will be a very small percentage of MCED test revenues and margins in the future. (PFF ¶ 884.) Respondents further incorporate their responses to CCFF ¶¶ 206, 3107 herein.

214. [redacted] (PX2464 (Illumina) at 025, 036 (Illumina, April BoD M&A Strategy Presentation, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 214:

The proposed finding is incomplete and misleading and not supported by the cited evidence insofar as it suggests [redacted]

[redacted]

The proposed finding is also incomplete and misleading and not supported by the cited evidence insofar as it suggests Illumina was deciding between acquiring GRAIL and other companies developing screening tests. [redacted]

Further, Illumina did not consider purchasing any other putative "MCED test" developers, as Complaint Counsel refers to them. (deSouza (Illumina) Tr. 2335.) Illumina "did an exhaustive study of the market, and we had been keeping up with the market since we were the ones who . . . . came up with GRAIL, and we still don't see anybody in the market that has an offering that's like GRAIL's in terms of looking at 50 cancers, identifying the tissue of origin, and so there really isn't anybody else that we felt, you know, was like GRAIL". (deSouza (Illumina) Tr. 2335.)

2. [redacted]

215. [redacted] (PX2055 (Illumina) at 005 (Grail Integration Planning Update, Oct. 22, 2020) (*in camera*); *see also* PX2008 (Illumina) at 015 (Board of Directors Strategic Plan, Nov. 4, 2020) (*in camera*) [redacted] PX5032 (Illumina)

at 010 [redacted]).

Response to Finding No. 215:

The proposed finding is incomplete and misleading as well as contradicted by the weight of the evidence.

First, as a general matter, Respondents have offered unrefuted evidence that the Transaction will lead to merger-specific efficiencies, including (1) saving of thousands of lives, (2) acceleration of market access to Galleri, (3) R&D efficiencies, (4) reduction of GRAIL's royalty burden, (5) elimination of double marginalization and (6) supply chain efficiencies, operational efficiencies and acceleration of international expansion of Galleri. (PFF ¶ 1106.) In addition to the testimony of Illumina and GRAIL executives, [redacted]

Second, with respect to the language cited in PX2055, [redacted]

[redacted]

[redacted] Respondents note that Complaint Counsel chose not to discuss PX2008 or PX5032 at trial, (CC Exhibit Index at 4, 55), or in any deposition, and therefore, the documents should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from them.

216. [redacted] (PX2464 (Illumina) at 031, 039 (April BoD M&A Strategy Presentation, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 216:

The proposed finding is incomplete and misleading. [redacted]

[redacted]

Further, Respondents incorporate their responses to CCFF ¶ 215 herein.

217. In a September 2020 Illumina FAQ document relating to Illumina's acquisition of Grail, an "Employee FAQ" section stated: "We do not expect material synergies to the transaction." (PX2575 (Illumina) at 013 (E-mail from T. Friedman, Illumina, to J. Cunningham, Illumina, Sept. 29, 2020)).

Response to Finding No. 217:

Respondents incorporate their responses to CCFF ¶ 215 herein. Further, Respondents note that Complaint Counsel did not elicit any testimony regarding the specific language it relies upon in the source cited when it showed PX2575 to Mr. deSouza at trial (deSouza (Illumina) Tr. 2217-23) and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

3. The Parties Closed the Transaction Despite the Possibilities of Fines, Reputation Consequences and Other Government Enforcement Action

218. Illumina closed the transaction despite knowing that doing so could result in the imposition of "fines, penalties, remedies or restrictions" by government or regulatory authorities. (PX0378 at 005 (Illumina Form 8-K, Aug. 18, 2021)).

Response to Finding No. 218:

Respondents have no specific response.

219. Illumina disclosed that consummating the transaction when it did could lead to "other adverse consequences to, among other things, its reputation[.]" (PX0378 at 005 (Illumina Form 8-K, Aug. 18, 2021); *see also* deSouza (Illumina) Tr. 2236-37 (stating that Illumina decided to close the transaction despite the potential risk to its reputation)).

Response to Finding No. 219:

Respondents have no specific response except to note that Mr. deSouza explained that, although there is *a risk* of reputational harm that has to be disclosed, Illumina believes that "once people hear what we did . . . . there won't be damage to our reputation" given the reasons for closing and the impact of the Transaction on cancer care and saving lives. (PFF ¶ 865.) In other words, Mr. deSouza, and Illumina, believe that closing the Transaction will *in fact* have a positive impact on Illumina's reputation. (PFF ¶ 865.1.) Also, there is nothing in the SEC disclosure that suggests that closing the Transaction would harm Illumina's reputation for lowering costs and innovating to encourage development on its platforms—and it is *that* reputation that an attempted foreclosure strategy would undoubtedly injure. (PFF ¶ 865.2.)

220. Illumina acknowledged in an SEC filing that:

> The European Commission had previously notified Illumina asserting that as a result of the Referral [of the transaction for European Union merger review under Article 22(1) of Council Regulation (EC) No 139/2004], pursuant to Article 22(4) of the EU Merger Regulation, Illumina was prohibited from implementing the Acquisition (i) until the European Commission clears the Acquisition under the EU Merger Regulation or (ii) until the European Commission refuses the Referral, and therefore the European Commission's acceptance of the Referral continued the purported standstill on the completion of the Acquisition until such time as the European Commission completes its review and approves the Acquisition.

(PX0378 at 004 (Illumina Form 8-K, Aug. 18, 2021)).

Response to Finding No. 220:

Respondents have no specific response.

221. Illumina understood that by consummating the transaction during the pendency of the European Commission's review, it would "likely" cause the European Commission to seek to fine Illumina:

> As a result of Illumina's decision to proceed with the completion of the Acquisition during the pendency of the European Commission's review, the European Commission will likely seek to impose a fine on Illumina pursuant to Article 14(2)(b) of the EU Merger Regulation of up to 10% of Illumina's consolidated annual turnover.

(PX0378 at 005 (Illumina Form 8-K, Aug. 18, 2021); *see also* deSouza (Illumina) Tr. 2235 (stating that Illumina decided to close the transaction despite the potential fines from the European Commission)).

Response to Finding No. 221:

Respondents have no specific response except to note that the disclosure also says that "Illumina intends to vigorously defend against any such fines, penalties, remedies or restrictions". (PX0378 (Illumina) at 5.) In addition, Mr. deSouza testified that Illumina does not believe that any such fines, penalties, remedies or restrictions "would be appropriate". (deSouza (Illumina) Tr. 2236.)

222. When Respondents closed the Acquisition despite a standstill order from the European Commission, Respondents promised to hold Grail separate from Illumina, meaning that Grail "will be run as a separate entity, and where it engages with Illumina, it will do so on an arm's length basis." (deSouza (Illumina) Tr. 2463; *see also* PX2851 (Illumina) (Hold-Separate Commitments, Aug. 18, 2021) (*in camera*) [redacted] (*in camera*)).

Response to Finding No. 222:

Respondents have no specific response.

223. [redacted] (PX2851 (Illumina) at 001 (Hold-Separate Commitments) (*in camera*)).

Response to Finding No. 223:

Respondents have no specific response.

224. Illumina publicly described its hold-separate commitment as "voluntarily offered." (PX0378 at 004 (Illumina Form 8-K, Aug. 18, 2021)).

Response to Finding No. 224:

Respondents have no specific response.

225. [redacted] (PX2851 (Illumina) at 002 (Hold-Separate Commitments) (*in camera*); *see also* PX0378 at 004 (Illumina Form 8-K, Aug. 18, 2021)).

Response to Finding No. 225:

Respondents have no specific response.

226. On October 14, 2021, Illumina appointed its Chief Operations Officer, Bob Ragusa, as Chief Executive Offer of Grail. (PX0405, (Illumina Appoints Ragusa as Chief Executive Officer (CEO) of GRAIL, Oct. 14, 2021, https://www.illumina.com/company/news-center/press-releases/press-release-details.html?newsid=2e72344d-ceaf-4453-868a-423516a4ba49 (last visited Oct. 25, 2021)).

Response to Finding No. 226:

Respondents have no specific response.

II. INDUSTRY BACKGROUND

A. CANCER IS THE SECOND LEADING CAUSE OF DEATH IN THE UNITED STATES

227. Cancer is the second-leading cause of death in the United States. (PX4095 (Grail) at 005 (A New War on Cancer, Investor Presentation, July 2020); Nolan (Freenome) Tr. 2724; Conroy (Exact) Tr. 1735; *see* RX3030 at 003 (American Cancer Society, Cancer Facts & Figures 2019) (ACS estimated that over 1.7 million new cancer cases would be diagnosed in 2019 in the United States)).

Response to Finding No. 227:

Respondents have no specific response.

228. Approximately 630,000 Americans die from cancer each year. (PX4095 (Grail) at 005 (New War on Cancer, Investor Presentation, July 2020)).

Response to Finding No. 228:

Respondents have no specific response.

229. [redacted] (PX8317 (Exact) at 004 [redacted] (*in camera*)).

Response to Finding No. 229:

[redacted]

230. Cancer treatment costs the United States $150 billion annually. (PX4095 (Grail) at 005 (A New War on Cancer, Investor Presentation, July 2020)).

Response to Finding No. 230:

Respondents have no specific response.

B. CURRENT CANCER SCREENING METHODS

1. Cancer Screening Methods Currently Exist for Only a Handful of Cancer Types

231. Single-cancer screening tests are used to identify five cancer types in the United States: breast, cervical, colon, lung, and prostate. (Bishop (Grail) Tr. 1374; Ofman (Grail) Tr. 3308; Abrams Tr. at 3729).

Response to Finding No. 231:

Respondents have no specific response.

232. "Standard of care" screening methods refer to existing cancer screening methods approved and accepted in the medical field. (Lengauer (Third Rock Ventures) Tr. 168).

Response to Finding No. 232:

Respondents have no specific response.

233. [redacted] (PX7040 (Getty

(Guardant) IHT at 26-27); PX5027 (Illumina) at 018 [redacted] (*in camera*) [redacted]).

Response to Finding No. 233:

Respondents have no specific response except to note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

234. [redacted] (Abrams Tr. at 3616-17; Conroy (Exact) Tr. 1736-37; PX7040 (Getty (Guardant) IHT at 26-27); PX5027 (Illumina) at 018 [redacted] (*in camera*) [redacted]).

Response to Finding No. 234:

Respondents have no specific response except to note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

235. The USPSTF also recommends that clinicians offer prostate cancer screening, in the form of a prostate-specific antigen (PSA) test, to a limited set of patients. (RX3729, USPSTF, Final Recommendation Statement – Prostate Cancer: Screening, May 8, 2018 (https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/prostate-cancer-screening (last visited July 16, 2021)).

Response to Finding No. 235:

Respondents have no specific response.

236. The ACS also issues cancer screening guidelines in collaboration with cancer research experts for various cancers including breast, colorectal, lung, cervix, and prostate cancer. (Cance (American Cancer Society) Tr. 605-06).

Response to Finding No. 236:

Respondents have no specific response.

237. Existing screening methods are highly effective at detecting these cancers in patients. (*See, e.g.*, PX2165 (Illumina) at 011 (Exact Sciences Q3 2020 Earnings Call, Oct. 27, 2020)).

Response to Finding No. 237:

Respondents have no specific response except to note that the cited source also observes that "the important aspect of a multi-cancer screening test is that you are for the first time ever able to screen for cancers *that today aren't screened for*". (PX2165 (Illumina) at 011 (Exact Sciences Q3 2020 Earnings Call, Oct.. 27, 2020) (emphasis added).) Respondents also note that while the features of the existing screening methods are effective for single-cancer screening tests, these same characteristics are unlikely to be effective as part of a multi-cancer screening test. For example, existing single cancer screening tests typically have very high sensitivity rates and correspondingly lower specificity/higher false positive rates. (PFF ¶ 180.1 (Cote Expert Report ¶ 95).) By contrast, a test developer of a multi-cancer screening test must focus on attaining a very high specificity rate—leading to a low false positive rate—and a high positive predictive value, which will often result in correspondingly lower sensitivity rates. (PFF ¶ 173, 181 (Cote Tr. 3778-81; RX3869 (Cote Expert Report) ¶ 95).) Further, Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 10), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

238. [redacted] (PX5024 (Illumina) at 022 (Board of Directors M&A Landscape Presentation, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 238:

Respondents have no specific response, except note that the cited [redacted]

[redacted] (PX5024 (Illumina) at 022 (Board of Directors M&A Landscape Presentation, Apr. 28, 2020 (*in camera*) (emphasis added).) Further, Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 10), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

239. [redacted] (PX5024 (Illumina) at 022 (Board of Directors M&A Landscape Presentation, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 239:

Respondents have no specific response.

240. Radiologic tests are used to screen for breast cancer and lung cancer. (Cance (American Cancer Society) Tr. 606).

Response to Finding No. 240:

Respondents have no specific response.

241. Pap smears and examinations of the human papilloma virus DNA in blood screen for cervical cancer. (Cance (American Cancer Society) Tr. 606).

Response to Finding No. 241:

Respondents have no specific response.

242. Examinations of prostate-specific antigen levels screen for prostate cancer. (Cance (American Cancer Society) Tr. 606).

Response to Finding No. 242:

Respondents have no specific response.

243. Colonoscopy is the gold standard for colon cancer screening. (Conroy (Exact) Tr. 1547).

Response to Finding No. 243:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 237 herein.

244. Exact's Cologuard test has also been approved by the FDA as a screening test for colon cancer. (Conroy (Exact) Tr. 1547).

Response to Finding No. 244:

Respondents have no specific response except to note that Exact's Cologuard test uses PCR technology as a platform. (PFF ¶ 1743.)

245. [redacted] (Conroy (Exact) Tr. 1736-37; Nolan (Freenome) Tr. 2725; PX2009 (Illumina) at 017 (April BoD M&A Strategy Presentation, Apr. 28, 2020) (*in camera*); PX7040 (Getty (Guardant) IHT at 32)).

Response to Finding No. 245:

Respondents have no specific response.

246. [redacted] (PX5027 (Illumina) at 018 (*in camera*) [redacted] PX7040 (Getty (Guardant) IHT at 28 (65 percent compliance with colorectal screening recommendations))).

Response to Finding No. 246:

Respondents have no specific response.

247. An Illumina Board document cites Grail for the proposition that [redacted] (PX2009 (Illumina) at 017 (April BoD M&A Strategy Presentation, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 247:

Respondents have no specific response.

2. Most Cancers Detected at Late Stages, Leading to Poor Outcomes

248. The American Cancer Society's Chief Medical and Scientific Officer, Dr. William Cance, testified that "[t]oday, there is no screening test available for all but five cancers, meaning that the vast majority of cancers are often diagnosed at very advanced stages of disease when treatment options are limited." (PX8398 (Cance (American Cancer Society) Decl. ¶ 6)).

Response to Finding No. 248:

Respondents have no specific response except to note that the cited reference—Dr. Cance's declaration—was drafted by Complaint Counsel. (Cance (American Cancer Society) Tr. 628.)

249. The American Cancer Society describes cancer staging as follows: "Stage describes the extent or spread of cancer at the time of diagnosis." (RX3030 at 011 (American Cancer Society, Cancer Facts & Figures 2019)).

Response to Finding No. 249:

Respondents have no specific response.

250. Stages of cancer range from 0 to Stage IV. (RX3030 at 011 (American Cancer Society, Cancer Facts & Figures 2019)).

Response to Finding No. 250:

Respondents have no specific response except to note that some cancers do not have a Stage IV and other cancers have alternative staging systems. (RX3030 at 011 (American Cancer Society, Cancer Facts & Figures 2019).) Respondents also incorporate their responses to CCFF ¶¶ 254 and 6210 herein.

251. Stage 0 correlates with "in situ" cancer, which means that "cancer cells are present only in the layer of cells where they developed and have not spread." (RX3030 at 011 (American Cancer Society, Cancer Facts & Figures 2019) (further explaining that "[i]f cancer cells have penetrated beyond the original layer of tissue, the cancer has become invasive and is categorized as local, regional, or distant based on the extent of the spread); RX3500 at 003 (Cancer Staging – National Cancer Institute, https://www.cancer.gov/about-cancer/diagnosis-staging/staging (last visited July 14, 2021) ("Stage 0 [means] [a]bnormal cells are present but have not spread to nearby tissue.")).

Response to Finding No. 251:

Respondents have no specific response.

252. Stage I cancer is "early" stage cancer and stage IV connotes "the most advanced disease." (RX3030 at 011 (American Cancer Society, Cancer Facts & Figures 2019)).

Response to Finding No. 252:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 250 herein.

253. From Stage 0 to Stage IV, "[t]he higher the number, the larger the cancer tumor and the more it has spread into nearby tissues[,]" until Stage IV, which means the "cancer has spread to distant parts of the body." (RX3500 at 003 (Cancer Staging – National Cancer Institute, https://www.cancer.gov/about-cancer/diagnosis-staging/staging (last visited July 14, 2021)).

Response to Finding No. 253:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 250 herein.

254. [redacted] (PX4172 (Grail) at 050 (Grail Board of Directors Meeting, Nov. 21, 2019) (*in camera*)).

Response to Finding No. 254:

The proposed finding is incomplete and misleading to the extent that it suggests that GRAIL refers to both Stages III and IV as "late stage" cancer in all circumstances. The cited Board of Directors presentation [redacted] (PX4172 (Grail) at 050 (Grail Board of Directors Meeting, Nov. 21, 2019) (*in camera*).) Thus, the presentation [redacted] (PX4172 (Grail) at 050 (Grail Board of Directors Meeting, Nov. 21, 2019 (in camera)).) Respondents also note that not all stage three cancers are the same: each stage has

subdivisions that "have prognostic importance", and thus "even within a stage, . . . the patients can be subdivided". (Cote Tr. 3732.)

Further, Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 39), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also refer to PFF ¶¶ 89-89.5.

255. By the time symptoms appear, cancer may already have grown and spread. (Conroy (Exact) Tr. 1736).

Response to Finding No. 255:

Respondents have no specific response.

256. Most cancers are discovered after they have grown and spread in a person's body. (Nolan (Freenome) Tr. 2724-25).

Response to Finding No. 256:

Respondents have no specific response.

257. A majority of cancers are discovered too late. (Conroy (Exact) Tr. 1736).

Response to Finding No. 257:

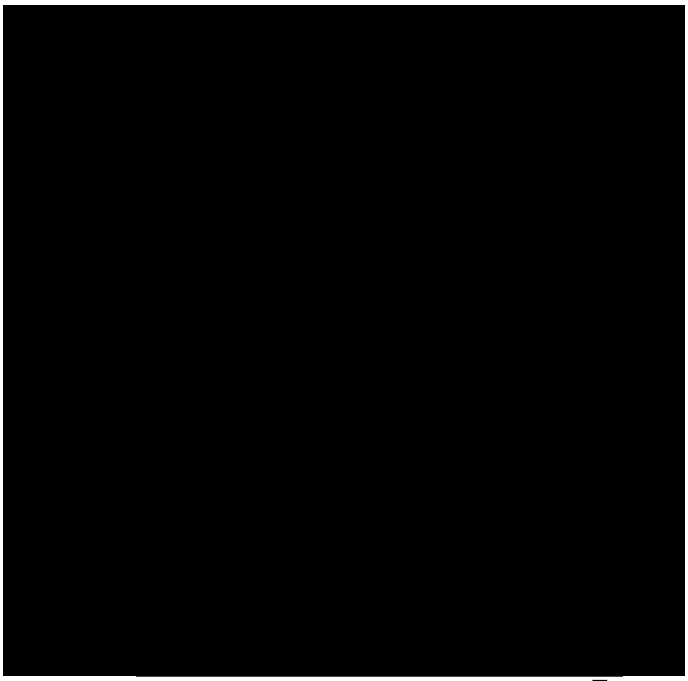
Respondents have no specific response.

258. Over half of cancers in the United States are diagnosed at Stages III and IV. (PX2005 (Illumina) at 002 (ScreenCo – Early Cancer Detection on a Global Scale)).

Response to Finding No. 258:

Respondents have no specific response.

259. [redacted]



(PX5027 (Illumina) at 019 (Board of Directors Project Valor Presentation, Aug. 3, 2020) (*in camera*)).

Response to Finding No. 259:

The proposed finding is incomplete and misleading to the extent that it suggests that Respondents also note that the cited presentation also observes that (PX5027 (Illumina) at 019 (Board of Directors Project Valor Presentation, Aug. 3, 2020) (*in camera*). The cited presentation also states that (PX5027 (Illumina) at 019 (Board of Directors Project Valor Presentation, Aug. 3, 2020) (*in camera*).)

260. [redacted] (PX5024 (Illumina) at 022 ((Board of Directors M&A Landscape Presentation, Apr. 28, 2020) (*in camera*); PX8317 (Exact) at 020 [redacted] (*in camera*)).

Response to Finding No. 260:

Respondents have no specific response except to note that the cited presentation observes [redacted] (PX8317 (Exact) at 020 [redacted] (*in camera*).)

261. Detection of cancer after it has progressed leads to high mortality rates. (PX2005 (Illumina) at 003 (ScreenCo – Early Cancer Detection on a Global Scale); Conroy (Exact) Tr. 1736 (explaining that by detecting cancer earlier, the odds of survival increase significantly)).

Response to Finding No. 261:

Respondents have no specific response except to note that all agree that accelerating the adoption of a cancer screening test with save lives, the unrefuted evidence shows that reuniting Illumina and GRAIL will accelerate the adoption of the Galleri test, and that there is no evidence that any putative MCED test developer will launch in the foreseeable future a cancer screening test that is a close substitute to the Galleri test. (PFF ¶¶ 476 (RX3869 (Cote Expert Report) ¶ 203), 1117.2-17.3 (*see e.g.* Conroy (Exact/Thrive) Tr. 1739; Chahine (Helio) Tr. 1132–33; [redacted] Fiedler (FMI) Tr. 4474; deSouza (Illumina) Tr. 2411; [redacted])

262. Patients that have cancer detected at an early stage by cancer screening tests benefit dramatically relative to patients that have cancer diagnosed at later stages. (Cance (American Cancer Society) Tr. 626).

Response to Finding No. 262:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein.

263. Treatment and/or surgical costs are typically lower for cancers detected at earlier stages. (Conroy (Exact) Tr. 1736).

Response to Finding No. 263:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein.

264. Dr. Cance described the benefits of screening early: "Screening for cancer increases the chances of detecting certain cancers early, when they might be easier to treat." (PX8398 (Cance (American Cancer Society) Decl. ¶ 5)).

Response to Finding No. 264:

Respondents have no specific response except to note that Dr. Cance also testified that GRAIL is further ahead in its development process than other companies that are developing purported MCED tests, that he is not aware of any other purported MCED test that is commercially available today, that he does not know of other companies detecting the same number of cancers as GRAIL, and that accelerating an early cancer detection test's ability to commercialize at scale is consistent with ACS's mission. (Cance (ACS) Tr. 631–33.) Respondents also incorporate their responses to CCFF ¶¶ 248 and 261 herein.

265. [redacted] (PX8506 (Guardant) at 004 [redacted] (*in camera*)).

Response to Finding No. 265:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein.

266. [redacted] (PX8506 (Guardant) at 004 [redacted] *n camera*)).

Response to Finding No. 266:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein.

C. MCED TESTS ARE POISED TO REVOLUTIONIZE HOW CANCER IS DETECTED AND TREATED

267. "[A]dvancements in blood-based cancer diagnostics present the possibility that some cancers previously undetectable until the late stages of disease could be detected at earlier stages, when treatment has higher likelihood of success." (PX8398 (Cance (American Cancer Society) Decl. ¶ 6)).

Response to Finding No. 267:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 248 and 264 herein.

268. "We always dreamt that it would be great to detect cancer early, because early cancer detection saves lives. Even with the current treatments that we have, if you use the same treatment and you were tested back for cancer earlier, most individuals not only live longer but actually get cured." (Lengauer (Third Rock Ventures) Tr. 273).

Response to Finding No. 268:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein.

269. Guardant's Nitin Sood testified how important MCED test development is: "cancer is a very serious disease, so it has a, you know, life altering impact on people. And we all know that with cancer, the sooner you detect it, the more localized it is, the more treatable it is and could mean the difference between life and death. And, therefore, the broader it's available to the community as a large -- not only in the U.S. but globally, the greater benefit to the world." (PX7090 (Sood (Guardant) Dep. at 111)).

Response to Finding No. 269:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein.

1. The Advantages of Liquid Biopsy

270. "Traditionally, cancers are detected and diagnosed through a tissue biopsy or involve an invasive procedure like a colonoscopy." (PX8398 (Cance (American Cancer Society) Decl. ¶ 5)).

Response to Finding No. 270:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 248 herein.

271. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29) (*in camera*)).

Response to Finding No. 271:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

272. Liquid biopsy tests are a new type of cancer screening test being developed. (Cance (American Cancer Society) Tr. 608).

Response to Finding No. 272:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 264 herein.

273. Prior to liquid biopsies, "in order to get information about a tumor, you were dependent on tissue samples of that tumor such that you could sequence it and then determine what was wrong in that particular individual's genome." (Getty (Guardant) Tr. 2489).

Response to Finding No. 273:

Respondents have no specific response.

274. Dr. Cance of the American Cancer Society testified: "Liquid biopsy offers several advantages over tissue biopsy. Most patients are comfortable and familiar with blood draws. Whereas tissue biopsy requires the surgical removal of tumor tissue for common pathology testing, liquid biopsy extracts similar information from the patient's blood." (PX8398 (Cance (American Cancer Society) Decl. ¶ 8)).

Response to Finding No. 274:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 248 and 264 herein.

275. [redacted] (PX7053 (Fesko (Natera) IHT at 21); PX7068 (Perettie (FMI-Roche) IHT at 21-23) (*in camera*); Cance (American Cancer Society) Tr. 608-09; PX8398 (Cance (American Cancer Society) Decl. ¶ 8)).

Response to Finding No. 275:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 264 herein. Respondents also note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 248 herein.

276. In traditional tissue biopsies, a portion of tissue must be removed—sometimes surgically, which takes more time and is expensive. (PX7053 (Fesko (Natera) IHT at 21); PX7040 (Getty (Guardant) IHT at 51-54); PX8398 (Cance (American Cancer Society) Decl. ¶ 8)).

Response to Finding No. 276:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 248 herein.

277. Liquid biopsy has a quicker turnaround time than a tissue biopsy and can be more accurate. (PX7040 (Getty (Guardant) IHT at 51-54); *see* PX4082 (Grail) at 012 (Email attaching Grail 2020 S-1/Amended, Sept. 2020) (noting that today patients are subjected to "potentially invasive and time-consuming workups" for "non-specific signs")). Natera's Mr. Fesko testified that "there is a lot of heterogeneity within tumors, and so you may get a cleaner and more accurate signal from liquid biopsy than a tumor biopsy." (PX7053 (Fesko (Natera) IHT at 21-22)).

Response to Finding No. 277:

Respondents have no specific response except to note that turnaround time is not a critical feature for early cancer screening tests. (Goswami (Illumina) Tr. 3196–3200 (fast turnaround times are not important for early cancer screening tests); Cote Tr. 151–52 ("But as I pointed out, for the purposes of cancer screening, this was probably the least important attribute because the differences in turnaround time are really not important when it comes to the specific application of -- of a cancer screening application.").) The proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

278. "[L]iquid biopsy relies on blood, a regenerating and readily accessible sample. It can be difficult, and sometimes impractical, to obtain a tissue biopsy for some cancers. With liquid biopsy, however, the patient could readily give more blood for additional testing." (PX8398 (Cance (American Cancer Society) Decl. ¶ 8); *see also* PX2010 (Illumina) at 022 (TruSight Oncology 500 ctDNA: Sales Training) ("Up to 25% of cancer tissue needle biopsies yield insufficient material for clinical sequencing[.]"). [redacted] (PX7068 (Perettie (FMI-Roche) IHT at 22-23) (*in camera*)).

Response to Finding No. 278:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 248 and 264 herein.

279. Natera's Chief Business Officer, Jon Fesko, testified about the benefits of liquid biopsy: "The most obvious advantage is sometimes you cannot get tissue to test. In fact, I think in about a quarter of all lung cancer patients, there is no attainable tissue. So if you can use a liquid biopsy, you can guide a patient to the appropriate treatment without having access to -- you would not have access to that information otherwise." (PX7053 (Fesko (Natera) IHT at 21); PX2010 (Illumina) at 022 (TruSight Oncology 500 ctDNA: Sales Training) ("Up to 25% of cancer tissue needle biopsies yield insufficient material for clinical sequencing[.]")).

Response to Finding No. 279:

Respondents have no specific response.

280. Liquid biopsy is generally safer and less uncomfortable for the patient than other current cancer screening tests. (PX8398 (Cance (American Cancer Society) Decl. ¶ 8); PX7040 (Getty (Guardant) IHT at 51-54); PX7042 (Gao (Singlera) IHT at 25-26); PX7044 (Stahl (Invitae) IHT at 45-46); PX0059 at 010-011 (Guardant 2020 10-K); PX8313 (Guardant) at 002 (Guardant 360 CDx Original PMA Application Attachment 6-1: Background Information on Liquid Biopsy for NGS Tests)).

Response to Finding No. 280:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 248 and 264 herein. Respondents also note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

281. Liquid biopsy tests are easier to repeat over time to observe changes than are tissue biopsy tests. (PX7040 (Getty (Guardant) IHT at 51-54)).

Response to Finding No. 281:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

282. Patient compliance is also a recognized strength for liquid biopsy: "Where liquid biopsy has significant advantages over the current standard of care is simply around compliance most importantly." (PX7040 (Getty (Guardant) IHT at 28)).

Response to Finding No. 282:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

283. [redacted]

Response to Finding No. 283:

Respondents have no specific response.

284. A liquid biopsy test begins with the collection of a blood (or other fluid) sample from the patient and is sent to the receiving laboratory. (PX4035 (Grail) at 016 (PiperJaffray, The 2015 Liquid Biopsy Report, Sep. 2015)).

Response to Finding No. 284:

Respondents have no specific response except to note that liquid biopsy test developers do not use Illumina technology for blood or other fluid sample collection from the patient. (*See* Berry (Illumina) Tr. 814 ("Illumina does not participate specifically in this space" of "isolating the genetic material to be sequenced from [a blood] sample").)

285. Once at the laboratory, the test developer performs a "series of chemistry steps to isolate the DNA from" the patient's blood and prepares it for sequencing in a process known as library preparation. (Bishop (Grail) Tr. 1379-81); *see also* Ofman (Grail) Tr. 3286; Chudova (Guardant) Tr. 1157-59; PX4035 (Grail) at 016 (PiperJaffray, The 2015 Liquid Biopsy Report, Sep. 2015); Rabinowitz (Natera) Tr. 306-09).

Response to Finding No. 285:

Respondents have no specific response except to note that many liquid biopsy tests, including those being developed for multi-cancer screening, do not involve sequencing. (*See, e.g.*, PFF ¶¶ 547-49.2 (StageZero); 554 (Genesys Biolabs); 558 (InterVenn Biosciences).) Respondents also note that liquid biopsy test developers do not use Illumina technology for library preparation. (Berry (Illumina) Tr. 815 (stating that the library preparation step "is very unique and specific to the particular test provider's sort of approach of methodology" and that there are "hundreds and hundreds of library preparation methods" and "potentially hundreds of providers of library preparation technology or kits").)

286. Following library preparation, the test sample is sequenced on a sequencing instrument to identify the order of base pairs in each molecule in the library. (PX0043 at 105-06 (Grail 2020 Form S-1); *see also* Berry (Illumina) Tr. 818-19 (explaining that Illumina sequencers'

primary analysis involves "base calling" by translating florescent signals to bases); Chudova (Guardant) Tr. 1159)).

Response to Finding No. 286:

Respondents have no specific response except to note that many liquid biopsy tests, including those being developed for multi-cancer screening, do not involve sequencing. (*See, e.g.*, PFF ¶¶ 547-549.2 (StageZero); 554 (Genesys Biolabs); 558 (InterVenn Biosciences).)

287. [redacted] (Chudova (Guardant) Tr. 1159; PX7051 (Lengauer (Third Rock Ventures) IHT at 37) (*in camera*); PX7048 (Klausner (Grail) IHT at 119)).

Response to Finding No. 287:

Respondents have no specific response except to note that many liquid biopsy tests, including those being developed for multi-cancer screening, do not involve sequencing. (*See, e.g.*, PFF ¶¶ 547-549.2 (StageZero); 554 (Genesys Biolabs); 558 (InterVenn Biosciences).) Respondents also note that liquid biopsy test developers do not use Illumina technology for bioinformatic and analytical analysis to identify the potential presence of cancer. (Berry (Illumina) Tr. 821 (stating that "secondary analysis and finally tertiary analysis, that tends to be the domain of other providers. And specifically, the tertiary analysis piece tends to correlate very closely with library preparation. And oftentimes the library preparation provider will also provide the data analysis piece because those two pieces of the workflow go hand in hand."); Tr. 815 (stating that the library preparation step "is very unique and specific to the particular test provider's sort of approach of methodology" and that there are "hundreds and hundreds of library preparation methods" and "potentially hundreds of providers of library preparation technology or kits").)

2. Analyte Molecules Present in Blood and Other Body Fluids

a) Cell-Free DNA (cfDNA) and Circulating Tumor DNA (ctDNA)

288. Nearly all cells, including cancer cells, contain deoxyribonucleic acid ("DNA"). (PX0043 at 105 (Grail 2020 Form S-1)).

Response to Finding No. 288:

Respondents have no specific response.

289. DNA is typically double stranded and is made up of complementary pairs of nucleotides, also known as base pairs. (PX0043 at 105 (Grail 2020 Form S-1)).

Response to Finding No. 289:

Respondents have no specific response.

290. Each nucleotide in a DNA molecule contains one of four nitrogenous bases: Cytosine (C), Guanine (G), Adenosine (A), or Thymine (T). (Rabinowitz (Natera) Tr. 304).

Response to Finding No. 290:

Respondents have no specific response.

291. DNA resides in the nucleus of most cells in the form of long (up to hundreds of millions of base pairs) molecules called chromosomes. (PX4035 (Grail) at 010 (PiperJaffray, The 2015 Liquid Biopsy Report, Sept. 2015); PX0043 at 105 (Grail 2020 Form S-1)).

Response to Finding No. 291:

Respondents have no specific response.

292. As cells within the body die, their chromosomes are broken down into small pieces and released into the blood stream as cell-free DNA ("cfDNA"). These cfDNA fragments are typically less than 200 base pairs long. (PX2010 (Illumina) at 008 (TruSight Oncology 500 ctDNA Sales Training); *see also* Chudova (Guardant) Tr. 1157-62; PX8313 (Guardant) at 002 (Guardant 360 CDx Original PMA Application Attachment 6-1: Background Information on Liquid Biopsy for NGS Tests)).

Response to Finding No. 292:

Respondents have no specific response.

293. cfDNA is thus a harmless byproduct of cell death that is present in all human bloodstreams. (PX4035 (Grail) at 010-011 (PiperJaffray, The 2015 Liquid Biopsy Report, Sept. 2015) (noting 50 to 70 million cells die every 24 hours)).

Response to Finding No. 293:

Respondents have no specific response.

294. Cancerous cells go through the same process; when cancer cells die, their chromosomes are broken down into short fragments that are shed into the bloodstream as cfDNA. (PX2010 (Illumina) at 008 (TruSight Oncology 500 ctDNA Sales Training)).

Response to Finding No. 294:

Respondents have no specific response.

295. The subset of cfDNA in the blood that originated from cancerous tumor cells is specifically called circulating tumor DNA ("ctDNA"). ctDNA reflects the genetic makeup of the tumor cells that released it and can differ from normal non-cancerous cfDNA in a variety of ways. (PX2010 (Illumina) at 009 (TruSight Oncology 500 ctDNA Sales Training); PX4035 (Grail) at 011-012 (PiperJaffray, The 2015 Liquid Biopsy Report, Sept. 2015)).

Response to Finding No. 295:

Respondents have no specific response.

296. "ctDNA is a direct measurement of cancer DNA, rather than an indirect measure of the effects of cancer." (PX2005 (Illumina) at 005 (ScreenCo: Early Cancer Detection on a Global Scale, Presentation)).

Response to Finding No. 296:

Respondents have no specific response except to note that there are other direct measurements of cancer including RNA biomarkers (PFF ¶ 110 (Cote Tr. 3733; RX3869 (Cote Expert Report) ¶¶ 48–50)), protein biomarkers (PFF ¶ 115 (Cance (ACS) Tr. 612-13; Cote Tr. 3736-37; RX3869 (Cote Expert Report) ¶¶ 51–53)), metabolomic biomarkers (PFF ¶ 120 (Cance (ACS) Tr. 609-10, 612-13; PX7131 (Cote Dep. at 112); RX3869 (Cote Expert Report) ¶¶ 54–55)), and exosome biomarkers (PFF ¶ 121.1 (RX3745 (Wong, et al., 2019) at 2, 5; PX7131 (Cote Dep. at 111-12); RX3869 (Cote Expert Report) ¶ 56)).

297. Because "most of the DNA in blood is derived from normal cells[,]" there is a very small amount of ctDNA in blood relative to normal cfDNA. (Lengauer (Third Rock Ventures) Tr. 161-62).

Response to Finding No. 297:

Respondents have no specific response.

298. [redacted] (PX2013 (Illumina) at 009 (Science & Technology Committee: Cancer Screening, Apr. 28, 2020) (*in camera*); PX7040 (Getty (Guardant) IHT at 39) ("you truly are finding a needle in a haystack"); PX7042 (Gao (Singlera) IHT at 39-40) (explaining that "the cancer signal [in the blood is] very subtle" at early stages); PX7045 (Chudova (Guardant) IHT at 30-31) (analogizing finding cancer signals to "find[ing] that needle in the haystack").

Response to Finding No. 298:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

299. The level of ctDNA in the blood can vary between individuals and tumor entities, but generally correlates to tumor size and stage, known as the "tumor burden." (Chudova (Guardant) Tr. 1162-64).

Response to Finding No. 299:

Respondents have no specific response.

300. [redacted] PX7111 (Fesko (Natera) Dep. at 29) (*in camera*)).

Response to Finding No. 300:

Respondents have no specific response except to note that some developers of cancer tests do use ctDNA as a biomarker to detect brain cancer. (*See* PX7095 (Hill (Emory Health) Dep. at 92-93 ("In the particular case of what we're doing [single-nucleotide extension], which is very heavily geared toward lung cancer and glial tumors, brain tumors . . . we can detect up to -- we have quantified it at 44 mutations in 10 different genes, and it's 44 very specific mutations.")).)

301. Dr. Chudova, Guardant's SVP of Technology, testified that "the challenges of detecting [ctDNA] become more significant as you go from late-stage disease to early-stage and then into screening." (Chudova (Guardant) Tr. 1163).

Response to Finding No. 301:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 261 herein.

b) Cell-Free RNA (cfRNA)

302. [redacted] (*See* Jamshidi (Grail) Tr. 4055-56 (*in camera*)).

Response to Finding No. 302:

Respondents have no specific response.

303. Nearly all cells, including cancer cells, contain ribonucleic acid ("RNA"). (PX0043 at 105 (Grail 2020 Form S-1)).

Response to Finding No. 303:

Respondents have no specific response.

304. [redacted] (*See* Jamshidi (Grail) Tr. 4055-56 (*in camera*)).

Response to Finding No. 304:

Respondents have no specific response.

305. [redacted] (Bishop (Grail) Tr. 1481-82 (*in camera*)).

Response to Finding No. 305:

Respondents have no specific response.

306. [redacted] (*See, e.g.*, Nolan (Freenome) Tr. 2816 (*in camera*); Jamshidi (Grail) Tr. 4056 (*in camera*) [redacted].

Response to Finding No. 306:

The proposed finding is inaccurate, incomplete and misleading to the extent that it suggests [redacted]

To the contrary, GRAIL has locked version 2 of Galleri, which is the version currently on the market, and is working on an updated version of Galleri that meets current performance standards while sequencing fewer regions of the genome, thereby reducing the cost of the test. (PFF ¶ 1607 (Ofman (GRAIL) Tr. 3301–03).) GRAIL does not plan to incorporate cfRNA as an analyte into the Galleri test. (Ofman (GRAIL) Tr. 3304 (testifying that GRAIL does not have any plans at this time to modify its Galleri test to include other biomarkers, apart from ctDNA).) Respondents also incorporate their responses to CCFF ¶ 312 herein.

c) Proteins

307. [redacted] (*See* Jamshidi (Grail) Tr. 4056-576 (*in camera*)).

Response to Finding No. 307:

The proposed finding is incomplete and misleading to the extent that it suggests that [redacted]. Rather, Dr. Jamshidi testified at trial that [redacted]. (*See* Jamshidi (Grail) Tr. 4056–57 (*in camera*).)

308. [redacted] (*See, e.g.*, Jamshidi (Grail) Tr. 4055-56 (*in camera*)); Nolan (Freenome) Tr. 2711 (*in camera*).

Response to Finding No. 308:

The proposed finding is incomplete and misleading to the extent that it suggests that GRAIL is planning to incorporate protein as an analyte into its Galleri test. To the contrary, GRAIL has locked version 2 of Galleri, which is the version currently on the market, and is working on an updated version of Galleri that meets current performance standards while sequencing fewer regions of the genome, thereby reducing the cost of the test. (PFF ¶ 1607

(Ofman (GRAIL) Tr. 3301–03.) GRAIL does not plan to incorporate proteins as an analyte into the Galleri test. (Ofman (GRAIL) Tr. 3304 (testifying that GRAIL does not have any plans at this time to modify its Galleri test to include other biomarkers apart from ctDNA).) Respondents also incorporate their responses to CCFF ¶ 312 herein.

3. Classes of Biomarkers Utilized for Cancer Detection

309. "A biomarker is some form of signature or fingerprint" that may indicate the existence of cancer. (Lengauer (Third Rock Ventures) Tr. 160).

Response to Finding No. 309:

Respondents have no specific response.

310. Mr. Conroy testified that a "biomarker is either a protein or DNA or RNA or other molecule in the body that is present when cancer is present and not present when cancer is not present." (PX7058 (Conroy (Exact) IHT at 31-32)).

Response to Finding No. 310:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

311. [redacted] (*See, e.g.*, Lengauer (Third Rock Ventures) Tr. 160, 175) (*in camera*); Aravanis (Illumina) Tr. 1880-81)).

Response to Finding No. 311:

Respondents have no specific response.

312. Dr. Cance of the American Cancer Society explained that "[a]t this stage, it is unclear whether analyzing DNA mutations, DNA methylation patterns, chromosomal variants, RNA variations, protein markers, or some other method for detecting cancer in the blood will prove most effective." (PX8398 (Cance (American Cancer Society) Decl. ¶ 11).

Response to Finding No. 312:

The proposed finding is incomplete and misleading to the extent that it suggests that GRAIL has not analyzed which of the classes of biomarkers is most effective, when it designed a

study precisely to determine the most effective way to identify multiple cancers and their signal of origin (PFF ¶¶ 377, 380) and ultimately chose to detect cfDNA shed by cancer cells using a targeted methylation assay (PFF ¶ 345). Respondents also incorporate their responses to CCFF ¶¶ 248 and 264 herein.

a) DNA Mutations (Genomics)

313. Mutations are changes to the sequence of nucleotides in a DNA molecule. (Chudova (Guardant) Tr. 1166-67).

Response to Finding No. 313:

Respondents have no specific response.

314. **There are multiple types of DNA mutations.** An example of a mutation would be a single nucleotide variant, where for example a C nucleotide changes to a T nucleotide. (Chudova (Guardant) Tr. 1166-67)).

Response to Finding No. 314:

Respondents have no specific response.

315. A mutation that occurs in any cell in the body that is not a germ line cell is called a "somatic mutation." (Chudova (Guardant) Tr. 1165.)

Response to Finding No. 315:

Respondents have no specific response.

316. [redacted] (PX7091 (Lengauer (Third Rock Ventures) IHT at 25) (*in camera*)).

Response to Finding No. 316:

The proposed finding is incomplete and misleading to the extent it suggests that there are certain universal cancer mutations or changes that are indicative of cancer. (PFF ¶¶ 308–309 (Cote Tr. 3787; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106).) Respondents also note that the proposed finding relies on IH testimony which Respondents had

no opportunity to cross examine and therefore the cited testimony should be given no weight.

(*See* Resps.' Post-Trial Br. at 275–76.)

317. Interrogating mutations in cfDNA falls within the larger field of study called "genomics." (*See, e.g.*, PX2369 (Illumina) at 014 (Email from J. Godsey, Illumina, to D. Baker et al., Illumina, Apr. 12, 2020, attaching "Recent Advances in Genomics-based Cancer Screening" draft, Apr. 28, 2020) [redacted] (*in camera*)).

Response to Finding No. 317:

Respondents have no specific response.

318. [redacted] (*See, e.g.*, Chudova (Guardant) Tr. 1164-65; Lengauer (Third Rock Ventures) Tr. 175 (*in camera*); Nolan (Freenome) Tr. 2711 (*in camera*); PX7074 (Perettie (FMI-Roche) Dep. at 75) (*in camera*)).

Response to Finding No. 318:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and that Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

b) DNA Methylation (Epigenomics)

319. Methylation is a process that plays a role in regulating gene expression, protein function, and RNA processing. (PX0043 at 106 (Grail 2020 Form S-1); *see also* Ofman (Grail) Tr. 3286 (stating that methylation refers to "little methyl groups that actually attach to the DNA" but do not change the DNA code); Rabinowitz (Natera) Tr. 357-58 (*in camera*)

(explaining that [redacted]).

Response to Finding No. 319:

Respondents have no specific response.

320. "[A] methylated nucleotide undergoes a specific chemical modification that has a chemical mark added to that nucleotide that really changes how the cell functions." For example, "we[] have the same DNA in our heart cells and our liver cells, generally, but [the] heart and liver function very differently. This is achieved partially by different methylation status of different genes, and so they can trigger a different development program or different expression program for the cells based on that chemical mark." (Chudova (Guardant) Tr. 1167).

Response to Finding No. 320:

Respondents have no specific response.

321. Each cell type in the body has a unique methylation pattern, known as its "fingerprint," and modifications to such patterns can result in pronounced changes to cellular function. (PX0043 at 106 (Grail 2020 Form S-1)).

Response to Finding No. 321:

Respondents have no specific response.

322. Methylation changes can lead to genes becoming over-expressed, under-expressed, or silenced altogether, thus resulting in excessive, reduced, or no protein production (respectively). (PX0043 at 106 (Grail 2020 Form S-1)). These deviations from normal cellular function can cause disease. For example, certain methylation modifications can turn off a tumor suppressor gene, leading to tumor growth and cancer. (PX0043 at 106 (Grail 2020 Form S-1)).

Response to Finding No. 322:

Respondents have no specific response.

323. Abnormal methylation patters are a hallmark of cancer, such as where unmethylated C in a nucleotide becomes a methylated C, or vice versa. (Chudova (Guardant) Tr. 1167; Ofman (Grail) Tr. 3286)).

Response to Finding No. 323:

The proposed finding is incomplete and misleading to the extent it suggests that there are certain universal cancer mutations or changes that are indicative of cancer. (PFF ¶¶ 308–309 (Cote Tr. 3787; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106).)

324. [redacted] (Chudova (Guardant) Tr. 1166 ("We call these modifications epigenetic changes or methylation changes."); PX7068 (Perettie (FMI-Roche), IHT at 53-54) (*in camera*)).

Response to Finding No. 324:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

c) DNA Fragmentation (Fragmentomics)

325. [redacted] (Lengauer (Third Rock Ventures) Tr. 175 (*in camera*)).

Response to Finding No. 325:

Respondents have no specific response.

326. [redacted] (*See, e.g.*, Lengauer (Third Rock Ventures) Tr. 175 (*in camera*); Chudova (Guardant) Tr. 1243 (*in camera*)).

Response to Finding No. 326:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 318 herein.

d) DNA Aneuploidy

327. [redacted] (Lengauer (Third Rock Ventures) Tr. 1776 (*in camera*)).

Response to Finding No. 327:

Respondents have no specific response.

328. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 36-37) (*in camera*); *see also* Lengauer (Third Rock Ventures) Tr. 175-76 (*in camera*)).

Response to Finding No. 328:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

329. [redacted] (Lengauer (Third Rock Ventures) Tr. 175-76 (*in camera*)).

Response to Finding No. 329:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 318 herein and to note that the cited testimony indicates that [redacted]. (Lengauer (Third Rock Ventures) Tr. 175–76.).

e) RNA Expression (Transcriptomics)

330. [redacted] (*See, e.g.,* PX7092 (Ofman (Grail) Dep. at 264) [redacted]) (*in camera*); Nolan (Freenome) Tr. 2817 (explaining [redacted]) (*in camera*)).

Response to Finding No. 330:

Respondents have no specific response.

331. [redacted] (*See, e.g.*, Nolan (Freenome) Tr. 2711; Jamshidi (Grail) Tr. 4055-56 (*in camera*)).

Response to Finding No. 331:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 318 herein.

f) Protein Levels (Proteomics)

332. Proteomics describes the analysis of proteins. (Nolan (Freenome) Tr. 2711).

Response to Finding No. 332:

Respondents have no specific response.

333. [redacted] (*See, e.g.*, Lengauer (Third Rock Ventures) Tr. 175) (*in camera*)).

Response to Finding No. 333:

Respondents have no specific response.

334. Interrogating protein expression levels falls within the field of study called "proteomics." (Nolan (Freenome) Tr. 2711).

Response to Finding No. 334:

Respondents have no specific response.

335. Proteomics platforms, which are separate from and "not direct replacements for" NGS platforms, are used to analyze proteins in patient samples. (deSouza (Illumina) Tr. 2325).

Response to Finding No. 335:

Respondents have no specific response except to note that the proposed finding is incomplete and misleading to the extent it suggests that proteomics platforms alone cannot be used for cancer screening tests. To the contrary, while a screening test that will identify 50 types of cancer from a single blood sample that can also identify the cancer signal of origin is likely to use NGS technology, a screening test for fewer types of cancer, particularly two or three types of cancer, can use other diagnostic platforms, such as proteomics, PCR or microarray technology. (PFF ¶ 1971; *see also* PFF ¶¶ 557–573.) For example, Genesys Biolabs' OneTest is a

proteomics-based test that measures seven cancer protein biomarkers that screen for lung, liver, pancreatic, ovarian, prostate and colon cancers. (PFF ¶ 692.2 (RX3259 (Genesys Biolabs); RX3869 (Cote Expert Report) ¶ 253); *see also* PFF ¶¶ 554–555.1; 693.)

336. [redacted] (*See, e.g.*, Cance (American Cancer Society) Tr. 613; Nolan (Freenome) Tr. 2759 (*in camera*)).

Response to Finding No. 336:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 261 and 318 herein. Respondents also note that Mr. Nolan testified that [redacted] (PX7094 (Nolan (Freenome) Dep. at 307).) [redacted] (PFF ¶¶ 459-70.) Accordingly, there is no indication based on Freenome's work to date that [redacted] (PFF ¶ 458 [redacted]; RX3869 (Cote Expert Report) ¶ 193).)

337. [redacted] (*See, e.g.*, Cance (American Cancer Society) Tr. 613; Nolan (Freenome) Tr. 2759 (*in camera*)).

Response to Finding No. 337:

The proposed finding is inaccurate, incomplete and misleading because several purported MCED test developers *are* developing tests exclusively utilizing proteomics biomarkers. (*See* PFF ¶ 1971; *see also* PFF ¶¶ 557–573.) For example, Genesys Biolabs' OneTest is a proteomics-based test that measures seven cancer protein biomarkers that screen for lung, liver,

pancreatic, ovarian, prostate and colon cancers. (PFF ¶ 692.2 (RX3259 (Genesys Biolabs); RX3869 (Cote Expert Report) ¶ 253); *see also* PFF ¶¶ 554–555.1; 693.) InterVenn currently provides an AI-enabled, mass spectrometry glycoproteomics-based proteomics platform, called VISTA, which is used by InterVenn to develop early cancer detection tests for advanced adenoma, colorectal cancer and nasopharyngeal carcinoma. (Leite (Illumina/InterVenn) Tr. 2171–74; RX3389 (InterVenn) at 1; PFF ¶¶ 557–563.1.) Seer is developing a Proteograph™ automated workflow proteomics platform that is used by PrognomiQ to develop early cancer detection tests. (RX1605 (Blume et al., 2020) at 1–14; RX3587 (PrognomiQ) at 2; PFF ¶¶ 564–569.)

g) Multiomics

338. [redacted] (*See* Della Porta (Grail) Tr. 492 (*in camera*); Nolan (Freenome) Tr. 2710-11)).

Response to Finding No. 338:

Respondents have no specific response.

339. [redacted] (*See, e.g.*, Cance (American Cancer Society) Tr. 613; Chudova (Guardant) Tr. 1166, 1243 (*in camera*); Nolan (Freenome) Tr. 2710-11 (describing Freenome's multiomics platform as spanning genomics, transcriptomics, and proteomics)).

Response to Finding No. 339:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer

early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

4. MCED Tests Rely on Illumina NGS to Simultaneously Examine Thousands of Cancer Biomarkers in cfDNA

340. [redacted]

Response to Finding No. 340:

The proposed finding is inaccurate, incomplete and misleading. To the extent Complaint Counsel relies on its Proposed Findings in CCFF ¶¶ 341–348, Respondents incorporate their responses to those Proposed Findings herein.

341. [redacted]
(PX7102 (Gao (Singlera) Dep. at 131); PX7096 (Song (Omniome) Dep. at 141); PX7070 (Felton (Thermo Fisher) IHT at 26-28) (*in camera*); *see* PX7046 (George (Invitae) IHT at 74-75) ("Illumina emerged as the dominant player…about six years ago…"); PX7054 (Rabinowitz (Natera) IHT at 36, 41-42) ("[E]ven at that time [around 2010 and 2011] . . .Illumina was pretty dominant in the sequencing market."); *see also infra* Section V.D. (Only Illumina NGS Platforms Meet the Requirements of MCED Tests)).

Response to Finding No. 341:

The proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is inaccurate, incomplete and misleading. Contrary to Complaint Counsel's unproven contention that all MCED tests require Illumina's NGS platforms, there are several other NGS platforms that can support purported MCED tests in development. (PPF ¶¶ 776–781.) BGI already has a commercially available NGS platform. (PFF ¶¶ 777–777.5.) BGI

recently won a jury verdict that held three of Illumina's patents to be invalid, meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). [redacted] (PFF ¶¶ 778–778.2; 2085.) In addition to BGI and [redacted] Oxford Nanopore is a viable alternative for MCED developers. (PFF ¶¶ 779–779.3.) There are also many NGS platforms in development that are likely to enter the market in the near future and will be viable platforms for MCED tests. (PFF ¶¶ 782–787.)

Purported MCED test developers treat these NGS platforms as viable substitutes for Illumina's NGS platform. (PFF ¶ 780.) [redacted] (RX0055 (Exact/Thrive) at 2.) [redacted] (PFF ¶ 780.1.) [redacted] Dr. Gao of Singlera testified that the PanSeer test can be run using Thermo Fisher equipment. (PFF ¶ 780.4.) [redacted]

To the extent Complaint Counsel relies on its Proposed Findings in Section V.D. (CCFF ¶¶ 1019–1211), Respondents incorporate their responses to those Proposed Findings herein.

342. MCED tests examine blood samples to detect cancer at an early stage. (Cance (American Cancer Society) Tr. 609).

Response to Finding No. 342:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 264 and 318 herein.

343. Dr. Cance explained in general terms how an MCED test works: "Many of these [MCED] tests examine fragments of DNA in the bloodstream and determine whether any DNA has been shed from cancer cells." (PX8398 (Cance (American Cancer Society) Decl. ¶ 7)).

Response to Finding No. 343:

Respondents have no specific response except to note that the cited source [redacted] (PX8398 (Cance (American Cancer Society) Decl. ¶ 7.) Respondents also incorporate their responses to CCFF ¶ 248 herein.

344. [redacted] (*See, e.g.*, Lengauer (Third Rock Ventures) Tr. 179-80 (*in camera*) [redacted]

Response to Finding No. 344:

The proposed finding is inaccurate, incomplete and misleading, including because it appears to suggest that [redacted] To the contrary, many test developers are pursuing cancer screening tests for multiple cancers using other analytes. For example, StageZero's Aristotle test is a microarray-based liquid biopsy test that interrogates mRNA to detect 10 cancers and Genesys Biolabs' OneTest is a proteomics-based test that measures seven cancer protein biomarkers to screen for lung, liver,

pancreatic, ovarian, prostate and colon cancers. (*See* PFF ¶¶ 691–696.) Protein biomarkers have also been used for many years for early stage cancer detection and screening. (*See* PFF ¶¶ 155–157.) An increasing number of companies are developing "multi-omic" tests which combine information from multiple analytes, including DNA (genome), RNA (transcriptome) and protein (proteome) for increased sensitivity in cancer detection. (*See* PFF ¶¶ 169–169.3.)

345. MCED tests require the ability to detect on the order of one molecule of DNA in ten milliliters of blood. (*See, e.g.*, Lengauer (Third Rock Ventures) Tr. 162-63). NGS can detect one molecule of DNA in ten milliliters of blood. (Lengauer (Singular Genomics) Tr. 162-63).

Response to Finding No. 345:

The proposed finding is not supported by the cited evidence. In the cited testimony, Dr. Lengauer merely commented on the ability for current technologies to "detect one molecule of DNA in ten milliliter of blood", which "becomes stochastic, because the ten next milliliters might not contain any cancer molecules." (Lengauer (Exact/Thrive) Tr. 162–63.) Dr. Lengauer did not testify that only NGS can detect one molecule of DNA in ten milliliters of blood or what specific techniques are so sensitive that can detect one molecule of DNA in ten milliliters of blood. (Lengauer (Exact/Thrive) Tr. 162–63.) For example, PCR is highly sensitive and requires only minimal amount of sample for detection and amplification of specific sequences. (*See* PFF ¶¶ 158–162.)

346. As Jay Flatley, former Illumina CEO, told Illumina investors in a 2016 investor call:

> To reliably detect ctDNA across cancer types with the needed sensitivity and specificity requires ultra-deep sequencing, thousands or more times the depth and breadth that has been used routinely in a [sic] clinical settings to date. . . .
>
> We expect the clinical trials required to show statistical significance could require sequencing between 100K and 300K genomes at 60X depth, or the equivalent of two whole genomes per sample, implying a project that could be as large as 6 times the scope of Genomics England. Only Illumina can sequence at the price points necessary to enable the required trials, . . .

(PX0037 at 004-005 (Illumina, Grail Investor Call Script, Jan. 10, 2016)).

Response to Finding No. 346:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 1), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

The proposed finding is incomplete and misleading. Although the cited source is from January 2016, the proposed finding appears to suggest that, even today, more than six years after the earnings call, "[o]nly Illumina can sequence at the price points necessary to enable the required trials." Contrary to Complaint Counsel's unproven contention, there are other viable NGS platforms on the market today that can support MCED tests in development. (*See* PFF ¶¶ 776–796.) In addition to the viable platforms on the market, there are also many NGS platforms in development and likely to enter the market in the near future that will be viable platforms for MCED tests. (*See* PFF ¶¶ 782–796.) Respondents also incorporate their responses to CCFF ¶¶ 341, 375, 378, 382 and 398 herein.

The proposed finding also appears to suggest that MCED testing today requires "ultra-deep sequencing", which is wrong. For example, GRAIL's Galleri test does not use "ultra-deep sequencing", but relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 1289.)

Respondents also note that the cited source observes that:

"And, there is simply no screening program for the vast majority of cancers, including pancreatic and ovarian, so those diseases are detected when the patient becomes symptomatic, which is typically in later stages, with the resulting poor prognosis. . . ."

"[A] test must be able to determine tissue of origin and to distinguish lethal from non-lethal cancers that may not progress. . . ." (PX0037 at 004–007 (Illumina, Grail Investor Call Script, Jan. 10, 2016).) These observations support the need for the Galleri test and show that other putative MCED test developers are unlikely to compete with the Galleri test in the foreseeable future.

347. NGS technology allows for the detection of a broad range of DNA mutations within a blood sample, which in turn allows for the analysis of many mutations associates with cancer. (PX8313 (Guardant) at 002 (Background Information on Liquid Biopsy for NGS Tests)).

Response to Finding No. 347:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 59), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

The proposed finding is inaccurate, incomplete, and misleading, including because it appears to suggest that only NGS technology may be used for the detection of a broad range of DNA mutations. To the contrary, many test developers are pursuing cancer screening tests for multiple cancers using other platform technologies such as PCR, microarray and proteomics. For example, StageZero's Aristotle test is a microarray-based liquid biopsy test that interrogates mRNA to detect 10 cancers and Genesys Biolabs' OneTest is a proteomics-based test that measures seven cancer protein biomarkers to screen for lung, liver, pancreatic, ovarian, prostate and colon cancers. (*See* PFF ¶¶ 691–696.) Protein biomarkers have also been used for many years for early stage cancer detection and screening. (*See* PFF ¶¶ 155–157.) An increasing number of companies are developing "multi-omic" tests which combine information from multiple analytes using multiple platform technologies, including DNA (genome), RNA

(transcriptome) and protein (proteome) for increased sensitivity in cancer detection. (*See* PFF ¶¶ 169–169.3.)

Respondents also note that the cited source also [redacted] (PX8313 (Guardant) at 004 (Background Information on Liquid Biopsy for NGS Tests).)

348. Unlike other testing technologies, NGS can simultaneously screen for thousands of biomarkers (such as mutations or methylation patterns) that potentially signal cancer within the body. (PX7042 (Gao (Singlera) IHT at 38-40)).

Response to Finding No. 348:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is inaccurate, incomplete and misleading, and contradicted by the weight of the evidence. For example, multiplex PCR can generate higher throughput than traditional (single-plex) PCR and obtains more information with less sample. Thermo Fisher's microfluidic digital PCR OpenArray system can generate over 12,000 data points in a single run. (*See* PFF ¶¶ 159–160.2.) Similarly, microarrays can also simultaneously screen tens of thousands of biomolecular interactions. (*See* PFF ¶¶ 164-164.5.) Respondents also incorporate their responses to CCFF ¶ 347 herein.

5. Illumina and Grail Were Not the First to Discover the Use of ctDNA for Cancer Screening Technology

349. A May 2017 Grail board presentation stated that Dr. Dennis Lo is the Director of the "[l]aboratory at forefront of cfDNA in NIPT & cancer since 1997." (PX4620 (Grail) at 007 (Grail, Project Knight – Board Update II, May 10, 2017)).

Response to Finding No. 349:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 54), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents note that the cited source also observes that [redacted]

(PX4620 (Grail) at 007 (Grail, Project Knight – Board Update II, May 10, 2017).)

350. Singlera Genomics co-founder and scientific advisor, Dr. Gary Gao, began collaborating with Dr. Dennis Lo of the Chinese University of Hong Kong on noninvasive prenatal testing ("NIPT") research in 2007. (Gao (Singlera) Tr. 2863-64; 2867-68).

Response to Finding No. 350:

Respondents have no specific response.

351. A noninvasive prenatal test ("NIPT") is a blood-based test performed on expectant mothers designed to determine whether the fetus has chromosomal abnormalities, including Down syndrome. (Qadan (Illumina) Tr. 4121).

Response to Finding No. 351:

Respondents have no specific response.

352. [redacted] (PX7113 (Rabinowitz (Natera) Dep. at 36) (*in camera*)).

Response to Finding No. 352:

Respondents have no specific response.

353. Together, Dr. Gao, Singlera's Co-Founder and current Scientific Advisor, and Dr. Dennis Lo, a professor at the Chinese University of Hong Kong, developed a protocol for sequencing cfDNA in blood samples of pregnant women to identify the presence of fetal chromosome 21 trisonomy (down syndrome). (Gao (Singlera) Tr. 2863-64; 2867-68).

Response to Finding No. 353:

Respondents have no specific response.

354. Dr. Gao, Singlera's Co-Founder and current Scientific Advisor, and Dr. Dennis Lo, a professor at the Chinese University of Hong Kong, published a paper in the Proceedings of National Academy of Science journal in 2008 presenting the results of their research on the detection of fetus chromosome trisomy using cfDNA. (Gao (Singlera) Tr. 2863-64; 2867-68). Dr. Gao used the research from his 2008 paper with Dr. Dennis Lo, a professor at the Chinese University of Hong Kong, to begin research on the use of cfDNA for cancer screening. (Gao (Singlera) Tr. 2863-65; 2867-68).

Response to Finding No. 354:

The proposed finding is inaccurate and misleading to the extent that it suggests that Singlera and Dr. Gao developed the technology that GRAIL uses for its Galleri test. To the contrary, Respondents note that Dr. Gao also testified that Singlera Genomics was started in July 2014 to use cell-free DNA for early detection of cancer, that methylation technology is a difficult technology, and that he was not aware of any efforts being made by Dr. Dennis Lo to develop cancer screening technology in 2008. (Gao (Singlera) Tr. 2863–68.) Singlera has not launched any product of any kind in the U.S. and only a SCED for colorectal cancer—ColonES—as an LDT in China. (Gao (Singlera) Tr. 2872–73.) Dr. Gao also testified that Singlera is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (*See* PFF ¶¶ 527–542.)

355. Dr. Gao published a paper on DNA methylation for use in applications such as cancer detection in 2009 with Singlera co-founder Professor Kun Zhang of the University of California San Diego. (Gao (Singlera) Tr. 2863-65).

Response to Finding No. 355:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 354 herein.

356. Dr. Gao testified at trial that he was not aware of efforts by Grail to develop cancer screening technology when he began his research related to cancer detection. (Gao (Singlera) Tr. 2869). Dr. Gao further testified that Singlera was "way ahead of Grail" in its efforts to develop a cancer screening technology. (Gao (Singlera) Tr. 2869).

Response to Finding No. 356:

Respondents have no specific response except to note that Singlera has not launched any product of any kind in the U.S. and only a SCED for colorectal cancer—ColonES—as an LDT in China. (Gao (Singlera) Tr. 2872–73.) Respondents also incorporate their responses to CCFF ¶ 354 herein.

357. Dr. Dave Alquist, a gastroenterologist at Mayo Clinic, conducted research for years looking for biomarkers that could provide early detection of colon cancer. (Conroy (Exact) Tr. 1538-39).

Response to Finding No. 357:

Respondents have no specific response except to note that Dr. Ahlquist only had research data demonstrating the ability to detect colon cancer and precancerous polyps accurately from a stool sample. (Conroy (Exact) Tr. 1538–40.)

358. In March 2009, Dr. Ahlquist told Mr. Conroy of his vision for detecting many or most cancers from a simple blood draw. (Conroy (Exact) Tr. 1539). Dr. Ahlquist called this vision a "pan-cancer" test, which would look for tiny fragments of cancer DNA in a patient's blood. (Conroy (Exact) Tr. 1539-40).

Response to Finding No. 358:

Respondents have no specific response except to note that [redacted] (Conroy (Exact) Tr. 1597.) [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶ 357 herein.

359. Dr. Ahlquist's vision for a pan-cancer test was the genesis of Exact's mission to detect cancer earlier. (Conroy (Exact) Tr. 1540-41).

Response to Finding No. 359:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 357–358 herein.

360. Exact and Mayo Clinic entered into a research and development partnership in June 2009 that has continued for 12 years. (Conroy (Exact) Tr. 1536-37). Dr. Ahlquist participated in the Exact-Mayo Clinic partnership. (Conroy (Exact) Tr. 1536-37; 1539-40).

Response to Finding No. 360:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 357–358 herein.

361. Dr. Bert Vogelstein's lab at Johns Hopkins University "published the first description of cancer genomes, what we called cancer genome landscapes" in approximately 2009 or 2010. (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 61)).

Response to Finding No. 361:

Respondents have no specific response except to note that Dr. Vogelstein started PapGene in 2014, now Thrive, an Exact company, and it has still not launched a commercial version of its cancer screening test, CancerSEEK, eight years later. (*See* PFF ¶¶ 296–296.3 (PX7101 (Vogelstein (Johns Hopkins University) Dep.) at 27–28; [redacted].)

362. Alongside teams of researchers, Dr. Vogelstein helped discover that "a relatively small number of genes play[ ] a major role in most human cancer types." (PX8400 (Vogelstein (Johns Hopkins University) Decl. ¶ 2)).

Response to Finding No. 362:

Respondents have no specific response except to note that Dr. Vogelstein's discovery focused on "a relatively small number of genes". (PX8400 (Vogelstein (Johns Hopkins University) Decl.) ¶ 2.) These genes and corresponding protein biomarkers only focus on epithelial cancers and not non-epithelial cancers. (Cote Tr. 3810–11.) Therefore, the biomarkers interrogated by the CancerSEEK test, now owned by Exact, are not capable of detecting "all" types of cancer, but only a subset of cancer types. (Cote Tr. 3810–11.) Respondents also incorporate their responses to CCFF ¶ 361 herein.

363. Dr. Vogelstein and the group of researchers with whom he works was awarded the international prize from the American Association of Cancer Research for "pioneering the development of liquid biopsies." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 78-79)).

Response to Finding No. 363:

The proposed finding is incomplete and misleading to the extent it uses the term "liquid biopsies", which does not refer only to early cancer screening. (*See, e.g.*, PFF ¶¶ 123–139.) Respondents also incorporate their responses to CCFF ¶¶ 361–362 herein. The proposed finding is also irrelevant because Dr. Vogelstein testified in the cited testimony that "our lab's current work, which considerably is quite different from what Thrive is doing". (PX7101 (Vogelstein (Johns Hopkins University), Dep.) at 54–55.)

364. CancerSEEK was developed by Dr. Bert Vogelstein within his lab at Johns Hopkins University. (Conroy (Exact) Tr. 1542-43).

Response to Finding No. 364:

Respondents have no specific response except to note that [redacted] (Conroy (Exact) Tr. 1621.) Respondents also incorporate their responses to CCFF ¶¶ 361–62 herein.

365. Dr. Vogelstein ran clinical studies to demonstrate the ability from a single blood draw to detect cancer earlier across many different types of cancer. (Conroy (Exact) Tr. 1542-43).

Response to Finding No. 365:

Respondents have no specific response except to note that the Cohen study only looked at eight cancer types and did not look at any other cancer types. (Conroy (Exact) Tr. 1698–1700.) Respondents also incorporate their responses to CCFF ¶¶ 361–62 herein.

366. Dr. Vogelstein is a co-founder of Thrive Earlier Detection Corp. ("Thrive"). (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 27)). Dr. Vogelstein's CancerSEEK became part of Thrive. (Conroy (Exact) Tr. 1542-43).

Response to Finding No. 366:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 357–365 herein.

367. The original version of CancerSEEK underwent its first study about three to four years ago. (Conroy (Exact) Tr. 1545-46).

Response to Finding No. 367:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 357–365 herein.

368. Using methods similar to those used in NIPT, Dr. Lo developed a method for detecting cancer signals in circulating cfDNA. (PX2858 (Illumina) at 001 (Email from R. Bookstein, Illumina, to N. Naclerio, Illumina, Aug. 9, 2012)).

Response to Finding No. 368:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 33), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

369. In August 2012, Illumina's Director of Corporate and Venture Development, Robert Bookstein, wrote to Illumina's SVP of Corporate and Venture Development, Nicholas

Naclerio, to alert Mr. Naclerio of research by Dr. Dennis Lo. (PX2858 (Illumina) at 001 (Email from R. Bookstein, Illumina, to N. Naclerio, Illumina, Aug. 9, 2012)).

Response to Finding No. 369:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 33), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also note that Complaint Counsel never called Dr. Bookstein as a witness and there is no record evidence suggesting that Dr. Bookstein's views are indicative of either Illumina's or GRAIL's strategy with respect to early cancer screening.

370. Mr. Bookstein wrote to Dr. Naclerio that, because Dr. Lo's method of detecting cancer through cfDNA "requires huge numbers . . . of random genomic reads, it's a perfect application for [Illumina's] largest-capacity instruments." (PX2858 (Illumina) at 001 (Email from R. Bookstein, Illumina, to N. Naclerio, Illumina, Aug. 9, 2012)).

Response to Finding No. 370:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 33), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also note that Complaint Counsel never called Dr. Bookstein as a witness and there is no record evidence suggesting that Dr. Bookstein's views are indicative of either Illumina's or GRAIL's strategy with respect to early cancer screening.

The proposed finding is also incomplete and misleading. Although the cited source is from August 2012, the proposed finding appears to suggest that, even today, nearly ten years later, "it's the perfect application for Illumina's largest-capacity instruments." Contrary to Complaint Counsel's unproven contention, there are other viable NGS platforms on the market today that can support MCED tests in development. (*See* PFF ¶¶ 776–796.) In addition to the

viable platforms on the market, there are also many NGS platforms in development and likely to enter the market in the near future that will be viable platforms for MCED tests. (*See* PFF ¶¶ 782–796.) Respondents further note that Illumina's "largest-capacity instruments" in 2012, the HiSeq, had much lower throughput than the NovaSeq instrument today (PFF Table 3; RX3869 (Cote Expert Report) ¶ 277), and other instruments currently available (PFF Table 5 (BGI's DNBSEQ-T7), PFF Table 6 (ONT's PromethION 48)). Respondents also incorporate their responses to CCFF ¶¶ 341, 375, 378, 382 and 398 herein.

371. Mr. Bookstein wrote to Dr. Naclerio that he thought that Dr. Lo's method of detecting cancer through cfDNA "could be built into a business rivaling or exceeding [noninvasive prenatal testing]." (PX2858 (Illumina) at 001 (Email from R. Bookstein, Illumina, to N. Naclerio, Illumina, Aug. 9, 2012)).

Response to Finding No. 371:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 33), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also note that Complaint Counsel never called Dr. Bookstein as a witness and there is no record evidence suggesting that Dr. Bookstein's views are indicative of either Illumina's or GRAIL's strategy with respect to early cancer screening.

372. Mr. Bookstein suggested to Dr. Naclerio that Illumina "scoop up [Dr. Lo's] entire IP portfolio and build it inside Illumina." (PX2858 (Illumina) at 001 (Email from R. Bookstein, Illumina, to N. Naclerio, Illumina, Aug. 9, 2012)).

Response to Finding No. 372:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 33), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also note that Complaint Counsel never called Dr.

Bookstein as a witness and there is no record evidence suggesting that Dr. Bookstein's views are indicative of either Illumina's or GRAIL's strategy with respect to early cancer screening.

373. On September 3, 2012, Illumina held a call with Dr. Dennis Lo relating to his discovery that cancer signals could be detected through cfDNA and sought next to review Dr. Lo's "filed patent applications." (PX2859 (Illumina) at 001-002 (Email from R. Bookstein, Illumina, to P. Fromen, Illumina, et al., Sept. 5, 2012)). In notes from the call, Illumina's attendees wrote the question, "How will a clinician use this type of data?" (PX2859 (Illumina) at 004 (Email from R. Bookstein, Illumina, to P. Fromen, Illumina, et al., attaching notes "Dennis Lo's talk 9/03/12," Sept. 5, 2012)). Responses to the question included "Blood biopsy – non-invasive screening" and "Potential for detecting cancer prior to actual detection of a primary tumor." (PX2859 (Illumina) at 004 (Email from R. Bookstein, Illumina, to P. Fromen, Illumina, et al., attaching notes "Dennis Lo's talk 9/03/12," Sept. 5, 2012)).

Response to Finding No. 373:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 33), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also note that Complaint Counsel never called Dr. Bookstein as a witness and there is no record evidence suggesting that Dr. Bookstein's views are indicative of either Illumina's or GRAIL's strategy with respect to early cancer screening.

374. It was not until "a little before 2015" that Illumina began work related to Grail and then created Grail as a corporate entity in 2016. (deSouza (Illumina) Tr. 2195-96).

Response to Finding No. 374:

Respondents have no specific response.

6. MCED Test Background

a) MCED Tests Seek to Detect Multiple Cancers Simultaneously in Asymptomatic Individuals

375. As discussed in detail below in Section III., MCED tests screen for multiple cancers in an asymptomatic population and all use Illumina's NGS platforms.

Response to Finding No. 375:

The proposed finding is inaccurate, incomplete and misleading and is not supported by any cited evidence. In addition, contrary to Complaint Counsel's unproven contention that all MCED tests require Illumina's NGS platforms, there are several other NGS platforms that can support purported MCED tests in development. (PPF ¶¶ 776–781.) BGI already has a commercially available NGS platform. (PFF ¶¶ 777–777.5.) BGI recently won a jury verdict that held three of Illumina's patents to be invalid, meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. [redacted] (PFF ¶¶ 778–778.2; 2085.) In addition to BGI and [redacted], Oxford Nanopore is a viable alternative for MCED developers. (PFF ¶¶ 779–779.3.) There are also many NGS platforms in development that are likely to enter the market in the near future and will be viable platforms for MCED tests. (PFF ¶¶ 782–787.)

Purported MCED test developers treat these NGS platforms as viable substitutes for Illumina's NGS platform. (PFF ¶ 780.) [redacted] (PFF ¶ 780.1.) [redacted] Dr. Gao of Singlera testified that the PanSeer test can be run using Thermo Fisher equipment. (PFF ¶ 780.4.) [redacted]

[redacted]

Purported MCED test developers today, such as StageZero, Genesys Biolabs, Intervenn Biosciences, Seer, and Somalogic, are also using non-NGS platforms, including proteomics and microarray platforms. (PFF ¶¶ 543–73.) Respondents also incorporate their responses to CCFF ¶¶ 341 and 344 herein.

376. [redacted] (PX2005 (Illumina) at 004-05, 009 (ScreenCo – Early Cancer Detection on a Global Scale Presentation, 2015); *see also* PX5027 (Illumina) at 016-17 (Board of Directors Meeting, Aug. 4, 2020) (*in camera*)).

Response to Finding No. 376:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. [redacted] (PX2005 (Illumina) at 004–05, 009 (ScreenCo – Early Cancer Detection on a Global Scale Presentation, 2015).) Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also note that the cited Board of Directors presentation confirms that [redacted] (PX5027 (Illumina) at 016 (Board of Directors Meeting, Aug. 4, 2020) (*in camera*).)

Respondents also incorporate their responses to CCFF ¶¶ 605–606 herein.

377. [redacted] (*See, e.g.*, PX0086 at 001 (Grail Press Release: GRAIL Presents Interventional PATHFINDER Study Data at 2021 ASCO Annual Meeting and Introduces Galleri, a Groundbreaking Multi-Cancer Early Detection Blood Test, June 4, 2021) (describing Galleri as a "multi-cancer early detection (MCED) blood test"); PX8314 (Guardant) (Multi-Cancer Screening, Dec. 2020) (*in camera*); PX8324 (Roche) at 003 [redacted] (*in camera*); PX8392 (Exact) at 002 (Pipeline Review, Jan. 2021) (*in camera*)).

Response to Finding No. 377:

The proposed finding is not supported by the cited evidence. Only GRAIL's Press Release refers to the Galleri test as a "multi-cancer early detection (MCED) blood test". (PX0086 at 001 (Grail Press Release: GRAIL Presents Interventional PATHFINDER Study Data at 2021 ASCO Annual Meeting and Introduces Galleri, a Groundbreaking Multi-Cancer Early Detection Blood Test, June 4, 2021).) [redacted]

The proposed finding also relates to irrelevant subject matter. Whether industry participants use the term "MCED test" to describe early cancer screening tests that detect

multiple cancers simultaneously has no bearing on whether MCED tests constitute a relevant product market. (PFF ¶¶ 679–772; *see also* Resps.' Post-Trial Br. Section I.A.)

378. [redacted] (*See, e.g.*, PX4082 (Grail) at 008-009 (Email attaching Grail 2020 S-1/Amended, Sept. 2020); PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29) (*in camera*); PX7100 (Chudova (Guardant) Dep. at 15-16); PX7094 (Nolan (Freenome) Dep. at 252-53) (*in camera*)); PX4116 (Grail) at 013 (Email from M. Podoll, Morgan Stanley, to A. Freidin, Grail, et al., attaching IPO Roadshow Video Outline: Project Galileo, Aug. 2020)).

Response to Finding No. 378:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Mr. Nolan testified that Freenome is [redacted] (PX7094 (Nolan (Freenome) Dep. at 307); PFF ¶¶ 459–72.) [redacted]

[redacted]

Dr. Chudova testified that Guardant's "platform in its foundation doesn't have anything specific for [] individual cancer types other than selection of the regions of the genomes that are most representative for that specific cancer" and [redacted] (PX7100 (Chudova (Guardant) Dep. at 24, 134; PFF ¶¶ 479–479.5.1.) Dr. Chudova also testified that [redacted] Accordingly, there is no evidence that Guardant will launch in the foreseeable future a cancer screening test that is a close substitute to the Galleri test. (PFF ¶ 476.) Further, the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

379. An Illumina Board presentation analyzing the potential acquisition of Grail notes that [redacted] (*in camera*)).

Response to Finding No. 379:

The proposed finding is incomplete and misleading. The cited presentation states that [redacted] (PX5027 (Illumina) at 005 (Board of Directors Project Valor Presentation, Aug. 4, 2020) (*in camera*).) The cited presentation also [redacted]

[redacted] (PX5027 (Illumina) at 016 (Board of Directors Project Valor Presentation, Aug. 4, 2020) (*in camera*).)

380. [redacted] (PX5027 (Illumina) at 005 [redacted] (*in camera*)).

Response to Finding No. 380:

Respondents have no specific response except to note that many liquid biopsy tests, including those being developed for multi-cancer screening, do not require NGS technology as they rely on analytes other than ctDNA. *See, e.g.*, PFF ¶¶ 547-49.2 (StageZero); 554 (Genesys Biolabs); 558 (InterVenn Biosciences). For example, StageZero's Aristotle test is a microarray-based liquid biopsy test that interrogates mRNA to detect 10 cancers, and Genesys Biolabs' OneTest is a proteomics-based test that measures seven cancer protein biomarkers to screen for lung, liver, pancreatic, ovarian, prostate and colon cancers. (*See* PFF ¶¶ 691–696.) Respondents also incorporate their responses to CCFF ¶ 344 herein.

381. [redacted] (PX7040 (Getty (Guardant) IHT at 29-32); *see also* PX4082 (Grail) at 008-009 (Email attaching Grail 2020 S-1/Amended, Sept. 2020); PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29) (*in camera*); PX7100 (Chudova (Guardant) Dep. at 15-16)); PX7094 (Nolan (Freenome) Dep. at 252-53) (*in camera*)).

Response to Finding No. 381:

The proposed finding is not supported by the cited evidence. *First*, Mr. Getty's testimony about "tests [that] would take place at [an annual physical]" (PX7040 (Getty (Guardant) IHT at 31–32) was in response to a question about all liquid biopsy screening tests, not just putative MCED tests. (PX7040 (Getty (Guardant) IHT at 29 ("Q. Going back to

something you said, how would liquid biopsy help improve compliance for screening of -- existing cancer screening methods?").) *Second*, the cited portion of GRAIL's S-1 does not discuss "MCED tests" broadly as the proposed finding suggests, but only that GRAIL intends for Galleri to be used at an annual physical. *Third*, nowhere in the cited portions of Dr. Chudova's testimony (or anywhere in the deposition) does she testify that MCED tests are to be used at annual routine appointments. (PX7100 (Chudova (Guardant) Dep. at 15–16.)

[redacted]

Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 378, 382, 398 and 709 herein.

382. Because MCED tests are targeted towards patients who do not have symptoms of, and have not been treated for, cancer, [redacted] (*See, e.g.*, PX7058 (Conroy (Exact) IHT at 103-04) (*in camera*); PX7040 (Getty (Guardant) IHT at 29-32)).

Response to Finding No. 382:

The proposed finding is misleading and contrary to the weight of the evidence. [redacted] Mr. Getty also identified other potential customers in the future, including OB/GYNs for female patients, "healthcare customers like employers", and "health systems". (Getty (Guardant) Tr. 2502–03; *see also* CCFF ¶ 2288.)

The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

For example, [redacted] (PFF ¶ 440.) [redacted]

[redacted]

Further, the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶ 710 herein.

383. Singlera's Dr. Gao explained that sensitivity of a cancer screening test indicates "a true positive, so when the person has a disease, your test tells positive results." (PX7042 (Gao (Singlera) IHT at 32)).

Response to Finding No. 383:

Respondents have no specific response.

384. In describing what the specificity of an MCED test means, Singlera's Gao explained that, for example, when a test subject "does not have cancer, [they] have negative test results." (PX7042 (Gao (Singlera) IHT at 31)).

Response to Finding No. 384:

Respondents have no specific response.

385. Christoph Lengauer, former Chief Officer and Co-Founder of Thrive, testified that, as an example to describe sensitivity, if you have ten individuals with cancer and your test identifies three of those individual as having cancer, the sensitivity of that test would be 30 percent. So seven individuals would be false-negatives. (Lengauer (Third Rock Ventures) Tr. 245). (Lengauer (Third Rock Ventures) Tr. 245).

Response to Finding No. 385:

Respondents have no specific response.

386. In explaining the importance of high sensitivity (i.e., minimizing false negatives) to cancer screening tests, Guardant's Chudova testified:

> Any patient that you miss as a result of that screening will continue to develop their cancer in an asymptomatic, potentially, state and not be diagnosed until either they become symptomatic or they will be diagnosed with another modality, and so any missed patients in the context of screening will continue on to develop the disease without awareness that at early stage could have been helpful in preventing more advanced disease.

(PX7045 (Chudova (Guardant) IHT at 63-64)).

Response to Finding No. 386:

Respondents have no specific response except to note that there is typically a tradeoff between specificity and sensitivity. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) [redacted] Given the same conditions, a test applying cutoff thresholds that minimizes false positives, *i.e.*, higher specificity, may often have a lower sensitivity than a test that results in a higher false positive

rate. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) [redacted]

Despite Guardant's purported focus on sensitivity, however, Respondents also note that, [redacted] In contrast, Galleri's current sensitivity rate for version 2 of its test (which is the version that is available as an LDT) is 51.5% for all cancer types across stages. (PFF ¶ 335.)

Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 656 herein.

387. Guardant's Chudova explained the consequences of a false positive cancer screening test result:

> [T]he physician would need to follow up with all sorts of radiological and other interventions to try to localize the cancer that the test is suggesting they have, whereas in fact they don't, and so the risk is exposure to a lot of subsequent diagnostic procedures that would have been totally unnecessary because the result is a false positive result.

(PX7045 (Chudova (Guardant) IHT at 64)).

Response to Finding No. 387:

Respondents have no specific response.

388. [redacted] (PX7058 (Conroy (Exact) IHT at 95-96) (*in camera*)).

Response to Finding No. 388:

Respondents have no specific response except to note that [redacted] (PFF ¶ 1743 (Lengauer (Exact/Thrive) Tr. 238–40).) Respondents note that Exact's Cologuard colorectal cancer screening test, which uses PCR technology, has a sensitivity of 92.3%, which is comparable to colonoscopy's sensitivity of 92.5%, but higher than Galleri's sensitivity of 82.0% for colorectal cancer. (PPF ¶ 180.2 (RX3222 (FDA) at 19); RX3409 (Klein et al., 2021) at 7, Fig. 3B.)

Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

389. [redacted] (PX7058 (Conroy (Exact) IHT at 93) (*in camera*)).

Response to Finding No. 389:

The proposed finding is incomplete and misleading to the extent it seems to suggest that [redacted] To the contrary, Respondents note that [redacted]

[redacted] (PFF ¶¶ 173 ("Specificity . . . measures the proportion of actual negative samples that are correctly identified as such", so that a 95.3% specificity corresponds to a true negative rate of 95.3% and a false positive rate of 100% minus 95.3%), 428, 431 ("In the DETECT-A study, CancerSEEK obtained [a] specificit[y] of 95.3% in its baseline blood test (that is, with a single blood test).").) In the DETECT-A study, out of the 490 patients who had a positive test result under Exact/Thrive's CancerSEEK baseline blood test, only 26 were actually found to have cancer in the end, leading to unnecessary and time-consuming work-ups for the patients with false positives. (Lengauer (Exact/Thrive) Tr. 251–54; RX3419 (Lennon et al., 2020) at 5.) Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

390. [redacted] (PX7058 (Conroy (Exact) IHT at 96) (*in camera*)).

Response to Finding No. 390:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 389 herein. Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

391. [redacted]

[redacted]

(PX7058 (Conroy (Exact) IHT at 96-97 (*in camera*)).

Response to Finding No. 391:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 389 herein. Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

392. Guardant's Getty explained that a false positive screening test could harm a "patient mentally" and also trigger "very invasive" follow-up procedures. (PX7040 (Getty (Guardant) IHT at 36-37)).

Response to Finding No. 392:

Respondents have no specific response.

393. [redacted] (PX7055 (Otte (Freenome) IHT at 84) (*in camera*)).

Response to Finding No. 393:

Respondents have no specific response.

394. Singlera's Gao indicated that a false positive test result is a "potentially damaging, worrisome thing." (PX7042 (Gao (Singlera) IHT at 31)).

Response to Finding No. 394:

Respondents have no specific response.

395. In discussing the importance of high sensitivity and specificity of cancer screening tests, Singlera's Gao explained that MCED test providers "don't want to miss any disease diagnosis. . . . You don't [want to] have any false negative [results]. . . . When[, for example, an individual] has a gastric cancer, your test" must really be able to detect the presence of gastric cancer. (PX7042 (Gao (Singlera) IHT at 32)).

Response to Finding No. 395:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 386 herein. Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

396. Grail's former CEO, Hans Bishop, testified that "[i]t's very important" to have a low false positive rate for a cancer screening test. (Bishop (Grail) Tr. 1385-86).

Response to Finding No. 396:

Respondents have no specific response except to note that the proposed finding provides support for the proposition that MCED tests with higher false positive rates—such as Exact/Thrive's CancerSEEK baseline blood test—are not reasonably interchangeable with an MCED test with a low false positive rate, such as GRAIL's Galleri test. (*See* Resps.' Post-Trial Br. at 48; PFF ¶¶ 725–726.3.) Respondents also incorporate their responses to CCFF ¶ 389 herein.

397. Grail's former CEO, Hans Bishop, testified that "the lower the false positive rate, the lower the unnecessary stress, the lower the risk of investigational harms, and the lower the wasted money on unnecessary work-ups" following a false diagnosis. (Bishop (Grail) Tr. 1385-86).

Response to Finding No. 397:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 396 herein.

b) Multiple Companies Are Developing MCED Tests

398. As discussed in detail below in Sections VI. and VII.B.3.-5., several competitors are racing to develop MCED tests and competing head-to-head with Grail's Galleri test.

Response to Finding No. 398:

The proposed finding is inaccurate, incomplete and misleading as well as contradicted by the weight of the evidence. The characterization of test developers as "competitors" and "competing" with GRAIL's Galleri test is contradicted by the weight of the evidence. There is no indication that any of the putative MCED test developers will be competitors to GRAIL in the foreseeable future. (RX3869 (Cote Expert Report ¶¶ 174 (Exact/Thrive), 184 (FMI/Roche), 193 (Freenome), 202 (Guardant), 217 (Helio), 227 (Natera), 238 (Singlera)).) All other purported MCED tests in development would not be substitutes for Galleri because of their highly differentiated performance metrics (PFF ¶¶ 722–740.1), [redacted]

For example, [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 1902–2606; 3516–69 (in response to Sections VI. and VII.B.3–5) herein.

399. [redacted] (*See infra* Section VI. (Competitors Are Racing to Develop MCED Tests); PX7109 (Daly (Singular Genomics) Dep. at 20 (*in camera*) (stating that [redacted]; *see generally* PX6090 (Scott Morton Report) ¶¶ 85-126 (*in camera*)).

Response to Finding No. 399:

The proposed finding is inaccurate and misleading. The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation and relies on improper expert testimony.

First, the proposed finding inaccurately characterizes Mr. Daly's testimony. Mr. Daly testified that [redacted] (Daly (Singular Genomics) Dep. at 20 (*in camera*).) That is, he testified [redacted]

Second, the proposed finding is misleading, as no test developer other than GRAIL has in fact brought an MCED test to market. Unlike GRAIL, all other companies listed in the proposed finding fall far behind GRAIL in the development of an MCED test. (PFF ¶¶ 413–542; *see*

Resps.' Post-Trial Br. at 30–37.) Respondents also incorporate their responses to CCFF ¶¶ 1902–2606 herein.

Third, the proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. Mr. Daly testified that [redacted] (Daly (Singular Genomics) Dep. at 20 (*in camera*).) However, Mr. Daly does not provide any basis for his conclusion and there is no evidence in the record that [redacted] to support it.

Fourth, the proposed finding relies on improper expert testimony. Dr. Scott Morton impermissibly usurps the role of the fact finder by opining on the credibility of witness testimony and weighing the evidence, rending her opinions unreliable. (*See* Resps.' Post-Trial Br. at 265–66.)

400. [redacted]
(Cance, Tr. 612-13; PX5024 (Illumina) at 025 (Illumina Board of Directors Meeting Minutes) (*in camera*)). *See generally* PX6090 (Scott Morton Report) at Table 1 (*in camera*)).

Response to Finding No. 400:

The proposed finding relies on improper expert testimony. Dr. Scott Morton lacks the expertise to opine on scientific and technical issues, rendering her opinions unreliable. (*See* Resps.' Post-Trial Br. at 261–62.) Respondents also incorporate their responses to CCFF ¶ 398 herein.

401. The American Cancer Society's Chief Medical Officer testified at trial that he is aware that several companies are developing MCED tests in the United States. (Cance (American Cancer Society) Tr. 610-12).

Response to Finding No. 401:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Dr. Cance also testified that GRAIL is further ahead in its development process than other companies that are developing purported MCED tests, that he is not aware of any other purported MCED test that is commercially available today, that he does not know of other companies detecting the same number of cancers as GRAIL, and that accelerating an early cancer detection test's ability to commercialize at scale is consistent with ACS's mission. (Cance (ACS) Tr. 631–33.)

402. Mr. Nolan, Freenome's CEO, testified that the one true competitor in oncology screening tests is cancer itself and each screening test companies is taking their own approach to beat this ultimate competitor. (Nolan (Freenome) Tr. 2727).

Response to Finding No. 402:

The proposed finding relates to irrelevant subject matter because, here, Mr. Nolan uses "competitor" as a layman's term rather than as a legal term within the antitrust context. Further, the proposed finding is incomplete and misleading insofar as it suggests that other purported MCED test developers are competitors of GRAIL or will be in the foreseeable future. [redacted]

[redacted]

Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698).

403. MCED test developers are taking different technical approaches. (Cance (American Cancer Society) Tr. 612).

Response to Finding No. 403:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 401 herein.

404. In terms of the technical approaches used by MCED test developers, some companies focus on methylation sites in DNA found in blood samples, and others combine a multi-omic approach, which focuses on genomics, proteomics, and metabolomics. (Cance (American Cancer Society) Tr. 612-13).

Response to Finding No. 404:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 401 herein.

405. Dr. Chahine testified that "where Grail has chosen to do multiple cancers at one time, Helio and a few others have taken a strategic approach to say let's get one cancer done right and then add a second and a third and a fourth"—"it's really a matter of strategy" for developing a multicancer test "that we're really debating." (Chahine (Helio) Tr. 1032).

Response to Finding No. 405:

The proposed finding is incomplete and misleading to the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. While the proposed finding accurately quotes Dr. Chahine's testimony, it suggests that Helio and other test developers can in fact develop a multi-cancer test using the single-cancer to multi-cancer strategy. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.)

Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by

undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

Dr. Chahine also testified that [redacted]

406. Dr. Chahine further testified that "everyone understands that the value of going to a blood-based test is this ability to now be able to . . . interrogate not just for a single cancer but for multiple cancers," that "it would be hard to find anyone in this industry that would say that all of these tests aren't eventually going to become a multicancer screening test," and "what we're witnessing today is really just a strategy for how you get there." (Chahine (Helio) Tr. 1031-32).

Response to Finding No. 406:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 401 and 405 herein.

407. [redacted] (Aravanis (Illumina) Tr. at 1802-1804 (*in camera*) (referencing PX4075)).

Response to Finding No. 407:

The proposed finding is incomplete and misleading to the extent that it suggests that any [redacted] (Aravanis (Illumina) Tr. 1802 (*in camera*) (referencing PX4075).) Dr. Aravanis also clarified that [redacted]

[redacted] (Aravanis (Illumina) Tr. 1803-04.) [redacted]

[redacted], and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698).

(1) Grail

408. Grail's Galleri test aims to detect cancer signals by identifying abnormal methylation patterns in a patient's DNA. (Bishop (Grail) Tr. 1319-20; 1373).

Response to Finding No. 408:

Respondents have no specific response.

409. Galleri identifies regions of a patient's DNA that are hypermethylated or hypomethylated. (Bishop (Grail) Tr. 1320). Galleri seeks to differentiate hyper- or hypomethylation patterns from those in healthy patients. (Bishop (Grail) Tr. 1320).

Response to Finding No. 409:

Respondents have no specific response.

410. At trial, Dr. Ofman described Galleri's analysis of DNA methylation: "Grail's test looks at over a million of these methylation sites in over a hundred thousand regions of the genome." (Ofman (Grail) Tr. 3287).

Response to Finding No. 410:

Respondents have no specific response.

411. [redacted] (Jamshidi Tr. 4055-56 (*in camera*); *see also* Bishop (Grail) Tr. 1481-82 (*in camera*) [redacted]; PX4082 (Grail) at 014 (Grail Amended S-1) ("We seek to continually enhance the performance and features of our tests, including seeking ways to improve sensitivity and reduce sequencing costs")).

Response to Finding No. 411:

The proposed finding is incomplete and misleading to the extent that it suggests that GRAIL is planning to incorporate cfRNA, proteins or biofluids as an analyte into its Galleri test. To the contrary, GRAIL has locked version 2 of Galleri, which is the version currently on the market, and is working on an updated version of Galleri that meets current performance standards while sequencing fewer regions of the genome, thereby reducing the cost of the test. (PFF ¶ 1607 (Ofman (GRAIL) Tr. 3301–03.) Respondents also note that there is no evidence that an MCED test using proteins or other biofluids (urine) as analytes would use NGS technology, nor have Complaint Counsel contended that such a test would be within the alleged product market. Respondents also incorporate their responses to CCFF ¶¶ 306, 312 herein.

Respondents also note that GRAIL has demonstrated that the Galleri test can identify over 50 types of cancers, over 45 of which lack recommended screenings (PFF ¶ 62), localize the cancer signal with high accuracy (PFF ¶ 62.1), has high sensitivity and specificity for forms of cancer that have no routine screening options, are usually detected at late stage, and thus are often lethal (PFF ¶ 344), and that the Galleri test as currently constructed has the ability to save lives by detecting dangerous cancers at an earlier, potentially curable stage (PFF ¶ 356).

412. Grail's Dr. Jamshidi [redacted] (PX7103 (Jamshidi (Grail) Dep. at 87-88) (*in camera*)).

Response to Finding No. 412:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 411 herein.

413. [redacted]

[redacted] (PX4250 (Grail) at 012 (Grail, [redacted]) (*in camera*)). [redacted] *See* (PX4054 (Grail) at 004 [redacted] (*in camera*)).

Response to Finding No. 413:

The proposed finding is incomplete and misleading. [redacted] Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 41), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

The proposed finding is also incomplete and misleading to the extent that it suggests that the described [redacted] are actual competitors to Galleri or GRAIL. [redacted]

Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents also incorporate their responses to CCFF ¶ 398 herein.

The proposed finding is also incomplete and misleading to the extent that it suggests that GRAIL is planning to incorporate cfRNA, proteins or biofluids as an analyte into its Galleri test. To the contrary, GRAIL has locked version 2 of Galleri, which is the version currently on the market, and is working on an updated version of Galleri that meets current performance standards while sequencing fewer regions of the genome, thereby reducing the cost of the test. (PFF ¶ 1607 (Ofman (GRAIL) Tr. 3301–03.) Respondents also note that there is no evidence that an MCED test using proteins or other biofluids (urine) as analytes would use NGS technology, nor have Complaint Counsel contended that such a test would be within the alleged product market.

Complaint Counsel chose not to discuss PX4250 at trial, (CC Exhibit Index at 41), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents also incorporate their responses to CCFF ¶¶ 306, 312 and 761 herein.

(2) Thrive/Exact

414. Dr. Lengauer testified that [redacted] (Lengauer (Third Rock Ventures) Tr. 194 (*in camera*)).

Response to Finding No. 414:

The proposed finding is inaccurate, incomplete and misleading as well as contradicted by the weight of the evidence. Galleri detects more than 50 cancer types (PFF ¶ 61), while Dr. Lengauer testified that the DETECT-A study of CancerSEEK only detected cancers of 10 organs (Lengauer (Exact/Thrive) Tr. 245; RX3869 (Cote Expert Report) ¶ 177; PFF ¶¶ 429–430.1). [redacted] By contrast, CancerSEEK must use a whole body PET-CT scan to attempt to localize any detected cancers. (*See* Lengauer (Exact/Thrive) Tr. 248; RX3419 (Lennon et al., 2020) at 3; PFF ¶¶ 419, 425, 739, 760, 841.3, 1723–24.) Dr. Lengauer also observes that the DETECT-A study of CancerSEEK only detected cancers of 10 organs, as opposed to the more than 50 cancer types that Galleri detects. (PFF ¶ 429 (Lengauer (Exact/Thrive) Tr. 245; RX3869 (Cote Expert Report) ¶ 177).) Dr. Lengauer also testified that CancerSEEK obtained a 30% sensitivity rate in the DETECT-A trial, as opposed to the 51.5% sensitivity rate of Galleri. (PFF ¶¶ 725 (RX3409 (Klein et al., 2021) at 5; RX3419 (Lennon et al., 2020) at 7; RX3115 (Chen et al., 2020) at 4).) Thus, [redacted] (PFF ¶ 421.)

Respondents also incorporate their responses to CCFF ¶ 362 herein.

415. Exact/Thrive's CancerSEEK test combines NGS-based DNA mutation detection technology and protein detection technology. (Conroy (Exact) Tr. 1544).

Response to Finding No. 415:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 414 herein.

416. [redacted] (PX8572 (Exact) at 046 (Exact Sciences, Innovation & Technology Committee Spring Meeting Presentation, April 16, 2021) (*in camera*)).

Response to Finding No. 416:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 414 herein.

417. [redacted] *camera*).

Response to Finding No. 417:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 414 herein.

418. [redacted] (Della Porta (Grail) Tr. 483) (*in camera*)).

Response to Finding No. 418:

The proposed finding is incomplete and misleading insofar as it suggests that Thrive is developing a product that is reasonably interchangeable with Galleri. (*See* Resps.' Post-Trial Br. at 18.) *First*, as Mr. Della Porta testified, [redacted] (Della Porta (GRAIL) Tr. 547–50.)

Second, as Dr. Katz testified, because "there's still a high degree of uncertainty" surrounding the development of these putative tests and their various characteristics, the views of the competitors are not probative of the actual contours of the relevant market. (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) "[I]t may well be they think of these firms as their competitor or prospectively so, but that's not really enough I think to reliably tell us what the market boundaries are going to be." (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) Statements by competitors "are not going to answer these questions about the trade-offs or . . . the degree of differentiation or how consumers are going to really behave." (RRFF ¶ 774 (RX6004 (Katz Trial Dep. at 21).) [redacted] (RRFF ¶ 773 (RX6004 (Katz Trial Dep. at 105) (emphasis added).)

Respondents further incorporate their responses to CCFF ¶¶ 413–14, 697, 773–76 herein.

419. [redacted]

Response to Finding No. 419:

Respondents have no specific response except to note that Complaint Counsel has presented no evidence that the current version of CancerSEEK in development is capable of competing with the Galleri test. (PFF ¶¶ 418-43.) Respondents incorporate their responses to CCFF ¶¶ 413–14 and 1904–2184 (in response to Section VI.A) herein.

(3) [redacted]

420. [redacted] (*in camera*)).

Response to Finding No. 420:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted] (PFF ¶¶ 508–09.) The evidence suggests that [redacted] and that Natera is unlikely to accelerate the development of a cancer screening test for multiple cancer types or to add a new cancer type to an existing screening test, [redacted] (PFF ¶¶ 509–10.) There is no evidence based on Natera's [redacted] (PFF ¶ 511 (RX3869 (Cote Expert Report) ¶ 227; [redacted]).)

421. [redacted]

Response to Finding No. 421:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 420 herein. Respondents also note that Natera is not developing any test called the [redacted] Respondents further note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

422. [redacted]

Response to Finding No. 422:

The proposed finding is inaccurate, incomplete and misleading. Although the proposed finding accurately cites from the [redacted] Steve Chapman, the CEO of Natera, stated, "***We are not focused on asymptomatic cancer screening or early detection.***" (PFF ¶ 526.3.) Further, while Natera's goal may be to create an MCED test, the evidence suggests that [redacted] and that Natera is unlikely to accelerate the development of a cancer screening test for multiple cancer types or to add a new cancer type to an existing screening test, [redacted] (PFF ¶¶ 509–10.) [redacted] Accordingly, there is no evidence based on [redacted] (PFF ¶ 511 (RX3869 (Cote Expert Report) ¶ 227; [redacted]).)

423. [redacted]

Response to Finding No. 423:

The proposed finding is incomplete and misleading. Respondents incorporate their responses to CCFF ¶¶ 420, 422 herein.

424. [redacted]

Response to Finding No. 424:

The proposed finding is incomplete and misleading. Respondents incorporate their responses to CCFF ¶¶ 420, 422 herein. Respondents also note that even other purported MCED test developers recognize that Natera is not developing a cancer screening test: Dr. Lengauer of Exact/Thrive testified at trial that [redacted] (Lengauer (Exact/Thrive) Tr. 206.)

425. [redacted]

Response to Finding No. 425:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 420, 422, 2185–2256 herein.

(4) Guardant

426. [redacted] (Getty, Tr. 2495-96; PX7045 (Chudova (Guardant) IHT at 98, 101-102) (*in camera*)).

Response to Finding No. 426:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. [redacted]

[redacted]

[redacted] (PFF ¶¶ 476–92.)

Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

427. Guardant is developing methylation-based technology to augment its existing somatic mutation technology. (Chudova (Guardant) Tr. 1165-66).

Response to Finding No. 427:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 426 herein and to note that Dr. Chudova testified that [redacted]

428. Guardant's therapy selection tests and minimal residual test for colorectal cancer look for mutations. (Chudova (Guardant) Tr. 1148-52; 1164-65).

Response to Finding No. 428:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 426–27 herein and note that as Complaint Counsel admitted, therapy selection and minimal residual disease (MRD) tests are not part of the relevant product market and are irrelevant here. (*See* Section III.C.4 (CCFF ¶¶ 728–31) below.)

429. Dr. Chudova, SVP of Technology for Guardant, explained that Guardant's technology "look[s] for nucleotide changes that are distinct between fragments of interest and [the] majority of the fragments in the body and that . . . links it to the tumor origin." (Chudova (Guardant) Tr. 1165).

Response to Finding No. 429:

The proposed finding is inaccurate, incomplete and misleading insofar as it suggests that Guardant has developed tumor of origin capabilities for its putative MCED test. [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 426–27 and 2315 herein.

430. Guardant is working on extending its minimal residual disease technology platform into an MCED testing platform to detect "a majority of the known cancers." (Chudova (Guardant) Tr. 1152-53).

Response to Finding No. 430:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 426–27 herein.

431. Dr. Chudova testified that cancer screening "requires higher sensitivity of the assay, because there's fewer [ctDNA] fragments, and you cannot rely exclusively on somatic mutations to identify presence of tumor." (Chudova (Guardant) Tr. 1165).

Response to Finding No. 431:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 426–27 herein. Respondents also note that, [redacted] In contrast, Galleri's current sensitivity rate for version 2 of its test (which is the version that is available as an LDT) is 51.5% for all cancer types across stages. (PFF ¶ 335.)

432. Because of the higher sensitivity required for MCED screening, Guardant has "significantly augmented" its somatic mutation technology with methylation as a second, distinct type of cancer biomarker. (Chudova (Guardant) Tr. 1165-66).

Response to Finding No. 432:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 426–27, 433 herein.

433. [redacted] (Chudova (Guardant) Tr. at 1243 (*in camera*)).

Response to Finding No. 433:

The proposed finding is incomplete and misleading insofar as it suggests [redacted] (Chudova (Guardant) Tr. 1243 (*in camera*)), which screens for early-stage colorectal cancer alone (PFF ¶ 486). Dr. Chudova also testified that [redacted] Accordingly, there is no indication based on Guardant's work to date that [redacted] (PFF ¶¶ 476–92.) Respondents also incorporate their responses to CCFF ¶¶ 426–27 herein.

434. [redacted] (Getty, Tr. 2625 (*in camera*)).

Response to Finding No. 434:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. As noted, even once a company has developed a cancer screening test for a single cancer type (which Guardant has not yet completed), it does not become easier to add additional cancer types. Respondents also incorporate their responses to CCFF ¶¶ 405 and 426–427 herein.

435. [redacted] (Getty, Tr. 2628 (*in camera*)).

Response to Finding No. 435:

The proposed finding is inaccurate, incomplete and misleading. Respondents incorporate their responses to CCFF ¶¶ 405 and 426–427 herein.

436. [redacted] (Della Porta (Grail) Tr. 482 (*in camera*)).

Response to Finding No. 436:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. The proposed finding is incomplete and misleading insofar as it suggests that [redacted] (*See* Resps.' Post-Trial Br. at 18.).

First, [redacted]

Second, like Mr. Della Porta, Complaint Counsel's own witness, Dr. Lengauer of Thrive, testified at trial that [redacted] (Lengauer (Exact/Thrive) Tr. 205–06.)

Third, as Dr. Katz testified, because "there's still a high degree of uncertainty" surrounding the development of these putative tests and their various characteristics, the views of the competitors are not probative of the actual contours of the relevant market. (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) "[I]t may well be they think of these firms as their competitor or prospectively so, but that's not really enough I think to reliably tell us what the market boundaries are going to be." (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) Statements by competitors "are not going to answer these questions about the trade-offs or . . . the degree of differentiation or how consumers are going to really behave." (RRFF ¶ 774 (RX6004 (Katz Trial Dep. at 21).). [redacted] (RRFF ¶ 773 (RX6004 (Katz Trial Dep. at 105) (emphasis added).)

Respondents further incorporate their responses to CCFF ¶¶ 433–434, 771, 773–76 herein.

437. [redacted] (PX4145 (Grail) at 009 (Grail, "An Overview," Aug. 14, 2019) (*in camera*)).

Response to Finding No. 437:

The proposed finding is incomplete and misleading. [redacted]

[redacted] The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also incorporate their responses to CCFF ¶¶ 405, 426–427, 433 and 436 herein.

438. [redacted]

Response to Finding No. 438:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2257–2352 herein.

(5) Freenome

439. Freenome's CEO, Mike Nolan, testified that Freenome is "starting with detection of colorectal cancer and advanced adenomas from a blood sample and then taking a stepwise approach to get to other cancer types so that we can deliver benefits of early detection across a range of different cancers." (Nolan (Freenome) Tr. 2706).

Response to Finding No. 439:

The proposed finding is incomplete and misleading insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. As noted, even once a company has developed a cancer screening test for a single cancer

type (which Freenome has not yet completed), it does not become easier to add additional cancer types. Respondents also incorporate their responses to CCFF ¶ 405 herein.

Mr. Nolan testified that [redacted] (PX7094 (Nolan (Freenome) Dep. at 307).) [redacted] (PFF ¶¶ 459-70.) [redacted] Accordingly, there is no indication based on Freenome's work to date that [redacted] (PFF ¶ 458 [redacted] RX3869 (Cote Expert Report) ¶ 193).)

Mr. Otte, Freenome's former CEO, also testified that [redacted]

440. Freenome's Nolan further testified that Freenome currently has "a multicancer program" and has prospectively collected samples "for the purpose of product development, across a range of cancer types." (Nolan (Freenome) Tr. 2709).

Response to Finding No. 440:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 439 herein. Mr. Nolan has also testified that [redacted]

441. [redacted] (PX7121 (Otte (Freenome) Dep. at 105) (*in camera*); *see also* Nolan (Freenome) Tr. 2711 (stating that Freenome's multiomics platform analyzes [redacted])).

Response to Finding No. 441:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 439 herein.

442. [redacted] (PX7121 (Otte (Freenome) Dep. at 56) (*in camera*)).

Response to Finding No. 442:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 439 herein.

443. [redacted] (Nolan (Freenome) Tr. 2748 (*in camera*)).

Response to Finding No. 443:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 439 herein.

444. [redacted] (Della Porta (Grail) Tr. 483 (*in camera*)).

Response to Finding No. 444:

The proposed finding is incomplete and misleading insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. The proposed finding is also incomplete and misleading insofar as it suggests that Freenome is developing a product that is reasonably interchangeable with Galleri. (*See* Resps.' Post-Trial Br. at 18.)

First, [redacted]

Second, and similar to Mr. Della Porta, Complaint Counsel's own witness, Dr. Lengauer of Thrive, testified at trial that [redacted]

Third, as Dr. Katz testified, because "there's still a high degree of uncertainty" surrounding the development of these putative tests and their various characteristics, the views of the competitors are not probative of the actual contours of the relevant market. (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) "[I]t may well be they think of these firms as their competitor or prospectively so, but that's not really enough I think to reliably tell us what the market boundaries are going to be." (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) Statements by competitors "are not going to answer these questions about the trade-offs or . . . the degree of differentiation or how consumers are going to really behave." (RRFF ¶ 774 (RX6004 (Katz Trial Dep. at 21).). [redacted]

[redacted] (RRFF ¶ 773 (RX6004 (Katz Trial Dep. at 105) (emphasis added).).

Respondents further incorporate their responses to CCFF ¶¶ ¶ 439, 771, 773–76 herein.

445. [redacted] (PX4145 (Grail) at 009 (Grail, "An Overview," Aug. 14, 2019) (*in camera*)).

Response to Finding No. 445:

The proposed finding is incomplete and misleading. [redacted] The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also incorporate their responses to CCFF ¶¶ 439–440, 444 herein.

446. [redacted]

Response to Finding No. 446:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2353–2400 herein.

(6) Singlera

447. Dr. Gao testified that Singlera's "goal is to detect cancer early, all kinds of cancer. (PX7042 (Gao, IHT at 21, 118-19)).

Response to Finding No. 447:

The proposed finding is incomplete and misleading. Although Singlera's "goal" may be to detect all kinds of cancer, Dr. Gao has also testified that Singlera is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82; PFF ¶ 536.1.) By Dr. Gao's own calculation, PanSeer is at least eight to ten years away from potential launch in the United States, and Singlera does not currently have any clinical trials relating to screening for multiple cancers listed on clinicaltrials.gov. (PFF ¶¶ 536.1-36.2.) Accordingly, [redacted] Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

448. Singlera's PanSeer test is designed to detect "all kinds of cancer" using a blood-based approach. (Gao (Singlera) Tr. 2873).

Response to Finding No. 448:

The proposed finding is incomplete and misleading. In the cited testimony, Dr. Gao was testifying specifically about "products in development", not products that have already been developed and launched on the market as an LDT, like Galleri. (Gao (Singlera) Tr. 2873 ("Q. Just to make sure I have it clear for the record, what products does Singlera currently have in

development? A. We have a number of products in development. . . . [T]he most important one is called PanSeer, so pan – it's for discovering all kinds of cancer through basically liquid biopsy.").) As explained in Respondents' response to CCFF ¶ 447, which Respondents incorporate herein, [redacted]

449. Singlera's PanSeer test analyzes cfDNA using methylation patterns as biomarkers to detect cancer. (Gao (Singlera) Tr. 2875; PX7042 (Gao (Singlera) IHT at 21)).

Response to Finding No. 449:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 447 herein.

450. Singlera published a paper in Nature Communications in 2020 demonstrating the performance of its platform for five different cancers in terms of sensitivity and specificity. (Gao (Singlera) Tr. 2875).

Response to Finding No. 450:

The proposed finding is incomplete and misleading. Even though Singlera published a paper in 2020 describing the performance of its test for "five different cancers", Dr. Gao subsequently testified in late 2021 that Singlera is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82; PFF ¶ 536.1.) By Dr. Gao's own calculation, PanSeer is at least eight to ten years away from potential launch in the United States, and Singlera does not currently have any clinical trials relating to screening for multiple cancers listed on clinicaltrials.gov. (PFF ¶¶ 536.1–36.2.) Accordingly, [redacted]

[redacted]

451. [redacted] (Della Porta (Grail) Tr. 483 (*in camera*)).

Response to Finding No. 451:

The proposed finding is incomplete and misleading insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. The proposed finding is also incomplete and misleading to the extent it suggests Singlera is developing a product that is reasonably interchangeable with Galleri. (*See* Resps.' Post-Trial Br. at 18.)

First, Galleri does not compete with Singlera's PanSeer test, which is very different from Galleri. Singlera's data from a 418-sample case control study shows only that Singlera's PanSeer assay detected five types of cancer and achieved only 96.1% specificity. (RX3115 (Chen et al 2020) at 3; [redacted] Indeed, Singlera is "far, far away" from launching its PanSeer test" (PX7102 (Gao (Singlera) Dep. at 118-19) and does not currently have a price for the product. (Gao (Singlera) Tr. 2893.) Respondents also incorporate their responses to CCFF ¶ 447 herein.

Second, as Dr. Katz testified, because "there's still a high degree of uncertainty" surrounding the development of these putative tests and their various characteristics, the views of the competitors are not probative of the actual contours of the relevant market. (RRFF ¶ 775

(RX6004 (Katz Trial Dep. at 21-22).) "[I]t may well be they think of these firms as their competitor or prospectively so, but that's not really enough I think to reliably tell us what the market boundaries are going to be." (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) Statements by competitors "are not going to answer these questions about the trade-offs or . . . the degree of differentiation or how consumers are going to really behave." (RRFF ¶ 774 (RX6004 (Katz Trial Dep. at 21).) [redacted] (RRFF ¶ 773 (RX6004 (Katz Trial Dep. at 105) (emphasis added).) Respondents also incorporate their responses to CCFF ¶¶ 773–76 herein.

452. [redacted] (PX4145 (Grail) at 009 (Grail, "An Overview," Aug. 14, 2019) (*in camera*)).

Response to Finding No. 452:

The proposed finding is incomplete and misleading. [redacted] The proposed finding is also incomplete and misleading to the extent that it suggests that [redacted] (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the

market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 447 and 451 herein.

453. [redacted]

Response to Finding No. 453:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2401–77.

(7) Helio

454. Helio is "a company in the space of early cancer detection using blood as the specimen trying to determine initially the early detection of liver cancer but with ambitions to do additional cancers, including ultimately a multicancer test." (Chahine (Helio) Tr. 1000).

Response to Finding No. 454:

Respondents have no specific response except to note that the cited testimony confirms that Helio has ambitions to create a multicancer test, but does not presently have a multicancer test. Dr. Chahine also testified that [redacted] (Chahine (Helio) Tr. 1090, 1092–93.) Further, Dr. Chahine testified that [redacted] Accordingly, there is no indication based on Helio Health's work to date that [redacted]

[redacted] (PFF ¶ 498.)

455. [redacted] (PX7077 (Chahine (Helio) Dep. at 15)).

Response to Finding No. 455:

The proposed finding is incomplete and misleading. The proposed finding mischaracterizes the cited testimony, in which Dr. Chahine testified that Helio is "interested in" other cancers, not that Helio plans to add cancers to its liver test. (PX7077 (Chahine (Helio) Dep. at 15 ("Q. What blood-based cancer screening products is Helio currently developing? A. Our lead product is in liver, but we have a pipeline of other cancers that we're interested in, including colon, breast, lung.").) Further, the cited testimony confirms that Helio is only "interested in" other cancers but has not in fact developed a test that screens for multiple cancer types simultaneously. In the cited trial testimony Dr. Chahine referred to "many others [i.e., cancer types] that we have done, you know, very limited research on" and noted that "ovarian cancer is a huge killer" and "[e]sophageal cancer is another one" but did not refer to a "HelioLiver test platform" or specifically discuss adding those or other cancer types to any such platform. (Chahine (Helio) Tr. 1039.) Respondents also incorporate their responses to CCFF ¶ 454 herein.

456. [redacted] (PX7077 (Chahine (Helio) Dep. at 16) (*in camera*)).

Response to Finding No. 456:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted],

[redacted] (Chahine (Helio) Tr. 1090, 1092–93.) Accordingly, there is no indication based on Helio Health's work to date that [redacted] (PFF ¶ 498.)

457. [redacted] (Chahine (Helio) Tr. 1000-01; PX7077 (Chahine (Helio) Dep. at 16) (*in camera*)).

Response to Finding No. 457:

Respondents have no specific response except note that Dr. Chahine also testified that [redacted] (Chahine (Helio) Tr. 1090, 1092–93.) Further, Dr. Chahine testified that [redacted] Accordingly, there is no indication based on [redacted]. (PFF ¶ 498.)

458. [redacted] (Della Porta (Grail) Tr. 483-84 (*in camera*)).

Response to Finding No. 458:

The proposed finding is incomplete and misleading insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. The proposed finding is also incomplete and misleading to the extent it suggests Helio is developing a product that is reasonably interchangeable with Galleri. (*See* Resps.' Post-Trial Br. at 18.)

First, [redacted]

Second, Respondents also note that Complaint Counsel's own witness, Dr. Lengauer of Thrive, confirmed at trial that [redacted] (Lengauer (Exact/Thrive) Tr. 206.)

Third, as Dr. Katz testified, because "there's still a high degree of uncertainty" surrounding the development of these putative tests and their various characteristics, the views of the competitors are not probative of the actual contours of the relevant market. (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) "[I]t may well be they think of these firms as their competitor or prospectively so, but that's not really enough I think to reliably tell us what the market boundaries are going to be." (RRFF ¶ 775 (RX6004 (Katz Trial Dep. at 21-22).) Statements by competitors "are not going to answer these questions about the trade-offs or . . . the degree of differentiation or how consumers are going to really behave." (RRFF ¶ 774 (RX6004 (Katz Trial Dep. at 21).). [redacted]

[redacted] (RRFF ¶ 773 (RX6004 (Katz Trial Dep. at 105) (emphasis added).) Respondents further incorporate their responses to CCFF ¶¶ 454–57 and 773–76 herein.

459. [redacted] (PX4145 (Grail) at 009 (Grail, "An Overview," Aug. 14, 2019) (*in camera*)).

Response to Finding No. 459:

The proposed finding is incomplete and misleading. [redacted] The proposed finding is also incomplete and misleading to the extent that it suggests [redacted] (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also incorporate their responses to CCFF ¶ 454–58 herein.

460. [redacted]

Response to Finding No. 460:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2478–2556 herein.

(8) [redacted]

461. [redacted]

Response to Finding No. 461:

Respondents have no specific response.

462. [redacted]

Response to Finding No. 462:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted] to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Dr. Fielder testified that [redacted] (PX7074 (Perettie (FMI) Dep. at 73, 74, 77–78); Fiedler (FMI) Tr. 4476–77) [redacted] (PX7074 (Perettie (FMI) Dep. at 72, 73, 79, 160–61).) [redacted]

[redacted] (PX7074 (Perettie (FMI) Dep. at 79–80); PX8447 (Roche) at 5.)

Accordingly, [redacted]

463. [redacted]

Response to Finding No. 463:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 462 herein.

464. [redacted]

Response to Finding No. 464:

The proposed finding is incomplete and misleading. Complaint Counsel mischaracterizes Ms. Perettie's testimony in which she testified not that she expected FMI's purported future MCED test to be "competitive or better" than GRAIL's test but merely that FMI's "*goal* would be to be as competitive or better". Further, [redacted]

[redacted] Respondents also note that Complaint Counsel's own witness, Dr. Lengauer of Thrive, confirmed at trial that [redacted] (Lengauer (Exact/Thrive) Tr. 206.) Further, the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

465. [redacted]

Response to Finding No. 465:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2557–94.

c) MCED Tests Are Designed to Complement Existing Screening Methods

466. [redacted] (PX7040 (Getty (Guardant) IHT at 154-155); PX7051 (Lengauer (Third Rock Ventures) IHT at 176) (*in camera*); PX7083 (Bishop (Grail) Dep. at 24-25)).

Response to Finding No. 466:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can

reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706**)** and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

467. [redacted] (Conroy (Exact) Tr. 1647 (*in camera*)).

Response to Finding No. 467:

The proposed finding is inaccurate and misleading to the extent it suggests that [redacted], which there is no evidence to support. Dr. Lengauer testified, [redacted] Additionally, [redacted] Respondents also incorporate their responses to CCFF ¶ 640 herein.

468. Dr. Cance anticipates that MCED tests will be part of annual physicals for certain individuals: "I expect that, once available, these tests might be used as part of patients' annual primary (wellness) care. For example, any individual above the age of 50 could receive a multi-cancer early detection test at their annual physical through their primary physician." (PX8398 (Cance (American Cancer Society) Decl. ¶ 9)).

Response to Finding No. 468:

Respondents have no specific response except to note that certain of the putative MCED developers Complaint Counsel has identified intend to market their putative tests to other customers: Natera plans to offer its purported cancer screening test to oncology offices (CCFF ¶ 2219) and Freenome plans to market its MCED test to primary care physicians *and OB-GYNs*. (CCFF ¶ 2389.)

Respondents also note that Dr. Cance also testified that GRAIL is further ahead in its development process than other companies that are developing purported MCED tests, that he is not aware of any other purported MCED test that is commercially available today, that he does not know of other companies detecting the same number of cancers as GRAIL, and that accelerating an early cancer detection test's ability to commercialize at scale is consistent with ACS's mission. (Cance (ACS) Tr. 631–33.) Respondents also incorporate their responses to CCFF ¶ 248 herein.

469. Dr. Cance declared that MCED tests will complement existing screening methods: "Until they are fully validated and studied, multi-cancer early detection tests may complement but not replace the existing screening methods." (PX8398 (Cance (American Cancer Society) Decl. ¶ 9)).

Response to Finding No. 469:

Respondents have no other specific response except to note that this proposed finding provides support for the proposition that Galleri will be a complement to single cancer screening tests, including those that are available as the standard of care today, as well as complementary to screening tests for a handful of cancer types that many purported MCED test developers are pursuing. (*See* PFF ¶ 358 (RX0744 (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15; PX7086 (Cance (ACS) Dep. at 50–53); [redacted]; RX3869 (Cote Expert Report) ¶ 136).)

Respondents also note that certain putative MCED test developers identified by Complaint Counsel are developing cancer screening test that are intended to be substitutes for USPSTF-recommended screening tests and/or single-cancer blood-based tests. For example, [redacted]

Respondents also incorporate their responses to CCFF ¶ 248 herein.

470. Dr. Cance described the potential to use MCED tests as a preliminary screening tool: "These multi-cancer early detection tests could ultimately be used as a preliminary screening test to determine whether further cancer-specific screening, such as a colonoscopy or other more invasive diagnostic methods, is needed." (PX8398 (Cance (American Cancer Society) Decl. ⁋ 9)).

Response to Finding No. 470:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 248 and 468 herein. Respondents note that Dr. Cance also described in the cited reference that [redacted] (PX8398 (Cance (American Cancer Society) Decl.) ⁋ 9.) Respondents also note that at this time, Galleri is not meant as an alternative or replacement to standard cancer screening procedures, but rather as a complement to recommended screenings (*See* PFF ¶ 358 (RX0744 (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15).)

471. Mr. Bishop testified on the distinction between single cancer and MCED tests:

> [T]he reason we should not use Galleri instead of any of those single tests is because those single tests are optimized for detecting those single cancers. They

> have a higher detection rate than we do for those individual cancers. And the clinical goal here is to maximize the number of cancers we detect early. And we do that by using Galleri in conjunction with single-cancer screening tests.

(Bishop (Grail) Tr. 1390-91).

Response to Finding No. 471:

Respondents have no other specific response except to note that this proposed finding confirms that Galleri will be a complement to single cancer screening tests, including those that are available as the standard of care today, as well as to the screening tests for a handful of cancer types that many purported MCED test developers are pursuing. (*See* PFF ¶ 358 (RX0744 (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15; PX7086 (Cance (ACS) Dep. at 50–53); [redacted]; RX3869 (Cote Expert Report) ¶ 136).) Respondents also note that certain putative MCED test developers identified by Complaint Counsel are developing cancer screening test that are intended to be substitutes for USPSTF-recommended screening tests and/or single-cancer blood-based tests. For example, [redacted]

Respondents further note that there is typically a tradeoff between specificity and sensitivity, where a test seeking higher specificity may often have lower sensitivity. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) Subsequently, existing single cancer screening tests typically have very high sensitivity rates and correspondingly lower specificity/higher false positive rates. **(**PFF ¶ 180.1 (RX3869 (Cote Expert Report) ¶ 95).) In contrast, a test developer

focusing on a cancer screening test for a large number of cancer types must focus on attaining a very high specificity rate, and a high PPV, which will often result in correspondingly lower sensitivity rates. (PFF ¶ 181 (RX3869 (Cote Expert Report) ¶ 95).) Based on the performance of Galleri in the CCGA-2 study and using 2006 to 2015 SEER data for ages 50–79, GRAIL estimates that by adding Galleri to diagnosis by usual care, there is potential to detect nearly 70% of cancers resulting in death within five years at an earlier stage (excluding cancers that grow too quickly to be detected by any screening program), which would translate to averting potentially 100,000 deaths annually, or 39% of the five-year deaths expected if not for early detection by Galleri. (PFF ¶ 64.)

472. Mr. Bishop explained that, in comparison to the existing standard of care screening tests, Galleri is not as sensitive:

> [W]ithout exception, the single-cancer tests used today for prostate, cervix, breast and colon -- and I can list the particular tests that are regarded as standard of care today -- their detection rate for those single cancers at their specificity is higher than the detection rate for those individual single cancers that the Galleri test has. That's the essential reason why these tests should be used alongside each other.

(Bishop (Grail) Tr. 1392).

Response to Finding No. 472:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 471 herein.

473. [redacted] (Della Porta (Grail) Tr. 544 (*in camera*)).

Response to Finding No. 473:

Respondents have no specific response except to note that Mr. Della Porta also testified that [redacted] (Della Porta (Grail) Tr.

544 (*in camera*) [redacted] Respondents also incorporate their responses to CCFF ¶ 471 herein.

474. [redacted] (PX7058 (Conroy (Exact) IHT at 119-120) (*in camera*)).

Response to Finding No. 474:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

475. [redacted] (PX7058 (Conroy (Exact) IHT at 112-13) (*in camera*)).

Response to Finding No. 475:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

D. THE U.S. MCED TEST MARKET IS EXPECTED TO REACH TENS OF BILLIONS OF DOLLARS ANNUALLY IN REVENUES

1. Illumina Expects Cancer Screening to Be "Probably the Single Biggest Market Segment That We Can Imagine"

476. In 2016, Jay Flatley, then the Chairman and Chief Executive Officer of Illumina, told investors that cancer screening is a "gigantic opportunity" and "probably the single biggest market segment that we can imagine." (PX0045 at 023 (Illumina, Illumina Q1 2016 Results Earnings Call Transcript, May 4, 2016)).

Response to Finding No. 476:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 1), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

The proposed finding is incomplete and misleading. Although the cited source is from January 2016, the proposed finding appears to suggest that Mr. Flatley's statement governs the behavior of Illumina today with respect to the GRAIL transaction.

477. "Illumina has recognized that cancer screening is [redacted] with a projected market size of tens of billions of dollars by 2035. . . ." (Answers and Defenses of Respondents Illumina and Grail at 018 (¶ 10) (*in camera*)).

Response to Finding No. 477:

Respondents have no specific response except to note that the cited source refers to "cancer screening" via liquid biopsy broadly and not multicancer screening. As noted, in addition to multicancer screening, there is cancer screening for single cancer types via liquid biopsy. (*See* CCFF ¶¶ 634, 671-72.).

478. Driving its proposed acquisition of Grail was Illumina's recognition that, [redacted] (*See* PX2465 (Illumina) at 006-008 [redacted] (*in camera*); PX2488 (Illumina) at 007-009 [redacted],

[redacted] (*in camera*)).

Response to Finding No. 478:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 3121 herein.

479. [redacted] (PX2035 (Illumina) at 002 (Illumina, Oncology Testing 5-Year Strategy Refresh, 2020) (*in camera*)).

Response to Finding No. 479:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 5), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

480. [redacted] (PX2488 (Illumina) at 003 [redacted] (*in camera*)).

Response to Finding No. 480:

Respondents have no specific response except to note that [redacted]

481. [redacted] (PX2488 (Illumina) at 003, 007 [redacted]

[redacted] (*in camera*)).

Response to Finding No. 481:

Respondents have no specific response except to note that [redacted]

482. [redacted] (PX2316 (Illumina) at 023 (Email from J. Goswami, Illumina, to A. Qadan, Illumina, et al., Apr. 29, 2020, attaching presentation entitled "Board of Directors M&A Landscape") (*in camera*)).

Response to Finding No. 482:

Respondents have no specific response except to note that [redacted]

483. In presentations to Illumina's board of directors, Illumina executives warned, [redacted] (PX2488 (Illumina) at 009 [redacted] (*in camera*); *see also* PX2465 (Illumina) at 008 [redacted] (*in camera*)).

Response to Finding No. 483:

The proposed finding is incomplete and misleading to the extent it characterizes Illumina's executives as "warn[ing]" the board about the observation it made. Respondents otherwise have no specific response except to incorporate their responses to CCFF ¶¶ 3115, 3121, 3125, 3127, 3129 herein.

484. [redacted] (PX2488 (Illumina) at 009 [redacted] (*in camera*); *see also* PX2465 (Illumina) at 008 [redacted] (*in camera*); PX2169 (Illumina) at 043 [redacted] (*in camera*)).

[redacted]

Response to Finding No. 484:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 212–13, 3129 herein.

2. Other MCED Developers Also Project Tens of Billions of Dollars in Revenues for the MCED Test Market

485. [redacted] (PX8324 (Roche) at 012 [redacted] (*in camera*)).

Response to Finding No. 485:

Respondents have no specific response except to note that [redacted] Respondents further note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 59), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

486. Guardant Senior Vice President of Commercial, Bill Getty, testified that Guardant estimates the multi-cancer early detection testing market will exceed $50 billion in revenue. (Getty (Guardant) Tr. 2503; PX7105 (Getty (Guardant) Dep. at 50-51)).

Response to Finding No. 486:

Respondents have no specific response.

487. As Guardant's Getty explained, "[t]he sequencing business is a much, much smaller slice . . . relative to that 60-billion-dollar [blood-based cancer screening business] opportunity. So as an organization, [Illumina's] acquisition of Grail is ostensibly geared to moving into this much bigger opportunity and maximizing that opportunity." (PX7105 (Getty (Guardant) Dep. at 68)).

Response to Finding No. 487:

Respondents have no specific response except to note that as an executive at Guardant Health, Mr. Getty lacks personal knowledge to opine on what Illumina's motivations and incentives might be.

488. [redacted] (Berry (Illumina) Tr. 767-768) (*in camera*).

Response to Finding No. 488:

Respondents have no specific response.

489. [redacted] (RX0894 (Helio) at 10 (Helio, Helio Health) (*in camera*)).

Response to Finding No. 489:

Respondents have no specific response except to note that the cited slide [redacted] Respondents further note that Complaint Counsel chose not to discuss this document at trial, (Resps.' Exhibit Index at 49), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

490. Freenome's Mr. Nolan testified that the MCED market "is huge and the unmet need is huge." (Nolan (Freenome) Tr. 2727).

Response to Finding No. 490:

Respondents have no specific response.

491. Cowen—a financial services firm—identified multi-cancer screening tests for asymptomatic patients as its own market and assessed that it would have approximately a $5 to $50 billion target addressable market in its report on liquid biopsy. (PX2752 (Illumina) at 007 (Liquid Biopsy Report: Early Detection of a Huge Opportunity, Sept. 18, 2020)). Cowen's market assessment noted that single cancer tests, tests targeting high risk patients, and tests with a non-screening function as separate market opportunities.

(PX2752 (Illumina) at 007 (Liquid Biopsy Report: Early Detection of a Huge Opportunity, Sept. 18, 2020).

Response to Finding No. 491:

Respondents have no specific response except to note that the same report notes that: GRAIL has "conducted systematic clinical studies" and that Galleri "has been shown to be capable of identifying >50 types of cancers by scanning methylation patterns"; the only other entity it recognizes as pursuing a multicancer screening test is Thrive. By contrast, the cited report notes that Freenome and Guardant are among the companies in a separate market segment pursuing *single-cancer screening tests to detect colorectal cancer* (PX2022 (Cowen) at 30–31 (emphasis added)), while it lists Singlera in passing under the heading "[s]ome [o]thers" following its summary of the colorectal cancer screening market (PX2022 (Cowen) at 33), and considers Helio in a separate segment for "High Risk Cancer Detection" for its liver cancer screening test. The cited report does not even recognize [redacted] as pursuing early cancer detection at all: it notes [redacted] as a participant in the recurrence monitoring/MRD and "liquid biopsy for biopharma" (*i.e.* companion diagnostic) segments (PX2022 (Cowen) at 46–53), and [redacted] in the therapy selection and "liquid biopsy for biopharma" market segments. (PFF ¶¶ 717.1–717.1.3.)

For clarity, Respondents note that Respondents cited a different exhibit that contains the same Cowen report in Respondents Proposed Findings of Fact. (*Compare* PX2022 (Illumina) at 2-59 *with* PX2752 (Illumina) at 2-59.) Respondents further incorporate their responses to CCFF ¶ 820 herein.

E. REGULATORY APPROVAL PROCESS AND REIMBURSEMENT FRAMEWORK FOR MCED TESTS

492. [redacted]

[redacted] (Bishop (Grail) Tr. 1331-33; Della Porta (Grail) Tr. 456-58; Ofman (Grail) Tr. 3371-72 (*in camera*)).

Response to Finding No. 492:

The proposed finding is incomplete and misleading. *First*, the proposed finding is incomplete and misleading to the extent it suggests that MCED tests are [redacted] (Ofman (GRAIL) Tr. 3352–53; RX6001 (Deverka Trial Dep.) at 49.) As Dr. Ofman testified, [redacted] (Ofman (GRAIL) Tr. 3352.) [redacted] (Ofman (GRAIL) Tr. 3352; RX6001 (Deverka Trial Dep.) at 52; *see also* PX4082 at -001 (GRAIL's Amended Form S-1 dated Sept. 2020) ("approval under traditional fee-for-service Medicare reimbursement . . . will take several years to obtain, if at all").)

MCED tests are also not currently covered by any private insurers. Private insurers will require evidence of analytic validity, clinical validity, clinical utility and economic utility when determining whether to cover a new test. (RX6001 (Deverka Trial Dep.) at 33–36).) [redacted] (Ofman Tr. 3354–55.) As Dr. Ofman testified, [redacted] (Ofman (GRAIL) Tr. 3354–55.)

Second, the proposed finding is incomplete and misleading to the extent it suggests that MCED tests are [redacted] Galleri is the only MCED test that is commercially available through any of these channels, and its availability is limited to [redacted] (Ofman (GRAIL) Tr. 3373–74.)

493. Grail has begun entering into contracts with some health systems and self-employed customers for the Galleri test, but, according to Grail Chief Medical Officer Josh Ofman, Grail does not expect to receive widespread payer coverage until after obtaining premarket approval ("PMA") from the FDA. (*See* PX7092 (Ofman (Grail) Dep. at 175-176)).

Response to Finding No. 493:

The proposed finding is misleading to the extent it refers to GRAIL entering contracts with "self-employed customers". [redacted]

Respondents also note that the proposed finding is incomplete and misleading to the extent it implies that premarket approval from the FDA is sufficient for GRAIL to obtain widespread payor coverage for Galleri. *First*, [redacted] (Ofman (GRAIL) Tr. 3354–55; *see also* RX6001 (Deverka Trial Dep. at 37–38.) *Second*, [redacted] (Ofman (GRAIL) Tr. 3354;

RX6001 (Deverka Trial Dep.) at 49–50.) Obtaining premarket approval would be a helpful step to achieving payor coverage, but it will not be enough on its own.

Respondents also note that the proposed finding supports Respondents' position regarding the amount of time it could take for GRAIL to achieve payor coverage for Galleri.

[redacted] (Ofman (GRAIL) Tr. 3351.) [redacted]

1. Laboratory Developed Tests (LDTs)

494. A laboratory-developed test ("LDT") is a test developed on-site at a single clinical laboratory, which uses components from multiple suppliers to put together a specific test that is then validated in that laboratory. (Febbo (Illumina) Tr. 4320; *see also* PX0043 at 041 (Grail 2020 Form S-1) ("LDTs are in vitro diagnostic tests that are intended for clinical use and are designed, manufactured, and used within a single laboratory")).

Response to Finding No. 494:

Respondents have no specific response except to note that the cited testimony does not specify that a clinical laboratory developing an LDT uses components from "multiple suppliers". With respect to LDTs, Dr. Febbo testified that "a clinical laboratory uses components to put together a specific test that they validate in their laboratory". (Febbo (Illumina) Tr. 4320.)

495. [redacted] (Goswami (Illumina) Tr. 3185-86; *see also* Rabinowitz (Natera) Tr. 382 (*in camera*)).

Response to Finding No. 495:

Respondents have no specific response except to note that the CLIA and CAP guidelines require clinical evidence supporting a test's performance in order to achieve and maintain CLIA/CAP certification. Laboratory-developed test manufacturers and laboratories are

dependent on this certification to offer their tests, and after initial certification they continue to undergo routine audits. (Febbo (Illumina) Tr. 4322; *see also* Goswami (Illumina) Tr. 3221 ("[T]hey have to certify robustness of results . . . And that certification has to be renewed over – you know, over the years.").) The United States allows a laboratory-developed test developed under CLIA/CAP guidelines "to be ordered by doctors". (Goswami (Illumina) Tr. 3222.)

496. LDTs, in order to be offered to patients, must be performed in labs that have CLIA certification. (Febbo (Illumina) Tr. 4320).

Response to Finding No. 496:

Respondents have no specific response.

497. The Centers for Medicare & Medicaid Services ("CMS") certifies CLIA compliance of the laboratories themselves. (Ofman (Grail) Tr. 3317-18).

Response to Finding No. 497:

Respondents have no specific response.

498. [redacted] (PX7111 (Fesko (Natera) Dep. at 181 (*in camera*)); *see also* Goswami (Illumina) Tr. 3186 (stating that the test developer "takes all responsibility for certifying the test and validating it"); PX7097 (Felton (Thermo Fisher) Dep. at 51) (stating that an LDT test itself is "self-validated" under CLIA/CAP regulation in the U.S.)).

Response to Finding No. 498:

Respondents have no specific response except to note that the proposed finding is incomplete and misleading to the extent it implies that test developers certify and validate their own LDTs without any regulatory oversight. To the contrary, for a test developer to validate its test under the CLIA/CAP guidelines, it must run the test at a CLIA-certified laboratory, which in turn must undergo routine audits in order to retain the CLIA certification. (Febbo (Illumina) Tr. 4322–23.) During those audits, CMS reviews the clinical data supporting an LDT and the test developer's claims about the data. (Febbo (Illumina) Tr. 4322–23.) If CMS found there was

insufficient data to support the LDT, the laboratory would risk losing its CLIA license. (Febbo (Illumina) Tr. 4323.)

499. CLIA/CAP guidelines for LDTs are not overseen by the FDA. (Goswami (Illumina) Tr. 3221-22, 3262; *see also* PX4035 (Grail) at 038 (PiperJaffray, The 2015 Liquid Biopsy Report, Sept. 2015) (stating that LDTs are exempt from FDA's oversight but laboratories with LDTs must follow CLIA)).

Response to Finding No. 499:

Respondents have no specific response except to note that the proposed finding is incomplete and misleading to the extent it implies that LDTs are never subject to FDA oversight. GRAIL is selling the Galleri test as an LDT while simultaneously seeking premarket approval from the FDA. Therefore, even though GRAIL is operating the Galleri test as an LDT, it is seeking to comply with FDA's additional evidentiary and other requirements in order to work towards obtaining regulatory approval. (Ofman (GRAIL) Tr. 3319; *see also* Ofman (GRAIL) Tr. 3318 ("if you have an LDT in the market, you still need to follow all the major guidances from the FDA about supportable claims and having evidence to support your claims").) Respondents also incorporate their responses to CCFF ¶ 498 herein.

500. The FDA does not review or validate safety or efficacy data associated with a test sold as an LDT. (Goswami (Illumina) Tr. 3262; *see also* PX0043 at 041 (Grail 2020 Form S-1) (stating that "[a]lthough LDTs are classified as medical devices and FDA has statutory authority to ensure that medical devices are safe and effective for their intended uses, FDA has historically exercised enforcement discretion and has not enforced certain applicable FDA requirements, including premarket review, with respect to LDTs")).

Response to Finding No. 500:

Respondents have no specific response except to note that the proposed finding is incomplete and misleading to the extent it implies that the safety or efficacy data associated with a test sold as an LDA is never subject to FDA oversight. GRAIL is selling the Galleri test as an LDT while simultaneously seeking premarket approval from the FDA. Therefore, even though

GRAIL is operating the Galleri test as an LDT, the FDA will review safety or efficacy data as part of its regulatory approval process. (Ofman (GRAIL) Tr. 3319.) Respondents also incorporate their responses to CCFF ¶ 498 herein.

501. [redacted] (*See* PX7111 (Fesko (Natera) Dep. at 171) (*in camera*)).

Response to Finding No. 501:

The proposed finding is incomplete and misleading because a laboratory-developed test must be supported by clinical evidence in order to obtain and maintain CLIA certification, regardless of whether the clinical evidence has been published. (Febbo (Illumina) Tr. 4322 (referring to clinical evidence as "very important" because "laboratory-developed test manufacturers and laboratories are dependent on CLIA certification to continue to offer their tests").) To the extent that the proposed finding suggests that certain putative MCED test developers are validating their tests to CLIA standards without publishing data, Respondents further note that [redacted]. (*See*, *e.g.*, RX5009–10 (subpoenas to Exact), RX5044–45 (subpoenas to Thrive); RX5015–16 (subpoenas to Guardant); RX5012–13 (subpoenas to Freenome); RX5022–23 (subpoenas to [redacted]); RX5035–36 (subpoenas to Singlera); RX5011 (subpoena to [redacted]).)

Respondents also note that GRAIL has published clinical validity data for Galleri, and published that data before launching Galleri in June 2021 as an LDT. (*See*, *e.g.*, RX3410 (CCGA study published 2018); RX3409 (clinical validation study presented April and May 2021); RX3041 (interim results of Pathfinder study presented June 4, 2021); *see also* Febbo (Illumina) Tr. 4322 (referring to the CCGA study that "demonstrated that the Galleri test could detect cancer in over 50 types of cancer"); Della Porta (GRAIL) Tr. 558 [redacted]

[redacted] RX6001 (Deverka Trial Dep.) at 83–84 (discussing "a number of" clinical validity studies that GRAIL has conducted for Galleri and the published clinical validity results from the CCGA study).)

502. [redacted] (*See* PX7051 (Lengauer (Third Rock Ventures) IHT at 146-147) (*in camera*); PX7058 (Conroy (Exact) IHT at 142) (*in camera*)).

Response to Finding No. 502:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also note that no test developer other than Galleri is currently selling an MCED, including as an LDT.

503. Grail's Galleri test is an LDT. (Ofman (Grail) Tr. 3317; Goswami (Illumina) Tr. 3222).

Response to Finding No. 503:

Respondents have no specific response.

504. As an LDT, Grail's Galleri test does not currently require FDA approval or oversight to be sold. (Goswami (Illumina) Tr. 3222).

Response to Finding No. 504:

Respondents have no specific response except to note that GRAIL is selling the Galleri test as an LDT while simultaneously seeking premarket approval from the FDA. Therefore, even though GRAIL is operating the Galleri test as an LDT and does not require FDA approval or oversight to be sold, it is seeking to comply with the FDA's additional evidentiary and other requirements in order to obtain regulatory approval. (Ofman Tr. 3319.) Respondents also incorporate their responses to CCFF ¶ 498 herein.

505. [redacted] (PX7050 (Nolan (Freenome) IHT at 279-280) (*in camera*); *see also* PX7051 (Lengauer (Third Rock Ventures) IHT at 149) (*in camera*)).

Response to Finding No. 505:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 498–504 herein.

2. FDA Approval Process

506. [redacted] (PX7092 (Ofman (Grail) Dep. at 175-176); PX0043 at 115, 132 (Grail 2020 Form S-1); PX7058 (Conroy (Exact) IHT at 87-88) (*in camera*)).

Response to Finding No. 506:

Respondents have no specific response except to note the proposed finding is incomplete and misleading to the extent it implies that [redacted] There are numerous factors that will contribute to whether an MCED test achieves [redacted], including the development of robust clinical utility evidence and health economic evidence. (RX6001 (Deverka Trial Dep.) at 34–39).) FDA approval is helpful for achieving payor coverage because it "gives confidence" that a new test passed the FDA's evidence thresholds (RX6001 (Deverka Trial Dep.) at 39–40)), but payors will apply additional clinical and economic evidentiary considerations when evaluating whether to cover a new test. (RX6001 (Deverka Trial Dep.) at 41–42.) Even with payor coverage, the widespread commercialization of an MCED test will also require physician education regarding "appropriate use of the test, how to interpret test results and how to refer people that have a positive test result for further diagnostic workup". (RX6001 (Deverka Trial Dep.) at 42–43.)

Respondents also note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

507. [redacted] (*See* PX7055 (Otte (Freenome) IHT at 32-33) (*in camera*); PX7068 (Perettie (FMI-Roche) IHT at 33) (*in camera*)).

Response to Finding No. 507:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

508. Grail CEO Hans Bishop testified at trial that FDA approval is "very necessary for getting American citizens access to our test." (Bishop (Grail) Tr. 1368).

Response to Finding No. 508:

Respondents have no specific response except to note that Mr. Bishop further explained that he views FDA premarket approval as "necessary" because it will help to achieve payor coverage, which is in turn a "prerequisite" to broad-scale adoption of the Galleri test. (Bishop Tr. 1369–70.) He testified that he believes becoming part of Illumina will "increase[] our chances of success to be successful with our PMA and indeed even the timing of it". (Bishop Tr. 1372.) Respondents also incorporate their responses to CCFF ¶ 506 herein.

509. Illumina, Grail, and MCED test developer witnesses, ordinary course documents, and external industry researchers state that FDA approval is a necessary input to achieve Medicare coverage of MCED testing from CMS. (deSouza (Illumina) Tr. 2414); Ofman (Grail) Tr. 3319-20; Conroy (Exact) Tr. 1734; Chahine (Helio) Tr. 1029 (explaining that CMS issued guidance "stating that it would require FDA approval for reimbursement under CMS" for early cancer detection); PX4172 (Grail) at 059 (Grail Board of Directors Meeting, Nov. 21, 2019) (*in camera*) [redacted]; PX9090 (Roche) at 019 (Cowen, The Liquid Biopsy Report: Early Detection of a Huge Opportunity, Sep. 18, 2020) (stating that it "is

clear that CMS reimbursement [for asymptomatic cancer screening tests] will require FDA approval")).

Response to Finding No. 509:

Respondents have no specific response except to note that Illumina and GRAIL witnesses testified that they believe Illumina's acquisition of GRAIL is likely to accelerate both FDA approval and Medicare coverage for Galleri. (*See, e.g.*, Bishop Tr. 1372; Ofman Tr. 3320; Febbo Tr. 4326–27, 4337–38; *see also* RX6001 (Deverka Trial Dep.) at 63.) Respondents also incorporate their responses to CCFF ¶ 506 herein.

510. A Premarket Approval ("PMA") is a regulatory approval from the FDA that applies to high-risk, Class III diagnostic tests. (Febbo (Illumina) Tr. 4324; Ofman (Grail) Tr. 3319).

Response to Finding No. 510:

Respondents have no specific response except to clarify that a PMA applies to all Class III medical devices. (Febbo (Illumina) Tr. 4445–46.) [redacted] (Febbo (Illumina) Tr. 4443.)

511. [redacted]

(Chudova (Guardant) Tr. at 1208-09) (*in camera*).

Response to Finding No. 511:

Respondents have no specific response except to note that the cited testimony also states that [redacted]

[redacted] (Chudova (Guardant) Tr. 1208–09.)

512. Unless a MCED test can be shown to be "substantially equivalent to a legally marketed predicate device," the test will be "automatically classified under the [Food, Drug, and Cosmetic Act] into class III, which generally requires PMA approval." (PX0043 at 043 (Grail 2020 Form S-1)).

Response to Finding No. 512:

Respondents have no specific response.

513. Galleri will be considered a Class III medical device and will require Premarket Approval. (Febbo (Illumina) Tr. 4445; PX7099 (Febbo (Illumina) Dep. at 83-84); PX0043 at 043-44 (Grail 2020 Form S-1)).

Response to Finding No. 513:

Respondents have no specific response except to note that the cited trial testimony also states that GRAIL has plans to submit an application for a single-site premarket approval and that a unified Illumina and GRAIL will continue to focus on premarket approval for Galleri. (Febbo (Illumina) Tr. 4337.) Respondents also incorporate their responses to CCFF ¶ 509 herein.

514. [redacted] (Conroy (Exact) Tr. 1548-49; *see also* Rabinowitz (Natera) Tr. 394-95 (*in camera*) [redacted]).

Response to Finding No. 514:

Respondents have no specific response except to note that the proposed finding relies on testimony for which the witnesses lack personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

515. The quality of a product is part of safety and efficacy with respect to FDA approval. (Conroy (Exact) Tr. 1548-49).

Response to Finding No. 515:

The proposed finding is irrelevant as it does not relate to MCED tests.

Respondents have no specific response except to note that the cited testimony was in response to a question about whether Exact needed to provide any information to the FDA regarding Cologuard's suppliers as part of the FDA approval process. Mr. Conroy testified that the "key suppliers are inspected by the FDA to help ensure that the quality measures are put into place", and that "the suppliers are an absolutely critical part of that quality assurance". (Conroy (Exact) Tr. 1548–49.)

516. Dr. Ofman testified at trial that the FDA's requirements for a PMA approval exceed those to meet LDT standards: "[T]he FDA has many additional requirements in terms of quality, manufacturing, inspections. The evidence requirements are quite different." (Ofman (Grail) Tr. 3319). "[T]here's just a lot more to getting an FDA approval above and beyond what it takes to get CAP/CLIA certification." (Ofman (Grail) Tr. 3319; *see also* Bishop (Grail) Tr. 1345 (stating that a PMA has "an entirely different set of requirements" than an LDT).

Response to Finding No. 516:

Respondents have no specific response except to note that Dr. Ofman also testified that a test must be "analytically and clinically validated" in order to obtain CLIA/CAP certification and operate a test as an LDT. (Ofman (GRAIL) Tr. 3317.) He testified that GRAIL is additionally working to meet the FDA's requirements because he believes FDA approval will enable GRAIL to "provide broad access of [the Galleri] test to as many adult Americans and adults worldwide as possible". (Ofman (GRAIL) Tr. 3319.) Dr. Ofman also testified that he believes Illumina's reacquisition of GRAIL could accelerate the process of making the Galleri test accessible to doctors and their patients "as soon as possible". (Ofman Tr. 3320.) Respondents also incorporate their responses to CCFF ¶ 498 herein.

517. [redacted] (Rabinowitz (Natera) Tr. 395 (*in camera*)).

Response to Finding No. 517:

Respondents have no specific response except to note that the cited testimony also states that [redacted]

(Rabinowitz (Natera) Tr. 395–96.)

518. A PMA requires submitting a lengthy application involving clinical and analytical validation data collected during clinical trials using the device. (PX4082 (Grail) at 135 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 518:

Respondents have no specific response.

519. According to Dr. Ofman, analytical validation means ensuring that a test measures what it purports to measure at certain levels of precision. (Ofman (Grail) Tr. 3284).

Response to Finding No. 519:

Respondents have no specific response.

520. Analytical validation is typically followed by clinical validation, which means demonstrating that a test performs as indicated to detect the given disease in the intended use population. (Ofman (Grail) Tr. 3284-85).

Response to Finding No. 520:

Respondents have no specific response.

521. Clinical validation is critical for the commercialization of a test such as Galleri, as it is necessary to receive FDA approval, Medicare coverage, and reimbursement by private insurance. (*See* Gao (Singlera) Tr. 2886-87; PX7099 (Febbo (Illumina) Dep. at 36) (testifying that clinical validation is necessary for FDA approval); *see also* PX4160 (Grail) at 094 (Grail, Board of Directors Meeting, Nov. 10, 2020) (*in camera*) [redacted]).

Response to Finding No. 521:

Respondents have no specific response except to note that GRAIL has already conducted clinical validity studies for Galleri and published clinical validity data from the CCGA study. (RX6001 (Deverka Trial Dep.) 83.)

522. Like clinical validation, demonstrating clinical utility requires evidence that a test can detect disease in the intended use population. (Qadan (Illumina) Tr. 4110).

Response to Finding No. 522:

Respondents have no specific response.

523. Establishing clinical utility also involves assessing how a test's results may impact patient management and outcomes. (Qadan (Illumina) Tr. 4110-11).

Response to Finding No. 523:

Respondents have no specific response.

524. Dr. Navathe testified that because evidence of clinical validity and clinical utility overlap, a single study may develop evidence of both clinical validity and clinical utility, such as Grail's PATHFINDER 1, Clinical Practice Learning Program, Strive, Summit, and NHS studies. (RX3853 (Navathe Trial Dep. at 182)).

Response to Finding No. 524:

The proposed finding relies on improper expert testimony. Dr. Navathe lacks the expertise to opine on payor reimbursement, rendering his opinions unreliable. (*See* Resps.' Post-Trial Br. at 266.)

Respondents have no other specific response except to note that Dr. Navathe testified that evidence of clinical validity and clinical utility, while overlapping in certain respects, are distinct. Dr. Navathe testified that clinical validity "would reflect whether the results of the test, for example, are valid, are they consistent, are they reliable, and od they have meaning clinically". (RX3853 (Navathe Trial Dep.) 178.) In contrast, he testified that "clinical utility means in practice is there benefit from implementation or use of a given test or diagnostic".

(RX3853 (Navathe Trial Dep.) 178–79; *see also* RX6001 (Deverka Trial Dep.) 34 ("Q: And is clinical utility the same thing as clinical validity? A: It is not.").)

525. [redacted] (PX4389 (Grail) at 036 [redacted] (*in camera*) [redacted]).

Response to Finding No. 525:

Respondents have no specific response except to note that GRAIL's PATHFINDER study was only meant to be a proof of concept study: "it was really a feasibility study about implementing Galleri into actual clinical practice" and "was not designed or powered to replicate the sensitivity of Galleri or to try to find . . . all the cancers that Galleri can find, because that would require hundreds of thousands of people." (Ofman (GRAIL) Tr. 3296–97; *see also* PFF ¶¶ 394–402.).

526. Evidence of clinical utility relates to how a test changes patient management and outcomes. (PX7084 (Qadan (Illumina) Dep. at 14) ("'[C]linical utility' . . . "mean[s] how does the test change the management of a patient, resulting in better outcomes.")).

Response to Finding No. 526:

Respondents have no specific response.

527. Dr. Navathe testified that interventional studies are an important step in the generation of clinical utility evidence. (RX3853 (Navathe Trial Dep. at 183) ("Q: What evidence of clinical utility is expected to be generated by PathFinder 1? A: The effectiveness, the real world effectiveness, of implementing Galleri into clinical practice.")).

Response to Finding No. 527:

The proposed finding relies on improper expert testimony. Dr. Navathe lacks the expertise to opine on payor reimbursement, rendering his opinions unreliable. (*See* Resps.' Post-Trial Br. at 266.) Respondents also note that Dr. Navathe did not testify that "interventional

studies are an important step in the generation of clinical utility evidence", as formulated by Complaint Counsel.

528. MCED test developers must conduct clinical trials for their tests to obtain regulatory approval. (Della Porta (Grail) Tr. 584; *see also* Lengauer (Third Rock Ventures) Tr. 170 (explaining that for FDA approval, test developers must undergo a "registrational trial," which allows the FDA to evaluate the benefit-to-risk ratio of a test or device).

Response to Finding No. 528:

The proposed finding is based on testimony for which the witnesses lack personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

529. [redacted] (*See, e.g.*, Rabinowitz (Natera) Tr. 302-303; PX7091 (Lengauer (Third Rock Ventures) Dep. at 134-135 (*in camera*)) [redacted] PX7077 (Chahine (Helio) Dep. at 32-33 (*in camera*)) [redacted]

Response to Finding No. 529:

The proposed finding is based on testimony for which the witnesses lack personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that Illumina has experience with multi-year, large-scale clinical studies and could therefore help GRAIL to conduct such studies for the Galleri test. (*See, e.g.*, Qadan Tr. 4158–59; RX6001 (Deverka Trial Dep.) 61–62.)

530. [redacted] (PX7111 (Fesko (Natera) Dep. at 33-34); PX7050 (Nolan (Freenome) IHT at 67-70, 72) (*in camera*).

Response to Finding No. 530:

Respondents object to the proposed finding as inaccurate and misleading on the following grounds: *First*, it is inaccurate and misleading to [redacted] because neither of those companies (nor any other company, as the facts show) has a multi-cancer early detection test commercially available today: Their prospective multi-cancer early detection tests are, at best, in the development phase. Respondents also incorporate their responses to CCFF ¶¶ 414, 420, 426, 439, 447, 454 and 462 herein.

Second, it is inaccurate and misleading to claim these companies have [redacted] To the contrary, other test developers have not yet performed clinical trials for most or all of the cancer types they aspire to include in an MCED test. For example:

[redacted] (Rabinowitz Tr. 394, 399.)

[redacted] (Getty Tr. 2593, 2599; Chudova Tr. 1154; 1240:7–12.)

[redacted]

[redacted] (Nolan Tr. 2811.)

Respondents also note that the proposed finding relies on IH testimony with respect to Freenome which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Singlera is also "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82; PFF ¶ 536.1.)

[redacted]

531. As part of the FDA's review of a PMA, the FDA will typically inspect the manufacturer's facilities for compliance with Quality System Regulation (QSR) requirements, which impose requirements related to design controls, manufacturing controls, documentation, and other quality assurance procedures. (PX4082 (Grail) at 135 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 531:

Respondents have no specific response.

532. Grail employees have already begun discussions with the FDA regarding a PMA application for Galleri. (Bishop (Grail) Tr. 1345).

Response to Finding No. 532:

Respondents have no specific response except to add that GRAIL employees have not yet submitted a PMA application. (Ofman (GRAIL) Tr. 3301–02, 3319.)

533. Grail's S-1 explains that the FDA is continuing to gather input from industry, academic, and clinical stakeholders to "inform its thinking on how to assess" MCED tests. (PX4082 (Grail) at 047 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 533:

Respondents have no specific response.

534. [redacted] (PX4430 (Grail) at 026, 028 [redacted] (*in camera*); PX4475 (Grail) at 012 [redacted] (*in camera*)).

Response to Finding No. 534:

Respondents have no specific response.

535. [redacted] (PX4475 (Grail) at 081 (*in camera*)).

Response to Finding No. 535:

Respondents have no specific response.

a) Single-Site IVDs

536. A single-site PMA is also referred to as a single-site IVD. (Goswami (Illumina) Tr. 3186).

Response to Finding No. 536:

Respondents have no specific response.

537. A single-site, or centralized, IVD test is approved by the FDA to run in a single approved lab, typically the MCED test developer's own laboratory. (Goswami (Illumina) Tr. 3186; PX7112 (Bailey (PGDx) Dep. at 14); PX7093 (Young (Illumina) Dep. at 43-44); PX7065 (Aravanis (Illumina) IHT at 139-140); PX7055 (Otte (Freenome) IHT at 41-42); PX7063 (Berry (Illumina) IHT at 202); PX7064 (Goswami (Illumina) IHT at 28-31); PX7040 (Getty (Guardant) IHT at 78-79); PX7049 (Bailey (PGDx) IHT at 25)).

Response to Finding No. 537:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

538. [redacted] (PX4082 (Grail) at 011 (Email attaching Grail 2020 S-1/Amended, Sept. 2020); PX7100 (Chudova (Guardant) Dep. at 55-57) (*in camera*)).

Response to Finding No. 538:

The proposed finding is incomplete and misleading to the extent it implies that companies other than GRAIL are at a similar stage in seeking a PMA for the use of an MCED test. While other companies are developing or have plans to develop an MCED test, their prospective MCED tests are, at best, in the development phase. Respondents also incorporate their responses to CCFF ¶¶ 414, 420, 426, 439, 447, 454, 462 and 530 herein.

539. [redacted] (PX7069 (Bishop (Grail) IHT at 94-95) (explaining that FDA approval is "a prerequisite for getting broad-based reimbursement. And secondly, it's something that confirms the performance attributes of the test"); PX7055 (Otte (Freenome) IHT at 32-33) (*in camera*) [redacted]).

Response to Finding No. 539:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also note that FDA approval is helpful for achieving payor coverage because it "gives confidence" that a new test passed the FDA's evidence thresholds (RX6001 (Deverka Trial Dep.) at 39–40)),

but payors will apply additional clinical and economic evidentiary considerations when evaluating whether to cover a new test. (RX6001 (Deverka Trial Dep.) at 41–42.) Respondents incorporate their responses to CCFF ¶ 506 herein.

b) Distributed or Kitted IVDs

540. A distributed or "kitted" IVD is an IVD test that has received PMA approval from the FDA permitting analysis by independent testing providers, such as hospitals or large reference labs like LabCorp or Quest. (Goswami (Illumina) Tr. 3186-87; Leite (Illumina) Tr. 2150; PX7049 (Bailey (PGDx) IHT at 68-69); PX7063 (Berry (Illumina) IHT at 202); PX7112 (Bailey (PGDx) Dep. at 14-18); PX7093 (Young (Illumina) Dep. at 44)).

Response to Finding No. 540:

Respondents have no specific response.

541. An approved IVD test must "lock-in" its specific NGS instrument, reagents, and other system components as part of the final FDA approval. (PX7045 (Chudova (Guardant) IHT at 73-74); PX7044 (Stahl (Invitae) IHT at 60-61)).

Response to Finding No. 541:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding is based on testimony for which the witnesses lack personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

542. Modifying any component of the approved IVD could require conducting an additional clinical trial with the modified component. (PX7045 (Chudova (Guardant) IHT at 73–74).

Response to Finding No. 542:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed

finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

543. Because the test is locked-in with a particular NGS platform, switching to new technology platforms is difficult. (PX7045 (Chudova (Guardant) IHT at 73-74); PX7044 (Stahl (Invitae) IHT at 60-61)).

Response to Finding No. 543:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding is based on testimony for which the witnesses lack personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

544. The distributed kit IVD test developer has "responsibility for quality control and quality analysis" of the distributed kit IVD test. (Goswami (Illumina) Tr. 3187).

Response to Finding No. 544:

Respondents have no specific response.

545. A distributed kit IVD test developer must follow FDA guidelines and submit to regular FDA audits following PMA approval of a distributed kit IVD. (Goswami (Illumina) Tr. 3187).

Response to Finding No. 545:

Respondents have no specific response.

546. [redacted] (PX7040 (Getty (Guardant) IHT at 81-82) (*in camera*)).

Response to Finding No. 546:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also misleading to the extent it implies that a distributed IVD model is always the best way for a test to reach the largest market. Several features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) ¶ 359.) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.)

547. [redacted] (PX7055 (Otte (Freenome) IHT at 40-41) (*in camera*); PX7049 (Bailey (PGDx) IHT at 25)).

Response to Finding No. 547:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (See Resps.' Post-Trial Br. at 275–76.)

Respondents also note that shortening the turnaround time for test results is not always necessary. For example, in oncology, it may be more important to shorten the turnaround time for therapy selection tests because patients with Stage III or Stage IV cancer require treatment right away. (Goswami (Illumina) Tr. 3219.) In contrast, it may be less important to shorten the turnaround time for early screening tests because patients the intervention at an early stage often requires to wait and watch or perform a secondary test. (Goswami (Illumina) Tr. 3200; *see also* Cote Tr. 151–52 ("But as I pointed out, for the purposes of cancer screening, this was probably the least important attribute because the differences in turnaround time are really not important when it comes to the specific application of -- of a cancer screening application.").)

548. [redacted] (PX7094 (Nolan (Freenome) Dep. at 234-35) (*in camera*)).

Response to Finding No. 548:

Respondents have no specific response except to note that Mr. Nolan testified [redacted] (PX7094 (Nolan (Freenome) Dep. at 234-35)); *see also* Nolan Tr. 2772.

549. Helio's Dr. Chahine testified that, [redacted] (PX7077 (Chahine (Helio) Dep. at 19) (*in camera*)).

Response to Finding No. 549:

The proposed finding is misleading and lacks foundation to the extent it is based on [redacted] (PX7077 (Chahine (Helio) Dep. at 19)). The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

550. [redacted] (PX7100 (Chudova (Guardant) Dep. at 57-58) (*in camera*)).

Response to Finding No. 550:

The proposed finding is misleading and lacks foundation to the extent it adopts Dr. Chudova's deposition testimony as fact. [redacted] (PX7100 (Chudova (Guardant) Dep. at 57–58)). The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

551. An MCED test developer that relies on Illumina sequencing would need an IVD agreement with Illumina to distribute its test to third-party labs. (Goswami (Illumina) Tr. 3262-63).

Response to Finding No. 551:

Respondents have no specific response except to clarify that an IVD agreement is not required for a test developer to pursue either an LDT or single-site PMA. (Goswami (Illumina) Tr. 3273; Leite (Illumina) Tr. 2154–55; *see also* (RX3373 (Illumina Vertical Foreclosure and Efficiencies Submission) at 41–43.)

3. Payer Reimbursement

552. [redacted] (PX7055 (Otte (Freenome) IHT at 34-35) (*in camera*); PX7058 (Conroy (Exact) IHT at 87-88) (*in camera*)).

Response to Finding No. 552:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is incomplete and misleading. FDA approval will be required for most payors to cover an MCED test, but test developers may begin to seek reimbursement coverage from CMS and private insurers before or in parallel with seeking FDA approval. With respect to CMS, the Parallel Review Pilot Program is a mechanism for the FDA and CMS to simultaneously review clinical data, decreasing the time between FDA approval and CMS NCD development. (RX3556 (FDA) at 3; RX3867 (Deverka Expert Report) ¶ 56.) With respect to private payors, Dr. Ofman testified [redacted] (Ofman (GRAIL) Tr. 3354–55.)

553. [redacted] (PX7083 (Bishop (Grail) Dep. at 145-146) (*in camera*)).

Response to Finding No. 553:

Respondents have no specific response.

554. [redacted] (Conroy (Exact) Tr. 1734; Bishop (Grail) Tr. 1343-44; PX7055 (Otte (Freenome) IHT at 32-33) (*in camera*); PX7068 (Perettie (FMI-Roche) IHT at 33) (*in camera*)).

Response to Finding No. 554:

Respondents have no specific response except to note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also inaccurate and misleading to the extent it refers to [redacted] Complaint Counsel alleges an MCED market consisting of the Galleri test and any other test in development, so long as its developers contend that it will detect more than one cancer type and use NGS, no matter its anticipated features, functions, or launch timeline. (*See* FTC Pretrial Br. at 43–44; Compl. ¶ 3; PX6090 (Scott Morton Expert Report) ¶¶ 141–46.) This "MCED market" definition is impermissibly speculative. (PFF ¶¶ 680.1–680.5.) The third-parties whose testimony is cited in support of Complaint Counsel's proposed finding [redacted] Respondents also incorporate their responses to CCFF ¶¶ 341, 375, 378, 382 and 398 herein.

555. There are two major sources of insurance in the United States: The Centers for Medicare & Medicaid Services ("CMS") and private payers. (Chahine (Helio) Tr. 1029).

Response to Finding No. 555:

Respondents have no specific response.

556. Illumina admits that "[t]o make Galleri broadly available in the U.S., it is essential that Galleri obtain coverage from both Medicare and private insurers." (PX6060 (Illumina) at 023 (Illumina's Responses & Objections to FTC's First Set of Interrogatories)).

Response to Finding No. 556:

Respondents have no specific response.

557. Broad-based adoption refers to coverage by government insurers and private insurers. (Bishop (Grail) Tr. 1330).

Response to Finding No. 557:

Respondents have no specific response.

558. Reimbursement of an MCED test will depend on many factors, including sensitivity and specificity of the test. (Conroy (Exact) Tr. 1735).

Response to Finding No. 558:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

559. Reimbursement of an MCED test will also depend on whether the test is reliable, safe, effective, and medically necessary. (Conroy (Exact) Tr. 1735).

Response to Finding No. 559:

The proposed finding is inaccurate to the extent it states that reimbursement will depend on a test being "medically necessary". Payors are more likely to focus instead on a test having "clinical utility", which is "a comparative evaluation" of whether "use of the test compared to not using the test . . . lead[s] to a behavior change, typically on the part of providers and patients, that then leads to a change in health outcomes". (RX6001 (Deverka Trial Dep.) 33–34.)

560. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 163-165) (*in camera*)).

Response to Finding No. 560:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

561. Respondents' expert Dr. Carlton [redacted] (RX3864 (Carlton Rebuttal Report) ¶ 13) (*in camera*)).

Response to Finding No. 561:

Respondents have no specific response.

562. Respondents' expert Dr. Abrams [redacted] (PX6097 (Abrams Rebuttal Report) ¶ 30) (*in camera*)).

Response to Finding No. 562:

Respondents have no specific response.

563. Grail's Galleri test is not yet covered by Medicare or private insurance. (PX7083 (Bishop Grail) Dep. at 87)).

Response to Finding No. 563:

Respondents have no specific response.

a) Private Payers

564. [redacted] (Bishop (Grail) Tr. 1331-33; Della Porta (Grail) Tr. 456-58; Ofman (Grail) Tr. 3371-72 (*in camera*)).

Response to Finding No. 564:

The proposed finding mischaracterizes the cited testimony. Mr. Bishop, Mr. Della Porta and Dr. Ofman [redacted] (Bishop (GRAIL) Tr. 1331-33; Della Porta (GRAIL) Tr. 456-58; Ofman (GRAIL) Tr. 3371-72 (*in camera*)). But these are not necessarily examples of "private payers". A "payer" is an entity that pays for healthcare services. (RX6001 (Deverka Trial Dep.) 29.) Private insurance companies are examples of private payers (RX6001 (Deverka Trial Dep.) 29), but [redacted] (RX6001 (Deverka Trial Dep.) 85–86.)

Dr. Ofman confirmed this in his testimony, stating that [redacted]

565. [redacted] (Bishop (Grail) Tr. 1401; Ofman (Grail) Tr. 3371-72 (*in camera*); PX4082 (Grail) at 011 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 565:

Respondents have no specific response except to note that [redacted] are not payers. Respondents also incorporate their responses to CCFF ¶ 565 herein.

566. In its 2020 Form S-1 filing, Grail stated that "[m]any of the nation's premier healthcare institutions have robust programs in population health management and precision management" and noted that one of Grail's "planned strategies upon commercial launch is to offer Galleri at select certain [sic] regional health systems." (PX0043 at 115 (Grail 2020 Form S-1)).

Response to Finding No. 566:

Respondents have no specific response.

567. As of trial, Grail [redacted] health systems. (Ofman (Grail) Tr. 3372 (*in camera*)).

Response to Finding No. 567:

Respondents have no specific response except incorporate their responses to CCFF ¶¶ 567 and 571 herein.

568. [redacted] (PX4610 (Grail) at 002-003 (Email from Stephanie Gutendorf, Grail, to Grail "Weekly Market Access Summary" distribution list, July 19, 2021) (*in camera*).

Response to Finding No. 568:

Respondents have no specific response except to note that [redacted] (Ofman (GRAIL) Tr. 3372.) Respondents also incorporate their responses to CCFF ¶ 571 herein.

569. Self-insured employers are employers that are responsible for the healthcare costs of their employees. (Della Porta (Grail) Tr. 457-58).

Response to Finding No. 569:

Respondents have no specific response.

570. As of trial, Grail [redacted] self-insured employers. (Ofman (Grail) Tr. 3374-75 (*in camera*)).

Response to Finding No. 570:

Respondents have no specific response except to note that [redacted] (Ofman (GRAIL) Tr. 3374–75.)

571. [redacted] (PX4610 (Grail) at 003-004 (Email from Stephanie Gutendorf, Grail, to Grail "Weekly Market Access Summary" distribution list, July 19, 2021) (*in camera*).

Response to Finding No. 571:

Respondents have no specific response except to note that [redacted] (Ofman (GRAIL) Tr. 3374–75.)

572. Concierge practices are primary care practices in which patients pay a fee for preferred access to doctors. (Bishop (Grail) Tr. 1333; Della Porta (Grail) Tr. 462).

Response to Finding No. 572:

Respondents have no specific response.

573. Grail estimates that the total addressable U.S. market for Galleri within physician-directed channels (including concierge practices) is 1 million individuals. (PX4082 (Grail) at 011 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 573:

The proposed finding is incomplete and misleading. GRAIL estimates that the "overall early detection market" is 107 million individuals between the ages of 50 to 79 in the United States. (PX4082 (GRAIL) at 011 (Email attaching Grail 2020 S-1/Amended, Sept. 2020).) Out of that population, GRAIL estimates that the total addressable U.S. market for "physician-directed channels, including concierge practices and executive health programs" is 1 million individuals—less than 1 percent of the overall market. (PX4082 (GRAIL) at 011 (Email attaching Grail 2020 S-1/Amended, Sept. 2020).)

574. [redacted] (Della Porta (Grail) Tr. 464; Ofman (Grail) Tr. 3372 (*in camera*) [redacted]).

Response to Finding No. 574:

Respondents have no specific response except to note that Dr. Ofman testified [redacted] (Ofman (GRAIL) Tr. 3372.)

575. As of trial, Grail [redacted] Galleri tests. (Ofman (Grail) Tr. 3375 (*in camera*)).

Response to Finding No. 575:

Respondents have no specific response.

576. Galleri is not covered by private insurance. (Bishop (Grail) Tr. 1323; 1401-02).

Response to Finding No. 576:

Respondents have no specific response.

577. Grail Chief Medical Officer Joshua Ofman testified: "we don't expect that large U.S. payers are going to provide coverage for the [Galleri] test without FDA approval." (Ofman (Grail) Tr. 3319-20).

Response to Finding No. 577:

Respondents have no specific response.

578. Grail CEO Hans Bishop testified that "PMA approval with FDA" is a "prerequisite" to making Galleri "accessible to many more patients than are in [Grail's] starting channels [made up of health systems, large self-insured employers, and concierge practices]." (Bishop (Grail) Tr. 1402-03).

Response to Finding No. 578:

Respondents have no specific response.

579. Dr. Lengauer explained that FDA approval is "very, very important for acceptance of tests in the community" and "is very often a requirement for potential reimbursement of the test." (Lengauer (Third Rock Ventures) Tr. 170).

Response to Finding No. 579:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

580. FDA approval also lends credibility to MCED tests, which many primary care physicians will likely require before prescribing MCED tests to patients. (Lengauer (Third Rock Ventures) Tr. 231).

Response to Finding No. 580:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

b) CMS

581. Individuals 65 or over are covered by Medicare. (Freidin (Grail) Tr. 2991).

Response to Finding No. 581:

Respondents have no specific response except to note that certain younger people with disabilities may also be covered by Medicare. (RX3742 (Who is Eligible for Medicare?) at 1.)

582. [redacted] (deSouza (Illumina) Tr. 2414; Ofman (Grail) Tr. 3319-20; PX4172 (Grail) at 059 (Grail, Board of Directors Meeting, Nov. 21, 2019) (*in camera*) [redacted]); (Conroy (Exact) Tr. 1734; Chahine (Helio) Tr. 1054-55 (*in camera*); [redacted]); Febbo (Illumina) Tr. 4335).

Response to Finding No. 582:

Respondents have no specific response.

583. CMS stated in January 2021 that it would require FDA approval to grant reimbursement for early cancer detection testing. (Chahine (Helio) Tr. 1029).

Response to Finding No. 583:

The proposed finding lacks foundation because it relies on the testimony of a third party without citing any specific statement or guidance from CMS. The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

584. The processes for receiving FDA approval and CMS reimbursement are not the same. (Freidin (Grail) Tr. 2981).

Response to Finding No. 584:

Respondents have no specific response except to note that the Parallel Review Pilot Program is a program in which the FDA and CMS agree to review a new test in parallel so that, if the test achieves FDA approval, CMS coverage could follow more quickly than if the test developer applied for CMS reimbursement separately. (RX6001 (Deverka Trial Dep) at 53.)

585. First, a test must get FDA approval, and then CMS performs a cost-benefit analysis to see whether it will pay for the test. (Freidin (Grail) Tr. 2981-82).

Response to Finding No. 585:

The proposed finding is incomplete, misleading and overly simplistic. CMS (like other payors) considers a variety of factors beyond a "cost-benefit analysis" to determine whether it will pay for an FDA-approved test. In particular, CMS considers the analytic validity, clinical validity, clinical utility and health economic evidence associated with the test. (RX6001 (Deverka Trial Dep.) at 33–34; RX3867 (Deverka Expert Report) ¶ 31.) The costs associated with the test and appropriate clinical follow-up care relative to the benefits of the test (*e.g.*, in the form improved health outcomes) is part of this analysis. (RX3867 (Deverka Expert Report) ¶ 101.) The costs and benefits of the test relative to the current standard of care is also part of this analysis. (RX3867 (Deverka Expert Report) ¶ 101.)

586. According to Mr. Conroy, an MCED test "would be viable only as a niche product" in the United States if it was not covered by Medicare. (Conroy (Exact) Tr. 1734-35).

Response to Finding No. 586:

The proposed finding lacks foundation because it relies on the opinion testimony of a third party.

587. [redacted]

[redacted] (Ofman (Grail) Tr. 3352-53 (*in camera*)).

Response to Finding No. 587:

Respondents have no specific response

588. Congress introduced a bill called the Medicare MCED Screening Coverage Act that targets early cancer screening. (Bishop (Grail) Tr. 1323-24).

Response to Finding No. 588:

Respondents have no specific response except to note that the Multi-Cancer Early Detection Screening Coverage Act (H.R. 1946), was re-introduced by Representative Terri Sewell (D-AL) on March 16, 2021 following its initial introduction as H.R. 8845 during the 116th Congressional session in 2020. (PX0095 (H.R. 8845); RX3602 (H.R. 1946); [redacted]

589. The Medicare MCED Screening Coverage Act would give CMS the authority to reimburse cancer screening tests including Galleri once approved by the FDA. (Bishop (Grail) Tr. 1324).

Response to Finding No. 589:

Respondents have no specific response except to note that under the Medicare MCED Screening Coverage Act, reimbursement of cancer screening tests like Galleri would not be automatic, even once approved by the FDA. There are still "evidence hurdles", including the need for clinical utility data, that Medicare would evaluate in making a coverage determination. (RX6001 (Deverka Trial Dep.) 111–12.)

590. Grail has advocated in favor of and supported the passage of the Medicare MCED Screening Coverage Act. (Bishop (Grail) Tr. 1324).

Response to Finding No. 590:

Respondents have no specific response.

591. [redacted] (Ofman (Grail) Tr. 3356 (*in camera*)).

Response to Finding No. 591:

Respondents have no specific response.

592. [redacted]
(Ofman (Grail) Tr. 3354 (*in camera*)).

Response to Finding No. 592:

Respondents have no specific response.

c) USPSTF

593. [redacted] (PX7110 (Conroy (Exact) Dep. at 58-59) (*in camera*)).

Response to Finding No. 593:

The proposed finding lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF. The United States Preventive Services Task Force ("USPSTF") is an independent panel of experts that makes recommendations about clinical preventive services (such as cancer screening) which influence the coverage and adoption of medical services. (*See* RX3867 (Deverka Report) ¶ 39; *see also* RX3723 (USPSTF) (listing USPSTF recommendations for various services.)

594. [redacted] (PX7058 (Conroy (Exact) IHT at 137 (*in camera*))).

Response to Finding No. 594:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding also lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents note that USPSTF recommendations impact whether a screening test can be covered by Medicare. Unless Congress enacts new legislation, Medicare has statutory authority to cover only preventive tests with a USPSTF A or B rating. (RX3646 (Social Security Act § 1833, 42 U.S.C. § 1395I); RX6001 (Deverka Trial Dep.) at 50; RX3867 (Deverka Expert Report) ¶ 39.)

595. [redacted] (PX7058 (Conroy (Exact) IHT at 27) (*in camera*)).

Response to Finding No. 595:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding also lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF.

596. [redacted]

[redacted] (PX7110 (Conroy (Exact) Dep. at 59-60 (*in camera*))).

Response to Finding No. 596:

The proposed finding lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

597. [redacted] (PX7058 (Conroy (Exact) IHT at 29-30) (*in camera*)).

Response to Finding No. 597:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding also lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF.

Respondents note that [redacted]

[redacted]

[redacted] (*See* RX3867 (Deverka Report) ¶¶ 39, 49.)

598. When USPSTF approves a product it "allows Medicare to cover a new screening test if that test is recommended by USPSTF. The way the Medicare Act works, which is under the Social Security Act, is that Medicare only pays for taking care of people who are sick and, unless otherwise specifically spelled out, it doesn't pay for preventive services. So it's only if – either in the law, like for mammography or colon cancer screening, where the Medicare Act specifically allows and provides for Medicare to pay for certain services or if the USPSTF ranks a new service as an A – or B-rated service, then Medicare can make the decision to cover the test." (PX7058 (Conroy (Exact) IHT at 30)).

Response to Finding No. 598:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding also lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

599. "USPSTF is hugely influential in whether a new cancer screening technology ever gets to see the light of day and used by people throughout the country." (PX7058 (Conroy (Exact) IHT at 30-31)).

Response to Finding No. 599:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding also lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF. The proposed finding also relies on improper lay

opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

600. [redacted] (Conroy (Exact) Tr. 1629 (*in camera*)).

Response to Finding No. 600:

Respondents have no specific response except to note that the proposed finding lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

601. [redacted] (Ofman (Grail) Tr. 3355 (*in camera*)).

Response to Finding No. 601:

Respondents have no specific response.

602. [redacted] (Ofman (Grail) Tr. 3355 (*in camera*)).

Response to Finding No. 602:

Respondents have no specific response.

603. [redacted] (Ofman (Grail) Tr. 3355 (*in camera*)).

Response to Finding No. 603:

Respondents have no specific response.

604. [redacted] (Ofman (Grail) Tr. 3355 (*in camera*)).

Response to Finding No. 604:

Respondents have no specific response.

III. THE RELEVANT PRODUCT MARKET IS THE MARKET FOR THE RESEARCH, DEVELOPMENT, AND COMMERCIALIZATION OF MCED TESTS

605. [redacted] (*See, e.g.*, PX4082 (Grail) at 008-009 (Email attaching Grail 2020 S-1/Amended, Sept. 2020); PX7100 (Chudova (Guardant) Dep. at 15-16); PX7094 (Nolan (Freenome) Dep. at 252-253) (*in camera*); PX4116 (Grail) at 013 (Email from M. Podoll, Morgan Stanley, to A. Freidin, Grail, et al., attaching IPO Roadshow Video Outline: Project Galileo, Aug. 2020); PX8392 (Exact) at 002 (Pipeline Review, Jan. 2021) (*in camera*); PX7051 (Lengauer (Third Rock Ventures) IHT at 27-29) (*in camera*)).

Response to Finding No. 605:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

606. [redacted] (*See, e.g.*, PX2005 (Illumina) at 004-005, 009, 013 (Illumina, ScreenCo – Early Cancer Detection on a Global Scale Presentation, 2015) [redacted]); PX5027 (Illumina) at 015 (Illumina, Board of Directors Meeting, Aug. 3, 2020) (*in camera*).

Response to Finding No. 606:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. [redacted] (PX2005 (Illumina) at 004–05, 009 (ScreenCo—Early Cancer Detection on a Global Scale Presentation, 2015).)

Respondents also note that most of the putative MCED developers identified by Complaint Counsel, [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–706) and that Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also note that the cited Board of Directors presentation [redacted] (PX5027 (Illumina) at 016 (Board of Directors Meeting, Aug. 4, 2020) (*in camera*).)

Respondents also incorporate their responses to CCFF ¶¶ 376 and 605 herein.

607. Witnesses similarly described MCED tests. (*See infra* Section VI. (Competitors Are Racing to Develop MCED Tests).

Response to Finding No. 607:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 605–606 herein.

608. [redacted] (Bishop (Grail) Tr. 1373; *see also* Cance (American Cancer Society) Tr. 609).

Response to Finding No. 608:

Respondents have no specific response.

609. [redacted] (*See* PX4082 (Grail) at 008-009 (Email attaching Grail 2020 S-1/Amended, Sept. 2020); PX4116 (Grail) at 013 (Email from M. Podoll, Morgan Stanley, to A. Freidin, Grail, et al., attaching IPO Roadshow Video Outline: Project Galileo, Aug. 2020); PX2169 (Illumina) at 048 (Illumina Strategic Plan 2021-2025, Board Discussion Document, Oct. 23, 2020) (*in camera*)).

Response to Finding No. 609:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 605 herein.

610. [redacted] (*See* PX2169 (Illumina) at 048 (Illumina Strategic Plan 2021-2025, Board Discussion Document, Oct. 23, 2020) (*in camera*); PX4289 (Grail) at 002, 004-005 (Email and attachment from J. Ofman, Grail, to all Grail employees, Apr. 9, 2020); PX4159 (Grail) at 011, 014-015 (Grail, Investor Presentation, Aug. 2020); *see also* PX5027 (Illumina) at 017 [redacted]) (*in camera*)).

Response to Finding No. 610:

Respondents have no other specific response except to note that this proposed finding provides support for the proposition that Galleri will be a complement to single cancer screening tests, including those that are available as the standard of care today, as well as complementary

to screening tests for a handful of cancer types that many purported MCED test developers are pursuing. (*See* PFF ¶ 358 (RX0744 (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15; PX7086 (Cance (ACS) Dep. at 50–53); [redacted]; RX3869 (Cote Expert Report) ¶ 136).)

Respondents also note that [redacted]

Respondents also note that the proposed finding undermines Complaint Counsel's assertion that test developers like [redacted] are developing products that will be substitutes for GRAIL's Galleri test.

For example, [redacted]

Similarly, the evidence in the record shows that [redacted]

[redacted] 428, 431 ("In the DETECT-A study, CancerSEEK obtained [a] specificit[y] of 95.3% in its baseline blood test (that is, with a single blood test).").) In the DETECT-A study, out of the 490 patients who had a positive test result under Exact/Thrive's CancerSEEK baseline blood test, only 26 were actually found to have cancer in the end, leading to unnecessary and time-consuming work-ups for the patients with false positives. (Lengauer (Exact/Thrive) Tr. 251–54; RX3419 (Lennon, *et al.*, 2020) at 5.) Exact/Thrive also admitted that, based on the DETECT-A trial, "[a]t present, we cannot be certain that the DETECT-A blood test"—the CancerSEEK test—"helped any participant." (RX3419 at 11.)

Respondents also incorporate their responses to CCFF ¶ 605 herein.

A. BLOOD-BASED CANCER DETECTION TESTS DESIGNED FOR PURPOSES OTHER THAN CANCER SCREENING ARE NOT SUBSTITUTES FOR MCEDS

1. Other Blood-Based Cancer Detection Tests Serve a Different Function

611. Guardant's R&D efforts include three oncology related clinical applications—a therapy selection test, a minimal residual disease test ("MRD"), and a cancer screening test. (Chudova (Guardant) Tr. 1138-39). These three applications span the different phases of a cancer diagnosis, from an undiagnosed patient to patients currently undergoing various stages of treatment. (Chudova (Guardant) Tr. 1138-39).

Response to Finding No. 611:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

[redacted]

612. (PX4074 (Grail) at 066 (Grail, Science, Medicine, and Technology Board Subcommittee Meeting, 2020-03-02 Pre-Read, Mar. 2, 2020) (*in camera*)).

Response to Finding No. 612:

Respondents have no specific response.

613. (Rabinowitz (Natera) Tr. 287-289, 354 (*in camera*)).

Response to Finding No. 613:

The proposed finding is incomplete and misleading insofar as it suggests that

[redacted]

Natera's CEO has publicly stated that "[Natera is] ***not focused on asymptomatic cancers [screening] or early detection***." (RX3492 (Natera) at 6.)

614. An MRD test monitors responsive therapy in treating cancer, including immunotherapy. (Rabinowitz (Natera) Tr. 287-289).

Response to Finding No. 614:

Respondents have no specific response.

615. [redacted] (Rabinowitz (Natera) Tr. 353-54 (*in camera*)).

Response to Finding No. 615:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 613 herein.

616. Grail is developing three separate blood-based tests—DAC, MRD, and MCED tests—for three separate purposes. [redacted]

Response to Finding No. 616:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 37), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

617. Grail's Mr. Kollu testified that MRD is a "different product" which is sometimes "referred to as the post-diagnostic product." "[T]he MRD product aims to be able to give the doctor an advance warning if [] cancer is about to recur." (PX7062 (Kollu (Grail) IHT at 31-32)).

Response to Finding No. 617:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

a) Therapy Selection Tests Serve a Different Purpose

618. [redacted] (PX7061 (Davy (Illumina) IHT at 153) (*in camera*)).

Response to Finding No. 618:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

619. A blood-based therapy selection test identifies the mutational profile of a tumor using a blood sample, instead of an invasive biopsy procedure, to help identify a drug therapy that works well when a patient's tumor contains a specific mutation. (Chudova (Guardant) Tr. 1150).

Response to Finding No. 619:

Respondents have no specific response.

620. For example, Guardant''s current flagship product—named Guardant360—is a therapy selection test that analyzes a blood sample to help clinicians choose the appropriate treatment for patients diagnosed with advanced cancer. (Chudova (Guardant) Tr. 1146-47).

Response to Finding No. 620:

Respondents have no specific response.

621. Therapy selection tests are intended for patients with "advanced cancer" and assist the physician with determining "the course of therapy they will pursue" to treat the cancer. (*See* PX7040 (Getty (Guardant) IHT at 44-45) (describing Guardant360, a 74-gene therapy selection assay)).

Response to Finding No. 621:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

622. [redacted] (PX7061 (Davy (Illumina) IHT at 153) (*in camera*)).

Response to Finding No. 622:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

623. Oncologists typically order therapy selection tests for patients who have already received a cancer diagnosis. (PX7080 (Silvis (Tempus) Dep. at 30-32)).

Response to Finding No. 623:

Respondents have no specific response.

b) Minimal Residual Disease Tests Serve a Different Purpose

624. Minimal Residual Disease tests are used to determine whether remnants of cancer remain in a patient who has been treated for cancer. (PX7092 (Ofman (Grail) Dep. at 94)).

Response to Finding No. 624:

Respondents have no specific response.

625. An MRD test is used with early-stage cancer patients to analyze any traces of residual disease in the blood after treatment. (Chudova (Guardant) Tr. 1151; PX4082 (Grail) at 012 (Email attaching Grail 2020 S-1/Amended, Sept. 2020) (describing MRD tests as intended for monitoring for cancer in "[p]atients with cancer, primary or metastatic, following completion of therapy"); PX4133 (Grail) at 006 (Grail, Investor Presentation, Aug. 2020) ("Minimal Residual Disease product designed to detect cancer after diagnosis and treatment")).

Response to Finding No. 625:

Respondents have no specific response, except to note that Complaint Counsel chose not to discuss PX4133 at trial, (CC Exhibit Index at 37), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

626. An MRD test can help physicians determine whether to perform additional treatments on a patient after a resection of a cancerous tumor based on the potential for any remaining disease to progress. (Chudova (Guardant) Tr. 1151-52).

Response to Finding No. 626:

Respondents have no specific response.

627. The clinical context for an MRD test is different than for a therapy selection test, in that a physician uses an MRD test for patients with earlier stages of cancer and a therapy selection test for patients with later-stages of cancers. (Chudova (Guardant) Tr. 1146-47, 1151-52).

Response to Finding No. 627:

Respondents have no specific response.

628. An MRD test is given to patients who have already been diagnosed with cancer, which differs from a cancer screening test that is given to asymptomatic patients who have not yet been diagnosed with cancer. (PX7092 (Ofman (Grail) Dep. at 94-95).

Response to Finding No. 628:

Respondents have no specific response.

c) Diagnostic Aid to Cancer Tests Serve a Different Purpose

629. A diagnostic aid to cancer ("DAC") test helps a doctor confirm or rule out a cancer diagnosis. (PX7069 (Bishop (Grail) IHT at 69-70); PX7072 (deSouza (Illumina) IHT at 160-61)).

Response to Finding No. 629:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

630. [redacted] *see also* Della Porta (Grail) Tr.Tr. 514 (*in camera*); PX4074 (Grail) at 067 (Grail, Science, Medicine, and Technology Board Subcommittee Meeting, 2020-03-02 Pre-Read, Mar. 2, 2020) (*in camera*); PX4133 (Grail) at 030 (Grail, Investor Presentation, Aug. 2020)).

Response to Finding No. 630:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX4116 at trial, (CC Exhibit Index at 37), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

631. [redacted] (PX4337 (Grail) at 005-006 [redacted] (*in camera*)).

Response to Finding No. 631:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 44), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

632. [redacted] (PX4337 (Grail) at 005 [redacted] (*in camera*)).

Response to Finding No. 632:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 44), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

633. [redacted] (PX4337 (Grail) at 006-007 [redacted] (*in camera*)).

Response to Finding No. 633:

The proposed finding is incorrect. PX4337 does not refer to the [redacted]

The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701-706), and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 44), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

B. OTHER CANCER SCREENING TESTS ARE NOT SUBSTITUTES FOR MCED TESTS

634. As Grail's Chief Medical Officer Dr. Ofman testified at trial, single-cancer screening tests are "very different" from MCED tests: "People who want to do single-cancer screening tests, that's very different than doing a multicancer early detection test." (Ofman (Grail) Tr. 3311).

Response to Finding No. 634:

Respondents have no other specific response except to note that this proposed finding provides support for the proposition that Galleri will be a complement to single cancer screening tests, including those that are available as the standard of care today, as well as complementary to screening tests for a handful of cancer types that many purported MCED test developers are pursuing. (*See* PFF ¶ 358 (RX0744 (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15; PX7086 (Cance (ACS) Dep. at 50–53); [redacted]; RX3869 (Cote Expert Report) ¶ 136).) Respondents also note that [redacted] For example, [redacted] Respondents also incorporate their responses to CCFF ¶¶ 469, 605 and 610 herein.

1. USPSTF Cancer Screening Methods Are Complementary to MCED Tests

635. USPSTF recommends a [redacted] (PX5027 (Illumina) at 018 (*in camera*)).

Response to Finding No. 635:

Respondents have no specific response except to note that whole body PET-CT scans are not recommended for routine early cancer screening, because of cost and radiation concerns, as well as the inability of PET-CT scanning to detect very small tumors. (RX3624 (Schöder & Gonen 2007) at 9–10; Cote Tr. 3812–13; RX3869 (Cote Expert Report) ¶ 72.) Diagnostic PET-CT will necessitate further evaluation of true-positive or false-positive finding and therefore impose downstream costs on the health care system as a whole. (RX3624 (Schöder & Gonen 2007) at 9–10.)

636. [redacted] (PX2009 (Illumina) at 017 (Illumina, April BoD M&A Strategy Presentation, Apr. 28, 2020) (*in camera*); Lengauer (Third Rock Ventures) Tr. 168-169).

Response to Finding No. 636:

Respondents have no specific response.

637. Grail explained in a document to address common questions and misperceptions about its test: "There is a misperception that current single cancer screening tests alone are doing the job. These critically important screens are saving lives, but given performance and compliance they collectively are only finding about 16% of the US cancer incidence." (PX4164 (Grail) at 004 (Key Points to Address Common Questions and Misperceptions, Oct. 26, 2020)).

Response to Finding No. 637:

Respondents note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 39), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 634 herein.

a) MCED Tests Offer Unique Benefits That Existing Screening Methods Do Not

638. Grail documents explain that MCED tests are being designed to detect cancer earlier than traditional methods of cancer detection. (PX0037 (Grail) at 002-006 (Grail Investor Call Script, Jan. 10, 2016)).

Response to Finding No. 638:

The proposed fact is incomplete and misleading. PX0037 is a transcript of an Illumina investor call dated Jan. 10, 2016. It does not discuss MCED tests generally, but rather discusses GRAIL as a new venture. (PX0037 (Grail) at 002-006 (Grail Investor Call Script, Jan. 10, 2016).) Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 1), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

639. Mr. Bishop—Grail's CEO—testified that MCED tests will have the ability to detect cancer much earlier. (PX7069 (Bishop (Grail) IHT at 122-23) (Explaining that Grail's Galleri differs from current screening methodologies: "The first is, it's a multicancer test. The – you know, the problem with cancer mortality associated with late detection is that 70 percent of cancer deaths are occurring – in spite of all those tests we just talked about, Will, 70 percent of cancer deaths are occurring in cancers where there is absolutely zero early detection, so the first way that Galleri differs is it gives us a way looking for all those cancers where today there is no early detection at all.")).

Response to Finding No. 639:

The proposed finding is not supported by the source provided. Mr. Bishop testified that Galleri—not "MCED tests"—" "gives us a way of looking for cancers where today there is no early detection at all." (PX7069 (Bishop (Grail) IHT at 122–23).) The proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

640. [redacted] (Lengauer (Third Rock Ventures) Tr. 190 (*in camera*); PX7091 (Lengauer (Third Rock Ventures) Dep. at 148-50) (*in camera*) ([redacted])).

Response to Finding No. 640:

The proposed finding is not supported by the source provided and is inaccurate and misleading to the extent it suggests that [redacted], which there is no evidence to support. Dr. Lengauer testified, [redacted] (Lengauer (Exact/Thrive) Dep. Tr. 151). [redacted] (Lengauer (Exact/Thrive) Tr. 189.) Additionally, [redacted] (Conroy (Exact/Thrive) Tr. 1651–52, 1709; Cote Tr. 3814; RX3869 (Cote Expert Report) ¶ 174.) Respondents also incorporate their responses to CCFF ¶ 467 herein.

641. Blood-based cancer screening tests are generally safer and less uncomfortable for the patient than other current cancer screening methods such as colonoscopy, mammogram, or tissue biopsy because it is generally easier on a patient for a clinician to draw a blood sample than to remove a tissue sample or perform a procedure for which the patient requires sedation or anesthesia. (*See, e.g.*, PX0059 at 011 (Guardant 2020 10-K); PX8313 (Guardant) at 002 (Guardant, Guardant 360 CDx Original PMA Application (M180021) - Module 5, Attachment 6-1: Background Information on Liquid Biopsy for NGS Tests); PX7044 (Stahl (Invitae) IHT at 45); PX7040 (Getty (Guardant) IHT at 50-51); PX7042 (Gao (Singlera) IHT at 25-26); PX7068 (Perettie (FMI-Roche) IHT at 22-23)).

Response to Finding No. 641:

Respondents have no specific response except to note that the proposed finding supports the proposition that [redacted] RX3419 (Lennon et al., 2020); Cote Tr. 3811–14.) Respondents also note that Complaint Counsel chose not to discuss PX8313 at trial, (CC Exhibit Index at 59), or in any

deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

642. Dr. Cance—from the American Cancer Society—also explained that blood-based biopsy tests are a less invasive screening method than tissue tumor biopsies. (Cance (American Cancer Society) Tr. 608-09; PX8398 (Cance (American Cancer Society) Decl. ¶ 8)).

Response to Finding No. 642:

Respondents have no specific response except to note that Dr. Cance also testified that GRAIL is further ahead in its development process than other companies that are developing purported MCED tests, that he is not aware of any other purported MCED test that is commercially available today, that he does not know of other companies detecting the same number of cancers as GRAIL, and that accelerating an early cancer detection test's ability to commercialize at scale is consistent with ACS's mission. (Cance (ACS) Tr. 631–33.)

643. Some advantages of blood-based biopsies over tissue biopsies include a quicker turnaround time and the ability to repeat the test over time to observe changes. (*See* PX7040 (Getty (Guardant) IHT at 51-54); PX0043 at 005, 101 (Grail, Form S-1 Registration Statement, Sept. 9, 2020); PX7044 (Stahl (Invitae) IHT at 44-46)).

Response to Finding No. 643:

Respondents have no specific response except to note that turnaround time is not a critical feature for early cancer screening tests. (Goswami (Illumina) Tr. 3196–3200 (fast turnaround times are not important for early cancer screening tests); PX7131 (Cote Dep. at 151–52 ("But as I pointed out, for the purposes of cancer screening, this was probably the least important attribute because the differences in turnaround time are really not important when it comes to the specific application of -- of a cancer screening application.").) The proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

644. The benefits of blood-based tests over tumor-based tests will likely lead to higher patient compliance, as patients that were previously reluctant to undergo invasive tests like a colonoscopy agree to receive non-invasive blood-based tests. Higher rates of cancer screening should, in turn, produce better patient outcomes. (*See* PX7040 (Getty (Guardant) IHT at 27-31); PX2022 (Illumina) at 009 (Cowen, The Liquid Biopsy Report: Early Detection of a Huge Opportunity, Sept. 18, 2020) (among the benefits of blood-based tests: "Ease of use/better outcomes – broader screening, expanded use of optimal targeted therapeutic decision making (even in the community setting where most cancers are treated), earlier recurrence detection.")).

Response to Finding No. 644:

Respondents have no specific response, except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

645. As Guardant's SVP of Commercial, Bill Getty, testified, "If you could find those [cancers] early on, you may be able to intervene and actually stop the course of that disease and therefore spare that person of the mortality associated with the disease." (PX7040 (Getty (Guardant) IHT at 33)).

Response to Finding No. 645:

Respondents have no specific response except to note that all agree that accelerating the adoption of a cancer screening test to will save lives, the unrefuted evidence shows that reuniting Illumina and GRAIL will accelerate the adoption of the Galleri test, and there is no evidence that [redacted] (PFF ¶¶ 476 (RX3869 (Cote Expert Report) ¶ 203), 1117.2-17.3 (*see, e.g.,* Conroy (Exact/Thrive) Tr. 1739; Chahine (Helio) Tr. 1132–33; [redacted]; Fiedler (FMI) Tr. 4474; deSouza (Illumina) Tr. 2411; [redacted].)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

(1) Witnesses and Ordinary Course Documents State That MCED Tests and USPSTF Screening Tests Are Complements

646. Market participants, including the parties, recognize that MCED tests should "complement" these "standard of care screening tests . . . rather than replace them." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 51-52); *see also* PX7092 (Ofman (Grail) Dep. at 92) ("Grail's multi-cancer early detection test is a complement to, not a replacement for, the standard of care single-cancer screening tests."); PX2165 (Illumina) at 011 (Exact Sciences Q3 2020 Earnings Call, Oct. 27, 2020)).

Response to Finding No. 646:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX2165 at trial, (CC Exhibit Index at 10), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 634 herein.

647. [redacted] (PX7040 (Getty (Guardant) IHT at 154-155); PX7051 (Lengauer (Third Rock Ventures) IHT at 176) (*in camera*); PX7083 (Bishop (Grail) Dep. at 24-25)).

Response to Finding No. 647:

Respondents have no specific response, except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 634 herein.

648. "CancerSEEK as a test is meant to be in addition to standard of care." Thrive wants "an individual to continue to comply with standard of care, like mammography or colonoscopy, and these tests should augment, which is an additional standard of care to detect cancer." (Lengauer (Third Rock Ventures) Tr. 167-68).

Response to Finding No. 648:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 634 herein.

649. Dr. Vogelstein testified that the goal of blood-based cancer screening tests is not to replace the existing standard of care screening tests because "standard of care screening tests have been extensively evaluated over a number of years" and it "would be a disservice to the public" for patients to "use blood tests to substitute for the currently recommended screening tests." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 51-52)).

Response to Finding No. 649:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 634 herein.

650. As the Grail website explains, "[t]he Galleri test is intended to be complementary to, and not a replacement of, U.S. guideline-recommended cancer screening." (PX0063 at 001 (Grail, Galleri Multi-Cancer Early Detection Test, https://grail.com/galleri/ (last visited Apr. 29, 2021))).

Response to Finding No. 650:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX0063 at trial, (CC Exhibit Index at 1), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 634 herein.

651. Illumina also acknowledged in its due diligence of Grail that Grail's MCED test would be [redacted] (PX2167 (Illumina) at 003 (Illumina, Early Cancer Detection: Market Access / Health Economic Considerations, circulated June 24, 2020) (emphasis in original) (*in camera*)).

Response to Finding No. 651:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX2167 at trial, (CC Exhibit Index at 10), or in any deposition, and therefore the

document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 634 herein.

652. Grail in its Form S-1 told potential investors that "Galleri is designed to detect unscreened cancers and to complement the United States Preventive Services Task Force (USPSTF)-recommended screenings (specifically, lung for high-risk smokers, breast, cervical, prostate, and colorectal cancers have recommended screenings)." (PX0043 at 005 (Grail, Form S-1 Registration Statement, Sept. 9, 2020)).

Response to Finding No. 652:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 634 herein.

653. [redacted] (PX4031 (Grail) at 016, 062-067 (Grail, Master Slide Deck_V1_061520) (*in camera*) [redacted] (PX4031 (Grail) at 069-070 (Grail, Master Slide Deck_V1_061520) (*in camera*)).

Response to Finding No. 653:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX4031 at trial, (CC Exhibit Index at 34), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 634 herein.

654. Grail witnesses, such as ex-CEO Hans Bishop, testified that Galleri should be used alongside existing standard of care screening tests. (Bishop (Grail) Tr. 1320-21).

Response to Finding No. 654:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 634 herein.

655. Grail's Dr. Jamshidi—Senior Vice President of Data Sciences—testified: "So our focus is not to replace [existing screening methods]. It's very much to complement the standard screening approaches that are available today so that we can address this unmet need around cancers that don't have any screenings available to them." (PX7103 (Jamshidi (Grail) Dep. at 38-39)).

Response to Finding No. 655:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 634 herein.

656. Existing standard of care single-cancer screening tests are "optimized" for the single cancers they detect. (Bishop (Grail) Tr. 1321). Mr. Bishop explained that, in comparison to the existing standard of care screening tests, Galleri is not as sensitive:

> [W]ithout exception, the single-cancer tests used today for prostate, cervix, breast and colon -- and I can list the particular tests that are regarded as standard of care today -- their detection rate for those single cancers at their specificity is higher than the detection rate for those individual single cancers that the Galleri test has. That's the essential reason why these tests should be used alongside each other.

(Bishop (Grail) Tr. 1392).

Response to Finding No. 656:

Respondents have no specific response except to note that there is typically a tradeoff between specificity and sensitivity. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) Existing single cancer screening tests typically have very high sensitivity rates and correspondingly lower specificity/higher false positive rates. (PFF ¶ 180.1 (Cote Expert Report ¶ 95).) A test developer of a multi-cancer screening test must focus on attaining a very high specificity rate, and low false positive rate, which will often result in correspondingly lower sensitivity rates. (PFF ¶ 181 (Cote Tr. 3778-81; RX3869 (Cote Expert Report) ¶ 95).) [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 386 and 634 herein.

657. Respondents' expert, Dr. Abrams, testified that he "would not substitute a multicancer early detection test for any of the standard recommended screening tests." (Abrams Tr. at 3631; *see also* PX7137 (Abrams Dep. at 34); PX6097 (Abrams Rebuttal Report) ¶ 31 (*in camera*) [redacted]")).

Response to Finding No. 657:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 634 herein.

658. Exact Sciences' CEO explained that [redacted] (Conroy (Exact) Tr. 1647-48 (*in camera*); *see also* Lengauer (Third Rock Ventures) Tr. 167-68).

Response to Finding No. 658:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 634 herein.

659. Mr. Getty does not expect Guardant's MCED test to replace current screening methodologies. He explained, for example, that "the goal of noninvasive screening in large part is to have a noninvasive test up front that says positive or negative, and if you're positive, then go for the colonoscopy." (PX7040 (Getty (Guardant) IHT at 154)).

Response to Finding No. 659:

The proposed finding is inaccurate and misleading because [redacted]

[redacted] The proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2. Other Non-USPSTF Single-Cancer Blood-Based Tests Are Not Close Substitutes for MCED Tests

660. [redacted] (PX4031 (Grail) at 006 (Master Slide Deck_V1_061520) (*in camera*)). [redacted] (*See* PX4031 (Grail) at 018, 020 (Master Slide Deck_V1_061520) (*in camera*) (identifying benefits of "Multi-Cancer Early Detection Test" including low false positives, maximizing compliance, high PPV, and avoiding overdiagnosis, among others).

Response to Finding No. 660:

Respondents have no other specific response except to note that this proposed finding provides support for the proposition that Galleri will be a complement to single cancer screening tests, including those that are available as the standard of care today, as well as complementary to the screening tests for a handful of cancer types that many purported MCED test developers are pursuing. (*See* PFF ¶ 358 (RX0744) (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15; PX7086 (Cance (ACS) Dep. at 50–53); [redacted]; RX3869 (Cote Expert Report) ¶ 136).)

Respondents also note that certain putative MCED test developers identified by Complaint Counsel are developing cancer screening test that *are* intended to be substitutes for USPSTF-recommended screening tests (or "standard of care screening" tests) and/or single-cancer blood-based tests.

For example, Bill Getty of Guardant testified "Galleri is going after something very different, which is just a larger population, test for more things. We are saying use us for colorectal cancer screening ostensibly when we are commercialized." (PX7040 (Getty (Guardant) IHT at 156).)

Similarly, Mr. Nolan of Freenome also testified that

This proposed finding also supports the proposition that a "collection" or "basket" of individual screening tests

(PX4031 (Grail) (Master Slide Deck_V1_061520) at 006.) For instance,

[redacted]

Respondents also note that [redacted] For example, Exact/Thrive's CancerSEEK test in development requires a whole-body PET-CT, which [redacted] (*see*, *e.g.*, Lengauer (Exact/Thrive) Tr. 248; RX3419 (Lennon et al., 2020) at 3; [redacted]; PFF ¶¶ 419, [redacted], 425, [redacted] 739, 760, [redacted], 841.3, [redacted], 1723–24), [redacted] In addition, in DETECT-A study, CancerSEEK obtained PPV (positive predictive value) of only 5.9% with its single baseline blood test and 28.3% with both blood tests and whole body PET-CT imaging. (PFF ¶ 432 (RX3419 (Lennon et al., 2020) at 8 & Table 2; Lengauer (Exact/Thrive) Tr. 257–59).) Exact/Thrive also admitted that, based on the DETECT-A trial, "[a]t present, we cannot be certain that the DETECT-A blood test"—the CancerSEEK test—"helped any participant." (RX3419 at 11.)

Respondents also note that Complaint Counsel chose not to discuss PX4031 at trial, (CC Exhibit Index at 34), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 634 herein.

661. [redacted] (PX4430 (Grail) at 012 (*in camera*)). [redacted] (PX4430 (Grail) at 012 (*in camera*)).

Response to Finding No. 661:

Respondents have no specific response except to note that [redacted]

For example, Bill Getty of Guardant testified "Galleri is going after something very different, which is just a larger population, test for more things. We are saying use us for colorectal cancer screening ostensibly when we are commercialized." (PX7040 (Getty (Guardant) IHT at 155–56).) [redacted]

[redacted] (Chudova (Guardant) Tr. 1189, 1237–38; PFF ¶ 1802.)

Similarly, Mr. Nolan of Freenome also testified that [redacted] 428, 431 ("In the DETECT-A study, CancerSEEK obtained [a] specificit[y] of 95.3% in its baseline blood test (that is, with a

single blood test).").) In the DETECT-A study, out of the 490 patients who had a positive test result under Exact/Thrive's CancerSEEK baseline blood test, only 26 were actually found to have cancer in the end, leading to unnecessary and time-consuming work-ups for the patients with false positives. (Lengauer (Exact/Thrive) Tr. 251–54; RX3419 (Lennon et al., 2020) at 5.)

Respondents also note that Complaint Counsel chose not to discuss PX4430 at trial, (CC Exhibit Index at 48), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 634 herein.

662. Grail told investors that "[m]ulti-cancer early detection is needed (single cancer screening won't get us there, as detects 15-20% of cancers)." (PX4133 (Grail) at 007 (Investor Presentation, Aug. 2020)).

Response to Finding No. 662:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61 herein.

a) MCED Tests Offer Unique Benefits from Single-Cancer Screening Tests

663. Grail's Galleri tests screen for more than one type of cancer, including cancer types that currently do not have existing screening mechanisms. [redacted]

Response to Finding No. 663:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss PX4116 at trial, (CC Exhibit Index at 37), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 660–61 and 666 herein.

664. In a PowerPoint regarding its IPO Roadshow Video, Grail noted that "screening for single cancers individually 'misses the forest for the trees'" as "[a]pproximately 3x as many cancer cases can be found with a test that is able to detect multiple cancers at the [redacted] *see also* (PX4031 (Grail) at 013 (Master Slide Deck_V1_061520) (*in camera*)) [redacted]**)).**

Response to Finding No. 664:

Respondents note that Complaint Counsel chose not to discuss PX4116 or PX4031 at trial, (CC Exhibit Index at 34, 37), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 660–61 and 666 herein.

665. Illumina's Dr. Aravanis explained in an ordinary course document that "[t]he potential benefits of a multi-cancer test are much larger than that of a single cancer test. For cancers like pancreatic cancer which have lower prevalence, but very deadly, it would be difficult to implement as a single cancer test vs part of a multi-cancer test that has a much higher aggregate prevalence." (PX2346 (Illumina) at 001 (Email from A. Aravanis, Illumina, to J. Cunningham, Illumina, Nov. 25, 2020)).

Response to Finding No. 665:

Respondents note that Complaint Counsel chose not to discuss PX2346 at trial, (CC Exhibit Index at 16), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 660–61 and 666 herein.

666. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29) (*in camera*); Gao (Singlera) Tr. 2873-74, 2914; PX7105 (Getty (Guardant) Dep. at 13-14)).

Response to Finding No. 666:

The proposed finding is inaccurate, incomplete, and misleading as well as contradicted by the weight of the evidence. The proposed finding is not supported by the sources provided. In the portion of the investigational hearing transcript cited, [redacted]

Dr. Gao testified that Singlera is "far [a]way" from starting clinical trials in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82).) Dr. Gao testified that the PanSeer test is at least eight to 10 years away from potential launch in the United States (Gao (Singlera) Tr. 2925–26; RX3869 (Cote Expert Report) ¶ 242.) Dr. Gao testified it could take 50 years before it was able to develop a MCED test that could detect 50 cancer types (Gao (Singlera) Tr. 2883.)

For many of these products in early stages of development, [redacted]

[redacted] Bill Getty of Guardant testified [redacted] (PX7040 (Getty (Guardant) IHT at 155–56).)

The proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

667. Dr. Ofman testified at trial that single cancer screening tests are "very different" from MCED tests: "People who want to do single-cancer screening tests, that's very different than doing a multicancer early detection test." (Ofman (Grail) Tr. 3311).

Response to Finding No. 667:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61 and 666 herein.

668. According to Dr. Ofman, the intended use of an MCED test differs from a single cancer screening test: "[W]hen you order Galleri as a physician, you're not suspecting any particular type of cancer. That's why you order Galleri." (Ofman (Grail) Tr. 3312).

Response to Finding No. 668:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–661 and 666 herein.

669. Grail's documents explain that MCED tests offer a unique benefit from single cancer tests in that MCED tests "[d]etect[] multiple deadly cancer types at early stages rather than creating multiple single cancer tests which may be logistically impractical and more costly overall." (PX4012 (Grail) at 001 (Email from K. Grossman, Grail, to K. Eng, Grail, July 11, 2019)).

Response to Finding No. 669:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61 and 666 herein. Respondents also note that the proposed finding undermines Complaint Counsel's assertion that [redacted] To the contrary, the evidence in the record shows that Freenome will not launch a cancer screening test that will compete with the Galleri test in the foreseeable future given that [redacted]

[redacted]

Respondents also note that Complaint Counsel chose not to discuss PX4012 at trial, (CC Exhibit Index at 34), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

670. [redacted] (*See* PX2169 (Illumina) at 048 (Illumina Strategic Plan 2021-2025, Board Discussion Document, Oct. 30, 2020) (*in camera*); PX4289 (Grail) at 002, 004-006 (Email from J. Ofman, Grail, to All Grail Employees, attaching comment for FDA Workshop, Apr. 9, 2020); PX4159 (Grail) at 015 (Email from J. Craighead, Grail, to Grail Board of Directors et al., attaching Early Cancer Detection - Investor Presentation, Aug. 2020); s*ee also* PX5027 (Illumina) at 025 [redacted] (*in camera*)).

Response to Finding No. 670:

The proposed finding is incomplete and misleading to the extent it suggests that [redacted]

Respondents note that [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 660–61 and 666 herein. Respondents also note that Complaint Counsel chose not to discuss PX4289 at trial, (CC Exhibit Index at 43), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

b) [redacted]

671. [redacted] (*in camera*); s*ee* PX4031 (Grail) at 011 (Master Slide Deck V1 061520) (explaining that [redacted] (*in camera*)).

Response to Finding No. 671:

Respondents have no specific response except to note that the proposed finding provides support for the proposition that test developers developing single cancer tests cannot simply stack single cancer tests together to make a multicancer test. (PFF ¶ 846; *see also* RRFF ¶ 405.)

For example, [redacted]

Respondents also note that the proposed finding undermines Complaint Counsel's assertion that test developers like [redacted] In the DETECT-A study, out of the 490 patients who had a positive test result under Exact/Thrive's CancerSEEK baseline blood test, only 26 were actually found to have cancer in the end, leading to unnecessary and time-consuming work-ups for the patients with false positives. (Lengauer (Exact/Thrive) Tr. 251–54; RX3419 (Lennon et al., 2020) at 5.)

Similarly, [redacted]

Complaint Counsel chose not to discuss PX4031 at trial, (CC Exhibit Index at 34), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 660–61 and 666 herein.

672. [redacted] (PX5027 (Illumina) at 015 (*in camera*)). [redacted] (PX5027 (Illumina) at 017 (*in camera*)).

Response to Finding No. 672:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

c) Witnesses and Documents from Illumina and Grail Show That Single-Cancer Tests Do Not Compete with MCED Tests

673. At trial, Grail's Dr. Ofman explained that single cancer tests are "not really competing" with MCED tests. (Ofman (Grail) Tr. 3311).

Response to Finding No. 673:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

674. Dr. Ofman testified in his deposition that "GRAIL's multi-cancer early detection test is a complement to, not a replacement for, the standard of care single-cancer screening tests." (PX7092 (Ofman (Grail) Dep. at 92)).

Response to Finding No. 674:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

675. Dr. Ofman claimed at trial that he did not expect that Galleri would compete with companies developing single-cancer blood-based tests because "single-cancer screening tests" are "very different than doing a multicancer early detection test." (Ofman, (Grail)Tr. 3310-11). Instead, Galleri is "a complement to . . . single-cancer screening tests." (Ofman (Grail) Tr. 3308-09).

Response to Finding No. 675:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

676. Dr. Ofman explained that Galleri "is not intended on any level to replace" the existing single-cancer screening tests. (Ofman (Grail) Tr. 3309).

Response to Finding No. 676:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

677. Dr. Ofman testified, "if you have a negative Galleri test, you still want to encourage the individual to get their single-cancer screening tests." (Ofman (Grail) Tr. 3310).

Response to Finding No. 677:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

678. Illumina's Dr. Aravanis testified at trial that Galleri is not intended to compete with single cancer tests because single-cancer screening tests "are to be used in current standard of care applications." (Aravanis (Illumina) Tr. 1921).

Response to Finding No. 678:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

679. Grail documents show that Grail had originally planned on developing both single-cancer tests as well as an MCED test. (*See* PX2712 (Illumina) at 009 (Email from M. Nguyen, Illumina, to P. Scagnetti, Illumina, attaching Python: A Revolution in Early Cancer Detection, Dec. 3, 2019)). Grail explained that "[t]his strategy gives Python [Grail] the option to develop products aimed at augmenting and eventually replacing established screening modalities such as spiral CT for lung cancer and mammography for breast cancer while simultaneously driving transformation of the screening paradigm with a pan-cancer

product." (PX2712 (Illumina) at 009 (Email from M. Nguyen, Illumina, to P. Scagnetti, Illumina, attaching Python: A Revolution in Early Cancer Detection, Dec. 3, 2019)).

Response to Finding No. 679:

The proposed finding is incomplete and misleading to the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.)

Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to a multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time, a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

Respondents also note that Complaint Counsel chose not to discuss PX2712 at trial, (CC Exhibit Index at 29), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

680. Grail's former CEO—Mr. Bishop—testified that he does not expect Galleri to compete with either Freenome's or Guardant's colorectal cancer screening test. (Bishop (Grail) Tr. 1390-91; 1394).

Response to Finding No. 680:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

681. Mr. Bishop explained that Galleri should not be used as a single-cancer blood-based screening test because "[i]t's being developed with a specific objective and optimized performance attributes to be a multicancer detection test to be used alongside single-cancer detection tests." (PX7069 (Bishop (Grail) IHT at 145)).

Response to Finding No. 681:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

d) Industry Participants Testified That MCED Tests Will Complement Single-cancer Screening Tests

682. Grail's MCED test developer rivals also do not view NGS-based single-cancer early detection tests as directly competitive with MCED tests. (*See, e.g.*, PX7105 (Getty (Guardant) Dep. at 25-27) (testifying that "a multi-cancer test provides distinct value over a single cancer test"); PX7042 (Gao (Singlera) IHT at 120)).

Response to Finding No. 682:

The proposed finding is inaccurate and misleading to the extent it describes [redacted]

[redacted]

Respondents also note that, contrary to the statement in the finding that [redacted] The proposed finding also relies in part on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 660–61, 666, and 671 herein.

683. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 187 (*in camera*)).

Response to Finding No. 683:

The proposed finding is incomplete and misleading to the extent it suggests that Thrive's CancerSEEK test is a competitor to GRAIL's Galleri test because [redacted] In his deposition, Dr. Lengauer testified that [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 660–61, 666, 671, and 682 herein.

The proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

684. Guardant's William Getty testified, "if we can offer a physician a test that covers colorectal, breast, lung, pancreatic, you know, so on and so forth, with the check of a pen . . . that would have significant value to the patient to be screened for multiple cancers at one particular time, and also value for the physician who could do so in an efficient fashion." (PX7105 (Getty (Guardant) Dep. at 23)).

Response to Finding No. 684:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–6) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note

that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

For example, [redacted]

685. Guardant's Mr. Sood testified, "[I]f I'm going to the doctor's office to give blood, you know, I want to be screened for as many cancers as possible. So I think eventually that's where the world will end [up]." (PX7090 (Sood (Guardant) Dep. at 106)).

Response to Finding No. 685:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Respondents also incorporate their responses to CCFF ¶ 684 herein.

686. [redacted] (PX7040 (Getty (Guardant) IHT at 151) (*in camera*)).

Response to Finding No. 686:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) The proposed finding also relies on IH testimony which Respondents had no opportunity

to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 684 herein.

687. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 187) (*in camera*)).

Response to Finding No. 687:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 683 herein.

C. BROWN SHOE FACTORS SHOW THAT THE RELEVANT PRODUCT MARKET IS MCED TESTS

1. MCED Tests Will Have Distinct Pricing and Reimbursement from Other Oncology Tests

688. Guardant's Senior VP of Product, Nitin Sood, testified that "screening, to be widely adopted, must be economical, because it addresses such a large population. Whereas . . . tests that may address niches of people, . . . patient population, small groups of patient populations can be more expensive." (PX7090 (Sood (Guardant) Dep. at 110-11)).

Response to Finding No. 688:

Respondents have no specific response except to note that Complaint Counsel did not undertake any study concerning the price sensitivity of Galleri or any of the purported MCED tests in development. (RX6004 (Katz Trial Dep. at 20–23).) Respondents also note that during his deposition, Mr. Getty of Guardant added the caveat that "[i]n the context of the blood-based screening market, which is yet to evolve to its maturity, it would be very difficult to speculate about the relevancy of price". (PFF ¶ 748 (PX7105 (Getty (Guardant) Dep.) at 106–07).) Mr. Getty also testified that "price, in the context of healthcare, is really difficult to determine what happens. And the reasons I say that is because the typical sort of laws of economics do not often persist in healthcare because there's a third party paying for them." (PX7040 (Getty (Guardant)

IHT) at 127.) Respondents further note that [redacted] (*See* PFF ¶¶ 747–51.)

689. [redacted] (*See* PX7069 (Bishop (Grail) IHT at 149 (*in camera*)) [redacted]

Response to Finding No. 689:

Respondents have no specific response except to note that Complaint Counsel did not undertake any study concerning the price sensitivity of Galleri or any of the purported MCED tests in development. (RX6004 (Katz Trial Dep. at 20–23).) Respondents also note that Galleri is currently selling for $949 (PFF ¶ 747; Bishop (GRAIL) Tr. 1322), [redacted] Respondents note that payor adoption will depend on the development of extensive evidence to establish clinical utility of an MCED test. (RX3867 (Deverka Expert Report) ¶ 92.)

690. As Illumina's CEO Francis deSouza testified, [redacted] (PX7072 (deSouza (Illumina) IHT at 149) (*in camera*)).

Response to Finding No. 690:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 689 herein.

a) [redacted]

691. [redacted] (PX4079 (Grail) at 005 (A revolution in Early Cancer Detection, Jan. 16, 2020) (*in camera*)).

Response to Finding No. 691:

Respondents have no specific response except to note that Complaint Counsel did not undertake any study concerning the price sensitivity of Galleri or any of the purported MCED tests in development. (RX6004 (Katz Trial Dep. at 20–23).)

692. Grail internally performed its own analysis of [redacted] (PX4079 (Grail) at 007 (A revolution in Early Cancer Detection,, Jan. 16, 2020) (*in camera*)).

Response to Finding No. 692:

Respondents have no specific response except to note that Complaint Counsel did not undertake any study concerning the price sensitivity of Galleri or any of the purported MCED tests in development. (RX6004 (Katz Trial Dep. at 20–23).) Respondents also note that Galleri is currently selling for $949 (PFF ¶ 747; Bishop (GRAIL) Tr. 1322), [redacted] Respondents note that payor adoption will depend on the development of extensive evidence to establish clinical utility of an MCED test, because payors will evaluate clinical utility and other data when evaluating whether to provide reimbursement coverage for a new test. (RX3867 (Deverka Expert Report) ¶ 92.) Both Illumina and GRAIL witnesses testified that they believe Illumina's reacquisition of GRAIL can accelerate the process of developing clinical utility evidence, obtaining payor coverage and achieving widespread adoption of Galleri. (*See, e.g.*, Bishop (GRAIL) Tr. 1372; Ofman (GRAIL) Tr. 3320; Febbo (Illumina) Tr. 4326–27, 4337–38; *see also* RX6001 (Deverka Trial Dep.) at 61–64.)

693. [redacted]

[redacted] (PX4055 (Grail) at 009-010, 023-024 (A Revolution in Early Cancer Detection, Q3 '20 BoD Commercial slides) (*in camera*)).

Response to Finding No. 693:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 692 herein.

694. [redacted] (PX4450 (Grail) at 009 [redacted] (*in camera*)).

Response to Finding No. 694:

The proposed finding is incomplete and misleading. [redacted] Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 49), and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. In addition, Complaint Counsel did not elicit testimony that would establish that this proposed finding accurately [redacted]

Respondents also note that Galleri is currently selling for $949 (PFF ¶ 747; Bishop (GRAIL) Tr. 1322), [redacted] Respondents note that payor adoption will depend on the development of extensive evidence to establish clinical utility of an MCED test, because payors will evaluate clinical utility and other

data when evaluating whether to provide reimbursement coverage for a new test. (RX3867 (Deverka Expert Report) ¶ 92.) Both Illumina and GRAIL witnesses testified that Illumina's reacquisition of GRAIL can accelerate the process of developing clinical utility evidence, obtaining payor coverage and achieving widespread adoption of Galleri. (*See, e.g.*, Bishop (GRAIL) Tr. 1372; Ofman (GRAIL) Tr. 3320; Febbo (Illumina) Tr. 4326–27, 4337–38; *see also* RX6001 (Deverka Trial Dep.) at 61–64.) Respondents also incorporate their responses to CCFF ¶ 692 herein.

695. [redacted] (PX4170 (Grail) at 009 [redacted] (*in camera*)).

Response to Finding No. 695:

The proposed finding is incomplete and misleading to the extent that it suggests that [redacted] GRAIL cannot actually monitor the pricing of nonexistent tests—as Mr. Getty of Guardant puts it: "[i]n the context of the blood-based screening market, which is yet to evolve to its maturity, it would be very difficult to speculate about the relevancy of price." (PFF ¶ 748; PX7105 (Getty (Guardant) Dep. at 106–07).)

The proposed finding is misleading to the extent it describes [redacted]

[redacted] (PFF ¶¶ 722–740.1), and most of the putative MCED developers identified by Complaint Counsel do not expect (and none can reasonably be expected) to launch a screening test for more than one cancer for many years (PFF ¶¶ 701–06).

Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 39), and therefore should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

696. Grail [redacted] (PX4456 (Grail) at 013 [redacted] (*in camera*)). [redacted] PX4456 (Grail) at 013 [redacted] (*in camera*)).

Response to Finding No. 696:

The proposed finding is incomplete and misleading. Hans Bishop, GRAIL's CEO at the time, testified that PX4456 [redacted]

[redacted] (Bishop (GRAIL) Tr. 1496.) Accordingly, the cited document is entitled to little weight.

Furthermore, [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) The only evidence presented at trial regarding projected future NGS costs came from Illumina's [redacted] In addition, Dr. Aravanis explained that "Illumina [] is [] going to lower the cost of sequencing over time," as will "[o]ther sequencing providers", which will "compound the overall reduction in sequencing costs as a fraction of the test." (Aravanis (Illumina) Tr. 1925.)

697. [redacted] (PX4075 (Grail) at 043 (Email from A. Aravanis, Grail, to M. Young, Grail, regarding "follow up on competition", Sept. 7, 2019, attaching a PowerPoint presentation titled "Competitive Intelligence," Aug. 14, 2019) (*in camera*)).

Response to Finding No. 697:

The proposed finding is incomplete and misleading insofar as it suggests that Singlera and Helio are [redacted] There is no testimony in the record to support Complaint Counsel's characterization that [redacted] Further, the cited document is nearly three years old. Since that time, Helio has abandoned its efforts to develop its multi-cancer screening test called IvyGene. (PFF ¶ 501.1.)

[redacted] Complaint Counsel's own witness, Dr. Lengauer of Thrive, [redacted] (Lengauer (Exact/Thrive) Tr. 206.)

Similarly, Galleri does not compete with [redacted] which is very different from Galleri. [redacted] (RX3115 (Chen, *et. al.,* 2020) at 4); [redacted] Indeed, Singlera is "far, far away from launching its PanSeer test" (PX7102) (Gao (Singlera) Dep. at 119) and does not currently have a price for the product. (Gao (Singlera) Tr. 2893.)

Finally, as Dr. Katz testified, [redacted] (RRFF ¶ 773 (RX6004) (Katz Trial Dep. at 105) (emphasis added).) Respondents further incorporate their responses to CCFF ¶¶ 454–57 and 773–76 herein.

b) MCED Test Developers Also Anticipate Pricing-Based MCED Competition

698. Freenome CEO Mr. Nolan testified that [redacted] (Nolan (Freenome) Tr. 2774-75 (*in camera*)).

Response to Finding No. 698:

The proposed finding is incomplete and misleading insofar as it suggests that Freenome is [redacted]

First, Mr. Nolan's characterization notwithstanding, Freenome's expectations are [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 2353–2400 herein.

699. Guardant expects that primary care physicians will choose among MCED test providers based on multiple factors. (Getty (Guardant) Tr. 2670).

Response to Finding No. 699:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. Mr. Getty is not a physician and has no knowledge as to how primary care physicians will choose among putative MCED test providers. The proposed finding also relies on improper lay opinion testimony and, accordingly, should be given no weight. (*See* Resps.' Motion *in limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that Mr. Getty cited a number of factors other than price. [redacted]

700. [redacted] (Getty (Guardant) Tr. 2671; *see* PX7105 (Getty (Guardant) Dep. at 181) (explaining that its goal is "to have a test that has strong access, so low out-of-pocket cost for patients"); PX7051 (Lengauer (Third Rock Ventures) IHT at 178-80) (*in camera*) [redacted] PX7042 (Gao (Singlera) IHT at 99) (explaining that the price of the MCED test should be less than $1,000 for market acceptance in the United States)).

Response to Finding No. 700:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. Mr. Getty is not a physician and has no knowledge as to how primary care physicians will choose among putative MCED test providers. The proposed finding also relies on improper lay opinion testimony and, accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also incomplete and misleading. [redacted]

The remaining testimony cited by Complaint Counsel is simply conjectural. [redacted] and Dr. Gao's statement that an MCED test should be less than $1,000 for market acceptance does not show that all "MCED tests" will have similar prices. Currently, there is no MCED test market to speak of, such that the significance of price is unknown.

Further, [redacted] (PFF ¶ 750.) Singlera has said that it [redacted] (PFF ¶ 750.1 (PX7042 (Gao (Singlera) IHT at 99)).) [redacted]

[redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

701. In addition to price, Mr. Getty testified that primary care physicians choosing among multiple screening tests will consider how easy it is for their staff to conduct the test, the performance characteristics of the test, and the number of cancers for which the test screens. (Getty (Guardant) Tr. 2671-72).

Response to Finding No. 701:

Respondents have no specific response except to note that the proposed finding is evidence that factors ***other than price*** are likely to differentiate MCED tests in the future.

702. Singlera also expects to compete with Grail's Galleri on multiple metrics, including price. (PX7042 (Gao (Singlera) IHT at 99-100)).

Response to Finding No. 702:

The proposed finding is incomplete and misleading to the extent it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

Singlera has said that it "couldn't know right now" at what price Singlera plans to market PanSeer. (PFF ¶ 750.1 (PX7042 (Gao (Singlera) IHT at 99)).) [redacted]

[redacted]

[redacted] (PFF ¶ 530 (RX3869 (Cote Expert Report) at ¶ 238; Cote Tr. 3869).)

703. [redacted] (PX7110 (Conroy (Exact) Dep. at 247-248) (*in camera*); PX7058 (Conroy (Exact) IHT at 111-113) (*in camera*)).

Response to Finding No. 703:

Respondents have no specific response except to note that [redacted] Any other analysis of CancerSEEK's characteristics, such as the number of cancers detected, its sensitivity or specificity, is premature, as Exact is going back to the drawing board with the test and "combining the Exact Sciences and Thrive approaches in one test." (PFF ¶ 726.6.) Exact/Thrive also admitted that, based on the DETECT-A trial, "[a]t present, we cannot be certain that the DETECT-A blood test"—the CancerSEEK test—"helped any participant." (RX3419 at 11.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

704. [redacted] (PX7077 (Chahine (Helio) Dep. at 83-84) (*in camera*)); *see* PX8654 (Helio) (Email exchange between J. Li, Helio, D.

Taggart, Helio, et al., Mar. 9, 2021) (discussing Grail's announcement of a $600-900 target price)).

Response to Finding No. 704:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

[redacted]

2. MCED Tests Target Distinct Customers from Other Oncology Tests

705. [redacted] (Della Porta (Grail) Tr. 514 (*in camera*)).

Response to Finding No. 705:

The proposed finding is not supported by the cited evidence. In the cited testimony, Mr. Della Porta agreed that [redacted] (Della Porta (Grail) Tr. 514.)

706. Patients that would use MCED tests are different from patients that use therapy selection tests. (Getty (Guardant) Tr. 2502). There are about 700,000 to one million patients that have advanced-stage disease who might use a therapy selection test, compared to 100 to 120 million patients who could use an MCED test. (Getty (Guardant) Tr. 2501-02).

Response to Finding No. 706:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

707. [redacted] (Rabinowitz (Natera) Tr. 353-54 (*in camera*)).

Response to Finding No. 707:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 706 herein.

708. Average-risk patients are generally defined as "45 and up." (PX7105, Getty (Guardant) Dep. at 18).

Response to Finding No. 708:

Respondents have no specific response except to note that Galleri is recommended for use in asymptomatic adults aged 50 and older. (PFF ¶ 727.)

709. [redacted] (PX7040 (Getty (Guardant) IHT at 31-32)); *see also* (PX4082 (Grail) at 008-009 (Email attaching "Grail S-1_A #1 As Filed," Sept. 17, 2020)); PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29) (*in camera*)); PX7100 (Chudova (Guardant) Dep. at 15-16)); PX7094 (Nolan (Freenome) Dep. at 252-53) (*in camera*)).

Response to Finding No. 709:

The proposed finding is not supported by the cited evidence. *First*, Mr. Getty's testimony about [redacted] (PX7040 (Getty (Guardant) IHT at 31-32) was in response to a question about all liquid biopsy screening tests, not just putative MCED tests. (PX7040) (Getty (Guardant) IHT at 29 ("Q. Going back to something you said, how would liquid biopsy help improve compliance for screening of -- existing cancer screening methods?").) *Second*, the cited portion of GRAIL's S-1 does not discuss "MCED tests" broadly as the proposed finding suggests, but only that GRAIL intends for Galleri to be used at an annual physical. *Third*, nowhere in the cited portions of Dr. Chudova's testimony (or anywhere in the deposition) does she testify that MCED tests are to be used at annual routine appointments. (PX7100) (Chudova (Guardant) Dep. at 15-16.)

[redacted]

Respondents also note that the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 381 and 2224 herein.

710. Because MCED tests are targeted towards patients who do not have symptoms of, and have not been treated for, cancer, [redacted] (PX7058 (Conroy (Exact) IHT at 103-04) (*in camera*)).

Response to Finding No. 710:

The proposed finding is misleading and contrary to the weight of the evidence. [redacted] Mr. Getty also testified that in the future, Guardant may market to OB/GYNs for female patients, "healthcare customers like employers", and "health systems". (Getty (Guardant) Tr. 2502–03; *see also* CCFF ¶ 2288.)

The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06), and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Further, the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 381–82 and 2224 herein.

711. [redacted] (PX4267 (Grail) at 008 [redacted] (*in camera*)). (PX4133 (Grail) at 016 (Email from H. Bishop, Grail, to F. deSouza, Illumina, attaching "Early Cancer Detection Investor Presentation," Aug. 2020) (explaining "Galleri is designed to be easy to use in primary care")); PX2712 (Illumina) at 019 (Email from P. Scagnetti, Illumina, to M. Nguyen, Illumina, attaching Python A Revolution in Early Cancer Detection, Dec. 3, 2019) ("While the oncology community will be critical to impressions of the utility and accuracy of our test, it is the general practitioner who orders routine screening tests like PSA and mammograms.")).

Response to Finding No. 711:

Respondents have no specific response except to note that certain of the putative MCED developers Complaint Counsel has identified intent to market their putative tests to other customers: [redacted] (CCFF ¶ 2219), and both Guardant and Freenome [redacted] (CCFF ¶¶ 2288 and 2389.) Respondents also incorporate their responses to CCFF ¶ 2224 herein.

712. [redacted] (PX4475 (Grail) at 033 [redacted] (*in camera*)).

Response to Finding No. 712:

The proposed finding is incomplete and misleading. PX4475 is titled [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 79 herein. Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 49), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

713. [redacted] (Ofman (Grail) Tr. 3417 (*in camera*)).

Response to Finding No. 713:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶ 79 herein.

714. [redacted] (Bishop (Grail) Tr. 1322; *see* Lengauer (Third Rock Ventures) Tr. 190 (*in camera*) (testifying that [redacted]; PX7091 (Lengauer (Third Rock Ventures) Dep. at 148-50) (*in camera*) [redacted]).

Response to Finding No. 714:

The proposed finding is not supported by the cited evidence. Mr. Bishop [redacted] (Bishop (Grail) Tr. 1322.) Dr. Lengauer testified that [redacted]

715. [redacted] (PX4075 (Grail) at 026 (Email from A. Aravanis, Grail, to M Young, Grail, et al., attaching Competitive Intelligence An Overview, Aug. 14, 2019) (*in camera*)) [redacted] (PX4075 (Grail) at 027 (Email from A. Aravanis, Grail, to M Young, Grail, et al., attaching Competitive Intelligence An Overview, Aug. 14, 2019) (*in camera*)).

Response to Finding No. 715:

The proposed fact is incomplete and misleading. PX4075 was created in 2019, and is significantly out of date. For example, Hans Bishop, GRAIL's CEO at the time of trial, testified that [redacted]

[redacted] (Bishop (GRAIL) Tr. 1496.) Accordingly, this cited document is entitled to little to no weight, and Complaint Counsels should not be permitted to rely on inferences from this document. Respondents also incorporate their responses to CCFF ¶ 2244 herein.

716. For example, Guardant anticipates that the primary customer for MCED tests would be primary care physicians. (Getty (Guardant) Tr. 2502).

Response to Finding No. 716:

Respondents have no specific response, except to note that Mr. Getty identified other potential customers in the future, including OB/GYNs for female patients, "healthcare customers like employers", and "health systems". (Getty (Guardant) Tr. 2502–03; *see also* CCFF ¶ 2288.) Respondents also incorporate their responses to CCFF ¶¶ 382,710, and 2244 herein.

717. [redacted] (Nolan (Freenome) Tr. 2769-70) (*in camera*)).

Response to Finding No. 717:

Respondents have no specific response [redacted] Respondents also incorporate their responses to CCFF ¶¶ 382, 710, and 2244 herein.

3. Both Blood-Based and Non-Blood Based Single-Cancer Screening Tests Have Different Customers

718. As set forth above in Sections III.B.1. (USPSTF Cancer Screening Methods are Complementary to MCED Tests) and III.B.2. (Other Non-USPSTF Single-Cancer Blood-Based Tests are Not Close Substitutes for MCED Tests), the existing single-cancer screening framework complements MCED tests, resulting in different customer bases.

Response to Finding No. 718:

To the extent Complaint Counsel relies on its Proposed Findings in CCFF Section III.B.1 and Section III.B.2 (¶¶ 635–687), Respondents incorporate their responses to those Proposed Findings herein.

719. Current screening tests are recommended for a different subset of the population than MCED tests will be. (*Compare* PX4303 (Grail) (Project Galileo Industry Report Pre-Read Presentation, May 7, 2018) (explaining the USPSTF guidelines) (*in camera*) *with* PX4082 (Grail) at 008-009 (Email attaching Grail 2020 S-1/Amended, Sept. 2020) (explaining that the Galleri test will be targeted for asymptomatic patients at their annual check-up)).

Response to Finding No. 719:

Respondents have no specific response except to note that this proposed finding provides support for the proposition that Galleri will be a complement to single cancer screening tests, including those that are available as the standard of care today, as well as complementary to screening tests for a handful of cancer types that many purported MCED test developers are pursuing. (*See* PFF ¶ 358 (RX0744 (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15; PX7086 (Cance (ACS) Dep. at 50–53); [redacted]; RX3869 (Cote Expert Report) ¶ 136).) Respondents also note that [redacted] For example, [redacted]

720. "The Galleri test is intended to be complementary to, and not a replacement of, U.S. guideline-recommended cancer screening." (PX0063 at 001 (Grail's Galleri website)).

Response to Finding No. 720:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 719 herein.

721. MCED tests target customers who want to test for a multitude of cancers versus single-cancer tests that focuses on customers who want to test for a particular type of cancer. (Ofman Tr. 3312) ("[W]hen you order Galleri as a physician, you're not suspecting any particular type of cancer. That's why you order Galleri.").

Response to Finding No. 721:

The proposed finding is misleading because the cited source was only testifying about Galleri and not about the putative MCED test developers cited by Complaint Counsel. The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06), and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

722. [redacted] (PX4303 (Grail) (Project Galileo Industry Report Pre-Read Presentation, May 7, 2018) (*in camera*)).

Response to Finding No. 722:

Respondents have no specific response.

723. [redacted]

[redacted] (PX4303 (Grail) (Project Galileo Industry Report Pre-Read Presentation, May 7, 2018) (*in camera*)).

Response to Finding No. 723:

Respondents have no specific response.

724. [redacted] (PX4303 (Grail) (Project Galileo Industry Report Pre-Read Presentation, May 7, 2018) (*in camera*)).

Response to Finding No. 724:

Respondents have no specific response.

725. [redacted] ((PX4303 (Grail) (Project Galileo Industry Report Pre-Read Presentation, May 7, 2018) (*in camera*)).

Response to Finding No. 725:

Respondents have no specific response.

4. DAC, Therapy Selection, and MRD Have Different Customers

726. DAC tests, in contrast, are intended for "symptomatic patients with a suspicion of cancer." (PX4082 (Grail) at 013 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 726:

Respondents have no specific response.

727. DAC tests will be "targeted "to oncologists and specialists." (PX4116 (Grail) (Email from M. Podoll, Morgan Stanley, to A. Freidin, Grail et al., attaching IPO Roadshow Video Outline: Project Galileo, Aug. 2020)).

Response to Finding No. 727:

Respondents have no specific response.

728. Patients that would use MCED tests are also different from patients that use therapy selection tests. (Getty (Guardant) Tr. 2502).

Response to Finding No. 728:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 721 herein.

729. [redacted] (*See* Getty (Guardant) Tr. 2503; *see also* PX7080 (Silvis (Tempus) Dep. at 31-33); PX8474 (Guardant) at 007 [redacted] (*in camera*); PX7040 (Getty (Guardant) IHT at 68-69); PX7068 (Perettie (FMI-Roche) IHT at 32 (*in camera*)).

Response to Finding No. 729:

Respondents have no specific response, except to note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

730. [redacted] (*See* PX7068 (Perettie (FMI-Roche) IHT at 32 (*in camera*)).

Response to Finding No. 730:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

731. [redacted] (*See* PX7121 (Otte (Freenome) Dep. at 181-82 (*in camera*) [redacted]; PX8474 (Guardant) at 007 [redacted] (*in camera*)).

Response to Finding No. 731:

Respondents have no specific response.

5. The Parties Recognize That MCED Testing Is Its Own Relevant Market

a) Illumina and Grail Refer to the MCED Industry, MCED Segment, and MCED Space

732. Grail publicly describes Galleri as an MCED test. (Bishop (Grail) Tr. 1319).

Response to Finding No. 732:

Respondents have no specific response.

733. Grail refers to its Galleri test as an MCED test on its corporate website. (Bishop (Grail) Tr. 1319).

Response to Finding No. 733:

Respondents have no specific response.

734. As shown in PX0063, Grail's website prominently refers to Galleri as a "Multi-cancer early detection test." (PX0063 at 001 (Grail, Galleri, Apr. 29, 2021)).

Response to Finding No. 734:

Respondents have no specific response.

735. [redacted] (PX4015 (Grail) at 053 (Grail, Board of Directors Meeting, September 10, 2020) (*in camera*)).

Response to Finding No. 735:

Respondents have no specific response.

736. Grail identifies itself in its documents as [redacted] (PX4048 (Grail) at 003-004 [redacted] (*in camera*) [redacted] ; PX4037 (Grail) at 008 [redacted] (*in camera*) [redacted] PX4075 (Grail) at 005 (Grail, Competitive Intelligence, Aug. 14, 2019) (*in camera*) [redacted]) Dep. at 92); PX7083 (Bishop (Grail) Dep. at 23-24); PX7103 (Jamshidi (Grail) Dep. at 38-39)).

Response to Finding No. 736:

The proposed finding is misleading and incomplete with respect to Complaint Counsel's characterization of PX4048. (PX4048 (Grail) at 003-004) [redacted] (PX4048 (Grail) at 004); *see also* (Della Porta (GRAIL) Tr. 512.) Respondents also incorporate their responses to CCFF ¶ 719 herein.

737. A May 2018 Grail document analyzes [redacted] **(**PX4295 (Grail) at 004 (Project Galileo – industry report, May 7, 2018) (*in camera*)).

Response to Finding No. 737:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 43), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to

rely on any inferences from it. Respondents also note that PX4295 is a four-year-old document that [redacted]

738. Jeff Huber's—Grail's former CEO—reaction to Thrive's launch was that it was "good to have a 'market' instead of a single company, and now we have a market. It'll also mean there will be others pushing the rock up the hill for reimbursement – which is a very good thing." (PX4121 (Grail) at 001 (Email from Jeff Huber to the Grail Board of Directors, May 30, 2018)).

Response to Finding No. 738:

The proposed finding is incomplete and misleading as well as contradicted by the weight of the evidence. In particular, the use of the term "market" in this context is vague and ambiguous, and improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also incomplete and misleading insofar as it suggests that Exact/Thrive is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. To the contrary, [redacted] Respondents further note that PX4121 also observes that it "looks like they're [Thrive] shooting for 8-12 cancers" and that "they will be relatively low cost since it's PCR+proteins/antigens." Further, Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 37), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

739. Hans Bishop—Grail's former CEO—also acknowledged that Exact is also in the "multicancer early detection space." (PX7069 (Bishop (Grail) IHT at 153)).

Response to Finding No. 739:

Respondents have no specific response except to note that in the cited testimony, Mr. Bishop was discussing Exact's acquisition of Thrive, and noted that Thrive has only "early technology." (PX7069 (Bishop (GRAIL) IHT at 154.)) [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

740. Mr. Bishop expects that "other multicancer early detection tests will eventually [be] launched in the market." (PX7069 (Bishop (Grail) IHT at 163)).

Response to Finding No. 740:

The proposed finding is incomplete and misleading. [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

741. Grail's [redacted] (PX4456 (Grail) at 013 [redacted] (*in camera*)).

Response to Finding No. 741:

The proposed finding is incomplete and misleading. Hans Bishop, GRAIL's CEO at the time, testified at trial that PX4456 [redacted] (Bishop (GRAIL) Tr. 1496). Accordingly, this proposed finding is entitled to little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

742. [redacted] (PX4284 (Grail) at 020 (Email from J. Ayers to M. Burns regarding GRAIL: First draft corporate communications plan attaching "GRAIL Corporate Comms Plan 5 19 2020 FINAL) (*in camera*)).

Response to Finding No. 742:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 43), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

743. [redacted] (PX4615 (Grail) at 070 [redacted] (*in camera*)).

Response to Finding No. 743:

Respondents have no specific response except to note that Complaint Counsel was unable to lay a foundation for any witness to discuss this document, and it is therefore entitled to little weight and Complaint Counsel should not be permitted to rely on any inferences from it. (Ofman (GRAIL) Tr. 3428). Respondents additionally note that [redacted]

744. Illumina documents presented to its Board of Directors regarding this transaction also discuss a market for MCED tests. [redacted] (PX5030 (Illumina) at 006 [redacted] (*in camera*)); *see* (PX7059, Scagnetti (Illumina) IHT at 63-64 (*in camera*) [redacted] (PX5030 (Illumina) at 009 [redacted] (*in camera*)).

Response to Finding No. 744:

The proposed finding is incomplete and misleading. Complaint Counsel omits that Dr. Aravanis provided additional context when shown PX5030 at trial:

[redacted]

[redacted]

(Aravanis (Illumina) Tr. 1806–07.)

745. Illumina's 2021-2025 Strategic Plan [redacted] (PX2169 (Illumina) at 048 (Illumina Strategic Plan 2021-2025, Board Discussion Document, Oct. 23, 2020) (*in camera*)).

Response to Finding No. 745:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06), and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also note that [redacted]

(PX2169 (Illumina) at 048.)

b) [redacted]

746. [redacted]

Response to Finding No. 746:

To the extent Complaint Counsel relies on its proposed findings in Section VII.A (¶¶ 2607–3078), Respondents incorporate their responses to those proposed findings herein.

747. [redacted] (Berry (Illumina) Tr. 751-53) (*in camera*). [redacted] (Berry (Illumina) Tr. 753) (*in camera*).

Response to Finding No. 747:

Respondents have no specific response except to note that the cited testimony [redacted]

748. [redacted] (Berry (Illumina) Tr. 938 (*in camera*)). [redacted] (Berry (Illumina) Tr. 938 (*in camera*)).

Response to Finding No. 748:

The proposed finding is incomplete and misleading. [redacted]

749. [redacted] (Berry (Illumina) Tr. 753-54) (*in camera*).

Response to Finding No. 749:

Respondents have no specific response except to note that the cited testimony confirms that the purpose of the outreach was to assure customers that the Transaction would have no impact on their supply relationship with Illumina.

750. [redacted] (Bishop (Grail) Tr. 1497-98 (*in camera*); PX4063 (Grail) at 001 (Email from Megan Hall, Grail, to Executive Team, Grail, et al., Feb. 2, 2021)).

Response to Finding No. 750:

The proposed finding is incomplete and misleading. Mr. Bishop testified that he was [redacted] (Bishop (GRAIL) Tr. at 1498.)

751. [redacted] (Bishop (Grail) Tr. 1498-99 (*in camera*); PX4063 (Grail) at 001 (Email from Megan Hall, Grail, to Executive Team, Grail, et al., Feb. 2, 2021)).

Response to Finding No. 751:

The proposed finding is incomplete and misleading. Mr. Bishop testified that [redacted] (Bishop (Grail) Tr. 1499).

The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable. Respondents further note that [redacted]

752. [redacted]

Response to Finding No. 752:

To the extent Complaint Counsel relies on its proposed findings in Section VII.B.3 (¶¶ 3189–3507), Respondents incorporate their responses to those proposed findings herein.

The proposed fact is inaccurate and misleading. Complaint Counsel cites no evidence in support of this purported fact, and therefore it should be disregarded entirely. Respondents further note that Mr. Della Porta testified that [redacted] Outside of Galleri, there are currently no other MCED tests on the market. (*See* PFF ¶¶ 340-573.)

753. [redacted]

[redacted] (PX4259 (Grail) at 001 (Email from C. Della Porta, Grail, to J. Ofman, Grail, copying A. Aravanis, Grail, H. Bishop, Grail, J. Owens, Grail, and V. Demas, Grail, Jul. 22, 2019) (*in camera*)).

Response to Finding No. 753:

The proposed finding is incomplete and misleading. As explained in the immediately preceding sentence in the cited source, [redacted]

754. [redacted] (Della Porta (Grail) Tr. 477-78 (*in camera*)); PX4145 (Grail) at 006 (Grail, "Competitive Intelligence," Aug. 14, 2019) (*in camera*)).

Response to Finding No. 754:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶ 754 herein.

755. [redacted] (PX4145 (Grail) at 006 (Grail, "Competitive Intelligence," Aug. 14, 2019) (*in camera*) [redacted]).

Response to Finding No. 755:

The proposed finding is incomplete and misleading. [redacted]

[redacted]

756. [redacted] (PX4145 (Grail) at 009 (Grail, "Competitive Intelligence," Aug. 14, 2019) (*in camera*)).

Response to Finding No. 756:

The proposed finding is incomplete and misleading. Respondents also incorporate their responses to CCFF ¶¶ 755–56 herein.

757. [redacted] (PX4287 (Grail) at 002 [redacted], 015-25 [redacted], 029-38 [redacted] (*in camera*). *See also,* PX4190 (Grail) at 013-15 [redacted] (*in camera*) ([redacted]).

Response to Finding No. 757:

The proposed finding is incomplete and misleading. [redacted] Dr. Ofman testified at trial that GRAIL does not conduct research and development in response to any test developer's work. (Ofman (GRAIL) Tr. 3304-05.)

A GRAIL conference report notes [redacted] Further, [redacted] Respondents also incorporate their responses to CCFF ¶¶ 3231–33 herein.

Complaint Counsel chose not to discuss PX4287 or PX4190 at trial, (CC Exhibit Index at 40, 43), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

758. [redacted] (Della Porta (Grail) Tr. 483 (*in camera*)).

Response to Finding No. 758:

Respondents have no specific response.

759. [redacted] (Aravanis (Illumina) Tr. 1802-1804 (*in camera*) (referencing PX4075 (Grail))).

Response to Finding No. 759:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 755–56 herein.

760. [redacted] (Aravanis (Illumina) Tr. 1802-1804) (*in camera*)).

Response to Finding No. 760:

The proposed finding is incomplete and misleading. [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 755–56 herein.

761. [redacted] (PX4250 (Grail) at 003, 009 [redacted] (*in camera*)).

Response to Finding No. 761:

The proposed finding is incomplete and misleading. [redacted]

Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 41), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents also incorporate their responses to CCFF ¶ 413 herein.

762. [redacted] (PX2588 (Illumina) at 008 (Illumina PowerPoint titled "Project: GRAIL", March 2020) (*in camera*)).

Response to Finding No. 762:

The proposed finding is incomplete and misleading. Contrary to the subsection's heading, nothing in the cited slide suggests that Illumina identified [redacted]

Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 25) and did not discuss this particular slide with the only witness who was shown this document in any deposition (*see* PX7099 (Febbo (Illumina) Dep. at 166–75), and should not be entitled to

rely on it to establish that the slide suggests Illumina views [redacted]

[redacted]

c) Illumina and Grail Track Research and Development Efforts of MCED Test Developers

763. Illumina tracks investment activity in MCED testing companies. (deSouza (Illumina) Tr. 2392).

Response to Finding No. 763:

Respondents have no specific response except to note that, contrary to the subsection's heading, nothing in the cited testimony suggests that Illumina tracks the research and development efforts of putative MCED test developers. Mr. deSouza only notes that after the announcement of the Illumina/GRAIL transaction, investment in the space "significantly ramped up". (deSouza (Illumina) Tr. 2392.)

764. Grail's R&D team tracks the research and development efforts of other companies that are developing MCED tests. (Della Porta (Grail) Tr. 583). [redacted] (PX4037 (Grail) at 008-10 [redacted] (*in camera*)).

Response to Finding No. 764:

The proposed finding is not supported by the cited evidence. Mr. Della Porta testified that [redacted] (Della Porta (Grail) Tr. 583). PX4037 demonstrates that [redacted] (PX4037 (Grail) at 008–10)

Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 35), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

765. [redacted] (PX4075 (Grail) at 009 (Email attaching Competitive Intelligence: An Overview, Aug. 14, 2019) (*in camera*)).

Response to Finding No. 765:

The proposed finding is incomplete and misleading. Respondents incorporate their responses to CCFF ¶ 759 herein.

766. [redacted] (PX4287 (Grail) at 013-14 (*in camera*)). [redacted] (PX4287 (Grail) at 022-042, 045-049 [redacted] (*in camera*)).

Response to Finding No. 766:

The proposed finding is incomplete and misleading. [redacted]

Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 43), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

767. In Grail's AACR Conference Report, dated May 5, 2021, Grail's Medical Affairs and R&D and Bioinformatics teams wrote: "MCED evolving into highly competitive landscape,

though many seem to be starting with one cancer type, with intent to add more." (PX4616 (Grail) at 017 (Grail, AACR Conference Report, May 5, 2021)).

Response to Finding No. 767:

The proposed finding is incorrect. Dr. Ofman testified that PX4616 was [redacted]

[redacted]

(Ofman (GRAIL) Tr. 3422). There is no evidence in the record regarding who wrote the sentence quoted in the proposed finding.

The proposed finding is also misleading to the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.)

Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to a multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time, a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by

undergoing a much more intensive process to develop a test for 50 cancer types at the same time.

(Aravanis (Illumina) Tr. 1895–97.)

768. The same Grail AACR Conference Report identifies Exact/Thrive as Grail's "most significant competitor in MCED space." PX4616 (Grail) at 030 (Grail, AACR Conference Report, May 5, 2021)).

Response to Finding No. 768:

The proposed finding is incorrect and Respondents incorporate their responses to CCFF ¶ 757 herein. Respondents further note that PX4616 notes [redacted]

769. [redacted] (Ofman (Grail) Tr. 3421-22 (*in camera*)).

Response to Finding No. 769:

Respondents have no specific response.

770. Grail's 2021 AACR Conference Report (PX4616) credits 27 Grail employees: 17 members of Grail's Medical Affairs team and ten members of Grail's bioinformatics and R&D teams. (PX4616 (Grail) at 135 (Grail, AACR Conference Report, May 5, 2021)).

Response to Finding No. 770:

Respondents have no specific response.

771. [redacted] (PX4037 (Grail) at 008-010 [redacted] (*in camera*)).

Response to Finding No. 771:

The proposed finding is incomplete and misleading. [redacted]

[redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 754 herein.

772. [redacted] (PX4266 (Grail) at 013 [redacted] (*in camera*)).

Response to Finding No. 772:

Respondents note that the [redacted]

773. Dr. Katz, Respondents' expert, agreed that Grail has a process in place "that identi[fies] technologies and competitors whose approaches are worth evaluating for future iterations of Grail's product." (RX6004 (Katz Trial Dep. at 105).

Response to Finding No. 773:

The proposed finding mischaracterizes the cited testimony, and is incomplete and misleading. In response to this question from Complaint Counsel, Dr. Katz specifically [redacted]

[redacted]

(RX6004 (Katz Trial Dep. at 105) (emphasis added.)

774. Specifically, Dr. Katz, testified that firms that are developing MCED tests have identified other MCED developers as competitors. (RX6004 (Katz Trial Dep. at 104)).

Response to Finding No. 774:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Dr. Katz testified that [redacted] (RX6004 (Katz Trial Dep.) at 21.) And, contrary to the proposed finding, Complaint Counsel's own witness Dr. Lengauer testified [redacted] (Lengauer (Third Rock) Tr. 205–06.)

Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06), and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents incorporate their responses to CCFF ¶¶ 775–76 herein.

775. Dr. Katz also testified that firms developing MCED tests have assessed their rivals' product features for their MCED tests. (RX6004 (Katz Trial Dep. at 104).

Response to Finding No. 775:

Dr. Katz also testified that "these companies don't know exactly where their tests are going to turn out in terms of the various characteristics, and the companies have aspirations and have some expectations, but there's still a high degree of uncertainty there. So, you know, it may well be they think of these firms as their competitor or prospectively so, but that's not really enough I think to reliably tell us what the market boundaries are going to be." (RX6004 (Katz Trial Dep.) at 21-22).)

Respondents incorporate their responses to CCFF ¶¶ 774 and 776 herein.

776. Dr. Katz understood that firms in the MCED industry track the science of other firms developing MCED tests. (RX6004 (Katz Trial Dep. at 105).

Response to Finding No. 776:

The proposed finding is incomplete and misleading. Dr. Katz testified that [redacted] (RX6004 (Katz Trial Dep. at 105.)

Respondents incorporate their responses to CCFF ¶¶ 774–75 herein.

6. Industry Participants View MCED Tests as Its Own Relevant Market

777. As captured below and in Section VI., [redacted] (*See, e.g.*, Nolan (Freenome) Tr. 2773-4 (*in camera*) [redacted]; PX8392 (Exact) at 002 (*in camera*) [redacted] PX7042 (Gao (Singlera) IHT at 102-103) (testifying that Singlera's PanSeer test is in the pan-cancer market, competing against companies like Grail, Exact, Freenome, and Thrive); PX7053 (Fesko (Natera) IHT at 84) (*in camera*) [redacted]).

Response to Finding No. 777:

The proposed finding is inaccurate, incomplete, misleading and contrary to the weight of the evidence insofar as it suggests that [redacted]

First, as Dr. Katz testified, statements by competitors "are not going to answer these questions about the trade-offs or . . . the degree of differentiation or how consumers are going to really behave." (RRFF ¶ 774 (RX6004 (Katz Trial Dep.) at 21).)

Second, observations of the industry participants are less probative where they have no personal knowledge about the features and functions of these tests. As Dr. Katz explained: "these companies don't know exactly where their tests are going to turn out in terms of the various characteristics, and the companies have aspirations and have some expectations, but there's still a high degree of uncertainty there. So, you know, it may well be they think of these firms as their competitor or prospectively so, but that's not really enough I think to reliably tell us what the market boundaries are going to be." (RRFF ¶ 775 (RX6004 (Katz Trial Dep.) at 21-22).)

This is consistent with some of the testimony cited in the proposed finding. [redacted]

Third, the available industry or public information about the putative MCED tests in development does not suggest that these tests belong in the same product market as Galleri. Instead, they make clear that they are all very different from Galleri. (*See* PFF ¶¶ 716–721.4.)

Analyst reports from investment banks that cover the broader biotechnology space recognize that Galleri is very different. (*See* PFF ¶¶ 717.1–717.2.) [redacted] (*See* PFF ¶¶ 718–718.1.) While the features and functions of Galleri are described in detail in several peer-reviewed publications and GRAIL has multiple clinical trials listed at clinicialtrials.gov, most other putative MCED tests in development do not even have published articles or initiated clinical trials relating to cancer screening at all. (*See* PFF ¶¶ 719–20.)

In addition, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Further, Complaint Counsel chose not to discuss PX8392 at trial, (CC Exhibit Index at 61), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

778. At trial, MCED test developers referred to their tests as MCED tests. (*See, e.g.*, (Lengauer, Tr. 158-59) (describing CancerSEEK as "a multicancer blood test for the . . . early detection of cancer"); (Chahine (Helio) Tr. 1000) (differentiating Helio's liver cancer test from its "multicancer test"); (Nolan (Freenome) Tr. 2709) (discussing Freenome's "multicancer program")).

Response to Finding No. 778:

The proposed finding is inaccurate, incomplete and misleading. Respondents incorporate their responses to CCFF ¶ 777 herein.

779. [redacted] (*See, e.g.*, PX8392 (Exact) at 002 (*in camera*); RX0545 (Guardant) at 010 (*in camera*) [redacted]); PX8324 (Roche) at 003 [redacted] (*in camera*)).

Response to Finding No. 779:

The proposed finding is inaccurate, incomplete and misleading. Respondents incorporate their responses to CCFF ¶ 777 herein. Further, Complaint Counsel chose not to discuss PX8324 or PX8392 at trial, (CC Exhibit Index at 59, 61), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

a) [redacted]

780. [redacted] (Chahine (Helio) Tr. 1066 (*in camera*)).

Response to Finding No. 780:

The proposed finding is incomplete and misleading insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Respondents note that Helio has [redacted] (Chahine (Helio) Tr. 1090, 1092–93.) Further, Dr. Chahine testified that [redacted] Accordingly, there is no indication based on [redacted]

[redacted]

(PFF ¶ 498.) Respondents also incorporate their responses to CCFF ¶¶ 454–60, 774–75 and 777 herein.

781. [redacted] (Chahine (Helio) Tr. 1066-67 (*in camera*)).

Response to Finding No. 781:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted] and Respondents incorporate their responses to CCFF ¶ 780 herein.

782. For example, [redacted] (PX8655 (Helio) at 029 (*in camera*)).

Response to Finding No. 782:

The proposed finding is incomplete and misleading to the extent it suggests that [redacted] Further, Respondents incorporate their responses to CCFF ¶ 780 herein.

[redacted]

783. [redacted] (Chahine (Helio) Tr. 1067 (*in camera*)).

Response to Finding No. 783:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 782 herein.

784. [redacted] (Chahine (Helio) Tr. 1067 (*in camera*)).

Response to Finding No. 784:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 782 herein.

b) [redacted]

785. When describing the CancerSEEK test, former Chief Innovation Officer and Co-Founder of Thrive, Dr. Lengauer, explained that "we call it a multicancer test. That's in stark contrast to single organs test that only look for one particular organ." (Lengauer (Third Rock Ventures) Tr.159-60).

Response to Finding No. 785:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted] Galleri detects more than 50 cancer types (PFF ¶ 61), [redacted] (Lengauer (Exact/Thrive) Tr. 245; RX3869 (Cote Expert Report) ¶ 177; PFF ¶¶ 429–430.1.) [redacted] By contrast, [redacted] (PFF ¶¶ 419 (RX3869 (Cote Expert Report) ¶ 174), 684.2 (Lengauer (Exact/Thrive) Tr. 246–48).) Dr. Lengauer also observes that the [redacted] (PFF ¶ 429 (Lengauer (Exact/Thrive) Tr. 245; RX3869 (Cote Expert Report) ¶ 177).) Dr. Lengauer also testified that [redacted] (PFF ¶¶ 725 (RX3409 (Klein et al., 2021) at 5; RX3419 (Lennon et al., 2020) at 7; RX3115 (Chen et al., 2020) at 4).) Thus, [redacted] and little evidence to indicate that [redacted] (PFF ¶ 421.) Respondents also incorporate their responses to CCFF ¶ 414 herein.

786. Mr. Conroy testified that there is now a nascent market—as Mr. Conroy uses the term as a layperson—in MCED testing since Galleri became available. (Conroy (Exact) Tr. 1738).

Response to Finding No. 786:

Respondents have no specific response except to note that Mr. Conroy's use of the term as a layperson provides no basis to determine the relevant product market, which requires a legal conclusion. Respondents also incorporate their responses to CCFF ¶ 785 herein.

787. [redacted] (Lengauer (Third Rock Ventures) Tr. 194-95 (*in camera*)).

Response to Finding No. 787:

Respondents have no specific response except to note [redacted] (Lengauer (Exact/Thrive) Tr. 205–06.) Respondents also incorporate their responses to CCFF ¶ 785 herein.

788. [redacted] (Conroy (Exact) Tr. 1652 (*in camera*)).

Response to Finding No. 788:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 785 herein.

789. [redacted] (PX8572 (Exact) at 048 (Exact Sciences Innovation & Technology Committee)) (*in camera*) [redacted]).

Response to Finding No. 789:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 774–75 and 785 herein.

790. [redacted] (PX8572 (Exact) at 092 (Exact Sciences Innovation & Technology Committee) (*in camera*)).

Response to Finding No. 790:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 774–75 and 785 herein.

791. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 177-78) (*in camera*)).

Response to Finding No. 791:

Respondents have no specific response except to note that [redacted]

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

c) [redacted]

792. [redacted]
(Rabinowitz (Natera) Tr. 359 (*in camera*)).

Response to Finding No. 792:

The proposed finding is incomplete and misleading insofar as it suggests that Natera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

Although [redacted] (PFF ¶¶ 508–09.) [redacted] and that Natera is unlikely to accelerate the development of a cancer screening test for multiple cancer types or to add a new cancer type to an existing screening test, [redacted]. (PFF ¶ 511 (RX3869 (Cote Expert Report) ¶ 227; [redacted].) Respondents also incorporate their responses to CCFF ¶¶ 774–75 and 794 herein.

793. [redacted]
(Rabinowitz (Natera) Tr. 359 (*in camera*)).

Response to Finding No. 793:

The proposed finding is incomplete and misleading insofar as it suggests that Natera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

Respondents also note that the cited testimony deserves little weight, because [redacted] Respondents also incorporate their responses to CCFF ¶ 792 herein.

794. [redacted] (Rabinowitz (Natera) Tr. 360 (*in camera*)).

Response to Finding No. 794:

The proposed finding is incomplete and misleading insofar as it suggests that Natera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

Respondents also note that [redacted] Respondents also incorporate their responses to CCFF ¶ 792 herein.

795. [redacted] (Rabinowitz (Natera) Tr. 360 (*in camera*)).

Response to Finding No. 795:

The proposed finding is incomplete and misleading insofar as it suggests that Natera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

Contrary to the cited testimony, [redacted] (RX0521 (Natera) at 3); *see also* (PX7113 (Rabinowitz (Natera) Dep. at 298–303).) [redacted] (*See generally* RX0521 (Natera).) Respondents also incorporate their responses to CCFF ¶ 792 herein.

d) Guardant Has Identified MCED Test Developers as Competitors in Its Market

796. Guardant estimates the potential size of the MCED market in terms of revenue as over $50 billion. (Getty (Guardant) Tr. 2503).

Response to Finding No. 796:

Respondents have no specific response, except to note that [redacted]

797. Guardant monitors Grail because of its funding and the advanced state of its technology. (Getty (Guardant) Tr. 2504).

Response to Finding No. 797:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

Accordingly, while Guardant may "monitor[] GRAIL", there is no evidence that Guardant will launch in the foreseeable future a cancer screening test that is a close substitute to the Galleri test. (PFF ¶¶ 476–92.)

798. Guardant is "really focused" on Grail as a competitor. (Getty (Guardant) Tr. 2505).

Response to Finding No. 798:

The proposed finding is incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

The proposed finding relates to irrelevant subject matter because Guardant's characterization of its own competitors says nothing about whether Guardant is, in fact, a credible rival of GRAIL. Accordingly, there is no indication based on Guardant's work to date that [redacted]

[redacted]

[redacted]).) Respondents further incorporate their responses to CCFF ¶¶ 426–438 and 2257–2352 herein.

799. Guardant monitors Exact as a competitor because of Exact's funding and the advanced state of its technology. (Getty (Guardant) Tr. 2504).

Response to Finding No. 799:

The proposed finding relates to irrelevant subject matter because Guardant's characterization of its own competitors says nothing about whether Guardant is, in fact, a credible rival of GRAIL. Accordingly, there is no indication based on Guardant's work to date that [redacted]

[redacted]).) Respondents further incorporate their responses to CCFF ¶¶ 426–438 and 2257–2352 herein.

800. Guardant also views Grail, Natera, Exact, and Freenome as competitors in MCED test development. (Getty (Guardant) Tr. 2687-88) (referring to PX0060 (Guardant) at 014 (Guardant 10-K for fiscal year ending Dec. 31, 2020)).

Response to Finding No. 800:

The proposed finding is misleading and contrary to the weight of the evidence. There is no indication based on Guardant's work to date that [redacted]

[redacted] (PFF ¶ 475 [redacted]).)

Further, the reference to Guardant's 10-K is misleading and does not support the proposed finding. The quoted portions of Guardant's 10-K say that Grail, Natera, Exact, and Freenome are "competitors in minimal residual disease testing and early screening testing" (PX0060 (Guardant) at 14) and do not mention "MCED" or "multicancer". Respondents further incorporate their responses to CCFF ¶¶ 426–438 and 2257–2352 herein.

e) Freenome Has Identified MCED Test Developers as Competitors in Its Market

801. [redacted] (PX7050, Nolan (Freenome) IHT at 137, 251-52 (*in camera*)).

Response to Finding No. 801:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted]

Notwithstanding Freenome's stated view of itself, Mr. Nolan testified that Freenome is [redacted] (PX7094 (Nolan (Freenome) Dep. at 307).) [redacted] (PFF ¶¶ 459-70.) [redacted]

[redacted] (PFF ¶ 458 (Cote Tr. 3846, 3849–50; RX3869 (Cote Expert Report) ¶ 193).)

Respondents further incorporate their responses to CCFF ¶¶ 439–446 and 2353–2400 herein.

802. Freenome CEO, Michael Nolan, testified at trial that [redacted] (Nolan (Freenome) Tr. 2774 (*in camera*)).

Response to Finding No. 802:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted]

Respondents also note that [redacted] Respondents further incorporate their responses to CCFF ¶¶ 439–446, 801 and 2353–2400 herein.

803. [redacted] (Nolan (Freenome) Tr. 2772-73 (*in camera*)).

Response to Finding No. 803:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted]

Respondents also note that [redacted] Respondents further incorporate their responses to CCFF ¶¶ 439–446, 801–02 and 2353–2400.

804. Freenome views Grail as a competitor in offering MCED tests. (Nolan (Freenome) Tr. 2727).

Response to Finding No. 804:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted]

Respondents also note that the proposed finding is incomplete and misleading to the extent it implies that Mr. Nolan's testimony is representative of Freenome's views writ large. In

fact, [redacted] Respondents further incorporate their responses to CCFF ¶¶ 439–446 and 2353–2400.

805. Freenome CEO, Michael Nolan, testified that because Grail's MCED test is [redacted] (Nolan (Freenome) Tr. 2774 (*in camera*)).

Response to Finding No. 805:

Respondents have no specific response.

806. Mr. Nolan testified that [redacted] (Nolan (Freenome) Tr. 2774-75 (*in camera*)).

Response to Finding No. 806:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted]

Respondents also note that [redacted] Respondents further incorporate their responses to CCFF ¶¶ 439–446 and 2353–2400.

f) [redacted]

807. [redacted] (PX8324 (Roche) at 003 (*in camera*))).

Response to Finding No. 807:

The proposed finding is incomplete and misleading insofar as it suggests that [redacted]

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 59), or in any deposition, and therefore the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

808. Cindy Perettie from Foundation Medicine is aware that Grail, Thrive, Exact Sciences, Freenome, and Natera are "developing NGS-based early cancer detection tests." (PX7068 (Perettie IHT at 54-55)).

Response to Finding No. 808:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06), and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698).

Respondents also note that the proposed finding does not demonstrate that all "MCED tests" as Complaint Counsel defines the term are reasonably interchangeable with each other and properly considered in a single relevant product market. In fact, Ms. Perettie does not even use the term "multi-cancer early detection" in referring to tests from GRAIL, Thrive, Exact Sciences, Freenome or Natera.

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

7. Legislators, Regulators, and Others Discuss an MCED Market

809. The U.S. House of Representatives and Senate introduced the Medicare Multi-Cancer Early Detection Screening Coverage Act of 2020, which states that MCED tests "can complement the covered early detection tests," rather than replace them. (H.R. 8845 (116th Congress, 2d Session), Sec. 2(a)(7)). (RX2588 (Illumina) (Reps. Sewell, Arrington, Ruiz, and Hudson Introduce Bipartisan Legislation to Remove Barriers to Innovative Multi-Cancer Screening Technology for Medicare Beneficiaries, Dec. 3, 2020, https://sewell.house.gov/media-center/press-releases/reps-sewell-arrington-ruiz-and-hudson-introduce-bipartisan-legislation, last visited Apr. 6, 2022) (stating "these new tools will complement, not replace, existing screenings")).

Response to Finding No. 809:

Respondents have no specific response except to note that the proposed finding does not demonstrate that all "MCED tests" as Complaint Counsel defines the term are reasonably interchangeable with each other and properly considered in a single relevant product market. To the extent Complaint Counsel relies on its proposed findings in CCFF ¶¶ 810–17, Respondents incorporate their responses to those proposed findings herein.

810. [redacted] (RX2588 (Illumina) (Reps. Sewell, Arrington, Ruiz, and Hudson Introduce Bipartisan Legislation to Remove Barriers to Innovative Multi-Cancer Screening Technology for Medicare Beneficiaries, Dec. 3, 2020, https://sewell.house.gov/media-center/press-releases/reps-sewell-arrington-ruiz-and-hudson-introduce-bipartisan-legislation, last visited Apr. 6, 2022) (stating "these new tools will complement, not replace, existing screenings")). *See also* (Bishop (Grail) Tr. 1323-24); (Ofman (Grail) Tr. 3356 (*in camera*)).

Response to Finding No. 810:

Respondents have no specific response.

811. [redacted] (Ofman (Grail) Tr. 3353 (*in camera*)).

Response to Finding No. 811:

Respondents have no specific response.

812. [redacted] (Ofman (Grail) Tr. 3356 (*in camera*)).

Response to Finding No. 812:

Respondents have no specific response.

813. As noted above at Complaint Counsel's Proposed Findings of Fact ¶¶ 587, 590-591, Grail has lobbied Congress to pass legislation to enable Medicare's coverage MCED tests.

Response to Finding No. 813:

Respondents have no specific response.

814. The U.S. House of Representatives and Senate introduced the "Medicare Multi-Cancer Early Detection Screening Coverage Act of 2020," which states that MCED tests "can complement the covered early detection tests," rather than replace them. (H.R. 8845 (116th Congress, 2d Session), Sec. 2(a)(7)). (RX2588 (Illumina) (Reps. Sewell, Arrington, Ruiz, and Hudson Introduce Bipartisan Legislation to Remove Barriers to Innovative Multi-Cancer Screening Technology for Medicare Beneficiaries, Dec. 3, 2020, https://sewell.house.gov/media-center/press-releases/reps-sewell-arrington-ruiz-and-hudson-introduce-bipartisan-legislation, last visited Apr. 6, 2022) (stating "these new tools will complement, not replace, existing screenings")).

Response to Finding No. 814:

Respondents have no specific response.

815. The Press Release announcing the legislation specifies tests that "detect multiple types of cancer before systems develop." (RX2588 (Illumina) (Reps. Sewell, Arrington, Ruiz, and Hudson Introduce Bipartisan Legislation to Remove Barriers to Innovative Multi-Cancer Screening Technology for Medicare Beneficiaries, Dec. 3, 2020, https://sewell.house.gov/media-center/press-releases/reps-sewell-arrington-ruiz-and-hudson-introduce-bipartisan-legislation, last visited Apr. 6, 2022) ("The bipartisan legislation recognizes emerging advances in our nation's fight against cancer by ensuring Medicare coverage for new, innovative tests that detect multiple types of cancer before symptoms develop.")).

Response to Finding No. 815:

Respondents have no specific response.

816. The text of the "Medicare Multi-Cancer Early Detection Screening Coverage Act of 2020" defines "Multi-Cancer Early Detection Screening Tests" as "any of the following tests, approved or cleared by the Food and Drug Administration, furnished to an individual for the purpose of early detection of cancer across many cancer types (as categories in the Annual Report to the Nation on the Status of Cancer issued by the National Cancer Institute): (1) A genomic sequencing blood or blood product test that includes the analysis of cell-free nucleic acids. (2) Such other equivalent tests (which are based on urine or other sample of biological material) as the Secretary determine appropriate." (RX3602 (H.R.1946 - To Amend Title XVIII of the Social Security Act to Provide for Medicare Coverage of Multi-Cancer Early Detection Screening Tests)).

Response to Finding No. 816:

Respondents have no specific response.

817. The "Purpose" section of the "Medicare Multi-Cancer Early Detection Screening Coverage Act of 2020" says that "Several innovative private and academic efforts are engaged in research, including advanced clinical trial to develop multi-cancer early detection blood-based tests. Published data indicate that these tests can screen for many cancers at the same time, including rare cancers, with one example currently able to screen for more than 50 cancers." ((RX3602 (H.R.1946 - To Amend Title XVIII of the Social Security Act to Provide for Medicare Coverage of Multi-Cancer Early Detection Screening Tests)).

Response to Finding No. 817:

Respondents have no specific response except to note that the draft legislation notes that Galleri is able to screen for more than 50 cancer types. (RX3602.)

818. Guardant's Mr. Getty testified at trial that "there are benchmarks that are out there that suggest" the uses for which third-party payers will cover MCED tests. (Getty (Guardant) Tr. 2662-63).

Response to Finding No. 818:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and, accordingly, should be given no weight. (*See* Resps.' Motion *in limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) The proposed finding is also vague as to what the "benchmarks" and "uses" are "for which third-party payers will cover MCED tests." Further, to the extent that such benchmarks do exist, the proposed finding is further evidence that Dr. Scott Morton's application of the hypothetical monopolist test in support of Complaint Counsel's proposed relevant market was insufficient, as she did not consider said "benchmarks" in performing her analysis and did not attempt to analyze substitution from the perspective of payors, despite acknowledging that payor choices will drive adoption of different screening tests. (PFF ¶ 767.)

819. [redacted] (Strom (Morgan Stanley) Tr. at 3567 (*in camera*)).

Response to Finding No. 819:

Respondents have no specific response except to note [redacted]

820. Cowen—a financial services firm—identified multi-cancer screening tests target at asymptomatic patients as its own market and assessed that it would have approximately a $5 to $50 billion target addressable market in its report on liquid biopsy. (PX2752 (Illumina) at 007 ("The Liquid Biopsy Report: Early Detection of a Huge Opportunity). Cowen's market assessment separately addressed single cancer tests, tests targeting high risk patients, and tests with a non-screening function. (PX2752 (Illumina) ("The Liquid Biopsy Report: Early Detection of a Huge Opportunity").

Response to Finding No. 820:

Respondents have no specific response except to note that the same report notes that: GRAIL has "conducted systematic clinical studies" and that Galleri "has been shown to be capable of identifying >50 types of cancers by scanning methylation patterns"; the only other entity it recognizes as pursuing a multicancer screening test is Thrive. By contrast, the cited report notes that Freenome and Guardant are among the companies in a separate market segment pursuing *single-cancer screening tests to detect colorectal cancer* (PX2022 (Cowen) at 30–31 (emphasis added)), while it lists Singlera in passing under the heading "[s]ome [o]thers" following its summary of the colorectal cancer screening market (PX2022 (Cowen) at 33), and considers Helio in a separate segment for "High Risk Cancer Detection" for its liver cancer screening test. The cited report does not even recognize [redacted] as pursuing early cancer detection at all: it notes [redacted] as a participant in the recurrence monitoring/MRD and "liquid biopsy for biopharma" (*i.e.*, companion diagnostic) segments (PX2022 (Cowen) at 46–

53), and [redacted] in the therapy selection and "liquid biopsy for biopharma" market segments. (PFF ¶¶ 717.1–717.1.3.)

For clarity, Respondents note that Respondents cited a different exhibit that contains the same Cowen report in Respondents' Proposed Findings of Fact ¶ 717.1. (*Compare* PX2022 (Illumina) at 2-59 *with* PX2752 (Illumina) at 2-59.)

821. Investors have also identified an MCED market and noted that Galleri test competes with other MCED test developers. (PX2138 (Illumina) at 008 (JPMorgan Investor Report "Searching for the (Un) Holy Grail: Deal Brings More Dilution than Test Sensitivity . . . Downgrading to Neutral, PT to $280") ("To address concerns around potential cannibalization into ILMN's existing customers that compete with Grail (GH. Freenome, Thrive, etc.)"); PX2138 (Illumina) at 025 (Wolfe Research "Betting The Farm) (recognizing that Guardant Health, Freenome, Exact, and Thrive are all posed to compete with GRAIL)).

Response to Finding No. 821:

The proposed finding is incomplete and misleading. The JPMorgan investor report refers to "the early detection market" and does not mention "multicancer" or "MCED". (PX2138 (Illumina) at 8.) The Wolfe Research report does not mention "multicancer" or "MCED" either; it says that "GRAIL is in the mix with early detection players". (PX2138 (Illumina) at 25.)

D. THE HYPOTHETICAL MONOPOLIST TESTS SHOWS MCED TESTS ARE A RELEVANT PRODUCT MARKET

822. Dr. Scott Morton concluded that the relevant product market is MCED tests. (PX7138 (Scott Morton Trial Dep. at 38)).

Response to Finding No. 822:

The proposed finding is incorrect. Complaint Counsel has the burden to prove the relevant market (RCoL ¶ 11), and has not done so (PFF ¶¶ 679–772). In proposing a relevant product market of "MCED tests" Complaint Counsel failed to conduct any analysis to show that all tests that detect multiple cancers simultaneously through a blood draw should be in a single product market. (PFF ¶ 689.) By defining the market to include tests that cannot be shown to be

substitutes for Galleri or each other, Complaint Counsel's proposed market violates the narrowest market rule. (PFF ¶ 690.1; RCoL ¶ 19.) To the extent Complaint Counsel relies on its proposed findings in CCFF ¶¶ 823–29, Respondents incorporate their responses to those proposed findings herein.

823. [redacted] (PX7138 (Scott Morton Trial Dep. at 40-43); PX6090 (Scott Morton Report) ¶ 149 (*in camera*)).

Response to Finding No. 823:

The proposed finding is incorrect. [redacted] Respondents also note that [redacted] (PFF ¶ 770.)

824. As described more fully in her expert report, Dr. Scott Morton found that "a hypothetical monopolist of all MCED products would likely be able to profitably impose a SSNIP above the MCED price that would prevail if there were multiple MCED rivals or profitably implement a significant reduction in product quality or availability." (PX7138 (Scott Morton Trial Dep. At 40-43); PX6090 (Scott Morton Report) ¶ 149 (*in camera*)).

Response to Finding No. 824:

The proposed finding is incorrect and Respondents incorporate their responses to CCFF ¶¶ 823 and 825–29 herein.

825. [redacted] (PX6090 (Scott Morton Report) ¶ 146 (*in camera*)).

Response to Finding No. 825:

Respondents do not dispute that [redacted] (PFF ¶ 770.) Dr. Scott Morton failed to assess how the possible characteristics of the MCED tests in development might impact the likelihood of switching within her defined market. (PFF ¶ 768.) In addition, Dr. Scott Morton lacks any foundation to opine on the behavior of doctors and patients, as she did not consider any information about the preferences and likely switching behavior of clinicians, patients and payors related to the products she includes and excludes from her proposed MCED market. (PFF ¶ 767.)

826. [redacted] (PX6090 (Scott Morton Report) ¶ 146 (*in camera*)).

Response to Finding No. 826:

Respondents do not dispute that [redacted] (PFF ¶ 770.) Dr. Scott Morton failed to assess how the possible characteristics of the MCED tests in development might impact the likelihood of switching within her defined market. (PFF ¶ 768.) In addition, Dr. Scott Morton lacks any foundation to opine on the behavior of doctors and patients, as she did not consider any information about the preferences and likely switching behavior of clinicians, patients and payors related to the products she includes and excludes from her proposed MCED market. (PFF ¶ 767.)

827. Dr. Scott Morton testified that a quantitative hypothetical monopolist test is not required to define a product market. (PX7138 (Scott Morton Trial Dep. at 42-43)).

Response to Finding No. 827:

Respondents have no specific response except to note that the proposed finding is improper because it consists entirely of a legal conclusion.

828. Respondents' economic expert admits that switching data and customer survey data is not necessary to define a relevant product market. (RX6004 (Katz Trial Dep. 99); *see also* PX0338 at 011-012, (*Horizontal Merger Guidelines* § 4.1.3, dated Aug. 19, 2010) ("Even when the evidence necessary to perform the hypothetical monopolist test quantitatively is not available, the conceptual framework of the test provides a useful methodological tool for gathering and analyzing evidence pertinent to customer substitution and to market definition. The Agencies follow the hypothetical monopolist test to the extent possible given the available evidence, bearing in mind that the ultimate goal of market definition is to help determine whether the merger may substantially lessen competition.")).

Response to Finding No. 828:

The proposed finding is incomplete and misleading to the extent it suggests that Dr. Katz believes that any such analysis was not necessary to conduct market definition analysis here. In fact, Dr. Katz testified that "because we don't have the actual switching behavior to study . . . there's an information gap" and Dr. Scott Morton didn't attempt to fill those information gaps by conducting a survey of "clinicians or payers to understand what they would think about . . . various alternatives and how close they would view those to be substitutes and then try to infer from that what that would mean for their switching behavior." (RX6004 (Katz Trial Dep.) at 19–20.) Nor did she consider any evidence about how "consumers weigh the different characteristics [of putative MCED tests] against each other . . . or what do they do if maybe one test looks better than the other in certain technical respects". (RX6004 (Katz Trial Dep.) at 20–21.)

829. [redacted]

[redacted] (*See* PX6090 (Scott Morton Report) ¶ 139 (*in camera*)).

Response to Finding No. 829:

The proposed finding is incorrect. [redacted]

Dr. Katz explained why Dr. Scott Morton's approach was insufficient. "First, the characteristics of the tests that we're going to end up seeing are uncertain now. I mean, both, if you think about specific tests, it's uncertain because we'll have to see how R&D and other issues, you know, play out by the companies, but also there's, you know, some uncertainty about, given what dimensions of differentiation among tests are going to really matter, which characteristics are going to most drive substitution." (RX6004 (Katz Trial Dep. at 20).)

In addition, relying solely on peculiar characteristics and uses "doesn't answer the question of . . . how [] consumers weigh the different characteristics against each other" or "what do they do if maybe one test looks better than the other in certain technical respects, but it also is more expensive. And just looking at the peculiar characteristics in isolation can't answer that question if . . . you have this other gap which you haven't really been able to collect information on the preferences of [clinicians, patients and payors]." (RX6004 (Katz Trial Dep. at 20-21).)

Further, Dr. Scott Morton applied the hypothetical monopolist test to the wrong set of products and relied on "practical indicia" to distinguish MCED tests from single-cancer screening tests and other blood-based cancer tests like DAC, MRD or Therapy Selection tests.

Dr. Scott Morton's analysis also ignores how the possible characteristics of the MCED tests in development might impact the likelihood of switching within her defined market. (PFF ¶ 768.) Because of this failure, her proposed market would include any test that screens for two or more cancer types, even though that would necessarily group together screening tests that detect distinct cancer types in different populations. (PFF ¶ 689.) As Dr. Katz testified: "suppose we have two tests, one of which covers testicular cancer and prostate cancer . . . and then we have another one that does uterine cancer and ovarian cancer. It's really difficult for me to see how those could be substitutes for one another. I believe they're not. And I think that shows a fundamental defect in [Complaint Counsel's proposed] market." (PFF ¶ 690.)

830. [redacted] (*See* RX3865 (Guerin-Calvert Rebuttal Report) (*in camera*); PX6105 (Katz Rebuttal Report) (*in camera*); RX3870 (Rock Rebuttal Report) (*in camera*); RX3867 (Deverka Rebuttal Report) (*in camera*); RX3864 (Carlton Rebuttal Report) (*in camera*); RX3869 (Cote Rebuttal Report) (*in camera*); PX6097 (Abrams Rebuttal Report) (*in camera*)).

Response to Finding No. 830:

Respondents have no specific response except to note that Complaint Counsel, not Respondents, has the burden to prove the relevant market. (RCoL ¶ 11.) To the extent the proposed finding is intended to suggest that Dr. Scott Morton's market definition analysis went unrebutted, nothing could be further from the truth. Many of Respondents' experts opined on the insufficiency of Dr. Scott Morton's market definition analysis. Dr. Carlton opined that Professor Scott Morton's market was not defined based on any empirical examination of demand. (PFF ¶ 1941.) Drs. Willig and Katz opined that Dr. Scott Morton failed to define the relevant market reliably. (PFF ¶¶ 2009–13, 2044–48.) [redacted]

[redacted]

(PX6097 (Abrams Expert Report) ¶ 47).

IV. THE UNITED STATES IS THE RELEVANT GEOGRAPHIC MARKET

A. THE UNITED STATES HAS UNIQUE REGULATORY REQUIREMENTS FOR MCED TESTS

831. In the United States, the Food and Drug Administration ("FDA") and Centers for Medicare & Medicaid Services ("CMS") (via the Clinical Laboratory Improvement Amendments of 1988 ("CLIA")) regulate MCED tests. (PX0043 (Grail) at 115, 132 (Grail 2020 Form S-1)).

Response to Finding No. 831:

Respondents have no specific response except to note that the College of American Pathologists ("CAP") also regulates laboratories. (PX0043 (Grail) at 43.) Illumina's laboratory that provides human whole-genome sequencing services is CLIA-certified and CAP-accredited. (PX0043 (Grail) at 43); *see also* PFF ¶ 27).

832. Dr. Chudova testified that the U.S. regulatory framework requires that the technology underlying an NGS platform be available for use in the U.S. for Guardant to commercialize its cancer screening test using that NGS platform:

> We have -- so we are working as a lab under two potential regulatory landscapes. We either work as a lab-developed test in -- under the CLIA regulations, or we're working under the FDA approval for a test that we can run in our internal lab. None of these configurations assume that you can -- you can -- you can use a technology that's not available in the U.S., as far as I can tell from regulatory sort of constraints around this.

(PX7045 (Chudova (Guardant) IHT at 52-53)).

Response to Finding No. 832:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony.

(*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)).

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76).

833. Dr. Chahine explained at trial that there are "two major options for bringing a diagnostic test to market" in the United States. (Chahine (Helio) Tr. 1027-28). "The first is to go through [the] FDA process … [and] the second way you can launch a product in the United States … is under … CLIA … the Clinical Laboratory Improvement Act [which is] run by a different government agency." (Chahine (Helio) Tr. 1028).

Response to Finding No. 833:

Respondents have no specific response, except to note that the "different government agency" to which Dr. Chahine is referring is the Centers for Medicare and Medicaid Services ("CMS").

834. [redacted] (Rabinowitz (Natera) Tr. 382 (*in camera*)).

Response to Finding No. 834:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1. Centers for Medicare & Medicaid Services Oversees Laboratory Developed Tests

835. A laboratory-developed test ("LDT") must meet Clinical Laboratory Improvement Amendments ("CLIA") and College of American Pathologists ("CAP") guidelines, which are clinical lab guidelines. (Goswami (Illumina) Tr. 3185-86).

Response to Finding No. 835:

Respondents have no specific response.

836. An MCED test may be sold in the United States as a laboratory-developed test ("LDT") before the test has received Premarket Approval from the FDA if it is developed pursuant to CLIA/CAP guidelines (Goswami (Illumina) Tr. 3222).

Response to Finding No. 836:

Respondents have no specific response.

837. To be offered to U.S. patients, LDTs must be performed in CLIA-certified labs. (Febbo (Illumina) Tr. 4320).

Response to Finding No. 837:

Respondents have no specific response.

838. Grail described CLIA requirements to its investors explaining "CLIA is a federal law that regulates clinical laboratories that perform testing on specimens derived from humans for the purpose of providing information for the diagnosis prevention, or treatment of disease …." (PX0043 (Grail) at 043 (Grail 2020 Form S-1)).

Response to Finding No. 838:

Respondents have no specific response.

839. Grail represented to investors that CLIA certification requires laboratories to "mandate specific standards in the areas of personnel qualifications, administration, participation in proficiency testing, test management, and quality assurance." (PX0043 (Grail) at 043 (Grail 2020 Form S-1)).

Response to Finding No. 839:

Respondents have no specific response.

840. Grail represented to investors that failure of Grail or its partners to comply with CLIA regulations could result in "prevent[ion] from performing our tests or …. disruption[] to our business." (PX0043 (Grail) at 043 (Grail 2020 Form S-1)).

Response to Finding No. 840:

Respondents have no specific response.

841. The Centers for Medicare & Medicaid Services ("CMS") certifies laboratory compliance with CLIA. (Ofman (Grail) Tr. 3317-18).

Response to Finding No. 841:

Respondents have no specific response.

842. Dr. Chahine explained that CLIA evaluates and set standards for laboratory developed tests that ensures the "laboratory quality, robustness, and accuracy of the test." (Chahine (Helio) Tr. 1029).

Response to Finding No. 842:

Respondents have no specific response.

843. Dr. Ofman testified that an LDT is also subject to FDA oversight of the representations that company makes about the LDT test stating a company offering an LDT "still need[s] to follow all the major guidances from the FDA about supportable claims and having evidence to support your claims …." (Ofman (Grail) Tr. 3317-18).

Response to Finding No. 843:

Respondents have no specific response.

2. The FDA Will Classify MCED Tests as Class III Medical Devices Requiring Pre-Market Approval

844. Grail represented to investors that it anticipates that the FDA will classify Galleri as a Class III device and require a PMA approval. (PX0043 (Grail) at 129 (Grail 2020 Form S-1)). Grail represented to investors that generally Class III medical devices require PMA approval by the FDA before they can be marketed. (PX4082 (Grail) at 135 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 844:

Respondents have no specific response.

845. Grail represented to investors that the FDA looks at a product's intended use when classifying, reviewing, and approving a Class III device, and the "FDA will approve the new device for commercial distribution if it determines that the data and information in the PMA constitute valid scientific evidence and that there is reasonable assurance that the device is safe and effective for its intended use(s)." (PX4082 (Grail) at 135 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 845:

Respondents have no specific response.

846. Grail represented to investors that obtaining PMA approval involves "complete analytical and clinical performance data and also information about the device and its components

regarding, among other things, device design, manufacturing and labeling." (PX4082 (Grail) at 135 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 846:

Respondents have no specific response.

847. Dr. Ofman testified that Grail anticipates the FDA will require MCED tests to obtain Premarket Approval ("PMA") for FDA approval. (Ofman (Grail) Tr. 3319).

Response to Finding No. 847:

Respondents have no specific response.

848. Illumina's Dr. Febbo testified that Illumina anticipates that the FDA will classify MCED tests as Class III (high-risk) medical devices. (Febbo (Illumina) Tr. 4445); PX7099 (Febbo (Illumina) Dep. at 83-84)).

Response to Finding No. 848:

Respondents have no specific response.

849. Dr. Rabinowitz testified that Natera anticipates that the FDA is likely to require a PMA approval for any cancer test for people who are asymptomatic. (Rabinowitz (Natera) Tr. 302-03).

Response to Finding No. 849:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)).

850. Dr. Gao testified that based upon a meeting with the FDA, the FDA classifies MCED tests as a Class III high risk device and will require MCED tests to obtain a PMA for FDA approval. (Gao (Singlera) Tr. 2872-73).

Response to Finding No. 850:

Respondents have no specific response, except to note that the proposed finding is based on hearsay testimony, and accordingly, should be given no weight.

B. COMMERCIALIZATION OF AN MCED TEST IN THE UNITED STATES WILL REQUIRE FDA APPROVAL BECAUSE OF U.S. PAYER REQUIREMENTS

1. CMS Will Not Reimburse for an MCED Test Without FDA Approval

851. Illumina's CEO Francis DeSouza testified that FDA approval is necessary for federal CMS coverage. (DeSouza (Illumina) Tr. 2414).

Response to Finding No. 851:

Respondents have no specific response

852. Dr. Ofman testified that "in the U.S. … we don't expect that we'll be able to get Medicare reimbursement without FDA approval. …" (Ofman (Grail) Tr. 3319-20).

Response to Finding No. 852:

Respondents have no specific response

853. Dr. Ofman testified that Grail's "assumption[] and our plan is that get broad Medicare coverage, we will need a PMA approval." (PX7092 (Ofman (Grail) Dep. at 175)).

Response to Finding No. 853:

Respondents have no specific response

854. Dr. Chahine testified that CMS issued guidance "stating that it would require FDA approval for reimbursement under CMS" for early cancer detection. (Chahine (Helio) Tr. 1029).

Response to Finding No. 854:

The proposed finding lacks foundation because it relies on the testimony of a third party without citing any specific statement or guidance from CMS. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)).

855. Mr. Conroy testified that FDA approval is necessary to obtain CMS payment for Medicare patients. (Conroy (Exact) Tr. 1734).

Response to Finding No. 855:

The proposed finding lacks foundation because it relies on the testimony of a third party without citing any specific statement or guidance from CMS. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)).

856. [redacted] (Conroy (Exact) Tr. 1560-61) (*in camera*); PX7058 (Conroy (Exact/Thrive) IHT at 87) (*in camera*)).

Response to Finding No. 856:

The proposed finding lacks foundation because it relies on the testimony of a third party without citing any specific statement or guidance from CMS. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)). The proposed finding also relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine. This testimony should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76).

857. [redacted] (PX4172 (Grail) at 059 (Grail, Board of Directors Meeting, Nov. 21, 2019) (*in camera*)).

Response to Finding No. 857:

Respondents have no specific response.

858. Illumina admits that "it is unlikely that Galleri will obtain Medicare coverage without FDA premarket approval." (PX6060 (Illumina) 023 (Illumina's Responses & Objections to FTC's First Set of Interrogatories).

Response to Finding No. 858:

The proposed finding is incomplete and misleading. Complaint Counsel's interrogatory had asked Respondents to identify all efficiencies Respondents alleged would result from this

Transaction. (PX6060 (Illumina) 021). Subject to and without waiving any of their objections, Respondents responded that, amongst other efficiencies, Illumina would accelerate GRAIL's ability to obtain a single-site PMA, accelerating Medicare coverage. (PX6060 (Illumina) 022–23). Illumina would also leverage its capabilities and relationships to accelerate obtaining coverage for GRAIL's tests from private insurers and adoption of GRAIL's tests by health systems. (PX6060 (Illumina) 023). Respondents incorporate PFF ¶¶ 1131–1135 and their objections to FTC's Interrogatory No. 3.

859. An investor report about liquid biopsy markets states that it "is clear that CMS reimbursement [for asymptomatic cancer screening tests] will require FDA approval . …" PX2752 (Illumina) at 020 ("The Liquid Biopsy Report: Early Detection of a Huge Opportunity.")).

Response to Finding No. 859:

Respondents have no specific response.

860. Medicare coverage will be particularly important for MCED test reimbursement because "many other U.S. payors look to the Medicare policies as a benchmark and model for their own." (PX0043 at 139 (Grail 2020 Form S-1); *see also* PX9090 (Roche) at 019 (Cowen, "The Liquid Biopsy Report: Early Detection of a Huge Opportunity", Sep. 18, 2020) ("[P]ractically speaking, FDA approval is (at a minimum) very important to driving reimbursement – both from CMS . . . and commercial payers")); PX4035 (Grail) at 039 (PiperJaffray, The 2015 Liquid Biopsy Report) (stating that "our payer diligence suggests the community does view FDA approval as an incremental supportive layer for payment" for liquid biopsy tests)).

Response to Finding No. 860:

Respondents have no specific response.

2. FDA Approval Is Also Important to Obtaining Broad Commercial Reimbursement in the United States

861. Grail's CEO agreed in trial testimony that FDA approval will likely be a prerequisite for getting broad-based reimbursement for Galleri. (Bishop (Grail) Tr. 1343-44).

Response to Finding No. 861:

Respondents have no specific response.

862. Dr. Ofman testified that Grail "does not expect that large U.S. payers are going to provide coverage for the test without FDA approval." (Ofman (Grail) Tr. 3319-20).

Response to Finding No. 862:

Respondents have no specific response.

863. Illumina's Dr. Aravanis testified that "FDA approval will help [Grail] with reimbursement and adoption of [Galleri]." (Aravanis Illumina) Tr. 1894).

Response to Finding No. 863:

Respondents have no specific response.

864. [redacted] (PX4004 (Grail) at 001 (Email from R. Currie, Illumina, to Executive Leadership Team, Illumina, Aug. 27, 2020) (*in camera*)).

Response to Finding No. 864:

Respondents have no specific response.

865. Grail represented to investors in its Form S-1 that Medicare coverage through CMS is important not only in its own right, but also because "many other U.S. payors look to the Medicare policies as a benchmark and model for their own." (PX0043 (Grail) at 139 (Grail 2020 Form S-1)).

Response to Finding No. 865:

Respondents have no specific response.

866. Exact Sciences Mr. Conroy testified that obtaining coverage from commercial payers without FDA approval is improbable. (Conroy (Exact) Tr. 1734).

Response to Finding No. 866:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)).

867. Mr. Conroy testified [redacted]

[redacted] (PX7058 (Conroy (Exact) IHT at 140-41) (*in camera*)).

Response to Finding No. 867:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)).

868. [redacted] (PX7058 (Conroy (Exact) IHT at 88) (*in camera*)).

Response to Finding No. 868:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021)).

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76).

869. [redacted] (Getty Guardant) Tr. 2530 (*in camera*)).

Response to Finding No. 869:

Respondents have no specific response except to note that Mr. Getty also testified that [redacted] (Getty (Guardant) Tr. 2531.)

870. [redacted] (PX7055 (Otte (Freenome) IHT at 35) (*in camera*)).

Response to Finding No. 870:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76).

3. Obtaining FDA Approval and U.S. Payer Coverage Is Critical for Commercial Adoption of MCEDs in the United States

871. Grail's CEO testified at trial that FDA approval is "very necessary for getting American citizens access to our test." (Bishop (Grail) Tr. 1368).

Response to Finding No. 871:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 883 herein.

872. Grail represented to investors in its Form S-1, "Medicare is the single largest healthcare payor in the United States, and a particularly significant payor for many cancer-related laboratory services given the demographics of the Medicare population, a large portion of which includes elderly individuals." (PX0043 at 139 (Grail 2020 Form S-1)).

Response to Finding No. 872:

Respondents have no specific response.

873. Dr. Ofman testified that "getting PMA approval is going to be critically important for Galleri to get the kind of broad-based coverage and reimbursement that we ultimately want if we really want to make a dent in public health's cancer crisis." (PX7092 (Ofman (Grail) Dep. at 176)).

Response to Finding No. 873:

Respondents have no specific response.

874. [redacted] (PX5024 (Illumina) at 024 (Board of Directors M&A Landscape, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 874:

Respondents have no specific response.

875. Illumina admits that "[t]o make Galleri broadly available in the U.S., it is essential that Galleri obtain coverage from both Medicare and private insurers." (PX6060 (Illumina Responses & Objections to FTC First Set of Interrogatories) at 023 (Interrogatory No. 3)).

Response to Finding No. 875:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 858 herein.

876. An investor report about liquid biopsy markets states that "practically speaking, FDA approval is (at a minimum) very important to driving reimbursement – both from CMS (the biggest payer given many people targeted are Medicare covered) and commercial payers." (PX2752 (Illumina) at 020 ("The Liquid Biopsy Report: Early Detection of a Huge Opportunity", Sept. 18, 2020)).

Response to Finding No. 876:

Respondents have no specific response.

877. [redacted] (RX3864 (Carlton Rebuttal Report) ¶¶ 13, 115 (*in camera*)).

Response to Finding No. 877:

Respondents have no specific response.

C. RESPONDENTS RECOGNIZE THE UNITED STATES AS A DISTINCT MARKET

878. Grail's Form S-1 filing references a United States-specific "early detection market." (PX0043 at 005-007 (Grail 2020 Form S-1)).

Response to Finding No. 878:

The proposed finding is incomplete and misleading. In the cited source, GRAIL uses the term "market" to refer to the customers of early detection cancer tests, not a market of purported MCED tests of which there exists only GRAIL's Galleri test. (*See* PFF ¶¶ 697-712; PX0043 at 005-007 (Grail 2020 Form S-1) ("We believe that we have an unprecedented opportunity to

transform cancer care and establish a market leading position for Galleri. Initially, we plan to target the following key channels in the United States: large, self-insured employers; physician-directed channels, including concierge practices and executive health programs; and progressive, integrated health systems. *These channels represent a significant segment of the overall early detection market of 107 million individuals between the ages of 50-79 in the United States.*") (emphasis added)).

The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including [redacted] do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701, 706) and Galleri is the only multi-cancer early detection test testing for anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

879. [redacted] (PX5027 (Illumina) at 015 [redacted] (*in camera*)).

Response to Finding No. 879:

Respondents have no specific response except to note that the cited source also observes that [redacted] (PX5027 (Illumina) at 015

(Project Valor, Aug. 4, 2020) (*in camera*)). Further, the cited source observes that Illumina will [redacted] (PX5027 (Illumina) at 015 (Project Valor, Aug. 4, 2020) (*in camera*)).

880. Illumina admits that requirements to commercialize medical devices in various "international markets" are distinct from the United States and require a "country-by-country process of commercializing" medical devices in previous court filings related to the transaction. (PX6060 (Illumina Responses & Objections to FTC First Set of Interrogatories) at 030-31 (Interrogatory No. 3)).

Response to Finding No. 880:

Respondents have no specific response except to note that the cited source also observes that "Illumina's experience will be invaluable to GRAIL as it undertakes the country-by-country process of commercializing its tests, including with obtaining foreign regulatory authorizations." (PX6060 (Illumina Responses & Objections to FTC First Set of Interrogatories) at 031 (Interrogatory No. 3)). Further, the cited source states that "[t]he breadth and depth of Illumina's international expertise stands in marked contrast to GRAIL", that "international acceleration is likely to further accelerate U.S. adoption and improvement of GRAIL's tests", and that "[a]bsent the Proposed Transaction, Illumina would have less incentive to provide such support for GRAIL's international regulatory and expansion efforts, and GRAIL would not have an incentive or desire to share with Illumina the data that Illumina would need to provide such support." (PX6060 (Illumina Responses & Objections to FTC First Set of Interrogatories) at 031-32 (Interrogatory No. 3)). The cited source therefore also provides support for the proposition that the reunion of Illumina and GRAIL will accelerate the international expansion of Galleri. (*See* PFF ¶¶ 1168–1173.3).

881. [redacted] (*See* PX2553 (Illumina) at 145 (Liquid Biopsy Market Landscape Analysis, Oct. 27, 2016) (*in camera*)).

Response to Finding No. 881:

Respondents have no specific response except to note that the cited source [redacted] (*See* PX2553 (Illumina) at 145 (Liquid Biopsy Market Landscape Analysis, Oct. 27, 2016) (*in camera*)). Accordingly, the cited source therefore also provides support of the breadth and depth of Illumina's international expertise, which will accelerate the international expansion of Galleri. (*See* PFF ¶¶ 1168-1173.3).

882. [redacted] (*See* PX2553 (Illumina) at 148 (Liquid Biopsy Market Landscape Analysis, Oct. 27, 2016) (*in camera*)).

Response to Finding No. 882:

Respondents have no specific response.

883. Grail's CEO, Hans Bishop, testified that "PMA approval with [the] FDA . . . [provides] American citizens access to our test" and that Grail will "have to go through equivalent processes all around the world to get patients outside of the United States access to our technology." (Bishop (Grail) Tr. 1368).

Response to Finding No. 883:

Respondents have no specific response except to note that Mr. Bishop testified that GRAIL intends to seek a PMA approval from the FDA, that seeking a PMA approval is a long and complicated process, and that PMA approval is a prerequisite to getting payor and insurance coverage for Galleri. (PFF ¶ 1587 (Bishop (GRAIL) Tr. 1368, 1370, 1403)). Mr. Bishop also testified that GRAIL will need to obtain regulatory approvals outside of the United States and that Illumina's commercial experience and relationships around the world will help GRAIL reach those customers faster. (PFF ¶ 1593 (Bishop (GRAIL) Tr. 1368, 1372, 1406–07). Respondents also note that Mr. Bishop testified that Illumina's acquisition of GRAIL will result

in numerous efficiencies including accelerating market access to Galleri (Bishop (GRAIL) Tr. 1368–72, 1403).

884. [redacted] (PX6090 (Scott Morton Report) ¶ 150 (*in camera*)).

Response to Finding No. 884:

The proposed finding is inaccurate and misleading because Dr. Scott Morton did not conduct a SSNIP analysis based on quantitative purchase data to identify the relevant geographic or product market. [redacted]

885. Respondent's economic expert, Dr. Carlton, does not dispute Dr. Scott Morton's opinion that the United States is the relevant geographic market to analyze the proposed transaction. (PX7134 (Carlton Dep. at 112-114)).

Response to Finding No. 885:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 884 herein.

V. ILLUMINA NGS IS A NECESSARY INPUT TO MCED TESTS

A. NEXT GENERATION SEQUENCING OVERVIEW

1. Next Generation Sequencing Determines the Order of Nucleotides in DNA Molecules

886. Next-generation sequencing ("NGS") is a method of DNA sequencing, the process of determining the order of nucleotides (A, C, G, or T) in a DNA molecule. (RX3333 at 007 (Illumina 2020 Form 10-K)).

Response to Finding No. 886:

Complaint Counsel did not present the exhibit RX3333 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (Resps. Exhibit Index at 160), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents note that the cited source also states that NGS sequencing platforms are used only for DNA sequencing but for many other purposes, including performing whole-genome, de novo, exome and RNA sequencing, and targeted resequencing of specific gene regions and genes. (RX3333 (Illumina 2020 Form 10-K) at 007.)

887. Illumina's website summarizes the NGS process: "The basic next-generation sequencing process involves fragmenting DNA/RNA into multiple pieces, adding adapters, sequencing the libraries, and reassembling them to form a genomic sequence. In principle, the concept is similar to capillary electrophoresis. The critical difference is that NGS sequences millions of fragments in a massively parallel fashion, improving speed and accuracy while reducing the cost of sequencing." (PX0113 at 002 (A Beginner's Guide to NGS)).

Response to Finding No. 887:

Complaint Counsel did not present the exhibit PX0113 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 2), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents note that the cited source also discloses that "[t]he cost of NGS has declined dramatically in recent years". (PX0113 (A Beginner's Guide to NGS) at 003.)

888. "The way [DNA sequencing] works at a high level is you prepare the DNA," and perform library preparations "where you take the DNA that you've extracted from the sample" and prepare it. (Rabinowitz (Natera) Tr. 304, 307-08).

Response to Finding No. 888:

Respondents have no specific response except to note that even test developers that are using the Illumina platform for sequencing do not use Illumina technology for library preparation. (Berry (Illumina) Tr. 815-16 (stating that the library preparation step "is very unique and specific to the particular test provider's sort of approach of methodology" and that there are "hundreds and hundreds of library preparation methods" and "potentially hundreds of providers of library preparation technology or kits").)

889. "[O]nce the DNA is hybridized onto the flow cell, a process is then undertaken called sequencing by synthesis, where you will add a particular nucleotide to the reaction, and the DNA that's attached onto the flow cell will be built up next to a matching fragment of DNA where the nucleotide that is added matches the nucleotide that is on that fragment that is attached to the substrate." (Rabinowitz (Natera) Tr. 307).

Response to Finding No. 889:

The proposed finding is inaccurate and misleading to the extent it suggests that all types of DNA sequencing require sequencing-by-synthesis, which is practiced by Illumina, BGI, Thermo Fisher, [redacted], Singular, Element and Omniome. (RX3869 (Cote Expert Report) ¶¶ 272, 281, 286, 301, [redacted], 314, 318; PFF ¶¶ 575, 578.1, 588, 605, [redacted], 632, 639, 641.) However, Oxford Nanopore's NGS platforms sequence DNA by measuring the minute charge in electrical conductance across biological nanopores. (PFF ¶ 598; RX3538 (ONT); RX3166 (Deamer et al., 2016).) [redacted]

[redacted]

890. The DNA is prepared for sequencing by attaching sequencing adapters onto the ends of the DNA fragments to allow the DNA to work with a particular sequencer. (Rabinowitz (Natera) Tr. 307-08).

Response to Finding No. 890:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 888 herein.

891. "Sequencing is a way of taking many fragments of DNA and telling you exactly what those fragments are made of, in other words, what nucleotides, A, C, T, or G, go into those fragments." (Rabinowitz (Natera) Tr. 304).

Response to Finding No. 891:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 886 and 888 herein.

892. NGS allowed sequencers to complete a sequencing project that would have cost billions of dollars and take over a decade to complete without NGS in a single day for under a thousand dollars. (*See* PX0124 at 006-007 (Jon Gertner, *New York Times*, "Genome Sequencing and COVID-19 – How Scientists Are Tracking the Virus," Mar. 25, 2021)).

Response to Finding No. 892:

Respondents have no specific response except note that the cited reference confirms that several of Illumina's NGS competitors, including BGI, have indicated that they will soon achieve a $100 genome; Illumina achieved the $1,000 genome in 2014, Illumina NovaSeq 6000 could sequence a whole human genome for $600 and the path to a $100 genome would not entail a breakthrough, just incremental technical improvements. (PX0124 (Jon Gertner, New York Times, "Genome Sequencing and COVID-19 – How Scientists Are Tracking the Virus," Mar. 25, 2021) at 006–007.)

2. Short-Read Versus Long-Read Sequencing

893. The two categories of NGS platforms are (1) short read and (2) long read. (PX8399 (Henry (PacBio) Decl. ¶ 3)).

Response to Finding No. 893:

The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that all traditional "long-read" platforms have the same capabilities. Historically, platforms using sequencing-by-synthesis technology like Illumina, BGI and Thermo Fisher, were limited in the length of nucleotide fragments that they could read (*see*, *e.g.*, RX3869 (Cote Expert Report) ¶¶ 277, 282, 287; PFF ¶¶ 575, 579, 590), which made such traditionally "short-read" platforms better suited to sequencing for certain applications. By contrast, platforms using other sequencing technologies, such as nanopore technology, could read much longer fragments and were referred to as "long-read" platforms. (*See*, *e.g.*, RX3869 (Cote Expert Report) ¶ 294; PFF ¶ 599.)

For example, technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) [redacted] Pacific Biosciences, a provider of traditional "long-read" platform, acquired Omniome, a developer of "short-read", sequencing-by-binding sequencers, in 2021 to specifically target the cancer screening market, as well as other oncology applications. (PFF ¶¶ 639–641 (RX3533 (Omniome); RX3947 (Clinical OMICs) at 1–3.)

Respondents incorporate their responses to CCFF ¶ 971 herein. Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

894. [redacted] (PX7045 (Chudova (Guardant) IHT at 44-47) (*in camera*); PX8399 (Henry (PacBio) Decl. ¶¶ 3-4)).

Response to Finding No. 894:

The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that all so-called "long-read" platforms have the same capabilities. Respondents incorporate their responses to CCFF ¶ 893 herein.

The proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

To the extent that the proposed finding relies on testimony from Dr. Chudova, the proposed finding is also based in part on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that the cited testimony states that [redacted] (PX7045 (Chudova (Guardant) IHT at 44–47.)

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

895. [redacted] (PX8399 (Henry (PacBio) Decl. ¶¶ 3-5) (*in camera*); PX7045 (Chudova (Guardant) IHT at 83-84) (*in camera*)). Illumina's NGS platforms are considered short-read sequencers. (Berry (Illumina) Tr. 823-24).

Response to Finding No. 895:

Respondents have no specific response except to note that many NGS platforms on the market and in development offer short-read NGS, including Illumina, Thermo Fisher, BGI, Singular, [redacted] Element and Omniome. (*See*, *e.g.*, RX3869 (Cote Expert Report) ¶¶ 277, 282, 287, 303, [redacted] 319; PFF ¶¶ 575, 579, 590, 609–609.6, [redacted], 642–642.2.) Respondents incorporate their responses to CCFF ¶¶ 888 and 893–894 herein.

Respondents also note that technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

896. [redacted] (*See* PX7042 (Gao (Singlera) IHT at 65); PX7043 (Gunn (Roche) IHT at 83-84) (*in camera*); PX7045 (Chudova (Guardant) IHT at 44-45); PX7046 (George (Invitae) IHT at 77) (*in camera*)).

Response to Finding No. 896:

The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities. Respondents incorporate their responses to CCFF ¶¶ 893–895, 904 and 970 herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

To the extent that the proposed finding relies on testimony from Dr. Chudova, Dr. Gao and Mr. George, the proposed finding is also based in part on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

897. [redacted] (PX7043 (Gunn (Roche) IHT at 72) (*in camera*)).

Response to Finding No. 897:

The proposed finding is incomplete and misleading because [redacted] (*See*, *e.g.*, RX3869 (Cote Expert Report) ¶ 294.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

898. [redacted] (PX7055 (Otte (Freenome) IHT at 64-65) (*in camera*)).

Response to Finding No. 898:

The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore

and PacBio sequencing technologies have the same capabilities. In particular, technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.)

Respondents also note that the cited testimony states that [redacted] (PX7055 (Otte (Freenome) IHT at 64–66.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

899. Former Illumina CFO/COO and current PacBio CEO Christian Henry declared that short-read sequencing provides high read count and low cost per read relative to long-read sequencing. (*See, e.g.*, PX8399 (Henry (PacBio) Decl. ¶¶ 3-4)).

Response to Finding No. 899:

The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities. Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower

than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.)

Furthermore, the evidence shows that [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).)

Respondents also incorporate their responses to CCFF ¶¶ 893, 898, and 904 herein.

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

900. Former Illumina CFO/COO and current PacBio CEO Christian Henry declared, "[b]ecause [ctDNA fragments] are typically fewer than 350 base pairs long, Illumina's short-read NGS platforms are capable of analyzing many ctDNA fragments in their entirety." (PX8399 (Henry (PacBio) Decl. ¶ 5)).

Response to Finding No. 900:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 893 herein.

901. [redacted] (PX8399 (Henry (PacBio) Decl. ¶¶ 5, 9–11 (*in camera*)).

Response to Finding No. 901:

The proposed finding is inaccurate. PacBio, along with recently-acquired Omniome, has publicly stated that they would specifically target the cancer screening market, as well as other oncology applications, including a general interest in companies developing blood-based early cancer screening tests. (RX3947 (Clinical OMICs) at 3; PX7096 (Song (Omniome) Dep. at 59–63, 66; [redacted]

[redacted] (PX7096 (Song (Omniome) Dep. at 82, 100–01); [redacted] Ultimately, Omniome has stated that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] In addition, the proposed finding is contradicted by the testimony of Complaint Counsel's own witnesses. For example, [redacted]

The proposed finding is also inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities. Contrary to Complaint Counsel's unproven contention, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Oxford Nanopore "believe[s] that nanopore-based sequencing can provide rich biological insights that include the ability to directly characterise variants that are relevant in cancer, including methylation, structural variants, repeats and phasing. . . . Shorter fragments can be sequenced, in the case of circulating tumour DNA, or ultra-long fragments for other cancer related analyses." (RX3939 (Oxford Nanopore Registration Document), at 41, 56, 65–66.) Respondents also incorporate their responses to CCFF ¶ 904 herein.

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

902. [redacted] (*See* PX8399 (Henry (PacBio) Decl. ¶ 4; PX7045 (Chudova (Guardant) IHT at 44-47) (*in camera*)).

Response to Finding No. 902:

The proposed finding is irrelevant and it is also misleading to the extent that it suggests that a particular number of read counts is required for particular applications, such as MCED test development. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893 and 904, which Respondents incorporate herein.

The proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

To the extent that the proposed finding relies on testimony from Dr. Chudova, the proposed finding is also based in part on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

903. [redacted] (*See, e.g.*, PX7045 (Chudova (Guardant) IHT at 45-48) (*in camera*)).

Response to Finding No. 903:

The proposed finding is irrelevant and it is also misleading to the extent that it suggests that the capability of long-read sequencers to read [redacted]

renders them unsuitable for use in MCED test development. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 902, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

904. MCED developers do not view the long-read NGS platforms of PacBio or Oxford Nanopore as viable alternatives to Illumina's short-read NGS platform due to their lower read counts, lower accuracy, and higher costs. (*See infra* Section V.E.3. ("Extremely Inefficient" Long-Read NGS Is Not an Option for MCED).

Response to Finding No. 904:

The proposed finding is inaccurate, incomplete, and misleading. Recent improvements have made Oxford Nanopore long-read sequencing more suitable for multi-cancer screening. (PFF ¶¶ 600–600.5.) Researchers have demonstrated that Oxford Nanopore sequencers are capable of short-read sequencing. (PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) Technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) Oxford Nanopore "believe[s] that nanopore-based sequencing can provide rich biological insights that include the ability to directly characterise variants that are relevant in cancer, including methylation, structural

variants, repeats and phasing. . . . Shorter fragments can be sequenced, in the case of circulating tumour DNA, or ultra-long fragments for other cancer related analyses." (RX3939 (Oxford Nanopore Registration Document), at 41, 56, 65–66.) Oxford Nanopore has also announced its intent to support the liquid biopsy market. (PFF ¶ 602 (RX3470 (Nanopore); RX3521 (NCM) at 50–52; RX3167 (Nanopore); RX3520 (NCM) at 6, 9–10)).)

Oxford Nanopore sequencers have a per-gigabase cost comparable to Illumina's NGS sequencers. (PFF ¶¶ 603.1-603.3.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1.)

[redacted]

Dr. Cote also explained that Oxford Nanopore's platform "is capable of sequencing up to 10 Terabase pairs ('Tb') per run and may be used to detect methylation and other epigenomic

changes directly. While Oxford Nanopore historically faced lower accuracy, the latest improvements in chemistry and bioinformatics enable the platform's accuracy to the Q50 range. This platform is already being used by developers of potential cancer screening tests." (RX3869 (Cote Expert Report) ¶ 19.)

In addition, because it does not require PCR amplification, Oxford Nanopore's long-read sequencing eliminates amplification bias while preserving base modifications, making it useful for epigenomic analysis such as methylation profiling. (PFF ¶ 600.1 (RX3439 (Mantere 2019) at 2; *see also* RX3236 (Folkard).) Oxford Nanopore's nanopore sequencing technology is capable of directly detecting methylation and other epigenomic markers on DNA or RNA, without the bisulfite conversion step used by other sequencing technologies (*e.g.*, for Illumina's sequencing technology) that can cause sample degradation, and that can complicate data analysis. (PFF ¶ 600.2 (RX3869 (Cote Expert Report) ¶ 295).) Using Oxford Nanopore's nanopore sequencing, researchers have directly identified epigenomic modifications at nucleotide resolution, including DNA methylation, with detection of other epigenomic modifications possible through training base-calling algorithms. (PFF ¶ 600.2 (RX3539 (ONT)).)

Furthermore, Respondents also note that PacBio, with its recently-acquired Omniome, has publicly stated that they would specifically target the cancer screening market, as well as other oncology applications, including a general interest in companies developing blood-based early cancer screening tests. (RX3947 (Clinical OMICs) at 3; PX7096 (Song (Omniome) Dep. at 59–63, 66; [redacted] In addition, the proposed finding is contradicted by the testimony of Complaint Counsel's own witnesses. For example, [redacted]

Respondents also incorporate their responses to CCFF ¶¶ 893, 898–899, 901, 913, 970 and 1346 herein. To the extent Complaint Counsel relies on its Proposed Findings in Section V.E.3 (CCFF ¶¶ 1346–98), Respondents incorporate their responses to those Proposed Findings herein.

905. [redacted] (Chudova (Guardant) Tr. 1221-22) (*in camera*).

Response to Finding No. 905:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904, which Respondents incorporate herein. Further, contrary to Complaint Counsel's unproven contention, [redacted]

(Chudova (Guardant) Tr. 1221–23.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

906. [redacted] (PX7045 (Chudova (Guardant) IHT at 47-48) (*in camera*)).

Response to Finding No. 906:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

907. Christian Henry, President and CEO of PacBio, a provider of long-read sequencing platforms, declared that "[g]iven the relatively short length of many ctDNA fragments, long-read sequencing does not often present the same technical benefits over short-read sequencing as it does for other sequencing applications" and stated that [redacted] (PX8399 (Henry (PacBio) Decl. ¶ 5) (*in camera*)).

Response to Finding No. 907:

The proposed finding relies on hearsay and is incomplete and misleading. In July 2021, Pacific Biosciences of California ("PacBio") announced it had acquired Omniome for $800M. (RX3947 (Clinical OMICs).) PacBio stated that it believes Omniome's data accuracy should help the combined company target oncology applications like cancer screening. RX3947 (Clinical OMICs) at 3.) Omniome has stated that, at launch, its NGS sequencer will have accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. PX7096 (Song (Omniome) Dep. at 43, 58); [redacted] RX3869 (Cote Expert Report) ¶ 319.)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904, which Respondents incorporate herein.

In addition, the proposed finding is contradicted by the testimony of Complaint Counsel's own witnesses. For example, [redacted]

[redacted]

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

908. Dr. Vogelstein testified that long-read sequencing technologies "are not applicable to the analysis of plasma DNA," and he elaborated "the reason is simple to understand: Plasma DNA is not long. Plasma DNA, the average size in a normal individual is 167 base pairs. And in cancers, it's a bit shorter." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 73-74)).

Response to Finding No. 908:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904, which Respondents incorporate herein.

909. [redacted] (PX7045 (Chudova (Guardant) IHT at 44-47, 48-49) (*in camera*); *see* PX7042 (Gao (Singlera) IHT at 65) (Long-read sequencing would "cost tens of thousands [of] dollar[s] to do the same job" as a short-read sequencer, so long-read sequencers "are not a viable option for screening test[s].")).

Response to Finding No. 909:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 904, and 927, which Respondents incorporate herein.

The proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

910. Illumina CEO, Francis deSouza, explained in an investor call that in looking at circulating tumor DNA fragments, "the ability to do very long-read doesn't offer any incremental value and certainly isn't worth paying a significant premium in terms of the cost per base." (PX2544 (Illumina) at 027 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching "JP Morgan Life Sciences CEO Conference Call Series" transcript, Sept. 5, 2019)).

Response to Finding No. 910:

The proposed finding is incomplete and misleading. The proposed finding relates to irrelevant subject matter because the facts that "the ability to do very long-read doesn't offer any incremental value" over Illumina's short-read sequencers and that it "isn't worth paying a significant premium in terms of the cost per base" do not mean that Oxford Nanopore's long-read sequencers may not be used for some of the same applications as Illumina's short-read sequencers, including MCED test development.

Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, while [redacted] (*See* PFF ¶¶ 577.4, 598–604.1.) Respondents also incorporate their responses to CCFF ¶ 904 herein.

911. Dr. Felton does not view long-read NGS platforms such as PacBio or Oxford Nanopore as competitors for oncology applications because the throughput of long-read NGS sequencing is inadequate to meet the needs of oncology testing. (Felton (Thermo Fisher) Tr. 1997-99).

Response to Finding No. 911:

The proposed finding is inaccurate, incomplete and misleading. Oxford Nanopore's PromethION has total throughput per run of up to 10 Tb, much higher than the up to 50 Gb per run generated by Thermo Fisher's Ion GeneStudio S5. (*See* PFF ¶¶ 579, 598–604.1.) Dr. Felton

did not consider the new technology of using concatenation to read cfDNA fragments using nanopore sequencing. (Felton (Thermo Fisher) Tr. 1996–97; Cote Tr. 3754–56.) Respondents also incorporate their responses to CCFF ¶ 904 herein.

912. Illumina CEO, Francis deSouza, explained to investors that short-read NGS platforms are much more suitable for detecting ctDNA fragments than long-read platforms:

> The way we see it is that there are applications that are very well suited for long-read technology, that frankly short-read technology don't [sic] address and vice versa it's true as well. But there are markets, our core markets where short-read technologies work exceptionally well and long-read don't offer any additional values. So let me give you some specifics. If you look at some of our core markets, for example, in NIPT the fragments we're looking at are 150-ish base pairs. So somewhere between 130 base pairs and maybe up to 200 base pairs long. And so the ability to sequence fragments that are a million base pairs long or a hundred thousand base pairs long is frankly irrelevant, because the fragments are nowhere near that long. And so what customers are looking for is a high-volume sequencer that's able to cost effectively and accurately read those short fragments. That's true in circulating tumor DNA fragments in the oncology space as well. And so if you look at the number of our core markets, the ability to do very long-read doesn't offer any incremental value and certainly isn't worth paying a significant premium in terms of the cost per base.

(PX2544 (Illumina) at 026-027 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching "JP Morgan Life Sciences CEO Conference Call Series" transcript, Sept. 5, 2019)).

Response to Finding No. 912:

The proposed finding is incomplete and misleading. Although the cited source is from September 2019, the proposed finding appears to suggest that, even today, more than three years later, that only traditional short-read platforms like those marketed and in development by Illumina, BGI, Thermo Fisher, Singular, Element, [redacted] and Omniome are suitable for sequencing circulating tumor DNA fragments. To the contrary, however, platforms such as Oxford Nanopore have progressed substantially since 2019. (*See*, *e.g.*, PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) In particular, technology has been developed to

conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA on Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) Respondents incorporate their responses to CCFF ¶¶ 893 and 904 herein.

913. Dr. Vogelstein testified that long-read sequencing is not suitable for analyzing plasma DNA molecules because "the error rates of long-read sequencers are much too high to effectively analyze the molecules and plasma for [ ] early cancer detection with the number of artifactual mutations outnumbering the expected number of real mutations by many fold." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 65-66)).

Response to Finding No. 913:

The proposed finding is incomplete and misleading. Contrary to Complaint Counsel's unproven contention, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.) Respondents incorporate their responses to CCFF ¶ 904 herein.

914. Dr. Vogelstein testified that "[l]ong-read sequencers are [ ] unsuited for early detection cfDNA biopsy testing" because "the throughput of long-read sequencers are much lower than the throughput of short-read sequencers." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 65-66)).

Response to Finding No. 914:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904, which Respondents incorporate herein.

B. MCED PRESENTS ENORMOUS SCIENTIFIC AND TECHNICAL CHALLENGES

915. The presence of a cancer signal in an individual's blood at an early stage is "very subtle." (PX7042 (Gao (Singlera) IHT at 39-40)).

Response to Finding No. 915:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

916. [redacted] (PX4032 (Grail) at 006 ("A Revolution in Early Cancer Detection," Feb. 10, 2020) (*in camera*)).

Response to Finding No. 916:

Complaint Counsel did not present the exhibit PX4032 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 35), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents note that the cited reference further explains that [redacted] (PX4032 (GRAIL) ("A Revolution in Early Cancer Detection," Feb. 10, 2020) at 006.)

917. [redacted] (PX2013 (Illumina) at 009 ("Cancer Screening," Apr. 28, 2020) (*in camera*)).

Response to Finding No. 917:

Complaint Counsel did not present the exhibit PX2013 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 5), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents note that the cited reference further notes that [redacted]

(PX2013 (Illumina) ("Cancer Screening," Apr. 28, 2020) at 009 (emphasis original).)

918. Thrive's Dr. Lengauer analogized finding cancer cells in a person's blood as looking for the "proverbial needle in the haystack . . . ." (Lengauer (Third Rock Ventures) Tr. 163).

Response to Finding No. 918:

The proposed finding is inaccurate, incomplete and misleading. Dr. Lengauer's testimony was regarding finding "cancer cell DNA in a blood sample", not "finding cancer cells in a person's blood" as Complaint Counsel proposed. (Lengauer (Exact/Thrive) Tr. 163.)

919. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 41-42) (*in camera*)).

Response to Finding No. 919:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

920. MCED tests require the ability to detect one molecule of DNA in ten milliliters of blood. (Lengauer (Third Rock Ventures) Tr. 163).

Response to Finding No. 920:

The proposed finding is not supported by the cited evidence. In the cited testimony, Dr. Lengauer merely commented on the ability for current technologies to "detect one molecule of DNA in ten milliliter of blood", which "becomes stochastic, because the ten next milliliters might not contain any cancer molecules." (Lengauer (Exact/Thrive) Tr. 162–63.) Dr. Lengauer did not testify that only NGS can detect one molecule of DNA in ten milliliters of blood or what specific techniques are so sensitive that can detect one molecule of DNA in ten milliliters of blood. (Lengauer (Exact/Thrive) Tr. 162–63.) For example, PCR is highly sensitive and

requires only minimal amount of sample for detection and amplification of specific sequences. (*See* PFF ¶¶ 158–162.) Respondents also incorporate their responses to CCFF ¶ 345 herein.

921. [redacted]
(PX7077 (Chahine (Helio) Dep. at 23) (*in camera*)).

Response to Finding No. 921:

The proposed finding is inaccurate, incomplete and misleading. Mr. Chahine's testimony was regarding [redacted]

(PX7077 (Chahine (Helio) Dep. at 23.)

922. [redacted]
(PX7045 (Chudova (Guardant) IHT at 53) (*in camera*)).

Response to Finding No. 922:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

923. [redacted]
(PX7045 (Chudova (Guardant) IHT at 30-31) (*in camera*)).

Response to Finding No. 923:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

924. Dr. Vogelstein testified that Illumina's NGS sequencers allow his lab to "evaluate the majority of DNA template molecules in a small amount of plasma," which is "critical because there are only a small, very small, number of molecules in plasma that come from [a] tumor" including as "little as 1 in 10,000 molecules or 1 in 100,000 molecules." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 58)).

Response to Finding No. 924:

Respondents have no specific response except note that Dr. Vogelstein did not testify that only Illumina's NGS technology can detect one molecule of DNA in 10,000 molecules or 100,000 molecules or what specific techniques are so sensitive. (PX7101 (Vogelstein (Johns Hopkins University) Dep.) at 58.) For example, PCR is highly sensitive and requires only minimal amount of sample for detection and amplification of specific sequences. (*See* PFF ¶¶ 158–162.)

C. MCED TESTS REQUIRE HIGH-THROUGHPUT, HIGHLY ACCURATE, LOW-COST NGS PLATFORMS

925. [redacted] (PX7121 (Otte (Freenome) Dep. at 48-50) (*in camera*) [redacted].

Response to Finding No. 925:

The proposed finding is vague and ambiguous. Mr. Otte fails to define any particular threshold for [redacted] Mr. Otte's former company, Freenome, has published data only relating to a single cancer, colorectal, and has commenced additional clinical trials only relating to colorectal cancer screening. (RX3869 (Cote Expert Report) ¶ 192; [redacted] Mr. Otte testified that Freenome is developing a "multiomics cancer screening assay" and is currently "in the process of assessing

the clinical performance of the CRC [*i.e.*, colorectal] portion of that test." (PX7121 (Otte (Freenome) Dep. at 16).) As such, this proposed finding is entitled to no weight.

Respondents also incorporate their responses to CCFF ¶¶ 893, 904, 928 and 1293 herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

926. Deep sequencing drives the performance of cancer screening tests because it "[i]mproves signal-to-noise, making small amounts of ctDNA detectable" and it "[c]over[s] more genes and mutations" which drive sensitivity and specificity. (PX2005 (Illumina) at 006-007 (ScreenCo – Early Cancer Detection on a Global Scale)).

Response to Finding No. 926:

The proposed finding is incomplete and misleading. PX2005 is an Illumina presentation dated 2015. It does not discuss MCED tests generally, but rather discusses GRAIL/ "ScreenCo" as a new venture. (PX2005 (Illumina) at 004–05, 009 (ScreenCo – Early Cancer Detection on a Global Scale Presentation, 2015).)

The proposed finding also appears to suggest that MCED testing today requires "deep sequencing", which is wrong. For example, GRAIL's Galleri test does not use "deep sequencing", but relies on targeted methylation for cancer signal detection and localization. (*See*, *e.g.*, PFF ¶¶ 56, 345, 384, 1289.)

Respondents also note that Complaint Counsel chose not to discuss PX2005 at trial (CC Exhibit Index at 4), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

927. [redacted]

[redacted] (Chudova (Guardant) Tr. 1208-09) (*in camera*).

Response to Finding No. 927:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that only Illumina's NovaSeq instrument is suitable for supporting Guardant's putative MCED test. [redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) [redacted]; RX3869 (Cote Expert Report) ¶ 287; [redacted]**.)** BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) Mr. Getty also admitted that Thermo Fisher Scientific Inc., and other companies developing next-generation sequencing platforms also provide NGS platforms that could be used for liquid biopsy testing. (Getty (Guardant) Tr. 2642.) Respondents also incorporate their responses to CCFF ¶¶ 927, 1115 and 1118 herein.

The proposed finding is also incomplete and misleading insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

Respondents further note that [redacted]

Accordingly, there is no indication based on Guardant's work to date that [redacted] PFF ¶ 475 [redacted] RX3869 (Cote Expert Report) ¶ 202).)

[redacted]

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents further incorporate their responses to CCFF ¶¶ 426–438 and 2257–2352 herein.

928. Natera's Fesko testified that [redacted] (PX7111 (Fesko (Natera) Dep. at 50-52) (*in camera*)).

Response to Finding No. 928:

The proposed finding is inaccurate, incomplete and misleading with respect to the statement that [redacted] Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.)

For example, Natera and BGI Genomics formed a partnership to commercialize Natera's Signatera NGS-based cancer monitoring test on BGI's DNBSEQ platform in China, and has now launched a version of the Signatera test in China "that incorporates MGI sequencing platforms." [redacted]; RX3062 (BGI) at 1.)

The Record Shows Availability of NGS Alternatives in the United States. BGI already has a commercially available NGS platform. (PFF ¶¶ 777–777.5.) BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted]; RX3869 (Cote Expert Report) ¶ 287; [redacted]**.)** BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) [redacted]. (PFF ¶¶ 778–778.2; 2085.) Thermo Fisher's Ion Torrent sequencers are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) Thermo Fisher has confirmed that its sequencers are capable of being used for MCED tests and researchers are successfully developing new ways to use Thermo Fisher products for early cancer screening applications. (PX7097 (Felton (Thermo Fisher) Dep. at 66-69.) [redacted]

[redacted]

Oxford Nanopore is also a viable alternative for MCED test developers. (RX3521 (NCM) at 50-51; RX3869 (Cote Expert Report) ¶¶ 293, 295-98.) Oxford Nanopore's instruments reportedly will compete with Illumina on throughput, accuracy and cost. Oxford Nanopore states that its highest throughput instrument, PromethION, has a higher throughput than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell. (RX3543 (ONT); RX1205 (Illumina): RX3869 (Cote Expert Report) ¶ 294.) Oxford Nanopore states that its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1 *with* RX3368 (Illumina).) [redacted]

Singular commercially launched the G4 NGS sequencer at the end of 2021 and will begin shipping the G4 NGS systems in the first half of 2022. (PFF ¶ 607; Velarde (Singular) Tr. 4515–16, 4522; *see also* PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at [redacted]–31).) Singular Genomics's G4 sequencer is reportedly [redacted]

[redacted] (PFF ¶ 609-609.6.)

[redacted]

Respondents also note that several other sequencers that are capable of supporting MCED development are arriving in the near future. [redacted]

[redacted]

Omniome, which was acquired by PacBio for $800 million in July 2021, is developing a NGS sequencer. (PFF ¶ 787 (RX3533 (Omniome)).) Omniome has stated that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted]

Roche has stated that it expects to bring to market an NGS nanopore sequencer by the 2024 time frame. (PFF ¶ 625 (RX3614 (Roche)).) [redacted]

Test Developers Agree That There are NGS Alternatives. Dr. Aravanis testified that GRAIL considered BGI, Thermo Fisher, Oxford Nanopore and Genapsys NGS sequencers for GRAIL's Galleri test, and determined that many of them would be a viable alternative. (PFF ¶ 1311 (Aravanis (Illumina) Tr. 1862–63).) Dr. Aravanis also testified that BGI's systems are used for liquid biopsy applications; BGI has an NGS sequencing product that could be used for multicancer screening; BGI competes with Illumina for liquid biopsy applications in the countries in which it operates; BGI markets its NGS offerings as an alternative to Illumina. (PFF ¶ 1306 (Aravanis (Illumina) Tr. 1852–54).)

Dr. Aravanis also testified that Thermo Fisher's Ion Torrent can be us as an alternative for many Illumina applications; that the Ion Torrent platform is adequate in terms of the type of sequencing data it produces, the accuracy and the cost and that Thermo Fisher markets the Ion Torrent as an alternative to Illumina. (PFF ¶ 1305 (Aravanis (Illumina) Tr. 1848–52).)

Dr. Aravanis further testified that it is possible to do short-read sequencing on Oxford Nanopore's platforms at very low cost; the Oxford Nanopore platform is a very high-output sequencing platform; the amount of data and cost per data is comparable to the high-end Illumina systems; Oxford Nanopore's NGS sequencing product can be used and have been for liquid biopsy oncology testing; Oxford Nanopore markets its NGS offering as an alternative to Illumina and Illumina views Oxford Nanopore as a competitor in NGS sequencing. (PFF ¶ 1308 (Aravanis (Illumina) Tr. 1856–59).) (*See also* PFF ¶¶ 1304–1310.)

Purported MCED test developers treat these NGS platforms as viable substitutes for Illumina's NGS platform. (PFF ¶ 780.) Dr. Vogelstein, a founder of Thrive, stated, [redacted]

[redacted] Dr. Gao of Singlera testified that the PanSeer test can be run using Thermo Fisher equipment. (PFF ¶ 780.4.) [redacted] (PFF ¶ 780.5.) Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–52.) Mr. Getty also admitted that Thermo Fisher Scientific Inc., and other companies developing next-generation sequencing platforms also provide NGS platforms that could be used for liquid biopsy testing. (Getty (Guardant) Tr. 2642.) [redacted] (*See also* PFF ¶¶ 578–644, 1305–10 for further analysis of alternatives to Illumina's NGS platforms.)

Mr. Stahl of Invitae also recognized that Thermo Fisher (along with Oxford Nanopore, BGI, and PacBio) is a participant in the NGS field and that there would be "no way to predict" which NGS company would be successful over the next five or ten years. (PX7075 (Stahl

(Invitae) Dep. at 42–43).) Mr. Stahl also testified that BGI's and Illumina's technologies are "very similar". (PX7075 (Stahl (Invitae) Dep. at 75.)

Natera Development Status. The proposed finding is also incomplete and misleading insofar as it suggests that Natera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

[redacted] (PFF ¶¶ 508–09.) [redacted] and that Natera is unlikely to accelerate the development of a cancer screening test for multiple cancer types or to add a new cancer type to an existing screening test, [redacted] There is no evidence based on [redacted] (PFF ¶ 511 (RX3869 (Cote Expert Report) ¶ 227; [redacted]).) Respondents also incorporate their responses to CCFF ¶¶ 341, 774–775 and 794 herein.

Lack of Foundation/Improper Lay Witness Testimony. The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

929. [redacted] (Conroy (Exact Sciences) Tr. 1580; 1582 (*in camera*)).

Response to Finding No. 929:

The proposed finding is also incomplete and misleading with respect to Exact/Thrive's purported reliance on Illumina's NGS systems. [redacted]

Further, Dr. Vogelstein, the founder of Thrive stated, [redacted]

[redacted] The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1293 and 2833, which Respondents incorporate herein.

The proposed finding is incomplete and misleading insofar as it suggests that Exact is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future for the reasons explained in Respondents' responses to CCFF ¶¶ 414, 418, 905 and 1912, which Respondents incorporate herein.

[redacted] Exact/Thrive also admitted that, based on the DETECT-A trial, "[a]t present, we cannot be certain that the DETECT-A blood test"—the CancerSEEK test—"helped any participant." (RX3419 at 11.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper

Lay Witness Opinion Testimony (Aug. 5, 2021).) In particular, Mr. Conroy was not involved in the development of CancerSEEK, Exact Sciences does not have any tests that use NGS technology and Exact Sciences was not an Illumina customer until its acquisition of Thrive. (*See* Conroy (Exact Sciences) Tr. 1542–43, [redacted].)

930. Illumina's Mr. Naclerio testified that "Illumina has really competed on primarily three parameters since the beginning, cost, throughput, and quality or accuracy. And [] at this time, we believed we were still the leaders in all three of those parameters." (PX7060 (Naclerio (Illumina) IHT at 76)).

Response to Finding No. 930:

Respondents note that Illumina anticipates additional NGS platforms launching in the near future, as is reflected in Illumina's ordinary course strategy documents. [redacted]

Respondents also note that Mr. Naclerio was testifying with respect to PX2270, which was a Board Presentation Mr. Naclerio prepared in October 2012. Mr. Naclerio noted in 2012 that "Complete Genomics Acquisition by BGI poses a threat to Illumina and our largest customers" and "BGI strategic rational believed to include – Expand commercial footprint in US". (PX2270 (Illumina) at 003, 020.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1. MCED Tests Need High-Throughput NGS Machines to Sample an Extremely High Number of cfDNA Fragments from Each Blood Sample

931. [redacted] (deSouza (Illumina) Tr. 2265 (*in camera*)).

Response to Finding No. 931:

Respondents have no specific response.

932. [redacted] (Conroy (Exact Sciences) Tr. 1580-81).

Response to Finding No. 932:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 929, which Respondents incorporate herein.

933. "Reads per run" is a measurement of throughput and means the number of DNA library molecules an instrument can sequence on each run of the instrument. (PX0114 at 002, Illumina Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Apr. 6, 2022)); *see* PX0035 at 002 (An Introduction to Next-Generation Sequencing Technology, https://www.illumina.com/Documents/products/Illumina_Sequencing_Introduction.pdf (last visited Apr. 6, 2022)); PX7044 (Stahl (Invitae) IHT at 87 ("Q. When you say 'throughput,' is that another way of talking about the depth of read that we were just talking about or is that a different attribute of the machine? A. It is that attribute, so how many millions of reads are you getting."); PX7070 (Felton (Thermo Fisher) IHT at 30-31 ("Q Can you explain the unit of measurement that you used to describe throughput, the reads per run? A. Sure. So read, as I've described earlier in the deposition, is a single contiguous length of DNA sequence from, in our case, a chip. So each well on a chip can generate a read, and we typically generate those reads in the range of 200 to 400 base pairs per sequence. So we're generating 60 to 80 million 200 to 400 base-pair sequencers per run.")).

Response to Finding No. 933:

The proposed finding is inaccurate and misleading to the extent it suggests that all types of DNA sequencing use the same types of metrics to measure throughput. While "reads per run" is an appropriate metric for throughput for traditional short-read sequencers, [redacted] Respondents incorporate their responses to CCFF ¶ 904 herein.

Respondents also note that Complaint Counsel chose not to discuss PX0114 and PX0035 at trial (CC Exhibit Index at 1, 2), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

934. Multiplying the number of reads per run by the length of each read calculates the instrument's output in terms of gigabases per run. (PX7044 (Stahl (Invitae) IHT at 80); PX7070 (Felton (Thermo Fisher) IHT at 31) (Gigabases is "how much overall sequence information is provided. The overall sequencing information and gigabases is a combination of the number of reads times the length of the read.")).

Response to Finding No. 934:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 933, which Respondents incorporate herein.

935. [redacted] (Chudova (Guardant) Tr. 1222-23) (*in camera*)).

Response to Finding No. 935:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 933, which Respondents incorporate herein.

936. In defining the term throughput in the context of cancer screening, Natera's Dr. Rabinowitz testified:

[redacted]

(PX7054 (Rabinowitz (Natera) IHT at 47) (*in camera*)).

Response to Finding No. 936:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 933, 1099 and 1293, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

937. [redacted] (Chudova (Guardant) Tr. 1210) (*in camera*)).

Response to Finding No. 937:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 927, which Respondents incorporate herein.

938. [redacted] (Chudova (Guardant) Tr. 1211) (*in camera*)).

Response to Finding No. 938:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 927, which Respondents incorporate herein.

The proposed finding also undermines Complaint Counsel's theory that multicancer tests require more or different sequencing than single cancer tests. *See, e.g.*, CC Post Trial Br. at 73-74 (arguing that Thermo Fisher sequencers are insufficient for MCED tests). [redacted]

939. [redacted] (deSouza (Illumina), Tr. 2265-66 (*in camera*)).

Response to Finding No. 939:

Respondents have no specific response.

940. [redacted] (PX7100 (Chudova (Guardant) Dep. at 60-61) (*in camera*)).

Response to Finding No. 940:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 928, 1115 and 1293, which Respondents incorporate herein.

The proposed finding is also incomplete and misleading to the extent it suggests that only Illumina's NovaSeq instrument is suitable for supporting Guardant's putative MCED test. [redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–52.)

941. [redacted] (PX7100 (Chudova (Guardant) Dep. at 60-61) (*in camera*)).

Response to Finding No. 941:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–928, 940, 1115 and 1293, which Respondents incorporate herein.

942. [redacted]

(PX7100 (Chudova (Guardant) Dep. at 61-62) (*in camera*)).

Response to Finding No. 942:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–28 and 940, which Respondents incorporate herein.

[redacted]

943. [redacted]

(PX7045 (Chudova (Guardant) IHT at 50) (*in camera*)).

Response to Finding No. 943:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–28, 940 and 942, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

944. [redacted] (Chudova (Guardant) Tr. 1207-08 (*in camera*)).

Response to Finding No. 944:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–28, 940 and 942, which Respondents incorporate herein.

945. Freenome CEO, Michael Nolan testified at trial that the high throughput of Illumina's sequencer also enables Freenome to "keep []costs in a position with proper ratios." (Nolan (Freenome) Tr. 2716).

Response to Finding No. 945:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 1293, which Respondents incorporate herein. It is also contradicted by the weight of the evidence. In particular, [redacted] BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted] RX3869 (Cote Expert Report) ¶ 287; [redacted]**.)** BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

The proposed finding is also inaccurate and misleading to the extent it suggests that only Illumina's NGS is cost effective for Freenome's putative test in development. *First*, Freenome is

still at the very early stages of developing a putative MCED test. Mr. Nolan testified that

[redacted] (PFF ¶¶ 459-70.)

Mr. Otte, Freenome's former CEO, also testified that [redacted]

[redacted]

Accordingly, there is no indication based on Freenome's work to date that [redacted] (PFF ¶ 458 ([redacted]; RX3869 (Cote Expert Report) ¶ 193).)

Second, the evidence shows that [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶¶ 439–446, 696, 698, 801 and 2353–2400 herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

946. Freenome CEO, Michael Nolan testified at trial that the high throughput of Illumina's NGS sequencer will enable "performing billions of tests a year." (Nolan (Freenome) Tr. 2715).

Response to Finding No. 946:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 945 and 1293, which Respondents incorporate herein. In particular, [redacted]

[redacted]

The proposed finding also lacks any evidentiary basis. Dr. Carlton estimated that, assuming no acceleration from the Transaction, GRAIL would sell about 0.1 million tests in 2022 and would only sell a total of 29.9 million tests from 2022-2030. (RX3864 (Carlton Expert Report) ¶ 119.)

947. Mr. Nolan further testified that the high throughput of Illumina's sequencer also enables Freenome to achieve "operational efficiency." (Nolan (Freenome) Tr. 2716).

Response to Finding No. 947:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 945 and 1293, which Respondents incorporate herein. In particular, [redacted]

948. Freenome's Nolan also explained at trial that "there's probably no higher priority" than the ability of an NGS sequencer to scale, because, "even with a relatively small share of [the] market," Freenome will be performing "millions of tests a year." (Nolan (Freenome) Tr. 2720).

Response to Finding No. 948:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 945 and 1293, which Respondents incorporate herein. In particular, [redacted]

949. In discussing potential alternatives to Illumina's NGS sequencers for Freenome's cancer screening test, Mr. Nolan testified, [redacted]

[redacted] (PX7094 (Nolan (Freenome) Dep. at 221-223) (*in camera*)).

Response to Finding No. 949:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 945 and 1293, which Respondents incorporate herein. In particular, [redacted]

950. Freenome's Otte testified that, for example, [redacted] (PX7055 (Otte (Freenome) IHT at 17-19) (*in camera*)).

Response to Finding No. 950:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 945 and 1293, which Respondents incorporate herein. In particular, [redacted] Further, the evidence shows that [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶¶ 439–446, 696, 698, 801 and 2353–2400 herein.

The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

951. [redacted] (PX7111 (Fesko (Natera) Dep. at 52) (*in camera*)).

Response to Finding No. 951:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1264 and 1293, which Respondents incorporate herein.

952. According to Thermo Fisher's Dr. Felton, MCED tests require a "high throughput platform such that you could screen through many thousands of patient samples per day or per week or tens of thousands per week because population screening for early cancer is likely to be a very sample-intensive solution." (PX7070 (Felton (Thermo Fisher) IHT at 52)).

Response to Finding No. 952:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 1293, which Respondents incorporate herein.

[redacted]

[redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 1212–68 herein.

953. Dr. Felton testified that multi-cancer early detection is an application suited for high-throughput NGS sequencers because "[t]he collection of samples from a wide area of the population is inherently easier if it's funneled into a central facility . . . and then running those samples on a high throughput platform would reduce the amount of labor time involved in the processing of said samples." (Felton (Thermo Fisher) Tr. 2002).

Response to Finding No. 953:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 952 and 1293, which Respondents incorporate herein.

954. Dr. Felton testified that a sequencing platform would have to be able to produce "a large number of reads" per run to be used for MCED tests because "we would expect there to be a high number of samples, and, therefore, a system with a high throughput capability would be much preferable to one with a small output that you would have to run multiple times." (Felton (Thermo Fisher) Tr. 1990-1991).

Response to Finding No. 954:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 952 and 1293, which Respondents incorporate herein.

2. MCED Tests Need NGS with High Accuracy and Low Error Rates to Correctly Identify ctDNA and Increase Sensitivity and Specificity

955. [redacted] (Conroy (Exact) Tr. 1581).

Response to Finding No. 955:

Respondents have no specific response except to note that to the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

956. [redacted] (deSouza (Illumina) Tr. 2266 (*in camera*)).

Response to Finding No. 956:

Respondents have no specific response except to note that to the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to

support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

957. Dr. Lengauer testified that for Thrive's CancerSEEK test, [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 66-67 (*in camera*)).

Response to Finding No. 957:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.). To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

958. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 70 (*in camera*)).

Response to Finding No. 958:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.). To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

959. [redacted] (PX7068 (Perettie (FMI-Roche) IHT at 69) (*in camera*)).

Response to Finding No. 959:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.). To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

960. [redacted] (Chudova (Guardant) Tr. 1208) (*in camera*)).

Response to Finding No. 960:

Respondents have no specific response except to note that Dr. Chudova testified that even Illumina's sequencing technology has error rates: "[T]hrough the history of working with Illumina platforms and NextSeq platforms in particular, we learned about specific error modes that the platform generates in addition to sort of .3/.1 generic random error that we discussed, right. There are certain places in the genome where the technology is more prone to errors, and we have mitigations in our algorithmic analysis for these error modes." (PX7045 (Chudova (Guardant) IHT at 34.) To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

961. Guardant's Dr. Chudova explained how accuracy affects sequencing costs, "to correct the error rate inherent in the sequencing technology, we oversequence, which means we read each molecule more than once to try to minimize the error." ((PX7045 (Chudova (Guardant) IHT at 28-31)).

Response to Finding No. 961:

Respondents have no specific response except incorporate their responses to CCFF ¶ 960 herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

962. Dr. Chudova explained that an NGS platform's accuracy influences sequencing costs because: "you can trade off throughput for error, so that means if you all of a sudden want to tolerate, instead of .3 percent, let's say .5 percent error rate, you need to sequence that molecule more times and you need to have higher throughput." (PX7045 (Chudova (Guardant) IHT at 31-34).

Response to Finding No. 962:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 960 herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.). To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

963. Dr. Rabinowitz testified that a "sequencer has to be very accurate in saying what series of nucleotides constitute each fragment, and the sequencer needs to be stable. In other words, [Natera] need[s] to model the noise of the sequencer very precisely so that [Natera] can calibrate out that noise[.]" (Rabinowitz (Natera) Tr. 310).

Response to Finding No. 963:

Respondents have no specific response except to note that to the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

964. "If the sequencer is accurate sometimes, not accurate [other times], and has a variable noise model or run-to-run instability, that creates major issues." (Rabinowitz (Natera) Tr. 310).

Response to Finding No. 964:

Respondents have no specific response except to note that to the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

965. [redacted] (Rabinowitz (Natera) Tr. 362 (*in camera*)).

Response to Finding No. 965:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 1293, which Respondents incorporate herein. To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

[redacted]

[redacted]

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

966. Low NGS platform accuracy increases costs to run a cancer screening test because low accuracy requires more "sequencing . . . to tell mutation from error." (PX7042 (Gao (Singlera) IHT at 46)).

Response to Finding No. 966:

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.). To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

967. Dr. Gao elaborated that if the accuracy is low you need to resequence, but "[w]ith Illumina you need less sequencing" or "coverage" so "if you look at the . . . raw sequencing reagent cost, [a less accurate NGS sequencer] may be a little bit cheaper. However if you look at the required amount of sequencing needed to tell mutation from error, you end up paying more[.]" (PX7042 (Gao (Singlera) IHT at 46-47)).

Response to Finding No. 967:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 960, 971 and 1293, which Respondents incorporate herein. Dr. Gao of Singlera testified that the PanSeer test can be run using Thermo Fisher equipment (Gao (Singlera) Tr. 2928.) [redacted] To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

968. Freenome CEO, Michael Nolan, testified at trial that the accuracy of an NGS sequencer "an important parameter overall for [an MCED] test, and it's of course important for [Freenome] in [its] research and product development to have accuracy." (Nolan (Freenome) Tr. 2720).

Response to Finding No. 968:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 945 and 1293, which Respondents incorporate herein. To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

969. [redacted] (PX4140 (Grail) at 007, 010 ("R&D Portfolio Planning – Part B: Sequencing Technology," last modified Apr. 14, 2019) (*in camera*)).

Response to Finding No. 969:

The proposed finding is incomplete and misleading. [redacted]

Dr. Aravanis identified a number of sequencing platforms on the market today and in development that would be viable platforms for an MCED test such as Galleri. (Aravanis (Illumina) Tr. 1848–63.) Respondents also incorporate their responses to CCFF ¶¶ 1074 and 1088 herein.

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 971 and 1293, which Respondents incorporate herein. To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss PX4140 at trial (CC Exhibit Index at 38), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

970. Illumina's Mr. Aravanis testified "the one area [] where Illumina is superior in a meaningful way is around data accuracy, so the accuracy of the Oxford Nanopore reads is not as good as the Illumina reads." (PX7065 (Aravanis (Illumina) IHT at 158)).

Response to Finding No. 970:

The proposed finding is incomplete and misleading. [redacted]

Dr. Cote also explained that Oxford Nanopore's platform "is capable of sequencing up to 10 Terabase pairs ('Tb') per run and may be used to detect methylation and other epigenomic changes directly. While Oxford Nanopore historically faced lower accuracy, the latest improvements in chemistry and bioinformatics enable the platform's accuracy to the Q50 range. This platform is already being used by developers of potential cancer screening tests." (RX3869 (Cote Expert Report) ¶ 19.)

In addition, Oxford Nanopore states that its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).)

Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904, which Respondents incorporate herein.

971. Dr. Vogelstein testified that the accuracy of Illumina's NGS sequencers "approaches about one error in several thousand bases" which he explained is "absolutely essential to get the specificity that you need for an earlier detection test" because "[o]therwise, you'll get too many false positives." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 58-59)).

Response to Finding No. 971:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which it is not. Dr. Vogelstein only testified that the accuracy of "about one error in several thousand bases [] is absolutely essential to get the specificity that you need for an earlier detection test." (PX7101 (Vogelstein (Johns Hopkins University) Dep.) at 58–59.) As Dr. Vogelstein has stated, there are other viable NGS platforms on the market that compare to Illumina's level of accuracy. BGI's DNBSEQ sequencer's reported accuracy is comparable to that of Illumina's sequencers, and guarantees over 99.9% accuracy (>80% of bases >Q30). (PFF ¶ 591 (RX3465 (MGI Tech); RX3067 (BGI)).) Specifically, Dr. Vogelstein stated, [redacted]

[redacted]

Oxford Nanopore states that its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).)

Singular Genomics' G4 System's reported performance characteristics are comparable to those of Illumina's NextSeq and NovaSeq systems, with high accuracy of 99.7% on 150 base reads. (PX8561 (Singular) at 4-5; [redacted]

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 1293, which Respondents incorporate herein.

972. To deliver sufficiently accurate results, MCED test developers must use sequencing technology with low error rates. ((PX7075 (Stahl (Invitae) Dep. at 71-74) (describing how some NGS platforms' error rates are prohibitively high for Invitae's applications)).

Response to Finding No. 972:

The proposed finding is based on speculation. [redacted] PX7075 (Stahl (Invitae) Dep. at

22, 44, 77–78) The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 904, 928 and 1293, which Respondents incorporate herein. To the extent the proposed finding suggests that platforms other than Illumina NGS platforms are not accurate enough to support putative MCED tests, this is inaccurate for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein.

973. In an internal presentation to Illumina's Science & Technology Committee, Illumina executives recognized that [redacted] (PX2013 (Illumina) at 003 (Cancer Screening, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 973:

The proposed finding is misleading. The cited language refers to cancer screening generally, not MCED tests. Respondents also note that Complaint Counsel chose not to discuss PX2013 at trial (CC Exhibit Index at 5), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

974. An internal presentation made to Illumina's Science & Technology Committee recognizes that [redacted] (PX2013 (Illumina) at 003 (Cancer Screening, Apr. 28, 2020) (*in camera*)).

Response to Finding No. 974:

The proposed finding is misleading. The cited language refers to cancer screening generally, not MCED tests. The full sentence reads [redacted] (PX2013 (Illumina) at 003 (Cancer Screening, Apr. 28, 2020) (*in camera*) (emphasis added)).

The proposed finding is incomplete and misleading insofar as it suggests that Guardant and Freenome are actual competitors to GRAIL today or will be competitors to GRAIL in the foreseeable future. Respondents also incorporate their responses to CCFF ¶¶ 927 (Guardant) and 945 (Freenome) herein.

Respondents also note that Complaint Counsel chose not to discuss PX2013 at trial (CC Exhibit Index at 5), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

975. Illumina's CEO Mr. deSouza testified that Illumina's expertise is "try[ing] [to] continue to move the accuracy of the reads of our sequencers using machine learning." (PX7072 (deSouza (Illumina) IHT at 187)).

Response to Finding No. 975:

Respondents have no specific response.

3. MCED Tests Need Low-Cost Sequencing to Screen the General Population

976. Because MCED test developers ultimately seek to regularly test most of the adult population in the United States, low costs are important to the success of an MCED test. (*See supra* Sections II.C.6. (MCED Tests Seek to Detect Multiple Cancers Simultaneously in Asymptomatic Individuals) and III.C.1. (MCED Tests Will Have Distinct Pricing and Reimbursement from Other Oncology Tests)).

Response to Finding No. 976:

The proposed finding is improper because it treats Complaint Counsel's inaccurate, misleading and argumentative headers as purported facts. To the extent Complaint Counsel relies on its Proposed Findings in Sections II.C.6 and III.C.1 (CCFF ¶¶ 375–475, 688–704), Respondents incorporate their responses to those Proposed Findings herein.

977. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 127-28) (*in camera*)).

Response to Finding No. 977:

The proposed finding is misleading. [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

978. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 68-69) (*in camera*); PX7102 (Gao (Singlera) Dep. at 27); PX7045 (Chudova (Guardant) IHT at 43-44) (*in camera*); Nolan (Freenome) Tr. 2723; Ofman (Grail) Tr. 3302.

Response to Finding No. 978:

The proposed finding is vague and misleading. It is not clear which witnesses would be considered "MCED witnesses". The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. [redacted] (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

The proposed finding is misleading to the extent it describes [redacted] (RX3869 (Cote Expert Report ¶¶ 174 (Exact/Thrive), 193 (Freenome), 202 (Guardant), 238 (Singlera)).) [redacted] (PFF

¶¶ 722–740.1), and [redacted] (PFF ¶¶ 701–706).

979. Thrive's Lengauer testified that [redacted]

[redacted]

(PX7051 (Lengauer (Third Rock Ventures) IHT at 68-69) (*in camera*)).

Response to Finding No. 979:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 977 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

980. Freenome's Otte testified that, for example, [redacted] (PX7055 (Otte (Freenome) IHT at 17-19) (*in camera*)).

Response to Finding No. 980:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 950 and 1293, which Respondents incorporate herein. Additionally, contrary to the cited testimony, putative MCED test developers *do* use Illumina's lower throughput NextSeq and MiSeq instruments. For example, the Singlera's

PanSeer test only requires approximately 2 million sequencing reads per sample, and is compatible with both Illumina's MiSeq or NextSeq systems and Thermo Fisher's Ion Torrent S5 systems, though it appears to primarily use the NextSeq 550Dx system from Illumina. (PFF ¶ 533 (RX3115 (Chen et al., 2020) at 7; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2875, 2894, 2928–29; PX7102 (Gao (Singlera) Dep. at 78); RX3869 (Cote Expert Report) ¶ 239).) Helio currently uses Illumina's MiSeq sequencer for its Helio Liver test. (Chahine (Helio) Tr. 1010-12). Dr. Chahine testified Helio uses the MiSeq because "a smaller machine is more efficient" as a "company in its early stage" prior to "ramp[ing] up." (Chahine (Helio) Tr. 1012).

[redacted] (Rabinowitz (Natera) Tr. 361) (*in camera*)). Respondents also incorporate their responses to CCFF ¶ 1115 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

981. Dr. Gao explained that Singlera chooses to run its cancer screening test on Illumina's NGS platform in part because "it's very cost economic" in terms of the number of reads per run. (PX7102 (Gao (Singlera) Dep. at 27)).

Response to Finding No. 981:

Respondents incorporate their responses to CCFF ¶¶ 928, 967, 980 and 1293 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Furthermore, the evidence shows that [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶¶ 439–446, 696, 698, 801 and 2353–2400 herein.

982. Singlera's Gao explained that a cancer "screen[ing] test has to be very cheap," "unlike [a] confirmation test" in order to be commercially viable. (PX7042 (Gao (Singlera) IHT at 50-51)).

Response to Finding No. 982:

Respondents incorporate their responses to CCFF ¶¶ 928, 967, 980 and 1293 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Furthermore, the evidence shows that [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶¶ 439–446, 696, 698, 801 and 2353–2400 herein.

983. [redacted] (PX7045 (Chudova (Guardant) IHT at 43-44) (*in camera*)).

Response to Finding No. 983:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 928 and 1293, which Respondents incorporate herein.

984. Mr. Nolan indicated at trial that keeping the cost of NGS sequencing and the related consumables low is important to Freenome because they are the "majority of [the] cost of goods today in [Freenome's] different prototypes." (Nolan (Freenome), Tr. 2723).

Response to Finding No. 984:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 945, which Respondents incorporate herein.

The proposed finding is also irrelevant as it does not relate to MCED tests in particular, and it is misleading because Illumina is not the only provider of sequencing instruments and core consumables, nor is it the only provider of other consumables used in the testing workflow, such as sample collection consumables or library preparation consumables. *See, e.g.,* (Bishop (GRAIL) Tr. 1381–82. (GRAIL uses a variety of reagents and consumables and not all of these inputs are from Illumina).

For example, liquid biopsy test developers do not use Illumina technology for blood or other fluid sample collection from the patient. (*See* Berry (Illumina) Tr. 814 ("Illumina does not participate specifically in this space" of "isolating the genetic material to be sequenced from [a blood] sample").) Similarly, most liquid biopsy test developers do not use Illumina technology for library preparation. (Berry (Illumina) Tr. 815–16 (stating that the library preparation step "is very unique and specific to the particular test provider's sort of approach of methodology" and that there are "hundreds and hundreds of library preparation methods" and "potentially hundreds of providers of library preparation technology or kits").) [redacted]

[redacted]

Furthermore, the evidence shows that [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) In addition, Dr. Aravanis explained that "Illumina is [ ] going to lower the cost of sequencing over time," as will "other sequencing providers", which will "compound the overall reduction in sequencing costs as a fraction of the test." (Aravanis (Illumina) Tr. 1924–25.)

985. Dr. Chahine testified at trial that the R&D process to develop a screening test is "extremely expensive," and the two major costs are "acquiring the actual samples" to conduct the analysis and the sequencing the samples. (Chahine (Helio) Tr. 1035-36).

Response to Finding No. 985:

Respondents have no specific response.

986. [redacted] (PX7077 (Chahine (Helio) Dep. at 30 (*in camera*)).

Response to Finding No. 986:

The proposed finding is irrelevant as it is does not relate to MCED tests and is directed to [redacted]

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 984 and 1293, which Respondents incorporate herein.

987. Dr. Rabinowitz testified that "uniformity" of coverage across regions of the genome being screened is a key factor for the cost of sequencing—for Natera "all the regions of DNA that [Natera] want[s] to look at should have a similar amount of sequencing." (Rabinowitz (Natera) Tr. 310-11).

Response to Finding No. 987:

The proposed finding is irrelevant as it is not specific to MCED tests or Illumina's sequencers. Respondents also incorporate their responses to CCFF ¶¶ 696, 928, 984 and 1293 herein.

988. Dr. Rabinowitz explained the significance of a sequencer's lack of uniformity:

> If you have lack of uniformity in the sequencer, you'll get a lot of information about one region of the chromosome and much less information about another region, and the result of that is you have to do a whole lot more sequencing, because you want to get a minimum amount of coverage and the coverage is largely the richness of the data that you can get about what's going on at that particular region of the chromosome.

(Rabinowitz (Natera) Tr. 311).

Response to Finding No. 988:

The proposed finding is irrelevant as it is not specific to MCED tests or Illumina's sequencers. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 987 and 1293, which Respondents incorporate herein.

989. Dr. Rabinowitz further testified that "especially for the oncology tests, you want to do as much sequencing as your costs will allow, because the more sequencing you do, the broader the things that you can look at, the better you are at capturing single molecules, and the better the sensitivity and specificity of your test." (Rabinowitz (Natera) Tr. 311).

Response to Finding No. 989:

The proposed finding is irrelevant as it is not specific to MCED tests or Illumina's sequencers. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 987 and 1293, which Respondents incorporate herein.

990. Dr. Rabinowitz explained that the sequencing data generated connects directly with test performance: "[T]he more sequencing that one can do, the better performance of the test,

especially in the oncology context, where you want to go down to sort of single-molecule detection levels." (Rabinowitz (Natera) Tr. 311-12).

Response to Finding No. 990:

The proposed finding is irrelevant as it is not specific to MCED tests or Illumina's sequencers. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 987 and 1293, which Respondents incorporate herein.

991. [redacted] (PX8354 (Roche) at 004 (Monitoring and Screening Markets, Jan. 29, 2021) (*in camera*)).

Response to Finding No. 991:

The proposed finding is incomplete and misleading. PX8354 at 004 [redacted] Respondents also note that Complaint Counsel chose not to discuss PX8354 at trial (CC Exhibit Index at 60), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents further note that [redacted]

[redacted]

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 984, which Respondents incorporate herein.

992. Customers requiring the sequencing of a large number of samples require sequencers with a low price per sample. (Felton (Thermo Fisher) Tr. 2000-01).

Response to Finding No. 992:

The proposed finding is irrelevant as it is not specific to MCED tests or Illumina's sequencers. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 952, which Respondents incorporate herein.

993. Thermo Fisher's Felton acknowledged that NGS instruments with a "low cost per sample [are] likely to be the major requirement" for MCED tests. (PX7070 (Felton (Thermo Fisher) IHT at 52)).

Response to Finding No. 993:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 952, which Respondents incorporate herein.

994. Dr. Vogelstein testified that "the sequencing component of the test is the most expensive part of" the research performed at his lab. (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 69)).

Response to Finding No. 994:

The proposed finding is irrelevant because it does not relate to costs for an MCED test. Dr. Vogelstein's lab does its own laboratory work to "discover improved ways to carry out experiments." PX7101(Vogelstein (Johns Hopkins University) Dep. at 38). Dr. Vogelstein testified that in his capacity as a consultant for Thrive, he "specifically said to them that I know nothing about business and did not want to discuss it because I was not a source of information." PX7101(Vogelstein (Johns Hopkins University) Dep. at 30)). Respondents also note that Dr. Vogelstein also testified that Illumina's cost of sequencing per giga-base has gone down over time. (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 62.)

Respondents also incorporate their responses to CCFF ¶ 977 herein.

995. Dr. Vogelstein testified that his "lab's goal is to ultimately create tests that are affordable for all" and "[t]herefore, the cost and the throughput of the sequencing are key." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 68)).

Response to Finding No. 995:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶ 994, which Respondents incorporate herein.

996. Dr. Vogelstein testified that "[r]esearchers in the field are acutely aware of Illumina's sequencing because sequencing is a major cost in the analysis of CF DNA" and "[t]he cost of sequencing is therefore a major factor that drives the cost of creating a test for the public that could become part of the battery of relatively routine tests associated with an annual physical." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 67-68)).

Response to Finding No. 996:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶ 994, which Respondents incorporate herein.

997. [redacted]

[redacted] (PX8399 (Henry (PacBio) Decl. ¶ 5) (*in camera*)).

Response to Finding No. 997:

The proposed finding relies on hearsay and is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 907, which Respondents incorporate herein.

998. Grail's Aaron Freidin explained, [redacted] (PX7066 (Freidin (Grail) IHT at 216-17) (*in camera*)).

Response to Finding No. 998:

Respondents have no specific response.

999. Grail witnesses also testified at trial that NGS sequencing needs to be low cost, including Grail's CEO Hans Bishop who testified that it is "a very high priority [in] reducing the cost of our test." (Bishop (Grail), Tr. 1368).

Response to Finding No. 999:

Respondents have no specific response.

1000. [redacted] (Bishop (Grail) Tr. 1446 (*in camera*)).

Response to Finding No. 1000:

Respondents have no specific response.

1001. Grail's Dr. Ofman testified that "we need to get the cost of the [MCED] test down" "to achieve [Grail's] mission of providing access to this type of technology to adults worldwide to . . . dramatically improve the cancer detection rate." (Ofman (Grail) Tr. 3302).

Response to Finding No. 1001:

Respondents have no specific response.

1002. Grail's ordinary course documents state, "Illumina represents >50% of GRAIL V2 Product Cost of goods sold." (PX4079 (Grail) at 004 (ILMN/Grail, Jan. 16, 2020) (listing total Illumina COGS at 56% and non-royalty COGS at 50%); *see* (PX4040 (Grail) at 005 (Email from K. Martin, Grail, to A. Freidin, Grail, Feb. 12, 2020) (listing a range of Illumina COGS from 32% to 54% depending on sales volumes and Galleri version number)).

Response to Finding No. 1002:

The proposed finding is incomplete and misleading. [redacted] Mr. deSouza also testified that "today sequencing costs represent about 10 percent of the price of Galleri" and "[b]y 2025, we project that sequencing costs will be less than 4 percent of the price of GRAIL's Galleri test." (deSouza (Illumina) Tr. 2388.) (*See also* [redacted].)

4. An MCED Developer Planning to Sell a Kitted MCED Test Requires an FDA-Cleared NGS Platform

1003. A distributed kit (or "kitted") in-vitro diagnostic test is where the test developer generates a version of the test that can then be distributed to third-party CLIA/CAP-certified labs to be processed. (Goswami (Illumina) Tr. 3185-87).

Response to Finding No. 1003:

Respondents have no specific response.

1004. A kitted IVD is an IVD test that has received pre-market approval from the FDA permitting analysis by independent testing providers. (Goswami (Illumina) Tr. 3186-87).

Response to Finding No. 1004:

Respondents have no specific response.

1005. The distributed kit IVD test developer has "responsibility for quality control and quality analysis" of the distributed kit IVD test. (Goswami (Illumina) Tr. 3187).

Response to Finding No. 1005:

Respondents have no specific response.

1006. An NGS-based kitted IVD test uses dedicated "DX" versions of Illumina's NGS platforms, which have obtained 510(k) clearance from the FDA. (Goswami (Illumina) Tr. 3188-89; *see* PX6056 (Illumina) at 051 (Illumina, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*) [redacted]).

Response to Finding No. 1006:

Respondents have no specific response.

1007. It is Illumina's responsibility to get FDA clearance for "the box that runs the test, and supply the core consumables that go along with the box" for a test developer developing a test on an Illumina's Dx platform. (Goswami (Illumina) Tr. 3188-89).

Response to Finding No. 1007:

Respondents have no specific response.

1008. Illumina then provides a device master file to the FDA when a kitted IVD test developer is seeking FDA approval for its test. (Goswami (Illumina) Tr. 3224).

Response to Finding No. 1008:

Respondents have no specific response.

1009. A distributed kit IVD test developer must follow FDA guidelines and submit to regular FDA audits following PMA approval of a distributed kit IVD. (Goswami (Illumina) Tr. 3187).

Response to Finding No. 1009:

Respondents have no specific response.

1010. An executive from Invitae, an Illumina oncology customer though not an MCED test developer, testified that, in order to offer a cancer screening test as "a distributed IVD, the FDA mandates that the next-generation sequencer be cleared, so it has to have a 510(k) clearance. That clearance then must be part of the companion diagnostic device." (PX7044 (Stahl (Invitae) IHT at 51-52)).

Response to Finding No. 1010:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.) The proposed finding is based on testimony for which the witnesses lack personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1011. Singlera's Dr. Gao testified that Singlera plans to commercially launch its screening test as an "IVD kit[ted test.]" (PX7102 (Gao (Singlera) Dep. at 45-46)).

Response to Finding No. 1011:

Respondents have no specific response except to note that Singlera is many years from launching its putative MCED test. Dr. Gao testified Singlera testified that it is "far [a]way" from starting clinical trials in the United States, and that is it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82; PFF ¶¶ 527–542.) Specifically, Singlera's PanSeer test is in its extreme infancy and will not reach the market in any realistic near-term time span. Dr. Gao testified that PanSeer test is at least eight to ten years away from potential launch in the United States (Gao (Singlera) Tr. 2919, 2924–26; RX3869 (Cote Expert Report) ¶ 242.) As of now, PanSeer can only detect five cancers and Singlera is a long way from starting clinical trials for PanSeer—Singlera has not even had discussions with the FDA regarding PanSeer, begun developing a clinical trial plan for PanSeer, or engaged FDA consultants for FDA submissions related to PanSeer. (Gao (Singlera) Tr. 2914–15, 2917; 2917–18; 2926–27, 2942–43, 2949.) Even when clinical trials for PanSeer are undertaken, Dr. Gao believes that, to generate sufficient data for FDA approval, Singlera will need to undertake a ten-year, 100,000 person study. (Gao (Singlera) Tr. 2919, 2924, 2926.) Dr.

Gao testified it could take 50 years before it was able to develop a MCED test that could detect 50 cancer types (Gao (Singlera) Tr. 2883.) Respondents also incorporate their responses to CCFF ¶¶ 546–547 herein.

The proposed finding is also misleading to the extent it implies that a distributed IVD model will be part of the plan for any putative MCED test. Several features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) ¶ 359.) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.)

1012. When asked why Singlera chose to use Illumina's NGS platform for its cancer screening test, Dr. Gao testified, "the first reason is the NextSeqDx is FDA 510K cleared." (PX7102 (Gao (Singlera) Dep. at 27)).

Response to Finding No. 1012:

Respondents have no specific response except to note that this proposed finding undermines Complaint Counsel's assertion that the NovaSeq sequencer is a requirement for MCED test development. Respondents also incorporate their responses to CCFF ¶ 1011 herein.

1013. Dr. Gao explained that Singlera "had to use a sure [sic] FDA cleared device, so we choose [Illumina's] NextSeqDx, even though NovaSeq/HiSeq will also do the job, even cheaper. But because they are not FDA cleared, we do not want to run the risk." (PX7102 (Gao (Singlera) Dep. at 27)).

Response to Finding No. 1013:

Respondents have no specific response except to note that this proposed finding undermines Complaint Counsel's assertion that the NovaSeq sequencer is a requirement for MCED test development. Respondents also incorporate their responses to CCFF ¶ 1011 herein.

1014. In discussing the prospect of Singlera running its cancer screening test on a sequencing platform that has not secured FDA clearance, Dr. Gao indicated, "[i]t's the – we call it's the no deal kind of a situation. If you don't have FDA clearance, we cannot go with you." (PX7042 (Gao (Singlera) IHT at 53)).

Response to Finding No. 1014:

Respondents have no specific response except to note that [redacted] Respondents also incorporate their responses to CCFF ¶¶ 928, 1011 and 1293 herein.

1015. [redacted]

Response to Finding No. 1015:

To the extent Complaint Counsel relies on its Proposed Findings in Section VII.A.2.d.1 (CCFF ¶¶ 2945–54), Respondents incorporate their responses to those Proposed Findings herein.

Respondents note that features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶¶ 675–678.5 (RX3869 (Cote Expert Report) ¶¶ 359–363; Goswami (Illumina) Tr. 3188–92, 3194–95).)

The proposed finding is also incomplete and misleading to the extent that it suggests that [redacted] (PFF ¶¶ 701–706) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

The proposed finding is misleading to the extent it describes [redacted] (RX3869 (Cote Expert Report ¶¶ 174 (Exact/Thrive), 184 (FMI/Roche), 193 (Freenome), 202 (Guardant), 217 (Helio), 227 (Natera), 238 (Singlera)).) [redacted] (PFF ¶¶ 722–740.1), and most of the putative MCED developers identified by Complaint Counsel do not expect (and none can reasonably be expected) to launch a screening test for more than one cancer for many years (PFF ¶¶ 701–706).

1016. [redacted]

Response to Finding No. 1016:

Respondents have no specific response.

1017. [redacted]

Response to Finding No. 1017:

Respondents have no specific response.

1018. Invitae's Stahl explained why Illumina's NGS platform is the only option for an oncology customer, like Invitae, or any MCED test developer, to sell a cancer screening test as a distributed IVD kit:

> It comes down to FDA regulation. So for a distributed IVD, the FDA mandates that the next-generation sequencer be cleared, so it has to have a 510(k) clearance. That clearance then must be part of the companion diagnostic device. . . . So unless you have an agreement with Illumina to agree when the FDA request it to send them their sequencing package, you have no way to get approval. Therefore, without them, it – I mean, right now, it's actually – it's impossible. You can't do it.

(PX7044 (Stahl (Invitae) IHT 51-52)).

Response to Finding No. 1018:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1010, which Respondents incorporate herein.

The proposed finding is also incomplete and misleading. Mr. Stahl testified that BGI's and Illumina's technologies are "very similar". (PX7075 (Stahl (Invitae) Dep. at 74–75.) Moreover, Dr. Felton explained how the PGM Dx platform, a fully FDA-approved system, is used in oncology applications. (Felton (Thermo Fisher) Tr. 1983–87.) [redacted] Respondents also incorporate their responses to CCFF ¶¶ 928 and 1293 herein.

D. ONLY ILLUMINA NGS PLATFORMS MEET THE REQUIREMENTS OF MCED TESTS

1019. As shown below, every MCED test developer testified that they need and rely on Illumina NGS as the sole NGS provider that meets their tests' needs. (*See* Section V.D.2).

Response to Finding No. 1019:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1025, which Respondents incorporate herein.

To the extent Complaint Counsel relies on its Proposed Findings in Section V.D.2 (CCFF ¶¶ 1053–1200), Respondents incorporate their responses to those Proposed Findings herein.

The proposed finding is also incomplete and misleading, including because it appears to suggest that Illumina's NGS sequencer is required for MCED tests. Respondents incorporate their responses to CCFF ¶¶ 341, 928 and 1293 herein.

1020. According to Illumina, more than 90% of the world's sequencing data is generated using Illumina NGS technology: "Leaders turn to Illumina technology for the high-quality sequencing data our instruments produce. They've done so for decades. With more than 90% of the world's sequencing data generated by Illumina sequencing by synthesis (SBS) chemistry, and > 17,000 active Illumina sequencers deployed globally, our solutions enable our customers to make discoveries that were unimaginable even a few years ago." (PX0121, Illumina, Choosing an NGS Company, https://www.illumina.com/science/technology/next-generation-sequencing/choose-ngs-company.html (last visited Apr. 6, 2022)).

Response to Finding No. 1020:

Respondents have no specific response.

1. Illumina's Industry Leading NGS Technology

a) Instruments

1021. Illumina's identifies three categories of "production-scale sequencers": the "NextSeq 550 Series," the "NextSeq 1000 & 2000," and the "NovaSeq 6000." (PX0114, Illumina, Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Apr. 6, 2022)).

Response to Finding No. 1021:

Respondents have no specific response.

1022. [redacted] (PX2032 (Illumina) at 014 (Illumina, AMR 2021 Revenue Forecast, Oct. 9, 2020) (*in camera*)).

Response to Finding No. 1022:

Complaint Counsel did not present the exhibit PX2032 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 5), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

(1) NovaSeq

1023. The NovaSeq is Illumina's "high-throughput platform." (Goswami (Illumina) Tr. 3191-92).

Response to Finding No. 1023:

Respondents have no specific response.

1024. The NovaSeq is the only sequencer for which Illumina identifies "cell-free sequencing & liquid biopsy analysis" and "methylation sequencing" as "key applications." (PX0114, Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Apr. 6, 2022)).

Response to Finding No. 1024:

The proposed finding is incomplete and misleading to the extent that it suggests that out of Illumina's platforms, only Illumina's NovaSeq may be used for cell-free sequencing, liquid biopsy analysis or methylation sequencing. To the contrary, as described in Respondents responses to CCFF ¶ 980, incorporated herein, putative MCED test developers are also pursuing test development using the NextSeq and MiSeq instruments.

1025. A "flow cell" is a surface onto which a prepared library of DNA molecules is attached for the purpose of sequencing. (PX7104 Aravanis (Illumina) Dep. at 117)).

Response to Finding No. 1025:

Respondents have no specific response.

1026. "Reads" are the strings of nucleotide bases in each library molecule being sequenced. (PX0035 at 002, Illumina, An Introduction to Next-Generation Sequencing Technology, https://www.illumina.com/Documents/products/Illumina_Sequencing_Introduction.pdf (last visited Apr. 6, 2022)).

Response to Finding No. 1026:

Respondents have no specific response.

1027. [redacted] (PX6069 (Illumina Responses & Objections to FTC Requests for Admissions) at 15-16 (RFA No. 17) (*in camera*)).

Response to Finding No. 1027:

The proposed finding is inaccurate, incomplete, and misleading to the extent it suggests that [redacted] Respondents also incorporate their responses to CCFF ¶¶ 341, 928, 1275 and 1293 herein.

Respondents further note that BGI's highest throughput instrument has a higher reported throughput than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell (up to 6 Tb/run) (*see* PFF ¶ 592), and that BGI may enter the U.S. market by August 2022. (PFF ¶ 588.2.) Similarly, [redacted]

1028. [redacted] (PX6069 (Illumina Responses & Objections to FTC Requests for Admissions) at 16 (RFA No. 18) (*in camera*)).

Response to Finding No. 1028:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1027, which Respondents incorporate herein.

(2) NextSeq Series

1029. The NextSeq is Illumina's "medium or mid-throughput platform." (Goswami (Illumina) Tr. 3191).

Response to Finding No. 1029:

Respondents have no specific response.

1030. Illumina identifies the NextSeq as a "production-scale sequencer." (PX0114, Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Apr. 6, 2022)).

Response to Finding No. 1030:

Respondents have no specific response.

1031. Illumina identifies the NextSeq as capable of "cell-free sequencing & liquid biopsy analysis" and "methylation sequencing." (PX0114, Illumina, Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Apr. 6, 2022)).

Response to Finding No. 1031:

Respondents have no specific response.

1032. "Cell-free sequencing & liquid biopsy analysis" and "methylation sequencing" are not identified as "key applications" for NextSeq sequencers. (PX0114, Illumina, Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Apr. 6, 2022)).

Response to Finding No. 1032:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1024, which Respondents incorporate herein.

(3) Illumina's Other Platforms

1033. Illumina offers a number of other benchtop sequencers that are not designated as "production-scale sequencers," including the iSeq 100, the MiniSeq, and the MiSeq series. (PX0114, Illumina, Sequencing Platforms, https://www.illumina.com/systems/sequencing-platforms.html (last visited Apr. 6, 2022)).

Response to Finding No. 1033:

Respondents have no specific response except to note that Dr. Gao of Singlera admitted that the PanSeer test only needs over 5 million reads and was being developed in part with Illumina's MiSeq. (Gao (Singlera) Tr. At 2893, 2928–31.)

1034. Illumina's MiSeq is a "low-throughput platform." (Goswami (Illumina) Tr. 3191). That means it "can run tests that have a low number of reads per test, so something like NIPT or an infectious disease test or a small oncology panel." (Goswami (Illumina) Tr. 3192).

Response to Finding No. 1034:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1033 herein.

1035. Generally, a low-throughput instrument will be used for an application with low reads or if the lab does not process many samples (i.e., ten to twenty samples at a time). (Goswami (Illumina) Tr. 3193).

Response to Finding No. 1035:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1033 herein.

(4) Illumina's Proactive Performance Monitoring System

1036. [redacted] (PX7076 (Berry (Illumina) Dep. at 27-30, 35-36); PX6056 (Illumina) at 047 (Illumina, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 1036:

The proposed finding is incomplete and misleading. Mr. deSouza was unequivocal in testifying that customers could run their sequencers with an "airgap"—that is, they can

"completely just run it on their own and don't have any connection to the Internet at all." (deSouza (Illumina) Tr. 2383–84.) The Proactive monitoring service and the cloud storage services are both voluntary, opt-in programs for customers. (*See also* PX7076 (Berry (Illumina) Dep. at 30.) Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶¶ 1038, 2612, 2673 and 2678 herein.

1037. Proactive provides customers with access to improved service. (PX7076 (Berry (Illumina) Dep. at 36-37)).

Response to Finding No. 1037:

The proposed finding is incomplete and misleading. The extent of the "improved service" that a customer receives from using Proactive is the Proactive service itself. Proactive "allows Illumina to have visibility into specific instrument sort of physical states to try to understand when an instrument is likely to requires service." (Berry (Illumina) Tr. 850–852.) The only added service benefit to the Proactive user is a notice from Illumina that its machines are likely to require service. Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶¶ 1038, 2676 and 2678 herein.

The proposed finding is also incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2612 and 2673, which Respondents incorporate herein.

1038. [redacted]

[redacted] (PX6056 (Illumina) at 047 (Illumina, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 1038:

The proposed finding is inaccurate, incomplete and misleading, including for the reasons described in Respondents' responses to CCFF ¶¶ 1036–37, which Respondents incorporate herein.

In any event, any information collected in connection with servicing is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—such as order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer, which Illumina made available after the submission of PX6056, requires Illumina not to share any customer confidential information with GRAIL or its subsidiaries or employees, or with Illumina employees who work with GRAIL. (*See* PFF ¶¶ 1038–1038.1.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL

subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted]; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted].)

1039. Proactive provides Illumina with "the ability to monitor instrument use, specifically as it relates to run metrics" and grants Illumina access to information on the number of runs a customer performs on each instrument, as well as the type of flow cell in use on each instrument. (PX7076 (Berry (Illumina) Dep. at 27-30, 39-40)).

Response to Finding No. 1039:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1036–38, which Respondents incorporate herein.

(5) [redacted]

(a) Technical Improvements/Updates – Process to Market

1040. Illumina continuously makes improvements and updates to the performance and feature set of its existing platforms:

> JUDGE CHAPPELL: Do you know if there are frequent – I'm not sure of the terminology – but software updates or something that would need to be added to make the machine perform properly?
>
> THE WITNESS [Nicole Berry, Illumina SVP and General Manager of the Americas Commercial Region]: Sure. So we are continuously seeking to improve performance and, you know, the feature set of our instruments and user friendliness as it relates to things like software. So, yes, software updates are something that we would typically provide and make part of our continuous sort of update and improvement process.
>
> Those oftentimes could be actually administered remotely. If the customer opted into sort of, you know, a remote connectivity, we could potentially just push an update to the customer's instrument without having to actually go into

> the lab and, you know, sit at it and put disks in a hard drive, you know, the old-fashioned way.

(Berry (Illumina) Tr. 675-76).

Response to Finding No. 1040:

Respondents have no specific response.

1041. Illumina's Ms. Berry testified about Illumina's "track record in terms of our technology innovation and new product introduction process," stating that Illumina has introduced new instrument platforms and new chemistries within instrument platforms "on a very regular basis." (Berry (Illumina) Tr. 714-15).

Response to Finding No. 1041:

Respondents have no specific response.

(b) [redacted]

1042. [redacted] (deSouza (Illumina) Tr. 2278 (*in camera*)).

Response to Finding No. 1042:

Respondents have no specific response.

1043. [redacted] (deSouza (Illumina) Tr. 2278 (*in camera*)).

Response to Finding No. 1043:

Respondents have no specific response.

(c) [redacted]

1044. [redacted] (Aravanis (Illumina) Tr. 1794 (*in camera*); deSouza (Illumina) Tr. 2271 (*in camera*); PX2169 (Illumina) at 022, 025 (Illumina Strategic Plan 2021-2025, Oct. 23, 2020) (*in camera*); PX5026 (Illumina) at 009 (FY20-25 Strategic Plan Initial Revenue Discussion, Jun. 4, 2020 (*in camera*))).

Response to Finding No. 1044:

Complaint Counsel did not present the exhibit PX5026 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 54), and

therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1045. [redacted] (RX1254 (Illumina) at 009 [redacted] (*in camera*)).

Response to Finding No. 1045:

Respondents have no specific response except to note that BGI's highest throughput instrument, the DNBSEQ-T10, has a higher reported throughput (20 Tb per day) than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell (up to 6 Tb/run), [redacted] (PFF ¶ 592; *compare* RX4004 (MGI Tech) at 1–2 *with* RX3357 (Illumina) at 7; [redacted]

Complaint Counsel did not present the exhibit RX1254 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (RC Exhibit Index at 64), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1046. [redacted] (Aravanis (Illumina) Tr. 1797; PX6056 (Illumina) at 017 (Illumina, Narrative Response to the Second Request, Mar. 1, 2021) (*in camera*) [redacted] ; RX1254 (Illumina) at 010 [redacted] (*in camera*) [redacted] ; PX2169 (Illumina) at 025 (Illumina Strategic Plan 2021-2025, Oct. 23, 2020) [redacted]

Response to Finding No. 1046:

Respondents have no specific response except to note that [redacted] (deSouza (Illumina) Tr. 2301 (in camera)). Furthermore, BGI's highest throughput instrument is claimed to have a higher throughput than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell (up to 6 Tb/run), [redacted]; Cote Tr. 3743–44; RX3869 (Cote Expert Report) ¶ 287.)

Respondents also note that BGI announced that its DNBSEQ-T10×4RS sequencers can generate $100 genomes, making it per Gb cost only $1.00. (PFF ¶ 594.2; RX4004 (MGI); *see also* deSouza (Illumina) Tr. 2331 ("Last year, BGI announced its hundred-dollar genome and has talked about its T-10 being ready to be deployed around the world").

Complaint Counsel did not present the exhibit RX1254 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (RC Exhibit Index at 64), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 1044–46 herein.

b) Illumina Consumables

1047. Illumina sells multiple versions of flow cells (SP, S1, S2, and S4): "the main difference between these flow cells is that they have different outputs," with the S4 providing the highest output of data in a single run of the sequencer. (PX7104 (Aravanis (Illumina) Dep. at 117-122)).

Response to Finding No. 1047:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1115 herein.

1048. The S4 flow cell for the NovaSeq can load 10 billion DNA library fragments, yielding 10 billion single-end reads (or 20 billion paired-end reads if each fragment is read both forward and backward). (PX0085 at 001, Illumina, NovaSeq 6000 System Specifications, https://www.illumina.com/systems/sequencing-platforms/novaseq/specifications.html (last visited Apr. 6, 2022)).

Response to Finding No. 1048:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1115 herein.

1049. The NovaSeq is capable of processing two flow cells simultaneously, and thus is capable of reading 20 billion library fragments, yielding 20 billion single-end reads (or 40 billion paired end reads), in a single 44-hour run of the instrument. (PX0085 at 001-002, Illumina, NovaSeq 6000 System Specifications, https://www.illumina.com/systems/sequencing-platforms/novaseq/specifications.html (last visited Apr. 6, 2022)).

Response to Finding No. 1049:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1115 herein.

1050. Many of Illumina's consumables are off-the-shelf products for use in a variety of sequencing applications. (Berry (Illumina) Tr. 827).

Response to Finding No. 1050:

Respondents have no specific response.

1051. Ms. Berry admitted at trial that Illumina also sells custom library prep kits to its NGS sequencing customers. (Berry (Illumina) Tr. at 928; PX7063 (Berry (Illumina) IHT at 33).

Response to Finding No. 1051:

Respondents have no specific response.

1052. In 2020, Illumina's consumable sales accounted for 71 percent of Illumina's total revenue. (PX0061 at 007 (Illumina 2020 Form 10-K)).

Response to Finding No. 1052:

Respondents have no specific response.

2. MCED Test Developers Testified That They Need and Rely on Illumina NGS as Their Only NGS Option

1053. Illumina sells NGS equipment to Grail, Exact, Natera, Guardant, Freenome, Singlera, and Foundation Medicine. (*See* Berry (Illumina) Tr. 650-51).

Response to Finding No. 1053:

Respondents have no specific response.

a) Grail

1054. Grail's Galleri test relies on Illumina's NGS instruments and reagents. (PX0043 at 011 (Grail 2020 Form S-1); PX7069 (Bishop (Grail) IHT at 208-10)).

Response to Finding No. 1054:

Complaint Counsel did not present the exhibit PX0043 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 1), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1055. [redacted] (Jamshidi (Grail) Tr. 4029 (*in camera*); (Bishop (Grail) Tr. 1336-37; 1381)).

Response to Finding No. 1055:

Respondents have no specific response except to note that [redacted]. (Jamshidi (GRAIL) Tr. 4029–30. (*in camera*))

1056. [redacted] (Jamshidi (Grail) Tr. 4029 (*in camera*)).

Response to Finding No. 1056:

The proposed finding is misleading to the extent that it suggests that [redacted] To the contrary, Mr. Bishop (GRAIL's CEO at the time of trial) testified that, while GRAIL uses the Illumina NovaSeq, the choice to use it relates mainly to the fact that it was used when Illumina founded GRAIL; GRAIL uses a variety of reagents and

consumables and not all of these inputs are from Illumina; and Illumina has no role in running the Galleri test. (PFF ¶ 1560; Bishop (GRAIL) Tr. 1381–82.) Respondents also incorporate their responses to CCFF ¶¶ 341, 928, 969 and 1293 herein.

Respondents also note that Dr. Aravanis identified a number of sequencing platforms on the market today and in development that would be viable platforms for an MCED test such as Galleri. (Aravanis (Illumina) Tr. 1848–63.) In particular, Dr. Aravanis testified that when he was at GRAIL, GRAIL considered using BGI, Thermo Fisher and Oxford Nanopore; GRAIL evaluated these platforms and determined that many of them would be a viable alternative. (PFF ¶ 1311; Aravanis (Illumina) Tr. 1863.) Dr. Aravanis also testified that "as a matter of good business, we did want to have contingencies. We – excuse me – evaluated the platforms that I mentioned and determined that many of them would be a viable alternative." (Aravanis (Illumina) Tr. 1863.)

1057. [redacted]
(Jamshidi (Grail) Tr. 4029 (*in camera*)).

Response to Finding No. 1057:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading for the reasons explained in Respondents' responses to CCFF ¶ 1056, which Respondents incorporate herein. Respondents also note that [redacted] (Jamshidi (GRAIL) Tr. 4029 (emphasis added) (*in camera*).)

1058. [redacted]

[redacted]

Response to Finding No. 1058:

Respondents have no specific response.

1059. [redacted] (PX4140 (Grail) at 007, 010 (R&D Portfolio Planning – Part B: Sequencing Technology) (*in camera*)).

Response to Finding No. 1059:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 969, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 341, 928, 1056 and 1293.

1060. [redacted] (Freidin (Grail) Tr. 3066 (*in camera*)).

Response to Finding No. 1060:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1056, which Respondents incorporate herein. Respondents also note that Dr. Aravanis identified a number of sequencing platforms on the market today and in development that would be viable platforms for an MCED test such as Galleri. (Aravanis (Illumina) Tr. 1848–63.) In particular, Dr. Aravanis testified that when he was at GRAIL, GRAIL considered using BGI, Thermo Fisher and Oxford Nanopore; GRAIL evaluated these platforms and determined that many of them would be a viable alternative. (PFF

¶ 1311; Aravanis (Illumina) Tr. 1863.) Dr. Aravanis also testified that "as a matter of good business, we did want to have contingencies. We – excuse me – evaluated the platforms that I mentioned and determined that many of them would be a viable alternative." (Aravanis (Illumina) Tr. 1863.)

1061. [redacted] (PX7066 (Freidin (Grail) IHT at 133) (*in camera*)).

Response to Finding No. 1061:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1062. [redacted] (PX7066 (Freidin (Grail) IHT at 126) (*in camera*)).

Response to Finding No. 1062:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the

reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1063. [redacted] (PX6049 (Grail) at 023 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 1063:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1064. [redacted] (PX4140 (Grail) at 003 (R&D Portfolio Planning – Part B: Sequencing Technology) (*in camera*)).

Response to Finding No. 1064:

Complaint Counsel did not present the exhibit PX4140 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 38), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1065. [redacted] (PX4140 (Grail) at 003, 009-010 (R&D Portfolio Planning – Part B: Sequencing Technology) (*in camera*)).

Response to Finding No. 1065:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 969, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 341, 928, 1056 and 1293.

1066. Grail has never physically performed technical evaluations of non-Illumina sequencers. (PX7103 (Jamshidi (Grail) Dep. at 33)).

Response to Finding No. 1066:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1067. In Grail's Form S-1 filed with the Securities and Exchange Commission, Grail detailed in the "Risk Factors" section, "[w]e rely on Illumina, Inc. as a sole supplier for our next-generation sequencers and associated reagents. . . ." (PX0043 at 011 (Grail 2020 Form S-1)).

Response to Finding No. 1067:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

Respondents also note that Dr. Aravanis identified a number of sequencing platforms on the market today and in development that would be viable platforms for an MCED test such as Galleri. (Aravanis (Illumina) Tr. 1848–63.) In particular, Dr. Aravanis testified that when he was at GRAIL, GRAIL considered using BGI, Thermo Fisher and Oxford Nanopore; GRAIL

evaluated these platforms and determined that many of them would be a viable alternative. (PFF ¶ 1311; Aravanis (Illumina) Tr. 1863.) Dr. Aravanis also testified that "as a matter of good business, we did want to have contingencies. We – excuse me – evaluated the platforms that I mentioned and determined that many of them would be a viable alternative." (Aravanis (Illumina) Tr. 1863.)

Complaint Counsel did not present the exhibit PX0043 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 1), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1068. In an internal email, Grail's Board Chair, Cathy Friedman, referred to "Illumina's position as a 'necessary tax' on the entire genomics industry . . . ." (PX4375 (Grail) at 001 (Email from G. Golumbeski, Grail, to C. Friedman, Grail, Oct. 10, 2018) (referring to a quote from Guardant's S-1, which states, "We rely on Illumina as the sole supplier of the sequencers, and as the sole provider of maintenance and repair services for these sequencers.")).

Response to Finding No. 1068:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

Complaint Counsel did not present the exhibit PX4375 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 46), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1069. [redacted] (PX7066 (Freidin (Grail) IHT at 212-13; PX6049 (Grail) at 023 (Grail, Narrative Response to Second Request, Mar. 1, 2021)) (*in camera*).

Response to Finding No. 1069:

The proposed finding is misleading to the extent that it suggests that [redacted] To the contrary, Mr. Bishop (GRAIL's CEO at the time of trial) testified that, while GRAIL uses the Illumina NovaSeq, the choice to use it relates mainly to the fact that it was used when Illumina founded GRAIL; GRAIL uses a variety of reagents and consumables and not all of these inputs are from Illumina; and Illumina has no role in running the Galleri test. (PFF ¶ 1560; Bishop (GRAIL) Tr. 1381–82.) The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1070. [redacted] (Freidin (Grail) Tr. 3065 (*in camera*)); *see* (Bishop (Grail) Tr. 1381) (explaining that Grail's earlier research was conducted on Illumina's NGS)).

Response to Finding No. 1070:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1071. [redacted]

[redacted] (Freidin (Grail) Tr. 3066 (*in camera*)).

Response to Finding No. 1071:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1072. Grail's former CEO Mr. Bishop testified at trial that Grail has stayed with Illumina NGS because it is the "technology we know and that works." (Bishop (Grail) Tr. 1381).

Response to Finding No. 1072:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1073. Galleri has been validated for use on only an Illumina NGS sequencer. (Bishop (Grail) Tr. 1337).

Response to Finding No. 1073:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1074. Grail does not have a validated alternative to Illumina's NGS platforms for Galleri. (Bishop (Grail) Tr. 1337-38).

Response to Finding No. 1074:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

Respondents also note that Dr. Aravanis identified a number of sequencing platforms on the market today and in development that would be viable platforms for an MCED test such as Galleri. (Aravanis (Illumina) Tr. 1848–63.) In particular, Dr. Aravanis testified that when he was at GRAIL, GRAIL considered using BGI, Thermo Fisher and Oxford Nanopore; GRAIL evaluated these platforms and determined that many of them would be a viable alternative. (PFF ¶ 1311; Aravanis (Illumina) Tr. 1863.) Dr. Aravanis also testified that "as a matter of good business, we did want to have contingencies. We – excuse me – evaluated the platforms that I mentioned and determined that many of them would be a viable alternative." (Aravanis (Illumina) Tr. 1863.)

The proposed finding is also misleading to the extent that it suggests that GRAIL could not switch to an alternative platform from the Illumina NovaSeq platform. Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, GRAIL would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like

Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch, and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (PFF ¶ 1312; Aravanis (Illumina) Tr. 1861–65.)

Respondents also note that GRAIL has used both Illumina's HiSeq platform and NovaSeq platform with S2 and S4 flow cells (Cote Tr. 3739–40; PX7104 (Aravanis (Illumina) Dep.) at 168–69; RX3773 (Supplement Information to Klein 2021) at 11, 13, 15–16), and [redacted]

1075. Grail's former CEO, Hans Bishop, testified that Illumina is Grail's "only [supplier of NGS instruments and reagents] that we validated with our technology, so if they're not available to us, we don't have a validated alternative." (PX7069 (Bishop (Grail) IHT at 210)).

Response to Finding No. 1075:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1074, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 1056 and 1060.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1076. Mr. Bishop explained that Illumina's status as Grail's only validated sequencer, "means that all the analytical validation and regulatory compliance documents that we've done that you're required to do to show our tests work is done, again, with all the different suppliers on that list, and if we had to substitute one, we would have to do that work again." (PX7069 (Bishop (Grail) IHT at 210)).

Response to Finding No. 1076:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1074, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1077. [redacted] (PX4085 (Grail) at 011 (Grail, "Critical Materials Landscape, Dec. 5, 2018) (*in camera*)).

Response to Finding No. 1077:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1078. [redacted] (PX6049 (Grail) at 023 (Grail, Narrative Response to Second Request) (*in camera*)).

Response to Finding No. 1078:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the

reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1079. [redacted] (Freidin (Grail) Tr. 3065-66 (*in camera*); PX7066 (Freidin (Grail) IHT at 133) (*in camera*)).

Response to Finding No. 1079:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

Respondents also note that Dr. Aravanis identified a number of sequencing platforms on the market today and in development that would be viable platforms for an MCED test such as Galleri. (Aravanis (Illumina) Tr. 1848–63.) In particular, Dr. Aravanis testified that when he was at GRAIL, GRAIL considered using BGI, Thermo Fisher and Oxford Nanopore; GRAIL evaluated these platforms and determined that many of them would be a viable alternative. (PFF ¶ 1311; Aravanis (Illumina) Tr. 1863.) Dr. Aravanis also testified that "as a matter of good business, we did want to have contingencies. We – excuse me – evaluated the platforms that I mentioned and determined that many of them would be a viable alternative." (Aravanis (Illumina) Tr. 1863.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1080. [redacted] (PX6049 (Grail) at 023 (Grail, Narrative Response to Second Request) (*in camera*)).

Response to Finding No. 1080:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

1081. [redacted] (PX6082 (Grail) at 009 (Grail Response to Request for Admission) (*in camera*)).

Response to Finding No. 1081:

The proposed finding is misleading to the extent that it suggests that [redacted] To the contrary, Mr. Bishop (GRAIL's CEO at the time of trial) testified that, while GRAIL uses the Illumina NovaSeq, the choice to use it relates mainly to the fact that it was used when Illumina founded GRAIL; GRAIL uses a variety of reagents and consumables and not all of these inputs are from Illumina; and Illumina has no role in running the Galleri test. (PFF ¶ 1560; Bishop (GRAIL) Tr. 1381–82.) The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

Complaint Counsel did not present the exhibit PX6082 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 56), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1082. [redacted] (PX7066 (Freidin (Grail) IHT at 212-13) (*in camera*)).

Response to Finding No. 1082:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

[redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1083. Grail's Form S-1—a filing submitted to the Securities and Exchange Commission—warns that a qualitative substitute for Illumina "may not be available at all":

> In the case of attempting to obtain an alternative supplier for Illumina, Streck, or Twist, replacement instruments and associated reagents, tubes, and panels that meet our quality control and performance requirements may not be available at all, or may not be available on reasonable terms or in a timely manner.

(PX4082 (Grail) at 034 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 1083:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1056 and 1060, which Respondents incorporate herein.

Respondents also note that Dr. Aravanis identified a number of sequencing platforms on the market today and in development that would be viable platforms for an MCED test such as Galleri. (Aravanis (Illumina) Tr. 1848–63.) In particular, Dr. Aravanis testified that when he was at GRAIL, GRAIL considered using BGI, Thermo Fisher and Oxford Nanopore; GRAIL evaluated these platforms and determined that many of them would be a viable alternative. (PFF ¶ 1311; Aravanis (Illumina) Tr. 1863.) Dr. Aravanis also testified that "as a matter of good business, we did want to have contingencies. We – excuse me – evaluated the platforms that I

mentioned and determined that many of them would be a viable alternative." (Aravanis (Illumina) Tr. 1863.)

b) [redacted]

1084. [redacted]

Response to Finding No. 1084:

The proposed finding is also incomplete and misleading with respect to Exact/Thrive's purported reliance on Illumina's NGS systems. [redacted]

Further, Dr. Vogelstein, the founder of Thrive stated, [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 341, 928, 1293 and 2833 herein.

The proposed finding is incomplete and misleading insofar as it suggests that Exact is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future for the reasons explained in Respondents' responses to CCFF ¶¶ 414, 418, 929, 1905, 1911, 1912, 1935 and 2023, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) In particular, Mr. Conroy was not involved in the development of CancerSEEK, Exact Sciences does not have any tests that use NGS technology and Exact Sciences was not an Illumina customer until its acquisition of Thrive. (*See* Conroy (Exact Sciences) Tr. 1542–43.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1085. [redacted]

Response to Finding No. 1085:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1084, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1086. [redacted]

Response to Finding No. 1086:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1084, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶ 1089 herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1087. [redacted]

Response to Finding No. 1087:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1084, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1088. [redacted]

Response to Finding No. 1088:

The proposed finding is not supported by the cited evidence. Dr. Lengauer testified that [redacted]. (Lengauer (Exact/Thrive) Tr. 185–186. (*in camera*)) The cited testimony also supports Respondents' proposition that switching between platforms will have no impact on any putative test development. [redacted] Further, neither Complaint Counsel nor Dr. Scott Morton offered any empirical assessment of the *incremental* cost of switching from an Illumina

platform to a third-party platform as compared to the switching cost that would be incurred by a test developer that seeks to upgrade to Illumina's next generation system. (PFF ¶ 948.2; RX3871 (Willig Expert Report) ¶¶ 46, 48.)

1089. [redacted]

Response to Finding No. 1089:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1084, which Respondents incorporate herein. [redacted]

[redacted]

[redacted]

1090. [redacted]

Response to Finding No. 1090:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1084 and 1089, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1091. [redacted]

Response to Finding No. 1091:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in

Respondents' responses to CCFF ¶ 929, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 341, 928 and 1293 herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

Respondents also note that Dr. Vogelstein, a founder of Thrive, stated, [redacted]

1092. [redacted]

Response to Finding No. 1092:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929 and 1091, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

Respondents also note that during the cited testimony, Dr. Lengauer confirmed that: [redacted]

[redacted]

[redacted]

[redacted]

[redacted]" (Lengauer (Exact/Thrive) Tr. 238–39.)

1093. [redacted]

Response to Finding No. 1093:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929 and 1091–92, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1094. [redacted]

Response to Finding No. 1094:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 904, 929 and 1091–92, which Respondents incorporate

herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1095. [redacted]

Response to Finding No. 1095:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929 and 1091–92, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

c) [redacted]

1096. [redacted]

Response to Finding No. 1096:

The proposed finding is misleading to the extent it suggests that Natera uses only Illumina platforms for its commercial testing. For example, Natera and BGI Genomics formed a partnership to commercialize Natera's Signatera NGS-based cancer monitoring test on BGI's DNBSEQ platform in China, and has now launched a version of the Signatera test in China "that incorporates MGI sequencing platforms." ([redacted]; RX3062 (BGI) at 1.)

1097. [redacted]

Response to Finding No. 1097:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 1293, which Respondents incorporate herein. . The proposed finding is also misleading to the extent it suggests that Natera uses only Illumina platforms for its tests. For example, Natera and BGI Genomics formed a partnership to commercialize Natera's Signatera NGS-based cancer monitoring test on BGI's DNBSEQ platform in China, and has now launched a version of the Signatera test in China "that incorporates MGI sequencing platforms." [redacted] RX3062 (BGI) at 1.)

1098. [redacted]

Response to Finding No. 1098:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 965 and 1293, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1099. [redacted]

Response to Finding No. 1099:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding is also inaccurate, incomplete and misleading, including because it appears to suggest that [redacted] which is not true. [redacted] (PX8532 (Natera) at

001 (*in camera*).) [redacted] (PX8532 (Natera) at 007 (*in camera*).) [redacted] As Complaint Counsel has contended in multiple of its proposed findings and in its post-trial brief, MRD tests are not the same as MCED tests. (*See* CCFF ¶¶ 155, 624–628, 731; CC Br. at 51–52, 54–55.)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to ¶¶ 928, 965, 1264 and 1293, which Respondents incorporate herein.

1100. [redacted]

Response to Finding No. 1100:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 965 and 1293, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1101. [redacted]

Response to Finding No. 1101:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 965, 1264 and 1293, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1102. [redacted]

Response to Finding No. 1102:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 965, 1264 and 1293, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1103. [redacted]

[redacted]

Response to Finding No. 1103:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 965, 1264 and 1293 herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1104. [redacted]

Response to Finding No. 1104:

The proposed finding is inaccurate, incomplete and misleading, including because it appears to suggest that [redacted] Respondents incorporate their responses to CCFF ¶¶ 904 and 913 herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1105. [redacted]

Response to Finding No. 1105:

The proposed finding is irrelevant because it does not relate to MCED tests. The proposed finding is also misleading to the extent it suggests that Natera uses only Illumina platforms for its tests. For example, Natera and BGI Genomics formed a partnership to commercialize Natera's Signatera NGS-based cancer monitoring test on BGI's DNBSEQ platform in China, and has now launched a version of the Signatera test in China "that incorporates MGI sequencing platforms." [redacted]; RX3062 (BGI) at 1.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

Complaint Counsel did not present the exhibit PX0155 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 2), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 1293, which Respondents incorporate herein.

d) Guardant

1106. [redacted] (Chudova (Guardant) Tr. 1196) (*in camera*)).

Response to Finding No. 1106:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 927, 928, 940, 960, 971 and 1293, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.) Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1107. [redacted] (Chudova (Guardant) Tr. 1300 (*in camera*)).

Response to Finding No. 1107:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 927, 928, 940, 960, 971 and 1293, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.) For example, [redacted]

[redacted] (PFF ¶ 780.5.) Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 43–47.)

1108. [redacted] (Chudova (Guardant) Tr. 1212 (*in camera*); *see also* PX7045 (Chudova (Guardant) IHT at 22-23; 39-40) (*in camera*)).

Response to Finding No. 1108:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 927, 928, 940, 960, 971 and 1293, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.) Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1109. [redacted] (Chudova (Guardant) Tr. 1207 (*in camera*)).

Response to Finding No. 1109:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 927, 928, 940, 960, 971 and 1293, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.) Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1110. [redacted] (Chudova (Guardant) Tr. 1208 (*in camera*)); PX7045 (Chudova (Guardant) IHT at 40-41) (*in camera*)).

Response to Finding No. 1110:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 927, 928, 940, 960, 971 and 1293, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.) Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1111. [redacted] (Chudova (Guardant) Tr. 1212 (*in camera*)).

Response to Finding No. 1111:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 927, 928, 940, 960, 971 and 1293, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.) Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1112. [redacted] (Chudova (Guardant) Tr. at 1212-13 (*in camera*)).

Response to Finding No. 1112:

Respondents have no specific response.

1113. [redacted] (Chudova (Guardant) Tr. 1212-13 (*in camera*)).

Response to Finding No. 1113:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1115 herein.

1114. [redacted] (Chudova (Guardant) Tr. 1213 (*in camera*)).

Response to Finding No. 1114:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1115 herein.

1115. [redacted] (Chudova (Guardant) Tr. 1213 (*in camera*)).

Response to Finding No. 1115:

The proposed finding is inaccurate, incomplete, and misleading to the extent it suggests that only Illumina's NovaSeq may be used for MCED test development. Respondents further note that BGI's highest throughput instrument has a higher reported throughput than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell (up to 6 Tb/run) (*see* PFF ¶ 592), and that BGI may enter the U.S. market by August 2022. (PFF ¶ 588.2.) BGI's second highest throughput instrument, the DNBSEQ-T7, is reported to simultaneously sequence 20 billion DNA fragments in less than 24 hours, which is less than the 45 hours required for the NovaSeq to sequence the same number of fragments. (PFF ¶ 590.) BGI's highest throughput instrument, the DNBSEQ-T10, is reported to simultaneously sequence 80 billion DNA fragments in less than 24 hours. (PFF ¶ 590.)

Respondents also note that many customers outside of China have successfully built a relationship with BGI, [redacted]

[redacted] (PX7053 (Fesko (Natera) IHT at 50–51); RX3473 (Natera) at 1; *see also* RX3062 (Natera); [redacted].

Oxford Nanopore's highest throughput instrument, the PromethION, has a throughput of 10 Tb in less than 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), which is equivalent to about 6.25 Tb in the 45 hours required for a NovaSeq run. (PFF ¶ 575.)

Similarly, [redacted]

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 927, 928, 940, 960, 971, 1275 and 1293, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.)

1116. [redacted] (Chudova (Guardant) Tr. 1224 (*in camera*)).

Response to Finding No. 1116:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1115, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms,

there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1117. [redacted] (Chudova (Guardant) Tr. 1224 (*in camera*)).

Response to Finding No. 1117:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1115, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1118. [redacted] (Chudova (Guardant) Tr. 1214 (*in camera*)).

Response to Finding No. 1118:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1115, which Respondents incorporate herein.

Specifically, for BGI's DNBSEQ-T7, [redacted]

[redacted]

For BGI's highest throughput instrument, the DNBSEQ-T10 that reportedly generates 20 Tb in 24 hours (PFF ¶ 590 (RX3465 (MGI Tech); RX4004 (MGI Tech))), [redacted]

Similarly, using Oxford Nanopore's PromethION with a reported throughput of 10 Tb in up to 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), [redacted]

1119. [redacted]
(Chudova (Guardant) Tr. 1214 (*in camera*)).

Response to Finding No. 1119:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1115 and 1118, which Respondents incorporate herein.

1120. [redacted] (Chudova (Guardant) Tr. 1215 (*in camera*)).

Response to Finding No. 1120:

The proposed finding is inaccurate and misleading because [redacted]

1121. [redacted] (Chudova (Guardant) Tr. 1215 (*in camera*)).

Response to Finding No. 1121:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1115 and 1118, which Respondents incorporate herein. (*See also* PFF ¶¶ 473–492.)

1122. [redacted] (Chudova (Guardant) Tr. 1215 (*in camera*)).

Response to Finding No. 1122:

The proposed finding is inaccurate and misleading because it does not address the discounts that Guardant receives under its supply agreement. [redacted]

Respondents also note that [redacted]

1123. [redacted] (Chudova (Guardant) Tr. 1215-16 (*in camera*)).

Response to Finding No. 1123:

The proposed finding is inaccurate and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1122, which Respondents incorporate herein.

1124. [redacted] (Chudova (Guardant) Tr. 1216 (*in camera*)).

Response to Finding No. 1124:

The proposed finding is inaccurate and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 1122, which Respondents incorporate herein.

1125. [redacted] (Chudova (Guardant) Tr. 1216 (*in camera*)).

Response to Finding No. 1125:

The proposed finding is inaccurate and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 1122, which Respondents incorporate herein.

1126. Guardant's Chudova testified, "Illumina sequencers . . . are the only game in town. There are other sequencers on the market, but ultimately they don't perform similarly. And [Guardant's cancer screening] test has been optimized to work in an Illumina environment." (PX7105 (Chudova (Guardant) Dep. at 239-40)).

Response to Finding No. 1126:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1115 and 1118, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1127. Guardant's Chudova explained that [redacted] (PX7045 (Chudova (Guardant) IHT at 40-41) (*in camera*))

Response to Finding No. 1127:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1115 and 1118, which Respondents incorporate herein. The proposed finding is also incomplete and misleading to the extent that it suggests that [redacted] To the contrary, as described in Respondents responses to CCFF ¶ 980, incorporated herein, putative MCED test developers are also pursuing test development using the NextSeq and MiSeq instruments. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1128. Dr. Chudova testified that Next Generation Sequencing is a requirement for Guardant's multicancer early detection test because it "need[s] parallel digital readout of every fragment in a highly, highly multiplex format, which means you need to run and read millions of molecules at a time or hundreds of millions of molecules at a time, and that is kind of the definition of what next-generation sequencing allows you to do." (Chudova (Guardant) Tr. 1177).

Response to Finding No. 1128:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1115 and 1118, which Respondents incorporate herein.

The proposed finding is also inaccurate, incomplete and misleading, including because it appears to suggest that an NGS platform is required for Guardant's putative development of cancer screening tests. Respondents incorporate their responses to CCFF ¶ 344 herein.

1129. Referring to Illumina, Guardant's Getty explained, [redacted] (Getty (Guardant) Tr. 2546 (*in camera*)).

Response to Finding No. 1129:

The proposed finding is irrelevant because it is not related to MCED tests.

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1115, 1118 and 1128, which Respondents incorporate herein.

The proposed finding is also inaccurate and misleading to the extent that it suggests that [redacted]

[redacted] (Chudova (Guardant) Tr. 1299–1301.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

To the extent that the proposed finding suggests that it is not viable to switch between an Illumina platform and another sequencing platform, this is also inaccurate and misleading. Respondents also note that Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, the test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (PFF ¶ 1312; Aravanis (Illumina) Tr. 1861–65.) Respondents also incorporate their responses to CCFF ¶¶ 1074, 1088, 1115 and 1118 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1130. "Guardant wouldn't exist without access to Illumina's products." (Getty (Guardant) Tr. 2510).

Response to Finding No. 1130:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–28, 1115, 1118 and 1129, which Respondents incorporate herein.

Respondents also note that Guardant (whose founders previously were employed by Illumina) stole a significant amount of confidential technical information and materials from Illumina relating to cancer testing at Guardant's founding. *See*, *e.g.*, *Illumina, Inc. v. Guardant Health, Inc. et al.*, Civ. No. 1:22-cv-00334-VAC, D.I. 1, at 6–7 (D. Del. Mar. 17, 2022).

1131. Guardant cannot operate its assays without Illumina, its sole supplier for NGS. (Getty (Guardant) Tr. 2510).

Response to Finding No. 1131:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–928, 1115, 1118 and 1129, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1132. Guardant has no opportunity to move away from Illumina as its NGS provider. (Getty (Guardant) Tr. 2510).

Response to Finding No. 1132:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–928, 1115, 1118 and 1129, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1133. Guardant could not switch to another NGS system. (Getty (Guardant) Tr. 2510).

Response to Finding No. 1133:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–928, 1115, 1118 and 1129, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1134. Guardant's Mr. Getty testified that nothing is comparable to Illumina's NGS platforms. (Getty (Guardant) Tr. 2510).

Response to Finding No. 1134:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–928, 1115, 1118 and 1129, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1135. For both PacBio and Oxford Nanopore the "throughput is substantially less than what [Guardant] would require even for the smallest Guardant360 test." (PX7045 (Chudova (Guardant) IHT at 45; *see* PX7045 (Chudova (Guardant) IHT at 45) (*in camera*) [redacted]

Response to Finding No. 1135:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that PacBio's and Oxford Nanopore's respective systems are not suitable for use with oncology tests. Respondents also incorporate their responses to CCFF ¶ 904 herein.

The proposed finding is also irrelevant because it relates to the requirements for the Guardant360 test, which is an 80-gene panel therapy selection test, and does not relate to an MCED test. (PFF ¶¶ 491–92; (RX3219 (Guardant)*;* RX3295 (Guardant); (RX3869 (Cote Expert Report) ¶¶ 214–15.))

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1136. "[T]here's a symbiotic relationship between Guardant Health and our activity and Illumina's activities in terms of making sure we're maximizing the value of the products they have delivered to us." (Getty (Guardant) Tr. 2509).

Response to Finding No. 1136:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–928, 1115, 1118 and 1129, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1137. Guardant's SVP of Commercial, Cancer Screening Core, William Getty, testified, "[w]ithout [Illumina], Guardant doesn't exist." (PX7040 (Getty (Guardant) IHT at 190)).

Response to Finding No. 1137:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–928, 1115, 1118 and 1129, which Respondents incorporate herein.

Respondents also note that Guardant (whose founders previously were employed by Illumina) stole a significant amount of confidential technical information and materials from Illumina relating to cancer testing at Guardant's founding. *See*, *e.g.*, *Illumina, Inc. v. Guardant Health, Inc. et al.*, Civ. No. 1:22-cv-00334-VAC, D.I. 1, at 6–7 (D. Del. Mar. 17, 2022).

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1138. In Guardant's 2020 Form 10-K filed with the Securities and Exchange Commission, Guardant explained,

> We rely on Illumina as the sole supplier of . . . sequencers and as the sole provider of maintenance and repair services for these sequencers. Any disruption in operations of Illumina . . . or termination or suspension of our relationships with them could materially and adversely impact our supply chain and laboratory operations . . . and thus our ability to conduct our business and generate revenue.

(PX0153 at 047 (Guardant, 2020 Form 10-K, Feb. 25, 2021)).

Response to Finding No. 1138:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1115, 1118, 1129 and 1139, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1139. Guardant has "[v]ery little" leverage in negotiating with Illumina. (PX7105 (Getty (Guardant) Dep. at 66)).

Response to Finding No. 1139:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1115, 1118 and 1129, which Respondents incorporate herein. Further, the actual circumstances of Guardant's negotiations with Illumina

are starkly different from Mr. Getty's self-serving explanation of Guardant's relationship with Illumina purportedly described in this proposed finding, therefore, the proposed finding is contradicted by the weight of the evidence.

Contrary to Mr. Getty's testimony, [redacted] (*See* Berry (Illumina) Tr. 938–43.) [redacted]. (Berry (Illumina) Tr. 938.) [redacted] This would not have been the case if Guardant had very little leverage in negotiating with Illumina.

[redacted]

[redacted] Guardant attached the amended supply agreement to its 2020 10–K because the amended agreement represented a material and important contract for Guardant. (PFF ¶ 1075.4; Getty (Guardant) Tr. 2668–69; PX0060 (Guardant) at 151.)

Finally, the public availability of the Open Offer increases Guardant's (and other customers') negotiating power, which, as outlined above, was already significant. As economist and the President and Senior Managing Director of FTI Consulting's Center for Healthcare Economics and Policy, Margaret Guerin-Calvert explained, [redacted]

[redacted] (RX3865 (Guerin-Calvert Expert Report) ¶ 44.)

e) Freenome

1140. Freenome CEO, Michael Nolan, testified that Illumina's sequencing technology is "really foundational" and a "pillar" in Freenome's product development efforts. (Nolan (Freenome) Tr. 2714).

Response to Finding No. 1140:

The proposed finding is irrelevant because it does not relate to MCED tests.

The proposed finding is also contradicted by the weight of the evidence. For example, [redacted] BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted] RX3869 (Cote Expert Report) ¶ 287; [redacted].) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) Respondents also incorporate their responses to CCFF ¶¶ 928, 945 and 1293 herein.

The proposed finding is also inaccurate and misleading to the extent it suggests that [redacted]

[redacted] (PFF ¶¶ 459-70.)

Mr. Otte, Freenome's former CEO, also testified that [redacted]

Accordingly, there is no indication based on Freenome's work to date that [redacted] (PFF ¶ 458 ([redacted]; RX3869 (Cote Expert Report) ¶ 193).)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 928, 945, 971, 1115, 1118 and 1293 which Respondents incorporate herein.

1141. Freenome uses Illumina's NovaSeq sequencer for its multiomics platform. (Nolan (Freenome) Tr. 2714-15).

Response to Finding No. 1141:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

The proposed finding is vague and ambiguous because it refers to a undefined "multiomics platform". The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1142. [redacted] PX7050 (Nolan (Freenome) IHT at 89-90 (*in camera*)); PX7055 (Otte (Freenome) IHT at 94-95 (*in camera*))).

Response to Finding No. 1142:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is vague and ambiguous because it refers to [redacted] Freenome is a pre-commercial company that does not have any [redacted]. (Nolan (Freenome) Tr. 2724.) The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1143. [redacted] (PX7094 (Nolan (Freenome) Dep. at 142-44) (*in camera*)).

Response to Finding No. 1143:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1144. Mr. Nolan testified that Freenome uses NGS in its multiomics platform as opposed to other technologies because it "gives [Freenome] great stability to detect the cancer in its – in the early stages. It's a really foundational or – or pillar in overall product development efforts. . . . [I]t is really I would say the anchor tenant." (Nolan (Freenome) Tr. 2713-14).

Response to Finding No. 1144:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS

platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.The proposed finding is also misleading to the extent that it suggests that only NGS is suitable for use in developing putative MCED tests. Respondents also incorporate their responses to CCFF ¶ 344 herein.

1145. Mr. Nolan testified that "anchor tenant" means "really foundational… [Freenome] get[s] a majority of the signal from next-generation sequencing [which is then] complemented by some of the other omics to be able to get better performance than [Freenome] would without it." (Nolan (Freenome) Tr. 2714).

Response to Finding No. 1145:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1144, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1146. In other words, "anchor tenant" is like the Macy's in a shopping mall; it's the "headliner, the major part of the model is next-generation sequencing." (Nolan (Freenome) Tr. 2714).

Response to Finding No. 1146:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in

Respondents' responses to CCFF ¶¶ 945 and 1144, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1147. Freenome purchases NGS consumables from Illumina. (Nolan (Freenome) Tr. 2718).

Response to Finding No. 1147:

Respondents have no specific response.

1148. Freenome purchases NGS sequencer servicing from Illumina. (Nolan (Freenome) Tr. 2718).

Response to Finding No. 1148:

Respondents have no specific response.

1149. Mr. Nolan further explained, [redacted] (Nolan (Freenome) Tr. 2759-60 (*in camera*)).

Response to Finding No. 1149:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1150. In discussing potential alternatives to Illumina's NGS sequencers for Freenome's cancer screening test, Mr. Nolan testified, [redacted]

[redacted] (PX7094 (Nolan (Freenome) Dep. at 221-223) (*in camera*)).

Response to Finding No. 1150:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1151. [redacted] (PX7094 (Nolan (Freenome) Dep. at 142-44) (*in camera*); PX7050 (Nolan (Freenome) IHT at 113) (*in camera*) [redacted]).

Response to Finding No. 1151:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in

development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1152. In discussing the requirements to run Freenome's cancer screening test, Mr. Nolan indicated that Freenome [redacted] (PX7094 (Nolan (Freenome) Dep. at 221-223) (*in camera*)).

Response to Finding No. 1152:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1153. [redacted] (PX8378 (Freenome) at 002 (Email from M. Nolan, Freenome, to A. Welland, Illumina, Feb. 26, 2021) (*in camera*)).

Response to Finding No. 1153:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in

development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1154. Freenome's Nolan listed reasons why alternatives to Illumina's sequencers were not viable options to run Freenome's cancer screening test: [redacted] (PX7094 (Nolan (Freenome) Dep. at 222-223) (*in camera*)).

Response to Finding No. 1154:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding is also inaccurate to the extent it suggests that MCED tests require sequencing at "depth". For example, GRAIL's Galleri test does not use "ultra-deep sequencing", but relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 981, 1289.)

1155. Freenome CEO, Michael Nolan, testified at trial that Freenome cannot switch away from Illumina's NGS platform because Freenome "just [does not] have . . . a suitable substitute to meet [Freenome's] highest-level requirements." (Nolan (Freenome) Tr. 2729).

Response to Finding No. 1155:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in

Respondents' responses to CCFF ¶¶ 945 and 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1156. In discussing the viability of using alternatives to Illumina's NGS platform, Freenome's Otte testified, [redacted] (PX7055 (Otte (Freenome) IHT at 69) (*in camera*)).

Response to Finding No. 1156:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1157. Freenome's former CEO Gabe Otte testified that [redacted] (PX7055 (Otte (Freenome) IHT at 64-66) (*in camera*)).

Response to Finding No. 1157:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1140, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1158. [redacted] (PX7121 (Otte (Freenome) Dep. at 48-50) (*in camera*) [redacted]

Response to Finding No. 1158:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1140 and 1154, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1159. [redacted] (PX7055 (Otte (Freenome) IHT at 17-18) (*in camera*)).

Response to Finding No. 1159:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1140 which Respondents incorporate herein. The proposed finding is also incomplete and misleading to the extent that it suggests that only the NovaSeq may be used for MCED test development. To the contrary, as described in Respondents responses to CCFF ¶ 980, incorporated herein, putative MCED test developers are also pursuing test development using the NextSeq and MiSeq instruments.

1160. Mr. Otte testified that [redacted] (PX7055 (Otte (Freenome) IHT at 72) (*in camera*)).

Response to Finding No. 1160:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 945 which Respondents incorporate herein. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that Oxford Nanopore's systems are not suitable for use with oncology tests. Respondents also incorporate their responses to CCFF ¶¶ 901, 904 and 1140 herein.

1161. [redacted] (PX7055 (Otte (Freenome) IHT at 73-74) (*in camera*)).

Response to Finding No. 1161:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1144 which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1162. [redacted] (Nolan (Freenome) Tr. 2756-57 (*in camera*)).

Response to Finding No. 1162:

Respondents have no specific response.

1163. Freenome CEO, Michael Nolan, testified at trial that [redacted] (Nolan (Freenome) Tr. 2759 (*in camera*)).

Response to Finding No. 1163:

Respondents have no specific response.

1164. At trial, Mr. Nolan, explained that Freenome [redacted] (Nolan (Freenome) Tr. 2759-60 (*in camera*)).

Response to Finding No. 1164:

Respondents have no specific response.

f) Singlera

1165. Dr. Gao testified at trial that Singlera does not have another viable alternative to Illumina's NGS sequencers for the PanSeer test. (Gao (Singlera) Tr. 2901).

Response to Finding No. 1165:

The proposed finding is incomplete and misleading, including because it appears to suggest that Illumina's NGS platform is required for Singlera's development of its PanSeer test. Respondents incorporate their responses to CCFF ¶¶ 341, 928, 940, 981–82, 971, 1011, 1115, 1118 and 1293 herein.

The proposed finding is inaccurate, incomplete and misleading. Dr. Gao of Singlera testified that the PanSeer test only needs over 5 million reads (Gao (Singlera) Tr. at 2893) and can be run using alternative NGS instruments such as Illumina's MiSeq and Thermo Fisher equipment. (*See* Gao (Singlera) Tr. at 2928–31; PFF ¶¶ 780–780.6.) [redacted] (PFF ¶¶ 778–778.2; 2085.) Thermo Fisher's Ion Torrent sequencers are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) [redacted]

[redacted]

1166. Singlera's PanSeer test relies on Illumina's NextSeqDx NGS platform. (Gao (Singlera) Tr. 2875; PX7102 (Gao (Singlera) Dep. at 26)).

Response to Finding No. 1166:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1165 which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1167. Singlera also uses Illumina's MiSeq sequencer as part of its efforts to develop the PanSeer test. (Gao (Singlera) Tr. 2929).

Response to Finding No. 1167:

Respondents have no specific response.

1168. Singlera's Co-founder, Gary Gao, testified at trial that Singlera's use of Illumina's sequencer is "an essential step" in the PanSeer test. (Gao (Singlera) Tr. 2892-93).

Response to Finding No. 1168:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1165 which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms,

there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1169. Dr. Gao testified that Singlera uses Illumina's sequencer because "[i]t's very cost-effective, first, and very eas[y to] use, and they are very reliable, and it's performing in the market." (Gao (Singlera) Tr. 2894).

Response to Finding No. 1169:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1165 which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1170. Dr. Gao explained that Singlera runs its cancer screening test on Illumina's NGS sequencing platform, in part, because it is "easy to use, very accurate, easy to maintain, and cost effective." (PX7102 (Gao (Singlera) Dep. at 27-28)).

Response to Finding No. 1170:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1165 which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development.

(PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1171. Dr. Gao testified that Singlera runs the PanSeer test on Illumina's NextSeq Dx sequencer "[b]ecause NextSeq is FDA-cleared, and we have to use FDA-cleared device for FDA trial." (Gao (Singlera) Tr. 2930-31).

Response to Finding No. 1171:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1011, 1014 and 1165 which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Dr. Gao does not have the required expertise as an expert on FDA regulations. (PX7102 (Gao (Singlera) Dep. at 41–42.)

An NGS sequencer with FDA clearance is not required for development of a cancer screening test. GRAIL has used both Illumina's HiSeq platform and NovaSeq platform with S2 and S4 flow cells (Cote Tr. 3739–40; PX7104 (Aravanis (Illumina) Dep.) at 168–69; RX3773 (Supplement Information to Klein 2021) at 11, 13, 15–16), and [redacted] (PX7103 (Jamshidi (GRAIL) Dep. at 189–90.)

1172. Singlera's Dr. Gao explained that Singlera chose to use Illumina's NextSeqDx NGS sequencer to develop its cancer screening test because "the NextSeqDx is FDA cleared, and it's very cost economic" in terms of the number of reads per run. (PX7102 (Gao (Singlera) Dep. at 27)).

Response to Finding No. 1172:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1171 which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1173. Singlera's Dr. Gao testified that, "Illumina has the highest throughput[.]" (PX7042 (Gao (Singlera) IHT at 43)).

Response to Finding No. 1173:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1165 which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is inaccurate, misleading, and based on testimony for which the witness lacks personal knowledge or foundation. BGI's DNBSEQT10×4RS / DNBSEQ-Tx and Oxford Nanopore's PromethION NGS sequencers both have reported higher throughputs than Illumina's NGS sequencers. (*Compare* PFF ¶¶ 575, 590 and 599.)

1174. Dr. Gao described Singlera's relationship with Illumina as like being a "prisoner of war." (PX7042 (Gao (Singlera) IHT at 88)).

Response to Finding No. 1174:

The proposed finding is incomplete and misleading, and contradicted by the weight of the evidence. In the portion of his IH cited here, Dr. Gao testified to facts that indicate that his characterization of Singlera's relationship with Illumina has no basis. For example, Dr. Gao testified that once Singlera seriously began pursuing a supply agreement with Illumina, Illumina

"quickly turn[ed] around a draft proposal of [a] supply agreement", which was a "standard boilerplate" agreement. (PX7042 (Gao (Singlera) IHT at 74–75).) Dr. Gao testified that Singlera was "happy" to receive a standardized agreement because Singlera's "only request [was] to have a standard supply agreement". (PX7042 (Gao (Singlera) IHT at 75).) Finally, Dr. Gao admitted that Illumina "provided us with [a draft supply agreement], expect[ed] us to negotiate I'm sure, but we never went back" to negotiate with Illumina. (PX7042 (Gao (Singlera) IHT at 87).) Thus, Dr. Gao's testimony shows that, after Singlera proposed entering a supply agreement with Illumina, Illumina sent a boilerplate agreement, which was exactly what Singlera wanted, and yet Singlera refused to even engage with Illumina on the draft agreement.

Further, even though Singlera stopped engaging with Illumina on a supply agreement, Illumina extended the Open Offer to Singlera (as well as all U.S. oncology customers). (*See* PX0064 (Illumina) at 1, 3.) The Open Offer specifically addresses the concerns identified in the portion of Dr. Gao's IH in which he discussed Singlera's desire for a supply agreement. In his IH, Dr. Gao identified two primary reasons why Singlera sought a supply agreement with Illumina: (1) to ensure that "Illumina will [not] discontinue the product line" that Singlera uses and (2) to ensure that Illumina does not increase the costs of sequencing equipment for Singlera. (PX7042 (Gao (Singlera) IHT at 71–72).) The Open Offer addresses each of these concerns. *First*, Illumina is prohibited from discontinuing products that any oncology customer has purchased in the prior year. (PFF ¶ 1011; [redacted] Berry (Illumina) Tr. 883; PX0064 (Illumina) at 6; [redacted].) *Second*, the Open Offer expressly forbids Illumina from raising prices over the entire 12-year term and affirmatively requires Illumina to lower the price of sequencing by at least 43% by 2025. (PFF ¶ ¶ 1021 –23; [redacted]; Berry (Illumina) Tr. 899, 901 –04; Conroy

(Exact/Thrive) Tr. 1731 –32; deSouza (Illumina) Tr. 2403; PX0064 (Illumina) at 7; [redacted] [redacted] Even though Dr. Gao claimed these concerns drove Singlera's requests for a supply agreement, Dr. Gao testified at trial that he was "*not even aware of the first open – open offer* until [his] lawyer told [him]", let alone the amended version, which provides even greater protections. (Gao (Singlera) Tr. 2952 (emphasis added).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1175. Dr. Gao testified that Oxford Nanopore's long-read sequencer is not a viable option for Singlera's Panseer test. (PX7042 (Gao (Singlera) IHT at 66)).

Response to Finding No. 1175:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904 which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶ 1165 herein.

1176. Singlera plans to run the PanSeer test on Illumina's NovaSeq sequencer when the sequencer obtains FDA clearance. (Gao (Singlera) Tr. 2930).

Response to Finding No. 1176:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1171 herein. Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

g) Helio

1177. Dr. Chahine testified at trial that the Illumina platform is "by far [ ] the preferred one that's used even at third-party shops" and the "leading one for many different [ ] reasons." (Chahine (Helio) Tr. 1044).

Response to Finding No. 1177:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 1293, which Respondents incorporate herein. Contrary to the proposed finding, [redacted]

[redacted]; RX3869 (Cote Expert Report) ¶ 287; [redacted].) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) Respondents also incorporate their responses to CCFF ¶ 1293 herein.

The proposed finding is also based entirely on inadmissible hearsay testimony because Dr. Chahine refers to "the preferred one that's used even at third-party shops", which is not based on Dr. Chahine's own experience, therefore, it should be accorded little weight. The proposed finding is also irrelevant because it doesn't appear to relate to MCED tests.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Specifically, Dr. Chahine testified that [redacted] (Chahine (Helio) Tr. 1090, 1092–93.) Further, Dr. Chahine testified that [redacted]

[redacted]

Accordingly, there is no indication based on Helio Health's work to date that [redacted] (PFF ¶ 498.) Respondents also incorporate their responses to CCFF ¶ 454 herein.

1178. [redacted] (Chahine (Helio) Tr. 1114-15 (*in camera*)).

Response to Finding No. 1178:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1177, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 940, 971, 980, 1115 and 1118 herein.

Furthermore, [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶¶ 439–446, 696, 698, 801 and 2353–2400 herein.

1179. Dr. Chahine testified at trial that Illumina is the preferred NGS platform because "from a business standpoint [ ] it is just considered the top technology with respect to its ability to sequence [ ] accurately . . . at larger scales" that create "some [very useful] economies of scale." (Chahine (Helio) Tr. 1044).

Response to Finding No. 1179:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1178, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1180. Dr. Chahine testified at trial that Illumina's suite of NGS sequencers is "designed to sort of scale with the company" and "almost everyone would likely start off with a smaller machine for some of the research but then eventually[,] if it was successful and there was enough volume, would move up to the NovaSeq." (Chahine (Helio) Tr. 1022).

Response to Finding No. 1180:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1178, which Respondents incorporate herein. Additionally, contrary to the cited testimony, putative MCED test developers *do* use Illumina's lower throughput NextSeq and MiSeq instruments. (*See* RRFF ¶ 980).

1181. In comparing Illumina's MiSeq to its NovaSeq sequencer, Dr. Chahine testified at trial that "quite simply on a NovaSeq you would be able to in a single run test the DNA of many more individuals than you would for a MiSeq [ ] at least more robustly." (Chahine (Helio) Tr. 1022). He elaborated that "[i]t's almost like using a more powerful computer for computing." (Chahine (Helio) Tr. 1022).

Response to Finding No. 1181:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 980 herein.

1182. Helio currently uses Illumina's MiSeq sequencer for its Helio Liver test. (Chahine (Helio) Tr. 1010-12). Dr. Chahine testified Helio uses the MiSeq because "a smaller machine is more efficient" as a "company in its early stage" prior to "ramp[ing] up." (Chahine (Helio) Tr. 1012).

Response to Finding No. 1182:

Respondents have no specific response.

1183. Dr. Chahine testified at trial that "almost everyone would likely start off with a smaller machine for some of the research but then eventually, you know, if it was successful and there was enough volume, would move up to a NovaSeq." (Chahine (Helio) Tr. 1022.)

Response to Finding No. 1183:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1178, which Respondents incorporate herein. Additionally, contrary to the cited testimony, putative MCED test developers *do* use Illumina's lower throughput NextSeq and MiSeq instruments. (*See* RRFF ¶ 980).

1184. Dr. Chahine testified at trial that Illumina's NovaSeq sequencer "provides economies of scale that are advantageous" because of its capacity to sequence more samples at once. (Chahine (Helio) Tr. 1022-23).

Response to Finding No. 1184:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1178, which Respondents incorporate herein. Furthermore, [redacted] (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Additionally, contrary to the cited testimony, putative MCED test developers *do* use Illumina's lower throughput NextSeq and MiSeq instruments. (*See* RRFF ¶ 980).

1185. Helio has not seriously considered switching from Illumina's NGS platform to an NGS platform sold by another vendor. (Chahine (Helio) Tr. 1043-44).

Response to Finding No. 1185:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1178, which Respondents incorporate herein. Contrary to the proposed finding, [redacted]

Respondents also note that Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, GRAIL would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (PFF ¶ 1312; Aravanis (Illumina) Tr. 1861–65.) Respondents also incorporate their responses to CCFF ¶¶ 1074, 1088, 1115 and 1118 herein.

1186. Helio also purchases NGS sequencers and reagents from Illumina. (Chahine (Helio) Tr. 1024).

Response to Finding No. 1186:

Respondents have no specific response.

1187. Helio cannot buy reagents from another company for use on Illumina's NGS sequencers. (Chahine (Helio) Tr. 1024).

Response to Finding No. 1187:

Respondents have no specific response.

1188. Dr. Chahine testified at trial that Illumina's NGS sequencers and its reagents are a "razor-razorblade model" and the Illumina reagents that Helio purchases "are specific to Illumina." (Chahine (Helio) Tr. 1024).

Response to Finding No. 1188:

Respondents have no specific response.

1189. Dr. Chahine testified that Helio has "looked at different providers. I don't want to say technically we couldn't, but the truth is that the entire category uses Illumina. We're very familiar with Illumina. … The cost is much lower. … [T]here are just a number of … technical advantages and just performance." (PX7077 (Chahine (Helio) Dep. at 26)).

Response to Finding No. 1189:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1178, which Respondents incorporate herein. Contrary to the proposed finding, [redacted] The proposed finding also relies on inadmissible hearsay to the extent it refers to "the entire category [using] Illumina" and should be accorded little weight.

h) [redacted]

1190. [redacted]

Response to Finding No. 1190:

The proposed finding is inaccurate and misleading to the extent it suggests that [redacted]

The proposed finding is also inaccurate, incomplete and misleading, including because it appears to suggest that [redacted] (*See* PFF ¶¶ 444–455, 705, 734 (Fiedler (FMI) Tr. 4476).)

Dr. Fielder testified that [redacted]

1191. [redacted]

Response to Finding No. 1191:

The proposed finding is irrelevant because it does not relate to MCED tests.

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 928, 940, 971, 980, 1115 1118 and 1293 which Respondents incorporate herein.

Respondents note that Dr. Fiedler, FMI's current COO, testified that since 2019, FMI has purchased well over a hundred million, probably $140 million, in NGS products from Illumina; and during the time that FMI has been an Illumina customer FMI has had no issues or problems with Illumina servicing the Illumina instruments that FMI uses. (Fiedler (FMI) Tr. 4470.) Dr. Fiedler has never known Illumina to delay providing services or replacement parts to FMI; Illumina has acted in good faith with respect to its obligations under the 2013 supply agreement; Illumina has never "monkeyed with supply"; Illumina has never interrupted supply to FMI because it claimed FMI had infringed on Illumina's intellectual property; Illumina has never reneged on a commitment it made to FMI; FMI is a satisfied customer and FMI trusts Illumina to abide by its commitments. (Fiedler (FMI) Tr. 4471–72.)

[redacted]

[redacted]

1192. [redacted]

Response to Finding No. 1192:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190–91, which Respondents incorporate herein. [redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1193. [redacted]

Response to Finding No. 1193:

The proposed finding is irrelevant because it does not relate to MCED tests.

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190–91, which Respondents incorporate herein. [redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1194. [redacted]

Response to Finding No. 1194:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is irrelevant because it does not relate to MCED tests. [redacted]

[redacted]

Dr. Fiedler also testified that: [redacted] (Fiedler (FMI) Tr. 4471–72.) Further, Respondents incorporate their responses to CCFF ¶ 904 and 1190–91 herein, and refer to Section IV of PFF (PFF ¶¶ 574–678.5), which sets out the extensive upstream competition facing Illumina.

1195. [redacted]

Response to Finding No. 1195:

The proposed finding is irrelevant because it does not relate to MCED tests. Respondents also incorporate their responses to CCFF ¶¶ 1190–91 herein.

1196. [redacted]

Response to Finding No. 1196:

The proposed finding is irrelevant because it does not relate to MCED tests. The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190–91, which Respondents incorporate herein. [redacted]

Respondents also note that [redacted] (Fiedler (FMI) Tr. 4497–98.)

1197. [redacted]

Response to Finding No. 1197:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1196, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1198. [redacted]

Response to Finding No. 1198:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1196, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1199. [redacted]

Response to Finding No. 1199:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1196, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1200. [redacted]

Response to Finding No. 1200:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1196, which Respondents incorporate herein. [redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

3. Illumina Understands That Its NGS Platforms Far Surpass Other Platforms on High Throughput, High Accuracy, and Low Cost

1201. When speaking to investors about the Grail acquisition announcement, Mr. deSouza said, "This [acquisition] is about accessing the largest opportunity in clinical genomics… we have enabled this market, and now we are moving more firmly into the application layer." (PX2575 (Illumina) at 019 (Illumina, Investor Call Transcript, Sept. 21, 2020)).

Response to Finding No. 1201:

Respondents have no specific response.

1202. [redacted] (PX6069 (Illumina) at 15-16 (RFA No. 17) (Illumina Responses & Objections to FTC Requests for Admissions)).

Response to Finding No. 1202:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1027, which Respondents incorporate herein.

Complaint Counsel did not present the exhibit PX6069 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 56), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1203. [redacted] (PX6069 (Illumina) at 16 (RFA No. 18) (Illumina Responses & Objections to FTC Requests for Admissions (*in camera*))).

Response to Finding No. 1203:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1027, which Respondents incorporate herein.

Counsel did not present the exhibit PX6069 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 56), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1204. Respondents' expert, Dr. Carlton notes in his report, [redacted] (RX3864 (Carlton Rebuttal Report) ¶ 24 (*in camera*) (citing PX6090 (Scott Morton Report) ¶ 152 (*in camera*)).

Response to Finding No. 1204:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 940, 971, 980, 1115, 1118 and 1293, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1205. [redacted] (PX2169 (Illumina) at 016 (Illumina, Strategic Plan 2021-2025, Oct. 23, 2020 (*in camera*))).

[redacted]

Response to Finding No. 1205:

Respondents have no specific response except to note that Illumina's ordinary course documents, including the cited source, refers to [redacted] Dr. Aravanis also testified that the Illumina patents that are currently blocking BGI from entering the U.S. will expire no later than 2023; Illumina projects BGI will enter the U.S. no later than 2023. (PFF ¶ 1306 (Aravanis (Illumina) Tr. 1852–54).) Respondents also note that BGI may enter the United States market as soon as August 2022, after certain Illumina patents expire. (PFF ¶¶ 777-777.3.) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and

related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022).

Respondents also note that Illumina expects there will be intensifying competition in the NGS space in the near future both from incumbent players and new entrants. (PFF ¶ 38 (deSouza (Illumina) Tr. 2318–20).)

1206. [redacted] (PX2169 (Illumina) at 020 (Illumina, Strategic Plan 2021-2025, Oct. 23, 2020 (*in camera*))).

Response to Finding No. 1206:

The proposed finding is irrelevant as it does not relate to MCED testing.

Respondents also incorporate their responses to CCFF ¶¶ 928, 1205 and 1293 herein.

1207. [redacted] (PX5026 (Illumina) at 005 (FY20-25 Strategic Plan Initial Revenue Discussion, Jun 4, 2020 (*in camera*)).

Response to Finding No. 1207:

The proposed finding is irrelevant as it does not relate to MCED testing.

Respondents also incorporate their responses to CCFF ¶¶ 928, 1205 and 1293 herein.

Complaint Counsel did not present the exhibit PX5026 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 54), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

4. Other Industry Participants Recognize that Illumina NGS Platforms Are the Only Viable Option for MCED Testing

1208. Dr. Vogelstein testified that "[t]he only technology available for short-read sequencing that is at a throughput and cost that would enable liquid biopsy to be analyzed is sold by Illumina." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 67)).

Response to Finding No. 1208:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 971, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶¶ 928–29, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1209. The Illumina NGS sequencer is the only sequencer that can be used for applications that demand "high accuracy for low frequency events" such as multi-cancer early detection. (PX7075 (Stahl (Invitae) Dep. at 71)).

Response to Finding No. 1209:

The proposed finding is based on speculation. [redacted] The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also incomplete and misleading. Mr. Stahl testified that BGI's and Illumina's technologies are "very similar". (PX7075 (Stahl (Invitae) Dep. at 75.)

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 341, 904, 928, 940, 971, 980, 1115, 1118 and 1293, which Respondents incorporate herein.

1210. Invitae represented to investors in its Form 10-Q filed with the Securities and Exchange Commission that "[w]e rely on Illumina as the sole supplier of next generation sequencers and associated reagents" and "[i]n the case of an alternative supplier for Illumina, we cannot assure you that replacement sequencers and associated reagents will be available or will meet our quality control and performance requirements for our laboratory operations." (PX0158 at 51-52 (Invitae Form 10-Q, Nov. 5, 2020)).

Response to Finding No. 1210:

The proposed finding is irrelevant because Invitae/ArcherDx is not developing an MCED test.

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1209, which Respondents incorporate herein.

1211. Invitae represented to investors in its Form 10-Q filed with the Securities and Exchange Commission that:

> ArcherDX's product customers are required to use Illumina sequencers and reagents …. ArcherDX's failure to maintain a continued supply of the sequencers and reagents … would adversely impact its business, financial condition, and results of operations. In particular, while ArcherDX is seeking to validate its tests on additional sequencing platforms, it has not, to date, validated any alternative sequencing platform on which its testing could be run in a commercially viable manner.

(PX0158 at 70 (Invitae Form 10-Q, Nov. 5, 2020)).

Response to Finding No. 1211:

The proposed finding is irrelevant because Invitae/ArcherDx is not developing an MCED test.

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1209, which Respondents incorporate herein.

E. NON-ILLUMINA NGS PLATFORMS DO NOT MEET THE REQUIREMENTS OF MCED TESTS

1. Thermo Fisher Is Not an Option for MCED Test Developers

a) Thermo Fisher Recognizes That Its NGS Platform Does Not Meet the Requirements of MCED Tests

1212. Thermo Fisher Vice President of Product Management, Dr. Andrew Felton, testified at trial that Thermo Fisher sequencers are not currently being used for MCED tests. (Felton (Thermo Fisher) Tr. 1987).

Response to Finding No. 1212:

The proposed finding is vague, speculative, and misleading. *First*, the phrase "used for MCED tests" is unclear. *Second*, [redacted] In fact, [redacted] and Singlera have already confirmed that their tests can be used on Thermo Fisher equipment, [redacted] (Gao (Singlera) Tr. 2928; [redacted]

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 952 and 1293, which Respondents incorporate herein.

1213. Dr. Felton testified that Illumina's NGS sequencers are better suited than Thermo Fisher's NGS sequencers for "any application that requires a very large number of samples … like early cancer detection." (Felton (Thermo Fisher) Tr. 2001).

Response to Finding No. 1213:

The proposed finding is vague and misleading. [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) [redacted]

[redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) Dr. Cote has also determined that Thermo Fisher's systems are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) This capability is not merely theoretical—Singlera and [redacted] have confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted]

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 952 and 1293, which Respondents incorporate herein.

1214. According to Dr. Felton, Illumina's NovaSeq platform has much higher output than any of Thermo Fisher's NGS sequencers. (Felton (Thermo Fisher) Tr. 2000).

Response to Finding No. 1214:

Respondents have no specific response except to note that [redacted]

Respondents also incorporate their responses to CCFF ¶¶ 928, 952 and 1293 herein.

1215. Thermo Fisher's highest throughput sequencer, the GeneStudio S5, has a maximum output of 130 million reads per run. (Felton (Thermo Fisher) Tr. 1983-84).

Response to Finding No. 1215:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1214 herein.

1216. According to Dr. Felton, the total work flow time for the GeneStudio to achieve 130 million reads per run is 24 to 48 hours. (Felton (Thermo Fisher) Tr. 1985).

Response to Finding No. 1216:

The proposed finding is inaccurate. [redacted]

1217. Dr. Felton testified that even Thermo Fisher's highest throughput sequencer, the GeneStudio, is not an option for MCED developers because "a platform with considerable more out-put per run than 130 million reads would be . . . preferred. . . . In general, the system isn't well suited to a kind of test that needs a very large number of samples . . . running through it very quickly." (Felton (Thermo Fisher) Tr. 1987-89).

Response to Finding No. 1217:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 940, 952,1115, 1118, 1212–13 and 1293 which Respondents incorporate herein. The proposed finding is also inaccurate, incomplete and misleading to the extent it suggests that only Illumina's NovaSeq platform could be used for putative MCED test development. To the contrary, as described in Respondents responses to CCFF ¶ 980, incorporated herein, putative MCED test developers are also pursuing test development using the NextSeq and MiSeq instruments, as well as Thermo Fisher's Ion Torrent S5 instrument.

1218. No other NGS platform available in the United States, other than Illumina's sequencers, can read more than 130 million fragments per run. (Felton (Thermo Fisher) Tr. 1985).

Response to Finding No. 1218:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1293 which Respondents incorporate herein.

Respondents also note that [redacted] It is "undisputed that . . . BGI's technology is substitutable for Illumina's NGS technology in throughput, accuracy, turnaround time, and cost. (RX3869 (Cote Expert Report)

¶ 287.) Specifically, BGI's NGS sequencers use an SBS technology that is similar to Illumina's NGS sequencing technology. (PFF ¶ 588; RX3869 (Cote Expert Report) ¶ 286.) BGI currently markets five sequencers.

Singular commercially launched the G4 NGS sequencer at the end of 2021 and will begin shipping the G4 NGS systems in the first half of 2022. (PFF ¶ 607; Velarde (Singular) Tr. 4515–16, 4522; *see also* PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31).) Singular Genomics' G4 sequencer, which is [redacted] (PFF ¶ 609–609.6.)

1219. The cost per read of Thermo Fisher's GeneStudio is higher than the cost per read of the NovaSeq. (Felton (Thermo Fisher) Tr. 2000).

Response to Finding No. 1219:

The proposed finding is misleading. [redacted]

1220. [redacted] (Felton (Thermo Fisher) Tr. 2008) (*in camera*)).

Response to Finding No. 1220:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1217 which Respondents incorporate herein.

Additionally, [redacted]

[redacted]

Respondents also note that Thermo Fisher has confirmed that its sequencers are capable of being used for multi-cancer screening tests. (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) Dr. Cote has also determined that Thermo Fisher's systems are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) This capability is not merely theoretical—Singlera and [redacted] have confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted]

1221. [redacted] (Felton (Thermo Fisher) Tr. 2006) (*in camera*)).

Response to Finding No. 1221:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1220, which Respondents incorporate herein.

1222. [redacted] (PX7097 (Felton (Thermo Fisher) Dep. at 29) (*in camera*)).

Response to Finding No. 1222:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1220, which Respondents incorporate herein.

1223. [redacted] (PX7097 (Felton (Thermo Fisher) Dep. at 34-35) (*in camera*)).

Response to Finding No. 1223:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1220, which Respondents incorporate herein.

1224. [redacted] (PX7097 (Felton (Thermo Fisher) Dep. at 42-43) (*in camera*)).

Response to Finding No. 1224:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1220, which Respondents incorporate herein.

As of the time of trial, [redacted]

Indeed, Singlera and [redacted] have confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted] Singlera even notes on its website that its PanSeer assay is "compatible with the two leading next-generation sequencing platforms on the market (systems from Illumina such as the MiSeq or NextSeq as well as from Thermo Fisher Scientific including the Ion Torrent S5) any laboratory familiar with NGS library construction can quickly implement this method". (RX3637 (Singlera) at 5.)

1225. Dr. Felton, admitted that Thermo Fisher's NGS platforms are not used for MCED tests because "the implementation of such a test is likely favored to a very high throughput system in a centralized facility, and our systems are generally suited to . . . smaller amounts of patient samples." (PX7070 (Felton (Thermo Fisher) IHT at 52-53)).

Response to Finding No. 1225:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1220, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1226. Mr. Felton explained, "the systems that [Thermo Fisher's] Ion Torrent provides are generally much better suited to the population of patients who's progressed to a late-stage cancer setting, so the number of patients is much smaller relative to the number of patients you are screening in a population-screening experiment or study." (PX7070 (Felton (Thermo Fisher) IHT at 52-53)).

Response to Finding No. 1226:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF¶¶ 1217 and 1220, which Respondents incorporate herein.

Respondents also note that the proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1227. Mr. Felton maintained that [redacted] (PX7070 (Felton (Thermo Fisher) IHT at 69) (*in camera*)).

Response to Finding No. 1227:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1220, which Respondents incorporate herein.

The proposed finding is misleading to the extent it suggests that [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) Dr. Cote has also determined that Thermo Fisher's systems are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) Singlera and [redacted] have confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1228. Mr. Felton stated further, "we are playing in the late-stage cancer setting. The GRAIL Illumina combination would be playing in the early cancer" setting. (PX7070 (Felton (Thermo Fisher) IHT at 69)).

Response to Finding No. 1228:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1217 and 1220, which Respondents incorporate herein.

Singlera and [redacted] have confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted]

Respondents also note that the proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

b) [redacted]

1229. [redacted] (Chudova (Guardant) Tr. 1218-19) (*in camera*)

Response to Finding No. 1229:

The proposed finding is misleading and vague. [redacted]

[redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) [redacted]

Respondents also incorporate their responses to CCFF ¶¶ 927, 952 and 1212–28 herein.

1230. [redacted] (Chudova (Guardant) Tr. 1218-19) (*in camera*)).

Response to Finding No. 1230:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1229, which Respondents incorporate herein.

[redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).)

1231. [redacted] (Chudova (Guardant) Tr. 1219-20) (*in camera*)).

Response to Finding No. 1231:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1220 and 1229, which Respondents incorporate herein. [redacted]

1232. [redacted] (Chudova (Guardant) Tr. 1218-19) (*in camera*)).

Response to Finding No. 1232:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1218, 1220 and 1229, which Respondents incorporate herein.

1233. [redacted] (Chudova (Guardant) Tr. 1220) (*in camera*)).

Response to Finding No. 1233:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1220 and 1229, which Respondents incorporate herein.

[redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).)

1234. [redacted] (Chudova (Guardant) Tr. 1220) (*in camera*)).

Response to Finding No. 1234:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1220 and 1229, which Respondents incorporate herein. [redacted]

1235. [redacted]

(PX7045 (Chudova (Guardant) IHT at 49-50) (*in camera*)).

Response to Finding No. 1235:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1220, 1229 and 1234, which Respondents incorporate herein. Additionally, [redacted]

1236. Guardant's Mr. Getty testified at trial that Guardant cannot run its MCED test on a Thermo Fisher sequencer. (Getty (Guardant) Tr. 2688).

Response to Finding No. 1236:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1220, 1229 and 1234, which Respondents incorporate herein. [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Mr. Getty's testimony also [redacted]

1237. Freenome evaluated Illumina's sequencer against Thermo Fisher's S5 sequencer. (Nolan (Freenome) Tr. 2715-18).

Response to Finding No. 1237:

The proposed finding relies on hearsay and is incomplete and misleading. Mr. Nolan admitted at trial that that "[Freenome] hadn't evaluated anything" since he has been at Freenome "with regard to an actual head-to-head evaluation," and he "was aware high level that [Freenome had] looked at the S5. That was really the extent of it." (Nolan (Freenome) Tr. 2737.)

1238. Mr. Nolan testified that Illumina's sequencer "did a better job with [sequence] variant calling" and "did a better job of detecting [colorectal cancer]" than Thermo Fisher's S5 sequencer in Freenome's evaluation. (Nolan (Freenome) Tr. 2715-16).

Response to Finding No. 1238:

The proposed finding relies on hearsay and is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1237, which Respondents incorporate herein. The proposed finding is vague and misleading. It is unclear what "better job" means in Mr. Nolan's context and whether such a "better job" has any significance for multiple cancer screening tests. [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) Dr. Cote has also determined that Thermo Fisher's systems are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.)

Singlera and [redacted] have confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 952 and 1212–28 herein.

1239. Freenome's Nolan testified that [redacted] (PX7094 (Nolan (Freenome) Dep. at 222-223) (*in camera*)).

Response to Finding No. 1239:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220, 1237 and 1238, which Respondents incorporate herein. [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).)

1240. Freenome's Nolan testified that [redacted] (PX7050 (Nolan (Freenome) IHT at 100-01) (*in camera*)).

Response to Finding No. 1240:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to ¶¶ 1220, 1237 and 1238, which Respondents incorporate herein. [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) [redacted]

[redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1241. Freenome's Otte testified that [redacted]

(PX7055 (Otte (Freenome) IHT at 65-66) (*in camera*)).

Response to Finding No. 1241:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1238, which Respondents incorporate herein. In addition, Mr. Otte appears to [redacted] For instance, Respondents note that Thermo Fisher has a paired-end sequencing protocol for its sequencer. (RX3869 (Cote Expert Report) ¶ 333.) [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1242. Freenome's Otte testified, [redacted] (PX7055 (Otte (Freenome), IHT at 66) (*in camera*)).

Response to Finding No. 1242:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1238, which Respondents incorporate herein.

Respondents also note that [redacted] Respondents also incorporate their responses CCFF ¶ 1217 herein. [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1243. Thermo Fisher's Dr. Felton testified that [redacted] (Felton (Thermo Fisher) Tr. 2006-2007 (*in camera*)).

Response to Finding No. 1243:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 , 1217, 1220 and 1238, which Respondents incorporate herein.

The proposed finding is based on inadmissible hearsay, speculative, and misleading.

[redacted]

Respondents additionally note that [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) [redacted] (Felton (Thermo Fisher) Tr. 2021–23; PX7097 (Felton (Thermo Fisher) Dep. at 65–68).) Dr. Cote has also determined that Thermo Fisher's systems are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) This capability is not merely theoretical—Singlera and [redacted] have confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted]

[redacted]

1244. Dr. Felton explained [redacted] *in camera*)).

Response to Finding No. 1244:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1243, which Respondents incorporate herein.

[redacted]

Respondents also note that the proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1245. Singlera Co-founder, Gary Gao, testified that Thermo Fisher is one of the alternatives to Illumina that Singlera has evaluated. (Gao (Singlera) Tr. 2894).

Response to Finding No. 1245:

Respondents have no specific response.

1246. Dr. Gao testified at trial that Thermo Fisher is "not going to be a viable alternative" for its PanSeer test and it has no plans to switch to Thermo Fisher's NGS platform. (Gao (Singlera) Tr. 2894).

Response to Finding No. 1246:

The proposed finding is inaccurate and misleading. Contrary to the proposed finding, Dr. Gao has admitted that Singlera's PanSeer test is interoperable with Thermo Fisher's systems, including the Ion Torrent S5. (Gao (Singlera) Tr. 2928.) **Singlera even notes on its website** that its PanSeer assay is "compatible with the two leading next-generation sequencing platforms on the market (systems from Illumina such as the MiSeq or NextSeq as well as from Thermo Fisher Scientific including the Ion Torrent S5) any laboratory familiar with NGS library construction can quickly implement this method". (RX3637 (Singlera) at 5.) Dr. Gao also confirmed that a switch to Thermo Fisher's systems would take about six months to a year. (Gao (Singlera) Tr. 2942–43.) The switch would not disrupt any ongoing clinical work for PanSeer and Singlera would not even need to run any bridging study to revalidate any PanSeer trial results. (Gao (Singlera) Tr. 2942–43.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 952 and 1212–28 herein.

1247. Singlera's Dr. Gao testified that Thermo Fisher's platforms are "not cost-effective," "not an easy workflow," and "not basically a viable alternative to Illumina['s] platform." (PX7042 (Gao (Singlera) IHT at 42-43)).

Response to Finding No. 1247:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1246, which Respondents incorporate herein.

Furthermore, the proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents additionally note that [redacted]

1248. Dr. Gao indicated that the throughput of Illumina's NextSeqDx instrument is higher than the Thermo Proton instrument: "[A] NextSeqDx will produce you about a -- I think between 100 to 300 million read per run while the Thermo Proton is more like 40 million to 100 million, so it's about only one-third to one-fifth of what Illumina produce." (PX7042 (Gao (Singlera) IHT at 43)).

Response to Finding No. 1248:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1246, which Respondents incorporate herein.

Respondents further note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also note that [redacted]

1249. In characterizing Thermo Fisher's NGS platform, Singlera's Gao testified:

> [T]here are basically sequencing -- higher sequencing error and a sequencing bias with the Thermo technology. For example, the homopolymer problem is significant in the Ion platform from Thermo Fisher, but the Illumina doesn't have that shortcoming. And also the mutation, you know, the error, sequencing error rate is higher in the Proton system.

(PX7042 (Gao (Singlera) IHT at 44)).

Response to Finding No. 1249:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1246, which Respondents incorporate herein.

Respondents also emphasize that Dr. Gao has admitted that Singlera's PanSeer test is interoperable with Thermo Fisher's systems, including the Ion Torrent S5. (Gao (Singlera) Tr. 2928.)

Furthermore, the proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1250. In explaining why Illumina's FDA-cleared NextSeqDX NGS platform is suitable for Singlera's PanSEER test and Thermo Fisher's NGS platform is not, Dr. Gao testified:

> [T]he throughput is lower, and you know, it's only one-third, so you want a -- Illumina system can do three times more sample. For screening, your scale economy coming from you can do many more sample in one day. That will save you equipment cost, you know, your depreciation, your labor, your time, your competitive skill.

(PX7042 (Gao (Singlera) IHT at 53)).

Response to Finding No. 1250:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1246, which Respondents incorporate herein.

Respondents also emphasize that Dr. Gao has admitted that Singlera's PanSeer test is interoperable with Thermo Fisher's systems, including the Ion Torrent S5. (Gao (Singlera) Tr. 2928.)

Furthermore, the proposed finding also relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1251. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 103-04) (*in camera*)).

Response to Finding No. 1251:

The proposed finding is ambiguous and misleading as discussed in Respondents' responses to CCFF ¶¶ 1220 and 1252, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1252. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 106) (*in camera*)).

Response to Finding No. 1252:

The proposed finding is ambiguous and misleading. [redacted]

[redacted]

[redacted] (Lengauer (Exact/Thrive) Tr. 238–39.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 952 and 1212–28 herein.

1253. Dr. Lengauer explained that Thrive's CancerSeek technology [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 96) (*in camera*)).

Response to Finding No. 1253:

The proposed finding is ambiguous and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1252, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1254. Dr. Lengauer testified that [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 96) (*in camera*)).

Response to Finding No. 1254:

The proposed finding is ambiguous and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1252, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1255. Dr. Lengauer said [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 107-08) (*in camera*)).

Response to Finding No. 1255:

The proposed finding is ambiguous and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1252, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1256. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 107) (*in camera*)).

Response to Finding No. 1256:

The proposed finding is ambiguous and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1252, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1257. Dr. Lengauer described [redacted]

[redacted]

(PX7051 (Lengauer (Third Rock Ventures) IHT at 108-09) (*in camera*)).

Response to Finding No. 1257:

The proposed finding is ambiguous and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1252, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1258. Dr. Lengauer testified that [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 109) (*in camera*)).

Response to Finding No. 1258:

The proposed finding is ambiguous and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1252, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1259. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 109-10) (*in camera*)).

Response to Finding No. 1259:

The proposed finding is incomplete and misleading to the extent it seems to suggest that [redacted] 428, 431 ("In the DETECT-A study, CancerSEEK obtained [a] specificit[y] of 95.3% in its baseline blood test (that is, with a single blood test).").) [redacted]

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1212–14 and 1252, which Respondents incorporate herein.

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.).

1260. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 112) (*in camera*)).

Response to Finding No. 1260:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1252 and 1259, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1261. Kevin Conroy, CEO of Exact, testified that [redacted] (PX7110 (Conroy (Exact) Dep. at 70-71) (*in camera*)).

Response to Finding No. 1261:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220, 1252 and 1259, which Respondents incorporate herein.

[redacted] Furthermore, Singlera and [redacted] have explicitly confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted] Singlera even publicly notes on its website that its PanSeer assay is "compatible with the two leading next-generation sequencing platforms on the market (systems from Illumina such as the MiSeq or NextSeq as well as from Thermo Fisher Scientific including the Ion Torrent S5) any laboratory familiar with NGS library construction can quickly implement this method". (RX3637 (Singlera) at 5.) [redacted]

[redacted]

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Mr. Conroy was not involved in the development of CancerSEEK, Exact Sciences does not have any tests that use NGS technology and Exact Sciences was not an Illumina customer until its acquisition of Thrive. (*See* Conroy (Exact Sciences) Tr. 1542–43, [redacted]

1262. [redacted] (PX7058 (Conroy (Exact) IHT at 120-21) (*in camera*)).

Response to Finding No. 1262:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1261, which Respondents incorporate herein.

The proposed finding is also vague as to the [redacted] Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1263. Mr. Conroy further testified that [redacted] (PX7058 (Conroy (Exact) IHT at 70) (*in camera*)).

Response to Finding No. 1263:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1220 and 1261, which Respondents incorporate herein.

[redacted]

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1264. [redacted] (PX7111 (Fesko (Natera) Dep. at 52-53) (*in camera*)).

Response to Finding No. 1264:

The proposed finding is misleading and vague, and irrelevant because it does not relate to MCED tests.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 952 and 1212–28 herein.

1265. [redacted] (PX7111 (Fesko (Natera) Dep. at 52-53) (*in camera*)).

Response to Finding No. 1265:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1264, which Respondents incorporate herein.

[redacted] Furthermore, Singlera and [redacted] have explicitly confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted] Singlera even publicly notes on its website that its PanSeer assay is "compatible with the two leading next-generation sequencing platforms on the market (systems from Illumina such as the MiSeq or NextSeq as well as from Thermo Fisher Scientific including the Ion Torrent S5) any laboratory familiar with NGS library construction can quickly implement this method". (RX3637 (Singlera) at 5.) [redacted]

1266. Ms. Perettie explained that [redacted] (PX7068 (Perettie (FMI-Roche) IHT at 60)).

Response to Finding No. 1266:

The proposed finding is misleading and vague for the reasons explained in Respondents' responses to CCFF ¶¶ 952, 1190 and 1212–28 which Respondents incorporate herein.

[redacted] Furthermore, Singlera and [redacted] have explicitly confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted] Singlera even publicly notes on its website that its PanSeer assay is "compatible with the two leading next-generation sequencing platforms on the market (systems from Illumina such as the MiSeq or NextSeq as well as from

Thermo Fisher Scientific including the Ion Torrent S5) any laboratory familiar with NGS library construction can quickly implement this method". (RX3637 (Singlera) at 5.) [redacted]

Lastly, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1267. Invitae's Stahl testified that Thermo Fisher's "sequencer data quality is so far below what Illumina can do, [that] you do not have a viable product" if a cancer screening test is run on Thermo Fisher's NGS platform. (PX7044 (Stahl (Invitae) IHT at 51-53)).

Response to Finding No. 1267:

The proposed finding is based on speculation. [redacted] The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also misleading and vague. *First*, the cited testimony discusses NGS in the context of IVD tests in general, *not* NGS cancer screening tests, specifically. (PX7044 (Stahl (Invitae) IHT at 51-54) *Second*, [redacted]

[redacted] Furthermore, Singlera and [redacted] have explicitly confirmed their tests' interoperability with Thermo Fisher systems. (Gao (Singlera) Tr. 2928; [redacted]

Respondents also note that Mr. Stahl himself recognized that Thermo Fisher (along with Oxford Nanopore, BGI, and PacBio) is a participant in the NGS field and that there would be "no way to predict" which NGS company would be successful over the next five or ten years. (PX7075 (Stahl (Invitae) Dep. at 43.)

Lastly, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 952 and 1212–28 herein.

1268. Mr. Stahl explained that Thermo Fisher's error rates are "very high" and "one mistake could mean cancer or not cancer." (PX7044 (Stahl (Invitae) IHT at 92-93)).

Response to Finding No. 1268:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1267, which Respondents incorporate herein.

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2. BGI Is Not an Option for MCED Test Developers

a) Illumina Sued BGI for Patent Infringement and Obtained an Injunction That Bars BGI from Beginning to Sell its NGS Platforms in the United States

1269. BGI is a Chinese genomics company that does next-generation sequencing. (deSouza (Illumina) Tr. 2226).

Response to Finding No. 1269:

Respondents have no specific response except to note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) BGI acquired California-based sequencing company Complete Genomics in 2013 and launched its BGISEQ-500 NGS sequencer in 2015. (PFF ¶ 587; RX3063 (BGI).)

Respondents also note that many customers outside of China have successfully built a relationship with BGI, [redacted]; PFF ¶ 780.1.

1270. When Mr. deSouza spoke at the JPM Life Sciences CEO Conference Series and answered questions from investors, one question Mr. deSouza responded to was whether BGI may try to come to the United States that year. (deSouza (Illumina) Tr. 2223-2225; PX2544 (Illumina) at 024-025 (Transcript of JPM Life Sciences CEO Conference Call, Sept. 3, 2019)). Mr. deSouza responded, "We [Illumina] think that every player should be considering coming to the U.S. It's also an area where we [Illumina] have very strong IP protection. And so for BGI or anyone else to be successful in the U.S., they'll have to do so with the technology that they have the IP to run." (deSouza (Illumina) Tr. 2223-2225; PX2544 (Illumina) at 024-025 (Transcript of JPM Life Sciences CEO Conference Call, Sept. 3, 2019)).

Response to Finding No. 1270:

Respondents have no specific response except to note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

1271. As set forth below in Section V.E.2.c., MCED test developers testified that the uncertainty around BGI's freedom to operate in the United States is one reason BGI is not a viable NGS option for MCED test developers.

Response to Finding No. 1271:

Respondents have no specific response except to note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

1272. As Illumina's CEO admitted at trial, Illumina has filed multiple lawsuits against BGI alleging that it has infringed on Illumina's patents. (deSouza (Illumina) Tr. 2226).

Response to Finding No. 1272:

The proposed finding is misleading and irrelevant. Respondents also note that BGI may enter the United States market as soon as August 2022, after certain Illumina patents expire. (PFF ¶¶ 777-777.3.) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022).

1273. An Illumina board presentation states that it "has 11 active IP infringement suits against BGI." (PX2847 (Illumina) at 013 (Project Protego BoD Discussion, July 15, 2020)).

Response to Finding No. 1273:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1272, which Respondents incorporate herein.

Further, Complaint Counsel did not present the exhibit PX2847 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 33), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1274. In 2019 and 2020, Illumina successfully sued BGI in the Northern District of California alleging that "BGI's sequencers and reagents infringe Illumina owned patents. (PX0119

at 001 (Illumina Inc. Announces that U.S. Federal Court Issues Preliminary Injunction Against BGI Companies)).

Response to Finding No. 1274:

Respondents have no specific response except to note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

Complaint Counsel did not present the exhibit PX0119 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 2), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1275. Dr. Felton testified that Thermo Fisher and Illumina are the only two companies offering short-read NGS sequencers in the United States. (Felton (Thermo Fisher) Tr. 1996).

Response to Finding No. 1275:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 928 and 1293, which Respondents incorporate herein.

Respondents also note that recent research demonstrates that Oxford Nanopore's long-read sequencers also have short-read sequencing capabilities. (PFF ¶¶ 601-601.4.) Respondents also incorporate their responses to CCFF ¶ 904 herein.

b) Illumina is Already Seeking Additional Injunctive Relief Against BGI Based on U.S. Patents that Do Not Expire Until 2027 and May Assert Additional Patents Against BGI That Run Beyond 2027

1276. Illumina has already filed additional patent infringement claims against BGI. (PX9232 at 015, 025-027 (Answer and Counterclaim, *Complete Genomic, Inc. v. Illumina, Inc.*, Case 1:19-cv-00970-MN (D. Del.) (July 25, 2019)).

Response to Finding No. 1276:

The proposed finding is incomplete and misleading. In particular, BGI won a jury verdict in the case described in the proposed finding that held all three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). Therefore, as previously noted, BGI can enter the United States market as early as August 2022. (PFF ¶¶ 777–777.3.)

In addition, Complaint Counsel presented no evidence regarding which products or services BGI would be enjoined from selling in the U.S. if Illumina's infringement claims are successful. (*See, e.g.*, (deSouza (Illumina) Tr. 2226–27) ("[BGI] can sell services here and has sequencing customers that use its service, but in terms of products, it has until 2023 that it can't sell here.").)

1277. Illumina filed claims against BGI in a Delaware Federal Court alleging that BGI infringed Illumina's U.S. Patent No. 9,303,290, U.S. Patent No. 9,217,178, and U.S. Patent No. 9,970,055. (deSouza (Illumina) Tr. 2226; PX9232 at 015, 025-027 (Answer and Counterclaim, *Complete Genomic, Inc. v. Illumina, Inc.*, Case 1:19-cv-00970-MN (D. Del.) (July 25, 2019)).

Response to Finding No. 1277:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

1278. Illumina has sought an order preliminarily and permanently enjoining BGI from infringing on its U.S. Patent No. 9,303,290, U.S. Patent No. 9,217,178, and U.S. Patent No. 9,970,055. (PX9232 at 032 (Answer and Counterclaim, *Complete Genomic, Inc. v. Illumina, Inc.*, Case 1:19-cv-00970-MN (D. Del.) (July 25, 2019)).

Response to Finding No. 1278:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein.

Respondents also note that BGI may enter the United States market as soon as August 2022.

(PFF ¶¶ 777–777.3.)

1279. The latest expiring of these patents, Illumina's U.S. Patent 9,217,178, does not expire until December 22, 2027. (PX9232 at 053 (Answer and Counterclaim, *Complete Genomic, Inc. v. Illumina, Inc.*, Case 1:19-cv-00970-MN (D. Del.) (July 25, 2019) (patent attached as exhibit showing the Patent Cooperation Treaty filing date of Dec. 13, 2005 and an extension of the twenty year patent term under 35 U.S.C. 154(b) by 739 days)).

Response to Finding No. 1279:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein.

Respondents also note that BGI may enter the United States market as soon as August 2022.

(PFF ¶¶ 777–777.3.)

1280. Dr. Alex Aravanis, Illumina's Chief Technology Officer, spoke at an event titled "Baird Non-Deal Roadshow," a large group investor meeting on Monday, February 22, 2021. (deSouza (Illumina) Tr. 2229-2230; PX2822 (Illumina) at 001 (Baird Non-Deal Roadshow with Alex Aravanis, Feb. 19, 2021)).

Response to Finding No. 1280:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein.

1281. One question Dr. Aravanis prepared a response to for the "Baird Non-Deal Roadshow" meeting was:

> I'd be really curious to hear about near-term patent expiration. I know there are 3 or 4 expiring in next 2-3 yrs. If we could dig into what those patents cover and how ILMN thinks about the impact of those patents expiring, that would be helpful.

(deSouza (Illumina) Tr. 2220-2231; PX2822 (Illumina) at 006 (Baird Non-Deal Roadshow with Alex Aravanis, Feb. 19, 2021)).

Response to Finding No. 1281:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein. BGI may enter the U.S. market by August 2022. *Illumina, Inc. v. BGI Genomics, Co.*, 20-cv-01465-WHO (N.D. Cal. Mar. 27, 2022), ECF No. 665 at 48 ("If [BGI] make[s] offers to sell Accused Products in the U.S. before the expiration of the patents-in-suit—as they are permitted—they must include the following conspicuous written disclaimer: 'No sales will occur, and no purchase orders will be accepted, until after August 23, 2022.'"). (PFF ¶ 588.2.)

1282. Dr. Aravanis' prepared response to the question on near-term patent expiration at the Baird Non-Deal Roadshow notes that Illumina has alleged that BGI infringed patents that expire after 2023 and range from 2024 to 2027:

> Illumina also alleged infringement by BGI of a number of other patents in the U.S. and Europe with later expiration dates. These include patents directed to Illumina's proprietary imaging reagent, modified polymerase and fluorescent dyes, which have expiration dates ranging from 2024 to 2027 depending on the patent and country.

(deSouza (Illumina) Tr. 2231; PX2822 (Illumina) at 006 (Baird Non-Deal Roadshow with Alex Aravanis, Feb. 19, 2021)).

Response to Finding No. 1282:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

1283. The patents Dr. Aravanis described at the Baird Non-Deal Roadshow include the patents that Illumina has alleged BGI has infringed in the counterclaims BGI filed in Delaware. (deSouza (Illumina) Tr. 2231; PX9232 at 032 (Answer and Counterclaim, *Complete Genomic, Inc. v. Illumina, Inc.*, Case 1:19-cv-00970-MN (D. Del.) (July 25, 2019)).

Response to Finding No. 1283:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein.

Respondents also note that BGI may enter the United States market as soon as August 2022.

(PFF ¶¶ 777–777.3.)

1284. Dr. Aravanis' response further notes that "[a]s we learn more about BGI's products, additional patents may become relevant" and that Illumina has additional patents touching "every aspect of the sequencing workflow, including nucleotides, enzymes, reagent mixes, instruments, optics, analysis software, and bioinformatics, which result from Illumina's significant investments in research and development." (deSouza (Illumina) Tr. 2231-2232; PX2822 (Illumina) at 006-007 (Baird Non-Deal Roadshow with Alex Aravanis, Feb. 19, 2021)). According to Dr. Aravanis' response, these additional patents extend from 2023 to beyond 2030. (deSouza (Illumina) Tr. 2232; PX2822 (Illumina) at 006-007 (Baird Non-Deal Roadshow with Alex Aravanis, Feb. 19, 2021)).

Response to Finding No. 1284:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein.

Respondents also note that BGI may enter the United States market as soon as August 2022.

(PFF ¶¶ 777–777.3.)

1285. Dr. Aravanis' notes that, as Illumina continues to innovate, Illumina intends to "broadly file patent applications covering these innovations, providing competitive advantages in our key technology areas." (deSouza (Illumina) Tr. 2232; PX2822 (Illumina) at 007 (Baird Non-Deal Roadshow with Alex Aravanis, Feb. 19, 2021)).

Response to Finding No. 1285:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1276, which Respondents incorporate herein.

Respondents also note that BGI may enter the United States market as soon as August 2022.

(PFF ¶¶ 777–777.3.)

c) Even if BGI Entered the U.S. Market, the Uncertainty Around BGI's Freedom to Operate in the United States in the Future Makes MCED Developers Unwilling to Switch to BGI

1286. Mr. Stahl testified that "Illumina has sued BGI for patent infringement. So the technologies are very similar. Due to the risk of that IP and them not being well intrenched [sic] in the US and also not having regulatory clearances in the US, we've decided not to pursue that instrument." (PX7075 (Stahl (Invitae) Dep. at 74-75)).

Response to Finding No. 1286:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269 and 1276, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Mr. Stahl is the President of Oncology at Invitae, a non-legal position completely focused on research and development efforts. (PX7075 (Stahl (Invitae) Dep. at 12-13.) His employment history similarly reveals no relevant patent-related expertise; he has always taken purely scientific and medical-related positions at his former and current employers. (PX7075 (Stahl (Invitae) Dep. at 10-13.)

The proposed finding is based on speculation. [redacted] (PX7075 (Stahl (Invitae) Dep. at 22, 44, 77–78) The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1287. [redacted] (PX7068 (Perettie (FMI-Roche) IHT at 59-60) (*in camera*)).

Response to Finding No. 1287:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269 and 1276, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Ms. Perettie is the CEO of FMI, a non-legal, purely business-related position. (PX7068 (Perettie (FMI-Roche) IHT at 14–17.) Her employment history similarly reveals no relevant patent-related expertise; she has always taken non-legal positions at his former and current employers and Ms. Perettie has no experience regarding patents or patent-related litigation. (PX7068 (Perettie (FMI-Roche) IHT at 11–14.) Accordingly, Ms. Perettie's analysis is not credible.

Respondents also note that [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 1190 herein.

Lastly, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1288. [redacted] (PX7068 (Perettie (FMI-Roche) IHT at 64) (*in camera*)).

Response to Finding No. 1288:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276 and 1287, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

1289. [redacted] (PX7074 (Perettie (FMI-Roche) Dep. at 158) (*in camera*)).

Response to Finding No. 1289:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276 and 1287, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

1290. Dr. Gao testified that using BGI for its PanSeer test is "out of the picture" because of the IP dispute involving its sequencers. (Gao (Singlera) Tr. 2895).

Response to Finding No. 1290:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276 and 1318, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

The proposed finding is also misleading and speculative. Dr. Gao apparently has minimal knowledge regarding BGI. He admitted that "[did] not have the facts" regarding switching to BGI systems and was "not sure" whether BGI actually has a dispute in China. (Gao (Singlera) Tr. 2895–97.) Dr. Gao also claimed that BGI had an injunction in Europe (Gao (Singlera) Tr. 2895) when, in actuality, [redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Dr. Gao held various research-related positions at Singlera and is currently Singlera's Research Advisor. (Gao (Singlera) Tr. 2870-72.) As Mr. Gao puts it, he is "heavily involved in the research part" and there is nothing in the record demonstrating Dr. Gao's knowledge or expertise regarding patents or patent-related litigation. (Gao (Singlera) Tr. 2870-72.) Accordingly, Mr. Gao's analysis is not credible.

1291. Dr. Gao explained the "BGI platform IP" would expose Singlera to "business risk from a legal point of view": If Singlera were to "develop a [cancer screening test] depending on BGI['s] . . . sequencer, we spend 40 to 60 million dollar[s] to get FDA approval. If they [BGI] were sued, we cannot use their machine." (PX7042 (Gao (Singlera) IHT at 63)).

Response to Finding No. 1291:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276, 1290 and 1318, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

The proposed finding is also misleading and speculative. Dr. Gao apparently has minimal knowledge regarding BGI. He admitted that "[did] not have the facts" regarding switching to BGI systems and was "not sure" whether BGI actually has a dispute in China. (Gao (Singlera) Tr. 2895–97.) Dr. Gao also claimed that BGI had an injunction in Europe (Gao (Singlera) Tr. 2895) when, in actuality, [redacted]

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1292. Dr. Gao identified the legal risk that Illumina patents would continue to block BGI as a reason why Singlera would not switch to BGI, stating, "[c]ommercially, [] we don't know whether [the] BGI machine will be able to continue. Or even if they decided they cannot just – they cannot continue their operation fully, then we are dead. . . . We cannot risk our future on other companies' legal potential and commercial potential." (PX7042 (Gao (Singlera) IHT at 63).

Response to Finding No. 1292:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276, 1290 and 1318, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

The proposed finding is also misleading and speculative. Dr. Gao apparently has minimal knowledge regarding BGI. He admitted that "[did] not have the facts" regarding switching to BGI systems and was "not sure" whether BGI actually has a dispute in China. (Gao (Singlera) Tr. 2895–97.) Dr. Gao also claimed that BGI had an injunction in Europe (Gao (Singlera) Tr. 2895) when, in actuality, [redacted]

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1293. [redacted] (Rabinowitz (Natera) Tr. 338-341 (*in camera*)).

Response to Finding No. 1293:

The proposed finding is compound due to it standing for five different propositions, each requiring individual analysis and support. It is also speculative, vague, consists of improper lay opinion, and is misleading.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) There is nothing in the record supporting Mr. Rabinowitz's ability to credibly speak about the relative strengths of the patents Illumina holds and Illumina's likelihood of success in their litigation. Dr. Rabinowitz is the executive chairman

of Natera and has an engineering/aeronautics educational background. (Rabinowitz (Natera) Tr. 284-85.) He has no background in patents, the law, or patent litigation. (Rabinowitz (Natera) Tr. 284-85.)

Intellectual Property. While BGI is currently enjoined in the United States, BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.) *Illumina, Inc. v. BGI Genomics, Co.*, 20-cv-01465-WHO (N.D. Cal. Mar. 27, 2022), ECF No. 665 at 48 ("If [BGI] make[s] offers to sell Accused Products in the U.S. before the expiration of the patents-in-suit—as they are permitted—they must include the following conspicuous written disclaimer: 'No sales will occur, and no purchase orders will be accepted, until after August 23, 2022.'") BGI recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022).

Performance. It is "undisputed that . . . BGI's technology is substitutable for Illumina's NGS technology in throughput, accuracy, turnaround time, and cost. (RX3869 (Cote Expert Report) ¶ 287.) Specifically, BGI's NGS sequencers use an SBS technology that is similar to Illumina's NGS sequencing technology. (PFF ¶ 588; RX3869 (Cote Expert Report) ¶ 286.) BGI currently markets five sequencers. The below chart shows each of the BGI instruments and their current throughput:

Instrument(s)	Throughput	Read Length	Run Time
DNBSEQ-G50	Simultaneous sequencing of ~ 100 to 500 million DNA fragments	50 to 2x150 nucleotides to generate outputs of up to ~ 150 Gb per run	10–66 hours
DNBSEQ-G400 FAST	Simultaneous sequencing of ~ 550 million DNA fragments	100 to 2x150 nucleotides to generate outputs of up to 330 Gb per run	13–37 hours

Instrument(s)	Throughput	Read Length	Run Time
DNBSEQ-G400	Simultaneous sequencing of ~ 1,500 to 1,800 million DNA fragments	50 to 2x200 nucleotides to generate outputs of up to 1,440 Gb (1.44 Tb) per run	13–37 hours
DNBSEQ-T7	Simultaneous sequencing of ~ 20 billion DNA fragments	100 to 2x150 nucleotides to generate outputs of up to 6,000 Gb (6 Tb) per run	<24 hours
DNBSEQ-T10×4RS / DNBSEQ-Tx[1]	Simultaneous sequencing of ~ 80 billion DNA fragments	100 to 2x150 nucleotides to generate outputs of up to 20 Tb per day	<24 hours

(PFF ¶ 590 (RX3465 (MGI Tech); RX4004 (MGI Tech)); RX3869 (Cote Expert Report) ¶ 287.)

BGI's DNBSEQ sequencer's reported accuracy is comparable to that of Illumina's sequencers, and guarantees more than 80% of bases with a quality score greater than Q30—which is over 99.9% accurate. (PFF ¶ 591; RX3465 (MGI Tech); RX3067 (BGI).) BGI's highest throughput instrument has a higher reported throughput than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell (up to 6 Tb/run), [redacted]. (PFF ¶ 592; *Compare* RX4004 (MGI Tech) at 1–2 *with* RX3357 (Illumina) at 7; [redacted] BGI's reported sequencing costs for its DNBSEQ sequencers are lower than those for Illumina's NovaSeq instrument. (PFF ¶¶ 594–594.2).

Purported MCED test developers treat these NGS platforms as viable substitutes for Illumina's NGS platform. (PFF ¶ 780.) Dr. Vogelstein, the founder of Thrive stated, [redacted]

[1] MGI Tech, *MGI Introduces DNBSEQ-T10×4RS Genetic Sequencing System at the ICG-15*, Oct. 30, 2020, at https://en.mgi-tech.com/news/183/.

[redacted] Mr. Stahl also testified that BGI's and Illumina's technologies are "very similar". (PX7075 (Stahl (Invitae) Dep. at 75.)

Dr. Aravanis explained that BGI manufactures multiple sequencing instruments and consumables; they have an array of instruments very similar to Illumina's offerings in terms of the different categories of high throughput, mid throughput, low throughput; the instruments are comparable in terms of sequencing output; BGI's systems are used for liquid biopsy applications; BGI has an NGS sequencing product that could be used for multicancer screening; BGI competes with Illumina for liquid biopsy applications in the countries in which it operates; BGI markets its NGS offerings as an alternative to Illumina. (PFF ¶ 1306; Aravanis (Illumina) Tr. 1852–54.)

Other sequencing platform developers also observe the excellent performance of the BGI system. Specifically, [redacted]

Perception/Purportedly Limited Install Base. The proposed finding is speculative and vague as to the [redacted] Other NGS customers have successfully built a relationship with BGI, [redacted] In fact, Natera already uses BGI for its Signatera test in China. (PX7053 (Fesko (Natera) IHT at 50–51); RX3473 (Natera) at 1; *see also* RX3062 (Natera).) Natera's Signatera test was initially validated on Illumina's HiSeq 2500 NGS platform, showing that Natera has *already* switched between Illumina's platform and BGI's platform. (RX3499 (Natera) at 6.) Respondents also note that many customers outside of China have successfully built a relationship with BGI, [redacted]

[redacted]

Switching. Dr. Rabinowitz's statements with respect to switching are inaccurate and misleading. Switching between Illumina's platform and alternative platforms is feasible. (PFF ¶ 645; RX3869 (Cote Expert Report) ¶ 336.) Contrary to Dr. Rabinowitz's testimony, [redacted] (PX7111 (Fesko (Natera) Dep. at 251–52); RX3062 (BGI) at 1.) Natera's Signatera test was initially validated on Illumina's HiSeq 2500 NGS platform, showing that Natera has *already* switched between Illumina's platform and BGI's platform. (RX3499 (Natera) at 6.)

[redacted]

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS

platform, the test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (PFF ¶ 1312; Aravanis (Illumina) Tr. 1861–65.)

Lastly, Respondents also note that, based on [redacted]. (RX3869 (Cote Expert Report) ¶ 227; [redacted] the last time Natera mentioned anything related to early-detection appears to be 2017 ((RX3495 (Natera) at 7 (discussing exploring breast and ovarian cancer screening); RX3491 (Natera) at 18.) and Natera's CEO has publicly stated that "[Natera is] ***not focused on asymptomatic cancers strain or early detection.***" (RX3492 (Natera) at 6.) Respondents also incorporate their responses to CCFF ¶¶ 928, 965, 1099, 1269 and 1293 herein.

1294. [redacted]

[redacted] (Rabinowitz (Natera) Tr. 339 (*in camera*)).

Response to Finding No. 1294:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276 and 1293, which Respondents incorporate herein.

1295. [redacted] (Rabinowitz (Natera) Tr. 338 (*in camera*)).

Response to Finding No. 1295:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276 and 1293, which Respondents incorporate herein.

Additionally, Respondents emphasize that [redacted]

d) Even if BGI Entered the U.S. Market, U.S. Companies Are Unlikely to Use a Chinese Company Due to Data Privacy and Reputational Concerns

1296. BGI is a Chinese company affiliated with the Chinese government. (deSouza (Illumina) Tr. 2312).

Response to Finding No. 1296:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1269, which Respondents incorporate herein.

1297. [redacted] (PX5027 (Illumina) at 063 [redacted] (*in camera*)).

Response to Finding No. 1297:

The proposed finding is vague and irrelevant. [redacted]

1298. Illumina's Senior Director of Corporate Strategy circulated a "Sample of 2020 BGI Headlines" that includes, among other things, "IP violations" headlines and "Ethics issues" headlines such as "Chinese coronavirus test maker [BGI] agreed to build a Xinjiang gene bank," and "Commerce Department Adds Eleven Chinese Entities Implicated in Human Rights Abuses in Xinjiang to the Entity List." (PX2170 (Illumina) at 001-002 (Email from J. Andrew, Illumina, to E. Milsovic, Illumina, Nov. 2, 2020)).

Response to Finding No. 1298:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269 and 1297, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss PX2170 at trial (CC Exhibit Index at 10), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1299. [redacted] (PX2790 (Illumina) at 001 (Email from J. Andrew, Illumina, to J. Goswami, Illumina, Jan. 29, 2021) (*in camera*)).

Response to Finding No. 1299:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269 and 1297, which Respondents incorporate herein.

[redacted]

Respondents also note that Complaint Counsel chose not to discuss PX2790 at trial (CC Exhibit Index at 32), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1300. [redacted] (PX2791 (Illumina) at 001 (Email from J. Andrew, Illumina, to F. deSouza et al., Illumina, Jan. 30, 2021) (*in camera*)).

Response to Finding No. 1300:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269 and 1297, which Respondents incorporate herein.

1301. Dr. Aravanis testified that:

> [T]here have been some concerns raised about the privacy and data integrity of data produced on the BGI system and whether or not that data would be protected . . . for its customers . . . [such as] data from the instruments, you know, being sent to China, perhaps without customers' knowledge.

(PX7065 (Aravanis (Illumina) IHT at 156)).

Response to Finding No. 1301:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269 and 1297, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.

1302. Mr. Stahl testified that there is a "broader macro question" about using BGI machines "in the sense that [BGI is] a Chinese company and US-China relations aren't the greatest, so to be determined." (PX7075 (Stahl (Invitae) Dep. at 99)).

Response to Finding No. 1302:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269 and 1297, which Respondents incorporate herein.

The proposed finding is vague, irrelevant, speculative, and consists of an improper lay opinion. It is unclear what effects "US-China relations" will have on BGI and/or its entry into the United States market. Furthermore, given the enormity and complexity of nation-state relationships, any attempt to determine the potential impact (if any) of the US-China relationship on BGI is inherently speculative and deserves no credence.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Mr. Stahl is the President of Oncology at Invitae, a position completely focused on research and development. (PX7075 (Stahl (Invitae) Dep. at 12-13.) He does not claim to possess, and his employment history reveals no, expertise on US-China relationships, its second-order impacts on NGS businesses, BGI's positioning within China, or United States assessments of BGI. (*See* (PX7075 (Stahl (Invitae) Dep. at 10-13.)

1303. [redacted] (PX7077 (Chahine (Helio) Dep. at 132) (*in camera*)).

Response to Finding No. 1303:

The proposed finding is misleading and speculative. [redacted]

Respondents also note that Dr. Chahine testified at trial that Helio has chosen to pursue a liver cancer screening test because Helio "has operations both in China and in the U.S." and "China has the largest number of liver cancer cases in the world." (Chahine (Helio) Tr. 1025.) [redacted] Helio has partnered with Chinese collaborators in the past as part of its work to validate its liver test, further undermining Complaint Counsel's argument that Chinese competitors such as BGI are off-limits to putative MCED developers. (RX3308 (Helio) at 1.) Complaint Counsel also concedes that [redacted]. (Chahine (Helio) Tr. 1062; CCFF ¶ 2537).

1304. [redacted] (Chahine (Helio) Tr. 1048 (*in camera*)).

Response to Finding No. 1304:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1303, which Respondents incorporate herein.

1305. [redacted] (Chahine (Helio) Tr. 1059-1060 (*in camera*)).

Response to Finding No. 1305:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1303, which Respondents incorporate herein.

1306. [redacted] (Chahine (Helio) Tr. 1110 (*in camera*)).

Response to Finding No. 1306:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1303, which Respondents incorporate herein.

1307. Helio's Chinese and United States operations share a "common interest and strategies," but the R&D is completely segregated between the two operations—all of the R&D work in China is done with Chinese samples, sequenced in China, and developed with an algorithm specific to China. (Chahine (Helio) Tr. 1026).

Response to Finding No. 1307:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1303, which Respondents incorporate herein.

1308. Dr. Chahine testified at trial that Helio has chosen to segregate the R&D between its United States and Chinese operations because of "specific laws" and because it "makes good business sense to completely segregate and not commingle any of those data" between the operations. (Chahine (Helio) Tr. 1026).

Response to Finding No. 1308:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1303, which Respondents incorporate herein.

1309. [redacted] (Chahine (Helio) Tr. 1048-49 (*in camera*)).

Response to Finding No. 1309:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1303 herein.

1310. [redacted] (Chahine (Helio) Tr. 1048-50 (*in camera*)).

Response to Finding No. 1310:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1303, which Respondents incorporate herein. Contrary to the proposed finding, [redacted] Respondents also incorporate their responses to CCFF ¶ 1177 herein.

1311. [redacted] (Chahine (Helio) Tr. 1048-49 (*in camera*)).

Response to Finding No. 1311:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1303, which Respondents incorporate herein. Further, [redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. Dr. Chahine testified at trial that he was no longer the CEO of Helio,

he terminated employment at Helio at the end of June 2021 and is currently at a start-up out of New York. (Chahine (Helio) Tr. 998–99.)

1312. [redacted] (Rabinowitz (Natera) Tr. 338-341 (*in camera*)).

Response to Finding No. 1312:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1293, which Respondents incorporate herein.

The proposed finding is inadmissible hearsay and misleading. [redacted] RX3473 (Natera) at 1; *see also* RX3062 (Natera).) [redacted]

1313. [redacted] (Rabinowitz (Natera) Tr. 338-41 (*in camera*)).

Response to Finding No. 1313:

The proposed finding is hearsay, irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1312, which Respondents incorporate herein.

The proposed finding is vague, irrelevant, speculative, and consists of an improper lay opinion. It is unclear [redacted]

[redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Dr. Rabinowitz is the executive chairman of Natera and has an engineering/aeronautics educational background. (Rabinowitz (Natera) Tr. 284-85.) He does not claim to possess, and his employment history reveals no, expertise on US-China relationships, its second-order impacts on NGS businesses, BGI's positioning within China, or United States assessments of BGI. (Rabinowitz (Natera) Tr. 284-85.)

1314. [redacted] (Rabinowitz (Natera) Tr. 338-341 (*in camera*)).

Response to Finding No. 1314:

The proposed finding is hearsay, irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1312, which Respondents incorporate herein.

Contrary to Complaint Counsel's unproven contention, [redacted]; RX3473 (Natera) at 1; *see also* RX3062 (Natera).) [redacted]

1315. [redacted] (PX7058 (Conroy (Exact) IHT at 122-123) (*in camera*)).

Response to Finding No. 1315:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Mr. Conroy is the Chairman and CEO of Exact Sciences. (PFF ¶ 1689; Conroy (Exact/Thrive) Tr. 1526.) He does not claim to possess, and his employment history reveals no, expertise on US-China relationships, its second-order impacts on NGS businesses, BGI's positioning within China, or United States assessments of BGI. (Conroy (Exact/Thrive) Tr. 1526–27, 1530.)

Respondents also incorporate their responses to CCFF ¶ 1293 herein.

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1316. [redacted] (PX7058 (Conroy (Exact) IHT at 122-123) (*in camera*)).

Response to Finding No. 1316:

The proposed finding is hearsay, irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1316, which Respondents incorporate herein.

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1317. [redacted] (PX7058 (Conroy (Exact) IHT at 122-123) (*in camera*)).

Response to Finding No. 1317:

The proposed finding is irrelevant because Cologuard uses PCR technology, not NGS, and is not an MCED test. Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1318. Though both BGI and Singlera have Chinese offices, Dr. Gao testified that "may not be beneficial for [BGI] for [Singlera] to be Chinese, because we kind of know them better, you know, then in terms of business practice, reputation." (PX7042 (Gao (Singlera) IHT at 61-62)).

Response to Finding No. 1318:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1290 and 1293, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

The proposed finding is also misleading and speculative. Dr. Gao apparently has minimal knowledge regarding BGI. He admitted that "[did] not have the facts" regarding switching to BGI systems and was "not sure" whether BGI actually has a dispute in China. (Gao (Singlera) Tr. 2895–97.) Dr. Gao also claimed that BGI had an injunction in Europe (Gao (Singlera) Tr. 2895) when, in actuality, [redacted]

[redacted]

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1319. Dr. Gao testified that BGI's reputation is "[n]ot great." (PX7042 (Gao (Singlera) IHT at 62)).

Response to Finding No. 1319:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1318, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶ 1293.

1320. [redacted] (PX5027 (Illumina) at 057 [redacted] (*in camera*)).

Response to Finding No. 1320:

The proposed finding is irrelevant. [redacted] Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.) Respondents also incorporate their responses to CCFF ¶ 1297 herein.

1321. [redacted]

[redacted] (PX5027 (Illumina) at 058 [redacted] (*in camera*)).

Response to Finding No. 1321:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1297 and 1320, which Respondents incorporate herein.

1322. [redacted] PX5027 (Illumina) at 058 [redacted] (*in camera*)).

Response to Finding No. 1322:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1297 and 1320, which Respondents incorporate herein.

1323. [redacted] (PX5027 (Illumina) at 058 [redacted] (*in camera*)).

Response to Finding No. 1323:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1297 and 1320, which Respondents incorporate herein.

1324. [redacted] (PX5027 (Illumina) at 058 [redacted] (*in camera*)).

Response to Finding No. 1324:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1297 and 1320, which Respondents incorporate herein. Respondents also note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

e) Even if BGI Entered the U.S. Market, MCED Test Developers Do Not Consider BGI an Alternative to Illumina

1325. [redacted] (Chahine (Helio) Tr. 1048 (*in camera*)).

Response to Finding No. 1325:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1293, which Respondents incorporate herein. In particular, it is [redacted] (RX3869 (Cote Expert Report) ¶ 287.) Further, Dr. Aravanis explained that BGI manufactures multiple sequencing instruments and consumables; they have an array of instruments very similar to Illumina's offerings in terms of the different categories of high throughput , mid throughput, low throughput; the instruments are comparable in terms of sequencing output; BGI's systems are used for liquid biopsy applications; BGI has an NGS sequencing product that could be used for multicancer screening; BGI competes with Illumina for liquid biopsy applications in the countries in which it operates; BGI markets its NGS offerings as an alternative to Illumina. (PFF ¶ 1306; Aravanis (Illumina) Tr. 1852–54.)

The proposed finding is also vague, misleading, and inaccurate. [redacted]

1326. [redacted] (PX7077 (Chahine (Helio) Dep. at 28) (*in camera*)).

Response to Finding No. 1326:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1325, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF 1293 herein. [redacted]

1327. [redacted] (Lengauer (Third Rock Ventures) Tr. 240 (*in camera*)).

Response to Finding No. 1327:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1293, which Respondents incorporate herein. [redacted] Specifically, [redacted] (RX0055 (Exact/Thrive) at

2.) [redacted]

1328. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 114) (*in camera*)).

Response to Finding No. 1328:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1327, which Respondents incorporate herein.

[redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents additionally note that BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

1329. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 114) (*in camera*)).

Response to Finding No. 1329:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1327, which Respondents incorporate herein.

[redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1330. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 113-115) (*in camera*)).

Response to Finding No. 1330:

The proposed finding is inaccurate, incomplete, and misleading with respect to the statement "BGI's lack of efficiency would limit Exact's ability to scale CancerSEEK" for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1327, which Respondents incorporate herein. [redacted]

1331. [redacted] (Rabinowitz (Natera) Tr. 341 (*in camera*)).

Response to Finding No. 1331:

Respondents have no specific response.

1332. [redacted] (Rabinowitz (Natera) Tr. 341 (*in camera*)).

Response to Finding No. 1332:

Respondents have no specific response.

1333. [redacted] (Rabinowitz (Natera) Tr. 337-338 (*in camera*)).

Response to Finding No. 1333:

Respondents have no specific response.

1334. [redacted] (Rabinowitz (Natera) Tr. 337-338 (*in camera*)).

Response to Finding No. 1334:

The proposed finding is misleading and is contradicted by the weight of the record evidence. For example, in June of 2021, BGI and Natera announced that, after two years of development alongside BGI, Natera was officially launching its Signatera MRD test in China, using BGI sequencers. (RX3473 (Natera) at 1.) [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1293 and 1338 herein.

1335. [redacted] (Rabinowitz (Natera) Tr. 338-341 (*in camera*)).

Response to Finding No. 1335:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1334, which Respondents incorporate herein. [redacted]

1336. [redacted] (Rabinowitz (Natera) Tr. 360-361 (*in camera*)).

Response to Finding No. 1336:

Respondents have no specific response.

1337. [redacted] (Rabinowitz (Natera) Tr. 342 (*in camera*)).

Response to Finding No. 1337:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293, 1327 and 1338, which Respondents incorporate herein. [redacted]

1338. [redacted] (Rabinowitz (Natera) Tr. 342-343 (*in camera*)).

Response to Finding No. 1338:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1327, which Respondents incorporate herein.

Contrary to Complaint Counsel's unproven contention, Respondents emphasize that Natera announced the launch of its *branded* Signatera MRD test in China, using BGI's sequencers. (RX3473 (Natera) at 1.)

(RX3473 (Natera) at 1.)

[redacted]

1339. [redacted] (Rabinowitz (Natera) Tr. 361 (*in camera*)).

Response to Finding No. 1339:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293, 1327 and 1338, which Respondents incorporate herein. [redacted]

1340. [redacted] (Rabinowitz (Natera) Tr. 341-342 (*in camera*)).

Response to Finding No. 1340:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293, 1327 and 1338, which Respondents incorporate herein. [redacted]

1341. [redacted] (Rabinowitz (Natera) Tr. 338-341 (*in camera*)).

Response to Finding No. 1341:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293, 1327 and 1338, which Respondents incorporate herein. [redacted]

1342. Dr. Gao explained at trial that "[a]ll we hear is [that BGI's] platform [is] not very reliable. Breakdown may be frequently, and the service is not that good, so . . . [that is what] I hear from market." (Gao (Singlera) Tr. 2899).

Response to Finding No. 1342:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1318, which Respondents incorporate herein. [redacted]

The proposed finding is also misleading and speculative. Dr. Gao apparently has minimal knowledge regarding BGI. He admitted that "[did] not have the facts" regarding switching to BGI systems and was "not sure" whether BGI actually has a dispute in China. (Gao (Singlera) Tr. 2895–97.) Dr. Gao also claimed that BGI had an injunction in Europe (Gao (Singlera) Tr. 2895) when, in actuality, [redacted]

1343. Dr. Gao testified that BGI has a reputation for being "spotty, not as good as Illumina." (Gao (Singlera) Tr. 2898).

Response to Finding No. 1343:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1318, which Respondents incorporate herein.

[redacted]

The proposed finding is also misleading and speculative. Dr. Gao apparently has minimal knowledge regarding BGI. He admitted that "[did] not have the facts" regarding switching to BGI systems and was "not sure" whether BGI actually has a dispute in China. (Gao (Singlera) Tr. 2895–97.) Dr. Gao also claimed that BGI had an injunction in Europe (Gao (Singlera) Tr. 2895) when, in actuality, [redacted]

1344. Dr. Gao testified that BGI's poor reputation for reliability and service prevents Singlera from using BGI sequencers to run its PanSeer test. (Gao (Singlera) Tr. 2899).

Response to Finding No. 1344:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1293 and 1318, which Respondents incorporate herein.

[redacted]

The proposed finding is also misleading and speculative. Dr. Gao apparently has minimal knowledge regarding BGI. He admitted that "[did] not have the facts" regarding switching to BGI systems and was "not sure" whether BGI actually has a dispute in China. (Gao

(Singlera) Tr. 2895–97.) Dr. Gao also claimed that BGI had an injunction in Europe (Gao (Singlera) Tr. 2895) when, in actuality, [redacted]

1345. [redacted] (*in camera*)).

Response to Finding No. 1345:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1293, which Respondents incorporate herein. [redacted]

3. "Extremely Inefficient" Long-Read NGS Is Not an Option for MCED

a) Industry Participants and the Parties Recognize that Long-Read NGS is Not an Option for MCED

1346. Illumina's CEO, Mr. deSouza, stated on his JP Morgan investor call that long-read platforms such as PacBio will not expand into short read NGS for oncology applications. (See PX2544 (Illumina) at 027 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching "JPM Life Sciences CEO Conference Call Series" transcript, Sept. 5, 2019) ("And so if we look at how this industry plays out over the next decade, we expect to continue to see that dynamic play out where there are applications for long-read that will continue to scale. And as those vendors continue to drive the price points down as they expand their accuracy as PacBio has done, it'll catalyze the adoption and the expansion of those markets but it won't get them into the short-read technology of markets like NIPT or oncology that we expect to be competing into the next decade.").

Response to Finding No. 1346:

The proposed finding is incomplete and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore

and PacBio sequencing technologies have the same capabilities, as the cited testimony appears to only refer to PacBio. Respondents incorporate their responses to CCFF ¶ 904 herein.

The proposed finding is also incomplete, misleading and outdated. Although the cited source is from September 2019, the proposed finding appears to suggest that the same market dynamics exist today, nearly three years later. To the contrary, however, platforms such as Oxford Nanopore have progressed substantially since 2019. (*See*, *e.g.*, PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) Recent improvements have made Oxford Nanopore long-read sequencing more suitable for multi-cancer screening. (PFF ¶¶ 600–600.5.)

1347. PacBio supplies long-read NGS platforms, and its 2020 annual revenue was approximately $79 million. (PX8399 (Henry (PacBio) Decl. ¶ 1)).

Response to Finding No. 1347:

Respondents note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1348. Long-read NGS platforms "can generate contiguous reads of up to 25,000 base pairs" in contrast to short-read NGS platforms like Illumina's that generate contiguous reads of only approximately 700 base pairs. (PX8399 (Henry (PacBio) Decl. ¶ 3)).

Response to Finding No. 1348:

The proposed finding is irrelevant and it is also misleading to the extent that it suggests that the length of contiguous reads suggests that Oxford Nanopore sequencers may not be used for MCED test development. The proposed finding is also inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities, as the cited

testimony appears to only refer to PacBio. Respondents incorporate their responses to CCFF ¶ 904 herein.

In particular, researchers have demonstrated that Oxford Nanopore sequencers are capable of short-read sequencing. (PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) Technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) Oxford Nanopore "believe[s] that nanopore-based sequencing can provide rich biological insights that include the ability to directly characterise variants that are relevant in cancer, including methylation, structural variants, repeats and phasing. . . . Shorter fragments can be sequenced, in the case of circulating tumour DNA, or ultra-long fragments for other cancer related analyses." (RX3939 (Oxford Nanopore Registration Document), at 41, 56, 65–66.) Accordingly, Oxford Nanopore sequencers may be "a reliable alternative to Illumina sequencing, with the advantages of minute instrumentation costs and extremely short analysis time". (RX3446 (Martignano et al., 2021) at 1.)

Respondents note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1349. Former Illumina CFO/COO and current PacBio CEO Christian Henry explained: "To accomplish whole-genome sequencing, sequencing platforms must sequence longer genomes—such as the human genome—by piecing together many individual sequencing reads using bioinformatics software. This process is akin to putting together puzzle pieces to form a complete picture of a genome." (PX8399 (Henry (PacBio) Decl. ¶ 2)).

Response to Finding No. 1349:

The proposed finding is irrelevant because the cited testimony does not explain why Oxford Nanopore sequencers may not be used for MCED test development. The proposed finding is also inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities, as the cited testimony appears to only refer to PacBio. Respondents incorporate their responses to CCFF ¶¶ 904, 1346 and 1348 herein. Respondents note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1350. Mr. Henry explained that long-read NGS platforms "are particularly beneficial for applications like whole-genome sequencing because it is easier to determine the entire genomic sequence by assembling fewer long sequence fragments than by assembling many short ones. Using the puzzle analogy, it is easier to piece together a puzzle with fewer larger pieces than many smaller ones." (PX8399 (Henry (PacBio) Decl. ¶ 3)).

Response to Finding No. 1350:

The proposed finding is irrelevant because the cited testimony does not explain why Oxford Nanopore sequencers may not be used for MCED test development. The proposed finding is also inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities, as the cited testimony appears to only refer to PacBio. Respondents incorporate their responses to CCFF ¶¶ 904, 1346 and 1348 herein. Respondents note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1351. Mr. Henry declared that, "[b]ecause [ctDNA fragments] are typically fewer than 350 base pairs long, Illumina's short-read NGS platforms are capable of analyzing many ctDNA fragments in their entirety." (PX8399 (Henry (PacBio) Decl. ¶ 5)).

Response to Finding No. 1351:

The proposed finding is irrelevant because the cited testimony simply states that Illumina's NGS platform is capable of analyzing ctDNA fragments. Respondents also incorporate their responses to CCFF ¶¶ 893, 904, 1346 and 1348 herein.

Respondents note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1352. Mr. Henry indicated that, "[g]iven the relatively short length of many ctDNA fragments, long-read sequencing does not often present the same technical benefits over short-read sequencing as it does for other sequencing applications." (PX8399 (Henry (PacBio) Decl. ¶ 5)).

Response to Finding No. 1352:

The proposed finding is also irrelevant because the fact Oxford Nanopore sequencers may not "present the same technical benefits *over* short-read sequencing" does not show that Oxford Nanopore sequencers may not be used for MCED test development. Respondents also incorporate their responses to CCFF ¶¶ 893, 904, 1346 and 1348 herein.

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1353. [redacted]
(PX8399 (Henry (PacBio) Decl. ¶ 5) (*in camera*)).

Response to Finding No. 1353:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 1346 and 1348, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities. Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.) Using Oxford Nanopore's PromethION with a throughput of 10 Tb in up to 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), [redacted] Respondents also incorporate their responses to CCFF ¶ 1118 herein.

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1354. [redacted] (PX8399 (Henry (PacBio) Decl. ¶ 5) (*in camera*)).

Response to Finding No. 1354:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1353, which Respondents incorporate herein. Oxford

Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.) Using Oxford Nanopore's PromethION with a throughput of 10 Tb in up to 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), [redacted] Respondents also incorporate their responses to CCFF ¶ 1118 herein.

1355. [redacted] (PX8399 (Henry (PacBio) Decl. ¶ 9) (*in camera*)).

Response to Finding No. 1355:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 904, 907 and 1353, which Respondents incorporate herein.

The proposed finding is inaccurate and outdated. PacBio, along with recently-acquired Omniome, has publicly stated that they would specifically target the cancer screening market, as well as other oncology applications, including a general interest in companies developing blood-based early cancer screening tests. (RX3947 (Clinical OMICs) at 3; PX7096 (Song (Omniome) Dep. at 59–63, 66; [redacted] (PX7096 (Song (Omniome) Dep. at 82, 100–01); [redacted]

[redacted]

Respondents note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1356. [redacted] (PX8399 (Henry (PacBio) Decl. ¶ 10) (*in camera*)).

Response to Finding No. 1356:

The proposed finding is outdated, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 907 and 1355, which Respondents incorporate herein. In July 2021, Pacific Biosciences of California ("PacBio") announced it had acquired Omniome for $800M. (RX3947 (Clinical OMICs).) PacBio stated that it believes Omniome's data accuracy should help the combined company target oncology applications like cancer screening. RX3947 (Clinical OMICs) at 3.) Omniome has stated that, at launch, its NGS sequencer will have accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. PX7096 (Song (Omniome) Dep. at 43, 58); [redacted] RX3869 (Cote Expert Report) ¶ 319.)

Respondents also note that Complaint Counsel chose not to discuss PX8399 at trial (CC Exhibit Index at 61), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1357. Illumina's CEO Francis deSouza explained in an investor call that in looking at circulating tumor DNA fragments, "the ability to do very long-read doesn't offer any incremental value and certainly isn't worth paying a significant premium in terms of the cost per base." (PX2544 (Illumina) at 026-027 (Email from T. Peterson, JP Morgan, to F. deSouza,

Illumina, attaching "JP Morgan Life Sciences CEO Conference Call Series" transcript, Sept. 5, 2019)).

Response to Finding No. 1357:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 910, 1346, 1348 and 1353, which Respondents incorporate herein.

1358. Illumina's Mr. deSouza, explained to investors that short-read NGS platforms are much more suitable for detecting ctDNA fragments than long-read platforms:

> The way we see it is that there are applications that are very well suited for long-read technology, that frankly short-read technology don't [sic] address and vice versa it's true as well. But there are markets, our core markets where short-read technologies work exceptionally well and long-read don't offer any additional values. So let me give you some specifics. If you look at some of our core markets, for example, in NIPT the fragments we're looking at are 150-ish base pairs. So somewhere between 130 base pairs and maybe up to 200 base pairs long. And so the ability to sequence fragments that are a million base pairs long or a hundred thousand base pairs long is frankly irrelevant, because the fragments are nowhere near that long. And so what customers are looking for is a high-volume sequencer that's able to cost effectively and accurately read those short fragments. That's true in circulating tumor DNA fragments in the oncology space as well. And so if you look at the number of our core markets, the ability to do very long-read doesn't offer any incremental value and certainly isn't worth paying a significant premium in terms of the cost per base.

(PX2544 (Illumina) at 026-027 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching "JP Morgan Life Sciences CEO Conference Call Series" transcript, Sept. 5, 2019)).

Response to Finding No. 1358:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 910, 1346, 1348 and 1353, which Respondents incorporate herein.

1359. Illumina's Mr. deSouza, explained to investors that long-read NGS platforms are not likely to impact Illumina's market position for liquid biopsy applications:

> Our thoughts on long read haven't really changed in the sense that … we believe long-read technologies … serve about 5% of the market where you're doing de novo sequencing for new species, for example. …[F]or the vast majority of the market, the 95% of the market, short reads are just simply the better technology in terms of accuracy, in terms of price performance. The price gap can be 10x between what you can do in short reads and what you can do in long reads. The raw accuracy is []higher on short reads. … [In markets like] liquid biopsy [] [y]ou're looking at fragments that are under 200 base pairs long. And so, you're not willing to make a trade-off in accuracy or cost just to be able to read 10,000 base pairs.

(PX2622 (Illumina) at 012 (Email from J. Cunningham, Illumina, to F. deSouza, Illumina, attaching "Edited Transcript, ILMN.OQ – Illumina Inc. at JPMorgan Healthcare Conference (Virtual) and Q&A Session," , Jan. 12, 2021)).

Response to Finding No. 1359:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF 893, 904, 910, 1346, 1348 and 1353, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss PX2622 at trial (CC Exhibit Index at 26), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1360. In discussing Oxford Nanopore's long-read sequencing platform, Illumina Senior Vice President and Chief Technology Officer, Alex Aravanis, described Illumina as "superior in a meaningful way . . . around data accuracy, so the accuracy of the Oxford Nanopore reads is not as good as the Illumina reads." (PX7065 (Aravanis (Illumina) IHT at 157-59) (noting that MCED tests other than Grail are even more sensitive to NGS accuracy)).

Response to Finding No. 1360:

The proposed finding is incomplete and misleading. [redacted]

[redacted]

Dr. Cote also explained that Oxford Nanopore's platform "is capable of sequencing up to 10 Terabase pairs ('Tb') per run and may be used to detect methylation and other epigenomic changes directly. While Oxford Nanopore historically faced lower accuracy, the latest improvements in chemistry and bioinformatics enable the platform's accuracy to the Q50 range. This platform is already being used by developers of potential cancer screening tests." (RX3869 (Cote Expert Report) ¶ 19.)

In addition, Oxford Nanopore states that its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.)

The proposed finding is also incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 904, 970, 1346 and 1348, which Respondents incorporate herein.

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1361. Thermo Fisher Vice President of Product Management Andrew Felton testified that "it's highly inefficient to use a platform [for routine testing applications] that can generate and has to generate very long reads compared to a platform that's … primary utility is in the 200 to 600 base pair read length space." (Felton (Thermo Fisher) Tr. 1997-1998).

Response to Finding No. 1361:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904 and 911, which Respondents incorporate herein. Oxford Nanopore's PromethION has total throughput per run of up to 10 Tb, much higher than the up to 50 Gb per run generated by Thermo Fisher's Ion GeneStudio S5. (*See* PFF ¶¶ 579, 598–604.1.) Dr. Felton did not consider the new technology of using concatenation to read cfDNA fragments using nanopore sequencing.

[redacted]

1362. Mr. Felton explained that the cost of clinical oncology sequencing "would tend to be higher [for long read NGS instruments] because you typically have smaller numbers of reads of longer reads in the long-read technologies. (PX7070 (Felton (Thermo Fisher) IHT at 24-25)).

Response to Finding No. 1362:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 911 and 1361, which Respondents incorporate herein.

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1363. Mr. Felton testified that when short-read NGS instruments are used in clinical oncology, "your cost per read and naturally your cost per [gigabase] of sequence would tend to be much lower than for a long-read technology." (PX7070 (Felton (Thermo Fisher) IHT at 24-25)).

Response to Finding No. 1363:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 911 and 1361, which Respondents incorporate herein.

Furthermore, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1364. Dr. Bert Vogelstein of Johns Hopkins University testified that "[l]ong-read sequencers are [ ] unsuited for early detection [cfDNA] liquid biopsy testing" in part because "the throughput of long-read sequencers are much lower than the throughput of short-read sequencers" and "the error rates of long-read sequencers are much too high to effectively analyze the molecules and plasma". (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 65-66)).

Response to Finding No. 1364:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904 and 913, which Respondents incorporate herein.

Contrary to Complaint Counsel's unproven contention, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.) Oxford Nanopore claims its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).) Respondents incorporate their responses to CCFF ¶ 904 herein.

1365. Dr. Vogelstein testified that long-read sequencing technologies "are not applicable to the analysis of plasma DNA," and he elaborated "the reason is simple to understand: Plasma DNA is not long. Plasma DNA, the average size in a normal individual is 167 base pairs. And in cancers, it's a bit shorter." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 73-74)).

Response to Finding No. 1365:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 913 and 1364, which Respondents incorporate herein.

1366. Dr. Vogelstein testified that "long-read sequencing is not suitable for analyzing the plasma DNA molecules that" his lab tests in part because "the throughput of long-read sequencers are much lower than the throughput of short-read sequencers" and "[a]s a result, short-read sequencers can analyze the plasma DNA molecules much faster and in many more samples in a given time than can long-read sequencers". (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 65-66)).

Response to Finding No. 1366:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 913 and 1364, which Respondents incorporate herein.

1367. Dr. Vogelstein testified that long-read sequencing is not suitable for analyzing plasma DNA molecules in part because "the error rates of long-read sequencers are much too high to effectively analyze the molecules and plasma for [ ] early cancer detection with the number of artifactual mutations outnumbering the expected number of real mutations by many fold." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 65-66)).

Response to Finding No. 1367:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 913 and 1364, which Respondents incorporate herein.

1368. Dr. Vogelstein testified that PacBio's sequencers are not "applicable to a good assay for plasma." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 73-74)).

Response to Finding No. 1368:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904 and 1355, which Respondents incorporate herein.

Respondents also note that PacBio, along with its recently-acquired Omniome, has publicly stated that they would specifically target the cancer screening market, as well as other oncology applications, including a general interest in companies developing bllod-based early cancer screening tests. (RX3947 (Clinical OMICs) at 3; PX7096 (Song (Omniome) Dep. at 59–63, 66; [redacted] In addition, the proposed finding is contradicted by the testimony of Complaint Counsel's own witnesses. For example, [redacted]

[redacted]

1369. Dr. Vogelstein testified that "only short-read sequencing is suitable for the liquid biopsy sequencing" that his lab performs for the research it conducts. (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 65-66)).

Response to Finding No. 1369:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 913 and 1364, which Respondents incorporate herein.

b) MCED Test Developers Testified that Long-Read NGS Is Not an Alternative to Illumina NGS

1370. [redacted] (Chudova (Guardant) Tr. 1221-22) (*in camera*)).

Response to Finding No. 1370:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904 and 1346, which Respondents incorporate herein.

1371. [redacted]
(Chudova (Guardant) Tr. 1218-19) (*in camera*)).

Response to Finding No. 1371:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904 and 1346, which Respondents incorporate herein.

Recent improvements have made Oxford Nanopore long-read sequencing more suitable for multi-cancer screening. (PFF ¶¶ 600–600.5.) Researchers have demonstrated that Oxford Nanopore sequencers are capable of short-read sequencing. (PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) Technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) Oxford Nanopore "believe[s] that nanopore-based sequencing can provide rich biological insights that include the ability to directly characterise variants that are relevant in cancer, including methylation, structural variants, repeats and phasing. . . . Shorter fragments can be sequenced, in the case of circulating tumour DNA, or ultra-long fragments for other cancer related analyses." (RX3939 (Oxford Nanopore Registration Document), at 41, 56, 65–66.) Accordingly, Oxford Nanopore sequencers may be "a reliable alternative to Illumina sequencing, with the advantages of minute instrumentation costs and extremely short analysis time". (RX3446 (Martignano et al., 2021) at 1.) Dr. Chudova did not consider the new technology of using concatenation to read cfDNA fragments using nanopore sequencing.

Respondents also note that Omniome's (acquired by PacBio) in-development NGS sequencer reportedly has comparable throughput and run times to Illumina's NextSeq sequencers, but with up to 10-100x better accuracy. (PX7096 (Song (Omniome) Dep. at 82, 100–01); [redacted] Ultimately, Omniome has stated that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted]

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 2273, which Respondents incorporate herein.

1372. [redacted] (Chudova (Guardant)Tr. 1218-19) (*in camera*)).

Response to Finding No. 1372:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 927, 1346 and 1371, which Respondents incorporate herein.

Using Oxford Nanopore's PromethION with a throughput of 10 Tb in up to 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), [redacted] —*a few more* samples in the same time frame. Respondents also incorporate their responses to CCFF ¶ 1118 herein.

1373. [redacted] (Chudova (Guardant) Tr. 1223-24) (*in camera*)).

Response to Finding No. 1373:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 927, 1355 and 1368, which Respondents incorporate herein.

Respondents also note that PacBio, along with its recently-acquired Omniome, has publicly stated that they would specifically target the cancer screening market, as well as other oncology applications, including a general interest in companies developing bllod-based early cancer screening tests. (RX3947 (Clinical OMICs) at 3; PX7096 (Song (Omniome) Dep. at 59–63, 66; [redacted] In addition, the proposed finding is contradicted by the testimony of Complaint Counsel's own witnesses. For example, [redacted]

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 2273, which Respondents incorporate herein.

1374. [redacted] (Chudova (Guardant) Tr. 1224 (*in camera*)).

Response to Finding No. 1374:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 927, 1346 and 1371, which Respondents incorporate herein.

Contrary to Complaint Counsel's unproven contention, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than

99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1385. [redacted]

(PX7051 (Lengauer (Third Rock Ventures) IHT at 116-17) (*in camera*)).

Response to Finding No. 1385:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 929, 1346 and 1348, which Respondents incorporate herein. [redacted] The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

[redacted]—while no Thrive witness provided any information about the sequencing required to perform CancerSEEK, and Exact/Thrive did not produce any information regarding the same during discovery—using Oxford Nanopore's PromethION with a throughput of 10 Tb in up to 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), [redacted] Respondents also incorporate their responses to CCFF ¶ 1118 herein. Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1386. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 107-09 (*in camera*)).

Response to Finding No. 1386:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 929, 1346, 1348, 1355 and 1368, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

Contrary to Dr. Lengauer's unsupported testimony, the only technical expert on NGS technology who testified at trial on behalf of either side opined that Oxford Nanopore sequencing platforms are alternatives for CancerSEEK. His testimony is also supported by the testimony of Dr. Aravanis, who is the primary witness at trial who has experience in the technical division of a sequencing platform as well as a successful MCED test developer.

Dr. Aravanis further testified that it is possible to do short-read sequencing on Oxford Nanopore's platforms at very low cost; the Oxford Nanopore platform is a very high-output sequencing platform; the amount of data and cost per data is comparable to the high-end Illumina systems; Oxford Nanopore's NGS sequencing product can be used and have been for liquid biopsy oncology testing; Oxford Nanopore markets its NGS offering as an alternative to Illumina and Illumina views Oxford Nanopore as a competitor in NGS sequencing. (PFF ¶ 1308 (Aravanis (Illumina) Tr. 1856–59).) (*See also* PFF ¶¶ 1304–1310.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1387. [redacted] (PX7055 (Otte (Freenome) IHT at 64-66) (*in camera*)).

Response to Finding No. 1387:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 945, 1346 and 1348, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

Recent improvements have made Oxford Nanopore long-read sequencing more suitable for multi-cancer screening.Researchers have demonstrated that Oxford Nanopore sequencers are capable of short-read sequencing. (PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) Technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) Oxford Nanopore "believe[s] that nanopore-based sequencing can provide rich biological insights that include the ability to directly characterise variants that are relevant in cancer, including methylation, structural variants, repeats and phasing. . . . Shorter fragments can be sequenced, in the case of circulating tumour DNA, or ultra-long fragments for other cancer related analyses." (RX3939 (Oxford Nanopore Registration Document), at 41, 56, 65–66.) Accordingly, Oxford Nanopore sequencers may be "a reliable alternative to Illumina sequencing, with the advantages of minute instrumentation costs and extremely short analysis time". (RX3446 (Martignano et al., 2021) at

1.) Mr. Otte did not consider the new technology of using concatenation to read cfDNA fragments using nanopore sequencing.

Contrary to Complaint Counsel's unproven contention regarding accuracy, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.) Oxford Nanopore claims its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).) Respondents incorporate their responses to CCFF ¶ 904 herein.

Furthermore, Respondents also note that PacBio, along with its recently-acquired Omniome, has publicly stated that they would specifically target the cancer screening market, as well as other oncology applications, including a general interest in companies developing bllod-based early cancer screening tests. (RX3947 (Clinical OMICs) at 3; PX7096 (Song (Omniome) Dep. at 59–63, 66; [redacted] In addition, the proposed finding is contradicted by the testimony of Complaint Counsel's own witnesses. For example, [redacted]

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 2355, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1388. [redacted] (PX7055 (Otte (Freenome) IHT at 72) (*in camera*)).

Response to Finding No. 1388:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 945 and 1387, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

Contrary to Complaint Counsel's unproven contention regarding accuracy, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in

accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.) Oxford Nanopore claims its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).) Respondents incorporate their responses to CCFF ¶ 904 herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1389. [redacted]

(PX7055 (Otte (Freenome) IHT at 72-73) (*in camera*)).

Response to Finding No. 1389:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 945 and 1387, which Respondents incorporate herein.

The cited testimony shows that Mr. Otte [redacted] (PFF ¶ 599.) [redacted] using Oxford Nanopore's PromethION with a throughput of 10 Tb in up to 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), [redacted] Respondents also incorporate their responses to CCFF ¶ 1118 herein. Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.)

Contrary to Complaint Counsel's unproven contention regarding accuracy, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by

test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.) Oxford Nanopore claims its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).) Respondents incorporate their responses to CCFF ¶ 904 herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1390. [redacted] (PX7055 (Otte (Freenome) IHT at 18) (*in camera*)).

Response to Finding No. 1390:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 945, 1387 and 1389, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1391. Singlera Co-founder and former CEO Dr. Gary Gao testified at trial that long read sequencing technology is not a viable option for the PanSeer test. (Gao (Singlera) Tr. 2900-01).

Response to Finding No. 1391:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904, 982, 1011, 1346 and 1348 which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

Recent improvements have made Oxford Nanopore long-read sequencing more suitable for multi-cancer screening. (PFF ¶¶ 600–600.5.) Researchers have demonstrated that Oxford Nanopore sequencers are capable of short-read sequencing. (PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) Technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) Oxford Nanopore "believe[s] that nanopore-based sequencing can provide rich biological insights that include the ability to directly characterise variants that are relevant in cancer, including methylation, structural variants, repeats and phasing. . . . Shorter fragments can be sequenced, in the case of circulating tumour DNA, or ultra-long fragments for other cancer related analyses." (RX3939 (Oxford Nanopore Registration Document), at 41, 56, 65–66.) Accordingly, Oxford Nanopore sequencers may be "a reliable alternative to Illumina sequencing, with the advantages of minute instrumentation costs and extremely short analysis time".

(RX3446 (Martignano et al., 2021) at 1.) Dr. Gao did not consider the new technology of using concatenation to read cfDNA fragments using nanopore sequencing.

Furthermore, Respondents also note that PacBio, along with its recently-acquired Omniome, has publicly stated that they would specifically target the cancer screening market, as well as other oncology applications, including a general interest in companies developing bllod-based early cancer screening tests. (RX3947 (Clinical OMICs) at 3; PX7096 (Song (Omniome) Dep. at 59–63, 66; [redacted] In addition, the proposed finding is contradicted by the testimony of Complaint Counsel's own witnesses. For example, [redacted]

The proposed finding is also incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 982 and 2406, which Respondents incorporate herein.

1392. At trial, Dr. Gao explained that long read sequencers are prohibitively expensive compared to Illumina's sequencers for the PanSeer test. (Gao (Singlera) Tr. 2900-01).

Response to Finding No. 1392:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893 and 904, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

Contrary to Complaint Counsel's unproven contention, Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.)

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011 and 1391, which Respondents incorporate herein.

1393. Dr. Gao further explained at trial, "Illumina, like I said, even the small NextSeq Dx can carry 200 to 400 million read per run, and the long reader can only carry the millions of reads. . . . The cost will be much higher when we use it for cancer detection." (Gao (Singlera) Tr. 2901).

Response to Finding No. 1393:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893 and 904, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 982, 1011 and 1391–92, which Respondents incorporate herein.

1394. [redacted]

[redacted] (PX7111 (Fesko (Natera) Dep. at 55-56) (*in camera*)).

Response to Finding No. 1394:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893 and 904, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities. Oxford Nanopore claims its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1264, 1346, 1348 and 1355, which Respondents incorporate herein.

1395. [redacted] (PX7074 (Perettie (FMI-Roche) Dep. at 157) (*in camera*)).

Response to Finding No. 1395:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 904, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 893, 1190, 1346 and 1348 herein.

Recent improvements have made Oxford Nanopore long-read sequencing more suitable for multi-cancer screening. (PFF ¶¶ 600–600.5.) Researchers have demonstrated that Oxford Nanopore sequencers are capable of short-read sequencing. (PFF ¶¶ 601–601.4 (RX3446 (Martignano et al., 2021); RX3737 (Wei & Williams 2016); RX3744 (Wilson et al., 2019); RX3441 (Marcozzi A et al., 2020)).) Technology has been developed to conjoin (concatenate) short fragments of DNA into very, very long strands of DNA, allowing for efficient, high throughput sequencing of cell-free DNA using Oxford Nanopore's sequencers. (Cote Tr. 3754–56.) Oxford Nanopore "believe[s] that nanopore-based sequencing can provide rich biological insights that include the ability to directly characterise variants that are relevant in cancer, including methylation, structural variants, repeats and phasing. . . . Shorter fragments can be sequenced, in the case of circulating tumour DNA, or ultra-long fragments for other cancer related analyses." (RX3939 (Oxford Nanopore Registration Document), at 41, 56, 65–66.) Accordingly, Oxford Nanopore sequencers may be "a reliable alternative to Illumina sequencing, with the advantages of minute instrumentation costs and extremely short analysis time". (RX3446 (Martignano et al., 2021) at 1.) Ms. Perettie did not consider the new technology of using concatenation to read cfDNA fragments using nanopore sequencing.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1396. Helio Health CEO Dr. Kenneth Chahine testified that long-read NGS platforms "provid[e] information that today we don't believe is important. And so if you are going to … pay additional money for it … it doesn't make sense for us to do that to date." (PX7077 (Chahine (Helio Health) Dep. at 28)).

Response to Finding No. 1396:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893 and 904, which Respondents incorporate herein. The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities. Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.)

Respondents additionally note that [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1346 and 1348 herein.

1397. Invitae's President of Oncology Joshua Stahl explained that long read sequencers have a low throughput so "you can't do applications like ctDNA" which require many reads of each sequence. (PX7044 (Stahl (Invitae) IHT at 97-100)).

Response to Finding No. 1397:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893 and 904, which Respondents incorporate herein. . The proposed finding is inaccurate and misleading because it oversimplifies the capabilities of various types of NGS platforms, and because it suggests that Oxford Nanopore and PacBio sequencing technologies have the same capabilities.

Mr. Stahl of Invitae also recognized that Thermo Fisher (along with Oxford Nanopore, BGI, and PacBio) is a participant in the NGS field and that there would be "no way to predict"

which NGS company would be successful over the next five or ten years. (PX7075 (Stahl (Invitae) Dep. at 43).)

Respondents additionally note that [redacted] (Stahl (Invitae) Dep. at 22, 44.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1398. Invitae's Mr. Stahl testified that that long-read sequencing provider Oxford Nanopore's "error rates are high, higher than [Thermo Fisher's] Ion Torrent and their throughput . . . is very low and so it's not a practical sequencing instrument within the precision oncology space." (PX7075 (Stahl (Invitae) Dep. at 74)).

Response to Finding No. 1398:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 893, 904 and 1397, which Respondents incorporate herein.

Contrary to Complaint Counsel's unproven contention, Oxford Nanopore's sequencing technology is suitable for multi-cancer screening and has been used by test developers for that purpose. (*See* PFF ¶¶ 598–604.1.) Methods have been developed to obtain consensus sequences from homogenous DNA samples by genome assembly, resulting in accuracies of more than 99.999% (Q50). (RX3541 (ONT) at 1; RX3535 (ONT); RX3536 (ONT).) Oxford Nanopore has also announced that its single-molecule modal accuracy is now >99.3% (Q20) using its "Q20+" chemistry, and also developed a new approach termed "Duplex" sequencing, which enables the sequencing of both template and complementary strands and accuracy "trending towards 99.9% (Q30)". (RX3541 (ONT) at 1; RX3535 (ONT) at 1; *see also* PFF ¶¶ 604–604.1.) Oxford Nanopore claims its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at

1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).) Respondents incorporate their responses to CCFF ¶ 904 herein.

F. OTHER TESTING TECHNOLOGIES ARE NOT VIABLE SUBSTITUTES FOR NGS FOR MCED TESTS

1399. In a 2019 presentation discussing a combined Illumina-Grail entity, Illumina stated that "[n]o technology has demonstrated the ability to achieve the required analytical sensitivity of 0.01% of ctDNA from a couple of blood tubes worth of input. [Illumina's] hypothesis is that deeper sequencing (breadth and depth) will drive higher sensitivity and specificity than lower resolution methods like digital PCR and lower coverage WGS, which will be critical to performance in screening. Specifically, deeper sequencing allows more coverage of cancer relevant genes and deeper sampling of the cfDNA to find rare molecules." (PX2712 (Illumina) at 027 (Email from P. Scagnetti, Illumina, to M. Nguyen, Illumina, attaching Python: A Revolution in Early Cancer Detection Presentation, Dec. 3, 2019)).

Response to Finding No. 1399:

The proposed finding is incomplete and misleading. It is undisputed that there are at least two MCED tests on the market that are not based on NGS technology. (PFF ¶ 692.)

StageZero's Aristotle test is a microarray-based liquid biopsy test that interrogates mRNA to detect 10 cancer types. (PFF ¶¶ 543–52, 692.1.) Genesys Biolabs' OneTest is a proteomics-based test that measures seven cancer protein biomarkers to screen for lung, liver, pancreatic, ovarian, prostate and colon cancers. (PFF ¶¶ 553–56, 692.2.)

Moreover, a number of companies are developing cancer screening tests that are not based on NGS technology, including tests in development from InterVenn Biosciences (PFF ¶¶ 557–63.1), Seer's ProteographTM and PrognomiQ platforms (PFF ¶¶ 564–69) and Somalogic (PFF ¶¶ 570–73). (PFF ¶ 693.) There is no evidence, or reason to believe, that an MCED test must use NGS technology to launch an MCED test under Complaint Counsel's articulation. (PFF ¶ 694.) Nor is there any evidence, or reason to believe, that patients or doctors have any preference for an MCED test based on the platform used to run it. (PFF ¶ 695.) What patients

and doctors care about is whether a test works and for which indications, not how exactly it works. (PFF ¶ 696.)

The proposed finding also appears to suggest that MCED testing today requires "very deep sequencing", which is wrong. For example, GRAIL's Galleri test does not use "very deep sequencing", but relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 1289.)

1400. Illumina materials state that no other DNA analysis technology can analyze as many DNA fragments as NGS or characterize almost all biomarkers contained within each fragment like NGS. (*See* PX0120 at 001 (Illumina, Advantages of next-generation sequencing vs. qPCR) (". . . qPCR can only detect known sequences. In contrast, NGS is a hypothesis-free approach that does not require prior knowledge of sequence information."); *see also* PX7097 (Felton (Thermo Fisher) Dep. at 39) (testifying that PCR is generally not used to detect unknown variants)).

Response to Finding No. 1400:

The proposed finding is not supported by the cited evidence. The two pieces of cited evidence both state that PCR can only detect known sequences; they do not provide support for the much broader first sentence of the proposed finding. PX0120 also states that "both [qPCR and NGS] offer highly sensitive and reliable variant detection". (*See* PX0120 (Illumina) at 1.) Respondents also incorporate their responses to CCFF ¶ 1399 herein.

1401. Illumina Senior VP of Corporate Development and Strategic Planning, Joydeep Goswami, explained, "NGS is a great solution" for applications like cancer screening because "cancer is by definition a disease that manifests due to changes in DNA" and "NGS helps customers assess the . . . changes in DNA . . . very, very quickly and comprehensively." (PX7087 (Goswami (Illumina) Dep. at 100-01)).

Response to Finding No. 1401:

Respondents have no specific response except to note that Dr. Goswami also testified that

[redacted]

[redacted] (PX7087 (Goswami (Illumina) Dep. at 99.) Respondents also incorporate their responses to CCFF ¶ 1399 herein.

1402. Dr. Felton testified that multi-cancer early detection is an application suited for high-throughput NGS sequencers because "[t]he collection of samples from a wide area of the population is inherently easier if it's funneled into a central facility … and then running those samples on a high throughput platform would reduce the amount of labor time involved in the processing of said samples." (Felton (Thermo Fisher) Tr. at 2002).

Response to Finding No. 1402:

The proposed finding is misleading and incomplete. It is evidence that "higher output platforms would be suited to a centralized environment", (Felton (Thermo Fisher) Tr. 2002) showing that, to the extent that test developers use a high-throughput approach for MCED testing, they are unlikely to pursue kitted IVD tests. [redacted] (Felton (Thermo Fisher) Tr. 2006.) Singlera's PanSeer test is compatible with both Illumina and Thermo Fisher systems. (PFF ¶¶ 533, 667–68.)

Respondents also incorporate their responses to CCFF ¶ 952 herein.

1403. [redacted] (PX7055 (Otte (Freenome) IHT at 63) (*in camera*)).

Response to Finding No. 1403:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1399, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1404. [redacted] (PX7100 (Chudova (Guardant) IHT at 20) (*in camera*)).

Response to Finding No. 1404:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 1399, which Respondents incorporate herein.

For the purposes of this response, Respondents assume that "IHT" is a typographical error and the intended reference is Chudova (Guardant) Dep. at 20.

1405. [redacted] (Lengauer (Third Rock Ventures) Tr. 183 (*in camera*)).

Response to Finding No. 1405:

The proposed finding is not supported by the cited evidence. In particular, Respondents state that Thrive's CancerSEEK test uses a combination of NGS and proteomics technology.

(PFF ¶ 423 (Lengauer (Exact/Thrive) Tr. 210–11; RX3419 (Lennon 2020) at 3).) The CancerSEEK assay as it exists today is not a liquid biopsy-only test, and does not solely rely on NGS; in particular, it relies on a full-body PET-CT imaging step. (PFF ¶ 425.1.) Respondents also incorporate their responses to CCFF ¶¶ 929 and 1399 herein.

1406. [redacted] (Lengauer (Third Rock Ventures) Tr. 268-70 (*in camera*)).

Response to Finding No. 1406:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1399 and 1405, which Respondents incorporate herein. The proposed finding is also incomplete and misleading insofar as it suggests that Exact is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future for the reasons explained in Respondents' responses to CCFF ¶¶ 414, 418, 905 and 1912, which Respondents incorporate herein.

[redacted] Exact/Thrive also admitted that, based on the DETECT-A trial, "[a]t present, we cannot be certain that the DETECT-A blood test"—the CancerSEEK test—"helped any participant." (RX3419 at 11.)

1. Microarray Platforms

1407. Microarrays test DNA fragments for the presence of predefined target sequences. (PX7072 (deSouza (Illumina) IHT at 55; PX7070 (Felton (Thermo Fisher) IHT at 20-21)).

Response to Finding No. 1407:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1399 and 1412; *see* also PFF ¶¶ 163–164.5.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1408. Microarrays determine whether specific sequences are present within a sample. (PX7070 (Felton (Thermo Fisher) IHT at 20-21) ("Q At a high level, what is the difference between Thermo's NGS business and its microarray business? A The microarray technology provides for so-called hypothesis-based experiments primarily for gene expression, genotyping, and copy. By that we mean, you have to know something about the sequences that you're trying to interrogate to place them onto the array to be detected; whereas, next-generation sequencing is a so-called hypothesis-free technology in which you do not have to understand the sequences that you are trying to interrogate. You just sequence them directly.")).

Response to Finding No. 1408:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1399 and 1412; *see* also PFF ¶¶ 163–164.5.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1409. A microarray is a device "that [labs] can hybridize DNA onto, and the device fluoresces, indicating what DNA is present…" (PX7113 (Rabinowitz (Natera) Dep. at 114)).

Response to Finding No. 1409:

Respondents have no specific response.

1410. Microarrays do not provide precise readouts of the sequence of nucleotides contained within fragments of DNA. (Chudova (Guardant) Tr. 1177).

Response to Finding No. 1410:

The proposed finding is incomplete and misleading. Dr. Chudova did not testify that microarrays "do not provide precise readouts"; she testified that "micro-arrays . . . would not provide the kind of precision that's needed for screening applications in terms of the readout of the fragments of DNA." (Chudova (Guardant) Tr. 1177.) In addition, StageZero's Aristotle test achieves a high degree of precision using microarray technology, specifically, Aristotle achieved sensitivity from 55.6% to 100% for various cancer types at 99.0% specificity, with mean false positive rates ranging from 0.3% to 6.8%. (PFF ¶ 550.) Respondents also incorporate their responses to CCFF ¶ 1399 herein.

1411. Microarray technology has a lower throughput than NGS. (Felton (Thermo Fisher) Tr. 1992-1993).

Response to Finding No. 1411:

The proposed finding is incomplete and misleading. When asked whether he knew how the throughput of Thermo's microarray technology compares to that of its NGS technology, Dr. Felton replied: "[n]ot well, no". He testified that "[g]enerally, it would – I would say [microarray] would be lower throughput than NGS". (Felton (Thermo Fisher) Tr. 1992–93.) This testimony is Dr. Felton's personal view about the general relationship between the two technologies, rather than the definitive view presented in the proposed finding.

Microarrays provide a high-throughput platform for simultaneously screening tens of thousands of biomolecular interactions. (PFF ¶ 164.) For example, microarray technology such as Thermo Fisher's Genome-Wide Human SNP Array 6.0 chip features 1.8 million genetic markers for single nucleotide polymorphisms (SNPs) and copy number variations (CNVs). (PFF ¶ 164.2.) Certain NGS systems such as the MiSeq may be used to interrogate a comparable number of genetic markers. (*See* e.g., PFF ¶ 575.)

1412. NGS is better suited than microarray for "more things like oncology testing, inherited disease testing where … you're looking to detect a relatively reasonable number of mutations, but across a large genomic footprint. That would tend to be the space that [NGS platform instruments] would have an advantage over a microarray platform." (Felton (Thermo Fisher) Tr. 1993).

Response to Finding No. 1412:

The proposed finding is misleading and incomplete. StageZero's Aristotle test is a microarray-based blood biopsy test that interrogates mRNA from whole blood (blood transcriptome) to detect gene expression profiles. (PFF ¶ 547.) Aristotle, which was launched as an LDT in 2021, detects 9 cancer types relevant for women and 6 cancer types relevant for men, for a total of 10 cancer types. (PFF ¶ 548.) In contrast to the DNA methylation or genomic mutation based approaches used by GRAIL, Thrive, and other companies, StageZero uses an approach called immunoediting. (PFF ¶ 549.) As a result of this immunoediting, gene expressions in the transforming cancer cells, *i.e.*, the mRNA in the transcriptome, display signature profiles, and cause a corresponding change in the mRNA profiles in the peripheral blood plasma. (PFF ¶ 549.1.) StageZero's Aristotle test detects this change in the mRNA profiles using microarray technology, which tests more than 36,000 gene transcripts and variants. (PFF ¶ 549.2.)

[redacted]

1413. Microarrays do not provide the level of accurate quantification that is possible with NGS technology. (Chudova (Guardant) Tr. 1143).

Response to Finding No. 1413:

The proposed conclusion is incomplete and misleading. In 2,845 unique blood samples validation study with 1,013 samples from patients diagnosed with 10 cancers and 1,832 control samples including 1,042 samples from healthy subjects and the remaining from patients diagnosed with non-cancer diseases, StageZero's microarray-based test, Aristotle, achieved sensitivity from 55.6% to 100% for various cancers at 99.0% specificity, with PPVs from 5.6–77.7% and mean false positive rate ranging from 0.3% to 6.8%. (PFF ¶ 550.) Respondents also incorporate their responses to CCFF ¶ 1412 herein.

1414. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 42) (*in camera*)).

Response to Finding No. 1414:

The proposed finding is incomplete and misleading. Thermo Fisher's Genome-Wide Human SNP Array 6.0 chip features 1.8 million genetic markers for single nucleotide polymorphisms (SNPs) and copy number variations (CNVs). (PFF ¶ 164.2.) Similarly, Agilent Technologies' Human Genome CGH Microarrays offers up to 1 million probes for genome-wide CNV identification and characterization. (PFF ¶ 164.4.)

1415. Microarray systems are limited in the number of genetic markers they can interrogate. (Chahine (Helio) Tr. 1020).

Response to Finding No. 1415:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1411 and 1412, which Respondents incorporate herein.

1416. Thermo Fisher's Felton acknowledged that while microarray technology "can generate a large number of data points, their throughput is relatively low compared to the highest throughput gene sequencing platforms." (PX7097 (Felton (Thermo Fisher) Dep. at 41)).

Response to Finding No. 1416:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1411 and 1412, which Respondents incorporate herein.

1417. [redacted]

(PX7111 (Fesko (Natera) Dep. at 64–65) (*in camera*)).

Response to Finding No. 1417:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1264, 1411 and 1412, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Mr. Fesko has never worked at Ariosa and is not an expert with respect to its technology. Further, Ariosa (part of Roche at the time) switched its Harmony NIPT from an NGS-based approach to a microarray-based approach, and stated that

it achieved more accurate analysis with lower cost and decreased turnaround time by doing so. (PX7096 (Song (Omniome) Dep. at 124–28); RX3400 (Juneau et al., 2014).) This change did not interrupt Harmony's commercial availability. (PX7076 (Song (Omniome) Dep. at 125–26.)

The proposed finding is also incomplete and misleading insofar as it suggests that Natera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

[redacted] (PFF ¶¶ 508–09.) [redacted] (PFF ¶¶ 509–10.)

[redacted] (PFF ¶ 511

(RX3869 (Cote Expert Report) ¶ 227; [redacted]).) Respondents also incorporate their responses to CCFF ¶¶ 341, 774–775 and 794 herein.

1418. [redacted] (PX7111 (Fesko (Natera) Dep. at 62) (*in camera*)).

Response to Finding No. 1418:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1264, 1411–12 and 1417, which Respondents incorporate herein.

1419. Former Ariosa co-founder and CEO Dr. Ken Song testified that Ariosa abandoned its plans for developing oncology tests because ctDNA was not detectable on a microarray. (PX7071 (Song (Omniome) IHT at 98–99)).

Response to Finding No. 1419:

The proposed finding is incomplete and misleading. Dr. Song also testified that Ariosa (at the time part of Roche) switched its Harmony non-invasive prenatal test (which detects circulating cell-free DNA (cfDNA), of which ctDNA is one type (Cance (ACS) Tr. 609; RX3869 (Cote Expert Report) ¶ 43), from an NGS-based approach to a microarray-based approach, and claimed to have achieved lower cost and decreased turnaround time for the test. (PFF ¶ 653; PX7096 (Song (Omniome/Fmr. Ariosa) Dep. at 124– 28); RX3400 (Juneau et al., 2014).) Ariosa completed this platform switching without interrupting the commercial availability of the Harmony test. (PFF ¶ 653; PX7096 (Song (Omniome/Fmr. Ariosa) Dep. at 125–26).) Respondents also incorporate their responses to CCFF ¶¶ 1411, 1412.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1420. Dr. Song testified that detecting ctDNA was "beyond the technical possibilities of an array system" because microarrays do not have the level of sensitivity necessary to detect rare events such as ctDNA. (PX7071 (Song (Omniome) IHT at 99)).

Response to Finding No. 1420:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1411, 1412 and 1419, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1421. Guardant cannot use microarrays for its screening test in development. (Chudova (Guardant) Tr. 1177).

Response to Finding No. 1421:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1411 and 1412, which Respondents incorporate herein.

1422. Dr. Chudova analogized at trial that microarray technology is an "analog TV" while NGS is a "digital TV." (Chudova (Guardant) Tr. 1143).

Response to Finding No. 1422:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1411 and 1412, which Respondents incorporate herein.

1423. Guardant cannot use microarrays in place of NGS for its MCED test because microarrays would not provide the kind of precision that is needed for cancer screening applications. (Chudova (Guardant) Tr. 1177).

Response to Finding No. 1423:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1411 and 1412, which Respondents incorporate herein.

1424. Guardant Senior VP of Product, Nitin Sood, explained that microarrays are "very difficult" and "will not work because [MCED testing requires] very deep sequencing. . . . And microarrays just wouldn't have the sensitivity to analyze the small number of tumor DNA molecules present[.]" (PX7090 (Sood (Guardant) Dep. at 93)).

Response to Finding No. 1424:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1411 and 1412, which Respondents incorporate herein. The proposed finding also appears to suggest that MCED testing today requires "very deep sequencing", which is wrong. For example, GRAIL's Galleri test does not use "very deep sequencing", but relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 1289.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1425. Mr. Sood testified that microarrays cannot look for the thousands of markers required by Guardant's MCED test "at the sensitivity required for detection." (PX7090 (Sood (Guardant) Dep. at 94)).

Response to Finding No. 1425:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1411 and 1412, which Respondents incorporate herein. The proposed finding also appears to suggest that MCED testing today requires "very deep sequencing", which is wrong. For example, GRAIL's Galleri test does not use "very deep sequencing", but relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 1289.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1426. In comparison to microarray platforms, Dr. Chahine testified that "DNA sequencing" is able to "interrogate the entire genome," which is "in the billions of base[] [pairs]." (Chahine (Helio) Tr. 1020).

Response to Finding No. 1426:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1411 and 1412, which Respondents incorporate herein. The proposed finding also appears to suggest that MCED testing today requires a test developer to "interrogate the entire genome". Complaint Counsel presented no evidence of any putative MCED test that "interrogates the entire genome". For example, GRAIL's Galleri test relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 1289.) [redacted] (*See, e.g.,* PFF ¶¶ 435– 36.) Guardant's LUNAR-2 CRC test uses genomic and methylation signatures. (*See, e.g.,* PFF ¶ 486.) Helio combines methylation data, protein biomarkers and demographic information for its early-stage liver cancer test. (*See, e.g.,* PFF ¶ 505.)

In addition, Helio currently uses Illumina's MiSeq sequencer for its Helio Liver test. (Chahine (Helio) Tr. 1010-12). Dr. Chahine testified Helio uses the MiSeq because "a smaller machine is more efficient" as a "company in its early stage" prior to "ramp[ing] up." (Chahine (Helio) Tr. 1012). Microarrays similarly provide a high-throughput platform for simultaneously screening tens of thousands of biomolecular interactions. (PFF ¶ 164.) For example, microarray technology such as Thermo Fisher's Genome-Wide Human SNP Array 6.0 chip features 1.8

million genetic markers for single nucleotide polymorphisms (SNPs) and copy number variations (CNVs). (PFF ¶ 164.2.) Certain NGS systems such as the MiSeq may be used to interrogate a comparable number of genetic markers. (*See e.g.*, PFF ¶ 575.)

1427. Dr. Chahine testified at trial that he "could say almost with certainty there's zero chance" of "catch[ing] any markers that" can distinguish cancer in the "early R&D phase" if you "limit[ed] yourself to, for example, 600,000 markers" with a microarray system. (Chahine (Helio) Tr. 1021).

Response to Finding No. 1427:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1411–12 and 1426, which Respondents incorporate herein.

In particular, Respondents note that Microarrays can interrogate many more genetic markers than what the cited testimony suggests. Thermo Fisher's Genome-Wide Human SNP Array 6.0 chip features 1.8 million genetic markers for single nucleotide polymorphisms (SNPs) and copy number variations (CNVs). (PFF ¶ 164.2.) Similarly, Agilent Technologies' Human Genome CGH Microarrays offers up to 1 million probes for genome-wide CNV identification and characterization. (PFF ¶ 164.4.)

1428. Freenome's Mr. Otte testified [redacted]

(PX7055 (Otte (Freenome) IHT at 59) (*in camera*)).

Response to Finding No. 1428:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1411 and 1412, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1429. Freenome's Mr. Otte testified that [redacted]

(PX7055 (Otte (Freenome) IHT at 58-61) (*in camera*)).

Response to Finding No. 1429:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1411 and 1412, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1430. FMI's Perettie testified that microarray technology [redacted] (PX7074 (Perettie (FMI-Roche) Dep. at 159) (*in camera*)).

Response to Finding No. 1430:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1411 and 1412, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1431. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 34–35, 38) (*in camera*)).

Response to Finding No. 1431:

Respondents have no specific response except to note that StageZero considered both the Illumina and Thermo Fisher platforms, and that StageZero has decided to switch *to* Illumina's NGS platform well after Illumina announced its decision to acquire GRAIL, showing that StageZero had no concerns about using Illumina as a platform even after the Transaction. (PX8540 (Stage Zero) at 2; PX7114 (Stamatiou (Stage Zero) Dep. at 33–34, 38–39.) Respondents also incorporate their responses to CCFF ¶¶ 1411–14 herein. Further, Stage Zero planned to launch its Aristotle test using microarray technology in Q2 or Q3 of 2021, and *then* transition to NGS technology; Stage Zero's transition document listed "ease of transition" as one of the factors encouraging this change. (PX8540 (Stage Zero) at 2; PX7114 (Stamatiou (Stage Zero) Dep. at 62–63.)

1432. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 33-34) (*in camera*)).

Response to Finding No. 1432:

Respondents have no specific response except to note that [redacted] (PX8540 (Stage Zero) at 2; PX7114 (Stamatiou (Stage Zero) Dep. at 33–34.) Respondents also note that StageZero also decided to switch because [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1411–14 herein. With respect to costs, Respondents also incorporate their responses to CCFF ¶¶ 1436–37 herein.

1433. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 34-35) (*in camera*)).

Response to Finding No. 1433:

The proposed finding is incomplete and misleading. While a screening test that will identify 50 types of cancer (or 10 types of cancer, like the StageZero Aristotle test) from a single blood sample that can also identify the cancer signal of origin is likely to use NGS technology, a screening test for fewer types of cancer, particularly two or three types of cancer, can use other diagnostic platforms, such as proteomics, PCR or microarray technology. (PFF ¶ 1971.)

Because of its high sensitivity, PCR is currently used in a variety of early screening tests for several cancers. (PFF ¶ 161; Cote Tr. 3736–3737; RX3869 (Cote Expert Report) ¶ 80.) For example, both the National Cancer Institute and the American Cancer Society recommend a stool-based PCR test for early stage screening of colorectal cancer and human papillomavirus ("HPV") PCR test for early stage screening of cervical cancer. (PFF ¶ 161; RX3502 (National Cancer Institute) at 2; RX3029 (ACS) at 1–2; RX3869 (Cote Expert Report) ¶ 80.)

Many of the putative MCED test developers are using PCR for their cancer screening tests. For example, [redacted] Singlera is considering a qPCR version (not NGS) of the ColonES test. (PFF ¶ 542.) Helio has undertaken some clinical trials using ddPCR (rather than NGS) for its early-stage liver cancer test (PFF ¶¶ 505.1–506.) [redacted] (PFF ¶ 655.)

1434. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 35) (*in camera*)).

Response to Finding No. 1434:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1411 and 1412 herein.

1435. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 50–51) (*in camera*)).

Response to Finding No. 1435:

Respondents have no specific response except to note that [redacted] (PX8540 (Stage Zero) at 2; PX7114 (Stamatiou (Stage Zero) Dep. at 33–34, 38–39.) Respondents also incorporate their responses to CCFF ¶¶ 1411–1414 herein. Further, Stage Zero planned to launch its Aristotle test using microarray technology in Q2 or Q3 of 2021, and *then* transition to NGS technology; Stage Zero's transition document listed "ease of transition" as one of the factors encouraging this change. (PX8540 (Stage Zero) at 2; PX7114 (Stamatiou (Stage Zero) Dep. at 62–63.)

1436. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 33–34) (*in camera*)).

Response to Finding No. 1436:

Respondents have no specific response except to note that this further underscores Illumina's efforts to reduce costs for its customers. Illumina has developed its reputation by investing substantial amounts into innovation and dramatically lowering sequencing costs over time. (PFF ¶ 854; Aravanis (Illumina) Tr. 1922; (RX1100 (George (Invitae) Decl. ¶ 8).) The phenomenon of dramatically declining sequencing costs is known in the industry as "Flatley's law", referring to Jay Flatley, Illumina's former CEO and Chairman. (PFF ¶ 855.2; *See* Berry (Illumina) Tr. 811–12 ("'Flatley's law' was a term coined by . . . a writer in Forbes magazine when he wrote an article comparing the reduction in the price of sequencing to Moore's law, which describes the reduction in the price of like silicon wafers or something in the computer

industry, and [under Jay Flatley's] leadership where we really drove significant, significant reductions in the price of sequencing . . . down towards the level that they are today.").) Respondents also incorporate their responses to CCFF ¶¶ 1411–14 herein.

1437. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 47–50) (*in camera*)).

Response to Finding No. 1437:

Respondents have no specific response except to note that this further underscores Illumina's efforts to reduce costs for its customers. Reductions in sequencing costs have encouraged the development of entire industries that would not otherwise exist and for which Illumina is the primary supplier of sequencing inputs. (PFF ¶ 855.3; RX3864 (Carlton Expert Report) ¶ 77.) Respondents also incorporate their responses to CCFF ¶¶ 1411–14 herein.

1438. [redacted] (PX8540 (StageZero) at 002 [redacted] (*in camera*)).

Response to Finding No. 1438:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1411–14, 1436–37 herein.

1439. [redacted] (PX7114 (Stamatiou (StageZero) Dep. at 33–34) (*in camera*); (Rabinowitz (Natera) Tr. 346 (*in camera*)).

Response to Finding No. 1439:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1411 and 1412 herein.

1440. Thermo Fisher's Felton explained that [redacted]

[redacted] (PX7070 (Felton (Thermo Fisher) IHT at 68) (*in camera*)).

Response to Finding No. 1440:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952, 1411 and 1412, which Respondents incorporate herein.

[redacted]

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2. PCR-Based Technology

1441. Dr. Felton of Thermo Fisher explained, "A PCR is a polymerase chain reaction. It's the process of making copies of a template DNA using the enzyme Taq polymerase. You take one copy of DNA, double strand DNA. You separate the two strands. You anneal a small sequence of the Taq polymerase and then rebuild the second strand. So you can generate multiple copies and consider it photocopying DNA and generate as many copies in principle as you wish from that original template." (PX7070 (Felton (Thermo Fisher) IHT at 66-67)).

Response to Finding No. 1441:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1442. [redacted] (PX7097 (Felton (Thermo Fisher) Dep. at 37-40); PX7058 (Conroy (Exact) IHT at 122) (*in camera*); PX0120 at 001 (Illumina, Advantages of next-generation sequencing vs. qPCR) (Although qPCR may be more cost effective than NGS for assays testing for less than 20 targets, qPCR "can only interrogate a limited set of variants" and has "low scalability")).

Response to Finding No. 1442:

The proposed finding is incomplete and misleading. While a screening test that will identify 50 types of cancer from a single blood sample that can also identify the cancer signal of origin is likely to use NGS technology, a screening test for fewer types of cancer, particularly two or three types of cancer, can use other diagnostic platforms, such as proteomics, PCR or microarray technology. (PFF ¶ 1971.)

Because of its high sensitivity, PCR is currently used in a variety of early screening tests for several cancers. (PFF ¶ 161; Cote Tr. 3736–3737; RX3869 (Cote Expert Report) ¶ 80.) For example, both the National Cancer Institute and the American Cancer Society recommend a stool-based PCR test for early stage screening of colorectal cancer and human papillomavirus ("HPV") PCR test for early stage screening of cervical cancer. (PFF ¶ 161; RX3502 (National Cancer Institute) at 2; RX3029 (ACS) at 1–2; RX3869 (Cote Expert Report) ¶ 80.)

Many of the putative MCED test developers are using PCR for their cancer screening tests. For example, [redacted] Singlera is considering a qPCR version

(not NGS) of the ColonES test. (PFF ¶ 542.) Helio has used ddPCR to study methylation for cancer screening. Helio is pursuing a path of using very limited numbers of biomarkers, (9, 8, 5 and even one), and has done some of their clinical studies not with NGS but with ddPCR. (PFF ¶ 505.1; *see* RX3747 (Xu et al 2017); RX3436 (Luo et al 2020).) In particular, Helio (and LAM) have conducted a few different trials relating to its liver cancer test, including certain trials relying on Bio-Rad's droplet digital platform (ddPCR) rather than NGS. (RX3265 (GenomeWeb) at 1.) [redacted] (PFF ¶ 655.) Respondents incorporate their responses to CCFF ¶¶ 929 and 952 herein.

With respect to the portion of this proposed finding which relies on testimony from Dr. Felton, [redacted]

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1443. PCR technology has several challenges. PCR "can only interrogate a limited set of variants," has "virtually no discovery power," and has "low scalability." (PX0120 at 001 (Illumina, Advantages of next-generation sequencing vs. qPCR); *see* PX7040 (Getty (Guardant) IHT at 39-40) (testifying that PCR, in comparison to NGS, does not provide the scale, depth, sensitivity, or turnaround times for blood-based tests)).

Response to Finding No. 1443:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 1442, which Respondents incorporate herein.

The proposed finding is based in part on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1444. PCR is limited to interrogating specific regions or points in the genome to identify the presence or absence of pre-determined target sequences, and PCR is unable to detect novel genetic variants or mutations. (PX7072 (deSouza (Illumina) IHT at 240) ("A PCR test is a type of genomic test where you're looking at very specific regions of the genome."); PX7097 (Felton (Thermo Fisher) Dep. at 39)).

Response to Finding No. 1444:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

With respect to the portion of this proposed finding which relies on testimony from Dr. Felton, [redacted]

[redacted]

[redacted]

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1445. The key different between NGS and qPCR is "discovery power." qPCR "can only detect known sequences. In contrast, NGS is a hypothesis-free approach that does not require prior knowledge of sequencing information. NGS provides higher discovery power to detect novel genes and higher sensitivity to quantify rare variants and transcripts." (PX0120 at 001 (Illumina, Advantages of next-generation sequencing vs. qPCR) ("discovery power is the ability to identify novel variants.")).

Response to Finding No. 1445:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

1446. Andrew Felton, Vice President of Product Development at Thermo Fisher, a leading PCR-based technology provider, acknowledged that PCR-based technology is "entirely unlikely to be scalable or have enough data points generated in a reasonable amount of time [for MCED testing], and therefore, the economics and the scalability of the answer is likely highly unsuited for that environment." (PX7070 (Felton (Thermo Fisher) IHT at 67)).

Response to Finding No. 1446:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952 and 1442, which Respondents incorporate herein.

[redacted]

[redacted] Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1447. PCR is not a substitute for NGS because PCR technology "only allows you to interrogate a very small number of genomic regions at a time," unlike NGS. (Felton (Thermo Fisher) Tr. at 1994).

Response to Finding No. 1447:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952 and 1442, which Respondents incorporate herein.

1448. [redacted] *See* (PX7042 (Gao (Singlera) IHT at 38-40); PX7058 (Conroy (Exact) IHT at 65-68) (*in camera*)).

Response to Finding No. 1448:

The proposed finding is incomplete and misleading to the extent it suggests that PCR cannot be used for cancer detection tests for the reasons explained in Respondents' responses to CCFF ¶¶ 982 and 1442, which Respondents incorporate herein.

Contrary to the statements by Dr. Gao and Mr. Conroy, both of their respective companies are pursuing cancer *screening* tests that use PCR. For example, [redacted] Singlera is considering a qPCR version (not NGS) of the ColonES test. (PFF ¶ 542.) Given that PCR technology can support a single-cancer screening test, there is no reason why PCR technology cannot support a two or three cancer screening test, and Complaint Counsel has not presented any evidence to the contrary. (PFF ¶ 1971.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1449. Mr. Felton explained that PCR technologies are "[n]ot able to generate sufficiently large number of data points at scale to make the test economic." (PX7097 (Felton (Thermo Fisher) Dep. at 38)).

Response to Finding No. 1449:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952 and 1442, which Respondents incorporate herein.

[redacted]

1450. The throughput of PCR is significantly less than NGS. (Felton (Thermo Fisher) Tr. at 1994-1995; PX7097 (Felton (Thermo Fisher) Dep. at 38-39)).

Response to Finding No. 1450:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

1451. NGS is a better option than PCR for applications in "oncology, inherited disease testing, reproductive health testing. . . ." (Felton (Thermo Fisher) Tr. at 1995).

Response to Finding No. 1451:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

[redacted]

1452. Andrew Felton, Vice President of Product Development at Thermo Fisher, a leading PCR-based technology provider, acknowledged that PCR-based technology is "entirely unlikely to be scalable or have enough data points generated in a reasonable amount of time [for MCED testing], and therefore, the economics and the scalability of the answer is likely highly unsuited for that environment." (PX7070 (Felton (Thermo Fisher) IHT at 67)).

Response to Finding No. 1452:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952 and 1442, which Respondents incorporate herein.

[redacted]

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1453. Mr. Felton testified that PCR technologies are generally not used to detect unknown DNA variants because PCR "requires the design of a primer, and therefore, a known sequence a priori to understand which variants you're detecting." (PX7097 (Felton (Thermo Fisher) Dep. at 39)).

Response to Finding No. 1453:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

[redacted]

1454. "Generally at this time, [digital PCR is] not considered to be very useful" for multi-cancer early detection testing. (PX7097 (Felton (Thermo Fisher) Dep. at 40)).

Response to Finding No. 1454:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952 and 1442, which Respondents incorporate herein.

[redacted]

[redacted]

1455. Mr. Felton testified that it would "almost certainly" cost more to run MCED tests on PCR, and likely "orders of magnitude" more. (PX7070 (Felton (Thermo Fisher) IHT at 67)).

Response to Finding No. 1455:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952 and 1442, which Respondents incorporate herein.

[redacted]

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1456. [redacted] (Felton (Thermo Fisher) Tr. at 2010-2011) (*in camera*)).

Response to Finding No. 1456:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 952 and 1442, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention, many PCR-based cancer screening tests

have low costs, though some are reimbursed at higher costs. (PFF ¶ 162; RX3869 (Cote Expert Report) ¶ 81.) For example, while the maximum cost of Cologuard could be $649, the CMS 2021 Fee Schedule for an HPV PCR test is only $35.09. (PFF ¶ 162; RX3306 (Healthline Media) at 2; RX3869 (Cote Expert Report) ¶ 81.)

[redacted]

1457. [redacted]

[redacted]

(PX7055 (Otte (Freenome) IHT at 58-61) (*in camera*)).

Response to Finding No. 1457:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1411–12, 1428 and 1442, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1458. [redacted]

(PX7055 (Otte (Freenome) IHT at 57-58 (*in camera*))).

Response to Finding No. 1458:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1442 and 1457, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1459. Dr. Gao testified at trial that PCR technology is not suitable for use in the PanSeer test. (Gao (Singlera) Tr. 2893-94).

Response to Finding No. 1459:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011 and 1442, which Respondents incorporate herein.

Contrary to the statements by Dr. Gao, Singlera is pursuing cancer *screening* tests that use PCR. For example, Singlera is considering a qPCR version (not NGS) of the ColonES test. (PFF ¶ 542.) Given that PCR technology can support a single-cancer screening test, there is no reason why PCR technology cannot support a two or three cancer screening test—or even a five cancer test like PanSeer—and Complaint Counsel has not presented any evidence to the contrary. (PFF ¶ 1971.)

1460. At trial, Dr. Gao explained that "[o]bviously you cannot use PCR to do, you know, 500 readings . . . in a cost-effective way." (Gao (Singlera) Tr. 2893).

Response to Finding No. 1460:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1442 and 1459, which Respondents incorporate herein.

1461. Singlera's Dr. Gao testified that Singlera's cancer screening test requires a sequencing instrument capable of analyzing "millions of base pairs" of DNA. (PX7042 (Gao (Singlera) IHT at 38-40)).

Response to Finding No. 1461:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1442 and 1459, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1462. Dr. Gao explained that, "[i]t's impossible" for Singlera to run its cancer screening test on sequencing instruments that use PCR technology because "PCR technology will only be able to analyze . . . tens of base pair[s]." (PX7042 (Gao (Singlera) IHT at 38-40)).

Response to Finding No. 1462:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1442 and 1459, which Respondents incorporate herein.

Respondents also note that in recent years, many improved PCR techniques have been developed and used in clinical cancer testing. (PFF ¶ 159; RX3869 (Cote Expert Report) ¶ 78.) Multiplex PCR allows simultaneous detection of multiple targets in a single test, with a different pair of primers for each target. (PFF ¶ 159; RX3686 (Thermo Fisher) at 1–2; RX3869 (Cote Expert Report) ¶ 78.) Multiplex PCR can generate higher throughput than traditional (singleplex) PCR and obtains more information with less sample. (PFF ¶ 159.1; RX3686 (Thermo Fisher) at 1–2; RX3869 (Cote Expert Report) ¶ 78.) Another category of new PCR technology is digital PCR (dPCR). (PFF ¶ 160; [redacted]; RX3869 (Cote Expert Report) ¶ 79.) Combinati is developing an Absolute Q Microfluidic Array Partitioning (MAP) dPCR system with 20,000 microchambers, pushing the microfluidic digital PCR technology forward even further. (PFF ¶ 160.2; RX3147 (Combinati) at 3; RX3869 (Cote Expert Report) ¶ 79.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1463. Dr. Gao explained why the fact that PCR can only analyze a small number of base pairs is insufficient for cancer screening:

> The analogy I usually use is for police looking at a suspect. If you said the suspect has black hair, then it's not easy to identify. Then [if] you have a sketch of the suspect with many description[s] … the nose, the ear, the eye, the mouth, and [] the height, weight … shoe size, so the more kind[s] of biomarker[s], the better description, better sensitivity and the specificity you can detect cancer, especially in many different kind[s] of cancer. … That's why we had to go to thousands of region and millions of base pairs to analyze them."

(PX7042 (Gao (Singlera) IHT at 39-40)).

Response to Finding No. 1463:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1442 and 1459, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1464. Dr. Gao testified that there is "no way" that a PCR version of PanSeer could compete with GRAIL's Galleri test. (PX7042 (Gao (Singlera) IHT at 92)).

Response to Finding No. 1464:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1442 and 1459, which Respondents incorporate herein.

Contrary to the statements by Dr. Gao, Singlera is pursuing cancer *screening* tests that use PCR. For example, Singlera is considering a qPCR version (not NGS) of the ColonES test. (PFF ¶ 542.) Given that PCR technology can support a single-cancer screening test, there is no reason why PCR technology cannot support a two or three cancer screening test—or even a five cancer test like PanSeer. (PFF ¶ 1971.) Additionally, Singlera's PanSeer test only requires

approximately 2 million sequencing reads per sample. (PFF ¶ 533 (RX3115 (Chen et al., 2020) at 7; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2875, 2894, 2928–29; PX7102 (Gao (Singlera) Dep. at 78); RX3869 (Cote Expert Report) ¶ 239).)

The proposed finding is also incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2406, which Respondents incorporate herein. Therefore, it is irrelevant that Dr. Gao believes that a PCR version of PanSeer would be unable to compete with Galleri as well.

Although Singlera's "goal" may be to detect all kinds of cancer, Dr. Gao has also testified that Singlera is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82; PFF ¶ 536.1.) By Dr. Gao's own calculation, PanSeer is at least eight to ten years away from potential launch in the United States, and Singlera does not currently have any clinical trials relating to screening for multiple cancers listed on clinicaltrials.gov. (PFF ¶¶ 536.1-36.2.) Accordingly, [redacted] Respondents also incorporate their responses to CCFF ¶¶ 447, 451, 982 and 1011 herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1465. In contrast to PanSeer, Dr. Gao explained that Singlera's single-cancer colorectal cancer test, ColonES, is able to use PCR technology—albeit with worse performance: "Because it's only one cancer type, we can only do a few marker. Basically, we can use qPCR. And it will not have the same high sensitivity, specificity . . ." (PX7042 (Gao (Singlera) IHT at 90-91)).

Response to Finding No. 1465:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1442 and 1459, which Respondents incorporate herein.

The proposed finding is also misleading to the extent it seems to suggest that Singlera's PanSeer would have worse specificity if it used PCR technology. To the contrary, the characteristics of the PanSeer test in development (which uses NGS technology)—in particular its specificity—are far from being suitable for being used in a multi-cancer screening test. In a retrospective, observational study of 418 participants from part of the Taizhou Longitudinal Study with samples from 113 post-diagnosis cancer patients, 98 prediagnostic cancer patients, and 207 healthy individuals, PanSeer achieved a 96% specificity. (PFF ¶ 532; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2877–79.) [redacted]

Further, the cited testimony supports the proposition that PCR may be used to support cancer screening tests directed to one, two or three cancer types. As Dr. Gao concedes, Singlera is pursuing cancer *screening* tests that use PCR. For example, Singlera is considering a qPCR version (not NGS) of the ColonES test. (PFF ¶ 542.) Given that PCR technology can support a

single-cancer screening test, there is no reason why PCR technology cannot support a two or three cancer screening test—or even a five cancer test like PanSeer. (PFF ¶ 1971.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1466. [redacted]

(PX7051 (Lengauer (Third Rock Ventures) IHT at 120-122) (*in camera*)).

Response to Finding No. 1466:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929 and 1442, which Respondents incorporate herein.

The proposed finding is incomplete and misleading to the extent it seems to suggest that Exact/Thrive's MCED test in development has "excellent specificity" that is better than what it would have if it used PCR technology. To the contrary, Respondents note that Exact/Thrive's CancerSEEK test in development currently uses a combination of NGS technology and proteomics technology, and was shown to have an unacceptably low specificity of 95.3% using a single blood test in the DETECT-A study. (PFF ¶¶ 173 ("Specificity . . . measures the proportion of actual negative samples that are correctly identified as such", so that a 95.3% specificity corresponds to a true negative rate of 95.3% and a false positive rate of 100% minus 95.3%), 428, 431 ("In the DETECT-A study, CancerSEEK obtained [a] specificit[y] of 95.3% in its baseline blood test (that is, with a single blood test).").) [redacted]

[redacted]

Further, the cited testimony supports the proposition that PCR may be used to support cancer screening tests directed to one, two or three cancer types. As Dr. Lengauer concedes, Exact markets a cancer *screening* test that uses PCR. Specifically, Exact's Cologuard test for colorectal cancer uses PCR. Given that PCR technology can support a single-cancer screening test, there is no reason why PCR technology cannot support a two or three cancer screening test, and Complaint Counsel has presented no evidence to the contrary. (PFF ¶ 1971.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1467. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 122) (*in camera*)).

Response to Finding No. 1467:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1442 and 1467, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1468. [redacted]

[redacted]

(PX7051 (Lengauer (Third Rock Ventures) IHT at 119-20) (*in camera*)).

Response to Finding No. 1468:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1442 and 1467, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1469. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 121-22) (*in camera*)).

Response to Finding No. 1469:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1442 and 1467, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1470. [redacted] PX7058 (Conroy (Exact) IHT at 65-68) (*in camera*)).

Response to Finding No. 1470:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929 and 1442, which Respondents incorporate herein.

The cited testimony supports the proposition that PCR may be used to support cancer screening tests directed to one, two or three cancer types. As Mr. Conroy concedes, Exact markets a cancer *screening* test that uses PCR. Specifically, Exact's Cologuard test for colorectal cancer uses PCR. Given that PCR technology can support a single-cancer screening test, there is no reason why PCR technology cannot support a two or three cancer screening test, and Complaint Counsel has presented no evidence to the contrary. (PFF ¶ 1971.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1471. Exact's Conroy testified that [redacted] PX7058 (Conroy (Exact) IHT at 122) (*in camera*)).

Response to Finding No. 1471:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1442 and 1470, which Respondents incorporate herein.

The proposed finding is incomplete and misleading to the extent it seems to suggest that Exact/Thrive's MCED test in development has sensitivity and specificity metrics that are better than what it would have if it used PCR technology.

Specificity. To the contrary, Respondents note that Exact/Thrive's CancerSEEK test in development currently uses a combination of NGS technology and proteomics technology, and

was shown to have an unacceptably low specificity of 95.3% using a single blood test in the DETECT-A study. (PFF ¶¶ 173 ("Specificity . . . measures the proportion of actual negative samples that are correctly identified as such", so that a 95.3% specificity corresponds to a true negative rate of 95.3% and a false positive rate of 100% minus 95.3%), 428, 431 ("In the DETECT-A study, CancerSEEK obtained [a] specificit[y] of 95.3% in its baseline blood test (that is, with a single blood test).").)

[redacted]

Sensitivity. Exact's Cologuard colorectal cancer screening test, which uses PCR technology, has a sensitivity of 92.3%, which is comparable to colonoscopy's sensitivity of 92.5%, but higher than Galleri's sensitivity of 82.0% for colorectal cancer. (PPF ¶ 180.2 (RX3222 (FDA) at 19); RX3409 (Klein et al., 2021) at 7, Fig. 3B.) This is also significantly higher than CancerSEEK's sensitivity for colorectal cancer, which is just over 60%. (RX3772 (Cohen 2018 Supplementary Material) at 15.) Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1472. Mr. Conroy testified that by using NGS sequencing technology: [redacted] (PX7058 (Conroy (Exact) IHT at 122) (*in camera*)).

Response to Finding No. 1472:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929 and 1470–71, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1473. [redacted] (PX7111 (Fesko (Natera) Dep. at 60) (*in camera*)).

Response to Finding No. 1473:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1264, 1293 and 1442, which Respondents incorporate herein.

1474. [redacted] (PX7077 (Chahine (Helio) Dep. at 22) (*in camera*)).

Response to Finding No. 1474:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177 and 1442, which Respondents incorporate herein.

[redacted] Helio is pursuing a path of using very limited numbers of biomarkers, (9, 8, 5 and even one), and has done some of their clinical studies not with NGS but with ddPCR. (PFF ¶ 505.1; *see* RX3747 (Xu et al 2017); RX3436 (Luo et al 2020).)

1475. [redacted] (Chahine (Helio) Tr. 1068 (*in camera*)).

Response to Finding No. 1475:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1177, 1442 and 1474.

The cited testimony supports the proposition that PCR may be used to support cancer screening tests directed to one, two or three cancer types. As Dr. Chahine concedes, Helio was pursuing ddPCR as a platform for its cancer screening test. (PFF ¶ 505.1; *see* RX3747 (Xu et al 2017); RX3436 (Luo et al 2020).) In particular, Helio (and LAM) have conducted a few different trials relating to its liver cancer test, including certain trials relying on Bio-Rad's droplet digital platform (ddPCR) rather than NGS. (RX3265 (GenomeWeb) at 1.)

Given that PCR technology can support a single-cancer screening test, there is no reason why PCR technology cannot support a two or three cancer screening test, and Complaint Counsel has presented no evidence to the contrary. (PFF ¶ 1971.)

1476. [redacted] (Chahine (Helio) Tr. 1068-69 (*in camera*)).

Response to Finding No. 1476:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1442 and 1474–75, which Respondents incorporate herein.

1477. [redacted] (Chahine (Helio) Tr. 1068 (*in camera*); *see* PX7077 (Chahine (Helio) Dep. at 24) (*in camera*)).

Response to Finding No. 1477:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1442 and 1474–75, which Respondents incorporate herein.

Contrary to the cited testimony, Helio itself, which has a test comprising as many as 9 biomarkers, has done some of its clinical studies not with NGS but with ddPCR. (PFF ¶ 505.1; *see* RX3747 (Xu et al 2017); RX3436 (Luo et al 2020).)

1478. [redacted] (PX7077 (Chahine (Helio) Dep. at 24) (*in camera*)).

Response to Finding No. 1478:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1442 and 1474–75, which Respondents incorporate herein.

Contrary to the cited testimony, Helio itself, which has a test comprising as many as 9 biomarkers, has done some of its clinical studies not with NGS but with ddPCR. (PFF ¶ 505.1; *see* RX3747 (Xu et al 2017); RX3436 (Luo et al 2020).)

1479. [redacted] (PX7077 (Chahine (Helio) Dep. at 25) (*in camera*)).

Response to Finding No. 1479:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1442 and 1474–75, which Respondents incorporate herein.

1480. [redacted] (Chahine (Helio) Tr. 1068-69 (*in camera*)).

Response to Finding No. 1480:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1442 and 1474–75, which Respondents incorporate herein.

Contrary to the cited testimony, Helio itself, which has a test comprising as many as 9 biomarkers, has done some of its clinical studies not with NGS but with ddPCR. (PFF ¶ 505.1; *see* RX3747 (Xu et al 2017); RX3436 (Luo et al 2020).)

1481. [redacted] (PX7077 (Chahine (Helio) Dep. at 36-37) (*in camera*)).

Response to Finding No. 1481:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1442 and 1474–75, which Respondents incorporate herein.

Contrary to the cited testimony, Helio itself, which has a test comprising as many as 9 biomarkers, has done some of its clinical studies not with NGS but with ddPCR. (PFF ¶ 505.1; *see* RX3747 (Xu et al 2017); RX3436 (Luo et al 2020).)

1482. Guardant's Mr. Getty explained that PCR technology would not be adequate for cancer screening tests because "you wouldn't be able to get the scale nor would you be able to mine the depths to find that, you know, proverbial needle in a haystack." (PX7040 (Getty (Guardant) IHT at 39)).

Response to Finding No. 1482:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

The proposed finding is based in part on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1483. Mr. Getty testified that PCR technology "couldn't achieve the sensitivity" required for cancer screening tests. (PX7040 (Getty (Guardant) IHT at 39-40)).

Response to Finding No. 1483:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1442 and 1482, which Respondents incorporate herein. Exact's Cologuard, a PCR-based test, has a sensitivity of 92.3%. (RX3222 (FDA) at 19.) In contrast, Guardant's NGS-based LUNAR-2 colorectal cancer screening test only achieved a sensitivity of 90.3%. (RX3740 (Westesson et al., 2020) at 2; (RX3869 (Cote Expert Report) ¶ 209.))

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1484. Mr. Getty testified that PCR technology does not have "the ability to read the genome across . . . multiple sequences and really mine the depths of the DNA." (PX7040 (Getty (Guardant) IHT at 39)).

Response to Finding No. 1484:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1442 and 1482, which Respondents incorporate herein.

The proposed finding also appears to suggest that MCED testing today requires "very deep sequencing", which is wrong. For example, GRAIL's Galleri test does not use "very deep sequencing", but relies on targeted methylation for cancer signal detection and localization. *(See, e.g.*, PFF ¶¶ 56, 345, 384, 1289.)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1485. Guardant's Mr. Getty testified that PCR technology is unlikely to produce the large number of data points required for MCED and similar tests within a reasonable turnaround time:

> The ability to leverage PCR in just -- just by virtue of time that you would need to have in order to do the volume that we're doing in terms of testing, assuming you could actually achieve the sensitivity, which is really the bigger challenge there, you would be looking at probably doubling or tripling of turnaround times associated with the test going back to the clinician.

(PX7040 (Getty (Guardant) IHT at 39-40)).

Response to Finding No. 1485:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1442 and 1482, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1486. Guardant's Nitin Sood testified that attempting to run its cancer screening test using PCR technology "just wouldn't work[,]" explaining that, "[b]ecause the number of changes we want to look for [in DNA] and the granularity with which those changes we want to look at, I mean, the fine grain granularity, the single base by resolution that you want to look at, it would not be possible to do that by PCR." (PX7090 (Sood (Guardant) Dep. at 89-90)).

Response to Finding No. 1486:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 1442, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1487. Guardant's Sood explained that Guardant cannot run its cancer screening test on PCR technology because, "when you're looking for multiple regions of a genome with high throughput, with sample multiplexing to bring costs down, I think next-generation sequencing is the platform of choice." (PX7090 (Sood (Guardant), Dep. at 89-90)).

Response to Finding No. 1487:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 1442, which Respondents incorporate herein.

1488. Guardant cannot use qPCR for its MCED test because it could not design an MCED assay capable of finding rare tumor fragments by only profiling the presence or absence of a small number of particular mutations. (Chudova (Guardant) Tr. 1176-77) (explaining that Guardant's "technology step relies heavily on profiling a significant portion of the human genome with a sequencing-based readout. So [Guardant] will not be compatible with any QPCR solution.")).

Response to Finding No. 1488:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 2273, which Respondents incorporate herein.

1489. Quantitative PCR ("qPCR") technology is suitable for assessing the presence or absence of a small number of mutations whose locations are known up front. (Chudova (Guardant) Tr. 1176; PX0096 at 001 (Illumina, Liquid Biopsy and NGS: Driving translational clinical research to the next level) ("qPCR is efficient when analyzing a small number of variants. However, qPCR assays are limited to the relatively few targets that are specified and assess only specified variant types, thus offering little discovery value.")).

Response to Finding No. 1489:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1442, which Respondents incorporate herein.

1490. FMI's Ms. Perettie testified that PCR technology would not be an option for FMI's early cancer detection test because [redacted] (PX7074 (Perettie (FMI-Roche) Dep. at 159) (*in camera*)).

Response to Finding No. 1490:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190 and 1442, which Respondents incorporate herein.

Further, PCR can be used to detect methylation biomarkers known to be associated with cancer. (RX3869 (Cote Expert Report) ¶ 77.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1491. [redacted] (PX7068 (Perettie (FMI-Roche), IHT at 65) (*in camera*)).

Response to Finding No. 1491:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1442, 1483 and 1490, which Respondents incorporate herein. For example, Cologuard, Exact's colorectal cancer screening test, which is PCR-based, has a sensitivity of 92.3%. (RX3222 (FDA) at 19.) The is superior to Guardant's NGS-based LUNAR-2 colorectal cancer screening test, which achieved a sensitivity of only 90.3%. (RX3740 (Westesson et al., 2020) at 2; (RX3869 (Cote Expert Report) ¶ 209.))

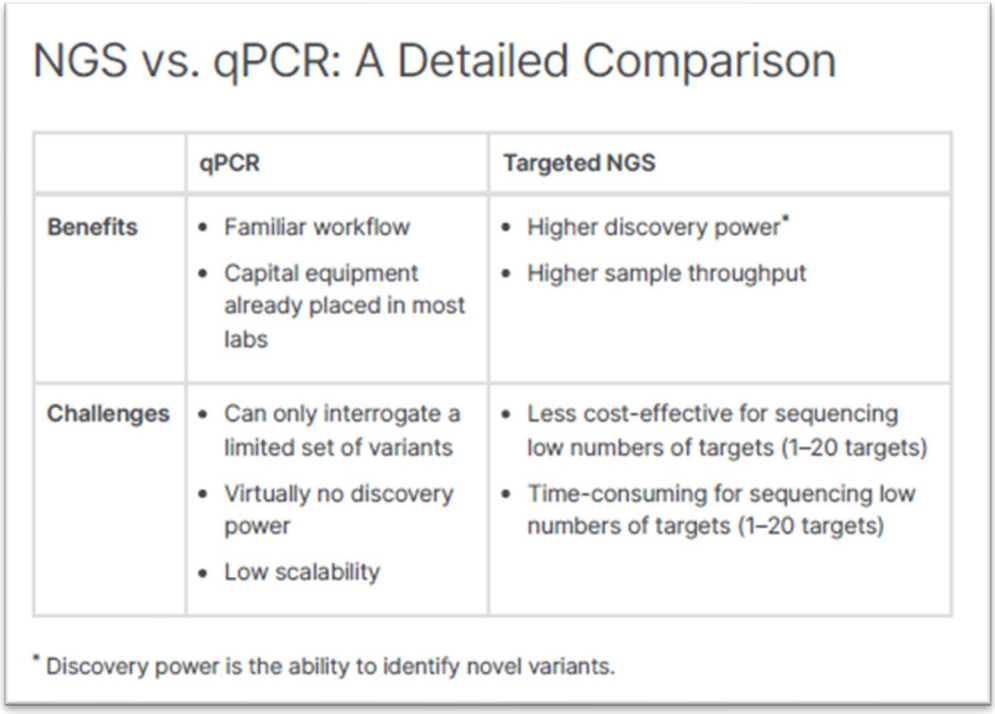
Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1492. Illumina's marketing materials also highlight the drawbacks of PCR-based detection technology relative to NGS, noting that "[w]hile qPCR is effective for low target numbers, the workflow can be cumbersome for multiple targets. NGS is preferable for studies with many targets or samples. A single NGS experiment can identify variants across thousands of target regions with single-base resolution." (PX0120 at 001 (Illumina, Advantages of next-generation sequencing vs. qPCR)).

Response to Finding No. 1492:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1442 herein.

1493. As seen in the screenshot below, Illumina's published marketing materials reflect PCR-based technology's limited "scalability" and ability to analyze more than "a limited set of variants":



NGS vs. qPCR: A Detailed Comparison

	qPCR	Targeted NGS
Benefits	• Familiar workflow • Capital equipment already placed in most labs	• Higher discovery power* • Higher sample throughput
Challenges	• Can only interrogate a limited set of variants • Virtually no discovery power • Low scalability	• Less cost-effective for sequencing low numbers of targets (1–20 targets) • Time-consuming for sequencing low numbers of targets (1–20 targets)

* Discovery power is the ability to identify novel variants.

(PX0120 at 001 (Illumina, Advantages of next-generation sequencing vs. qPCR)).

Response to Finding No. 1493:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1442 herein.

3. Other (Sanger & Proteomics)

1494. [redacted]

[redacted]

Response to Finding No. 1494:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1495. Andrew Felton of Thermo Fisher, a leading provider of Sanger sequencers, explained that Sanger sequencing is unsuitable for MCED tests as it "would take too much time, cost too much, and would not be scalable enough to deal with the very large number of samples that you would be trying to interrogate." (PX7070 (Felton (Thermo Fisher) IHT at 66)).

Response to Finding No. 1495:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1496. Proteomics analyzes protein levels as a biomarker for cancer. (PX7100 (Chudova (Guardant) Dep. at 106)).

Response to Finding No. 1496:

Respondents have no specific response.

1497. No existing technology can look at the number of proteins in the body that would be necessary to screen for multiple cancers. (*See* PX7090 (Sood (Guardant) Dep. at 92-93)).

Response to Finding No. 1497:

The proposed finding is inaccurate, incomplete and misleading. It is undisputed that Genesys Biolabs' OneTest is a proteomics-based test that measures seven cancer protein biomarkers to screen for lung, liver, pancreatic, ovarian, prostate and colon cancers. (PFF ¶¶ 692.2.) [redacted] (PFF ¶ 2094.) Seer also uses proteomics (not NGS) for its ProteographTM and PrognomiQ platforms which may be used to develop MCED tests. (PFF ¶ 564.) Somalogic also has a proteomics platform

which may be used to develop MCED tests. (PFF ¶ 570.) [redacted]

[redacted] (PFF ¶ 2095.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1498. Using proteomics in place of NGS would require developing a new platform capable of doing so. (*See* PX7090 (Sood (Guardant) Dep. at 92-93)).

Response to Finding No. 1498:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1497, which Respondents incorporate herein.

1499. [redacted] (PX7100 (Chudova (Guardant) Dep. at 106-107) (*in camera*)).

Response to Finding No. 1499:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 1497, which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1500. [redacted] (*See, e.g.*, Cance (American Cancer Society) Tr. 613; Nolan (Freenome) Tr. 2759 (*in camera*)).

Response to Finding No. 1500:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1497, which Respondents incorporate herein.

G. SUFFICIENT AND TIMELY ENTRY OF A NEW SHORT-READ NGS PLATFORM SUITABLE FOR MCED TEST DEVELOPERS IS UNLIKELY

1. Significant Scientific, Legal, and Commercial Barriers to Entry Exist

a) Multiple Companies Have Attempted to Develop an NGS Platform Comparable to Illumina's and Have Failed

1501. Roche has spent nearly a decade and millions of dollars attempting to develop an NGS platform and still has not succeeded. (*See infra* Complaint Counsel's Proposed Findings of Facts ¶¶ 1622-1654).

Response to Finding No. 1501:

The proposed finding is misleading, inaccurate and ambiguous as to the term "succeeded". [redacted] (RX2697 (Roche) at 5; PX7074 (Perettie (FMI) Dep. at 110–11); PX7043 (Gunn (Roche) IHT at 164); *see also* PFF ¶¶ 785–85.3).)

1502. Qiagen developed and launched an NGS platform but Illumina sued Qiagen for patent infringement and won an injunction that prevented Qiagen from selling its NGS product in the United States, resulting in Qiagen's exit from the NGS market. (*See* PX9067 at 017 (Complaint for Violation of Federal Antitrust and California Unfair Competition Laws, *Complete Genomics, Inc., et al. v. Illumina, Inc.*, No. 3:21-cv-00217 (N.D. Cal.) (Jan. 11, 2021)) ("After introducing a sequencing system in 2016, [Qiagen] was forced to abandon the U.S. and worldwide sequencing market because of a series of challenges that Illumina initiated.") (citing *Illumina, Inc. v. Qiagen, N.V.*, 207 F. Supp. 3d 1081, 1083 (N.D. Cal. 2016) (granting preliminary injunction))).

Response to Finding No. 1502:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1205 herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 69), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1503. [redacted] (*See* PX7061 (Davy (Illumina) IHT at 127) (*in camera*)).

Response to Finding No. 1503:

The proposed finding is not supported by the cited evidence. Ms. Davy only testified that [redacted] (PX7061 (Davy (Illumina) IHT at 127) (in camera)). Respondents also incorporate their responses to CCFF ¶ 1205 herein.

1504. [redacted] (Rabinowitz (Natera) Tr. 336-37 (*in camera*)).

Response to Finding No. 1504:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1205 and 1293 herein.

1505. [redacted] (Rabinowitz (Natera) Tr. 336-37 (*in camera*)).

Response to Finding No. 1505:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1205 and 1293 herein.

1506. [redacted] (Rabinowitz (Natera) Tr. 336-37 (*in camera*)).

Response to Finding No. 1506:

The proposed finding is incomplete and misleading. Mr. Rabinowitz did not clarify the [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1205 and 1293 herein.

1507. [redacted] (Rabinowitz (Natera) Tr. 349 (*in camera*)).

Response to Finding No. 1507:

The proposed finding is misleading and ambiguous to the extent it implies [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1205 and 1293 herein.

1508. Thermo Fisher has spent years and millions of dollars trying to develop an NGS sequencer that performs as well as Illumina's NGS sequencers and has not yet succeeded (*See* supra Section V.E.1. (Thermo Fisher Is Not an Option for MCED Test Developers); *see also infra* Complaint Counsel's Proposed Findings of Facts ¶¶ 1577-1585).

Response to Finding No. 1508:

To the extent Complaint Counsel relies on its Proposed Findings in Section V.E.1 (CCFF ¶¶ 1212–68) and ¶¶ 1577–1585, Respondents incorporate their responses to those Proposed Findings herein.

1509. Omniome has spent years and millions of dollars trying to develop an NGS sequencer and has yet to complete development let alone commercially launch a sequencer. (*See infra* Complaint Counsel's Proposed Findings of Facts ¶¶ 1586-1621).

Response to Finding No. 1509:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1586–1621, which Respondents incorporate herein.

In particular, Omniome's technology has attracted a significant investment from PacBio, an established sequencing company. Specifically, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).) Omniome has stated that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] (PX7096 (Song (Omniome) Dep. at 28–29, 56).)

1510. [redacted] (Rabinowitz (Natera) Tr. 348 (*in camera*)).

Response to Finding No. 1510:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1293 and 1501 herein, and to note that Dr. Rabinowitz was not privy to documents and testimony produced by Roche in this matter when he provided the testimony quoted by Complaint Counsel.

1511. [redacted] (PX7070 (Felton (Thermo Fisher) IHT at 38) (*in camera*)).

Response to Finding No. 1511:

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1512. Thermo Fisher's Dr. Felton estimates that for company with no prior genome sequencing experience, entry into the NGS market would take "three to five years" and "hundreds of millions of dollars" depending on the complexity of the technology stating that a new

company would have to "provide enough differentiation [to] … gain significant market share" and "building a new technology from scratch is more difficult and expensive than iterating an existing technology." (PX7070 (Felton (Thermo Fisher) IHT at 39)).

Response to Finding No. 1512:

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1513. [redacted] (Velarde (Singular Genomics) Tr. 4553 (*in camera*)).

Response to Finding No. 1513:

Respondents have no specific response.

1514. [redacted] (Velarde (Singular Genomics) Tr. 4554 (*in camera*)).

Response to Finding No. 1514:

Respondents have no specific response.

1515. "[I]n the past decade, there was really no NGS compan[y] that could compete with Illumina in a meaningful, material way." (PX7124 (He (Element) Dep. at 123)).

Response to Finding No. 1515:

The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) As she was not offered as an expert witness, it was improper for Dr. He to offer a general opinion on the ability of NGS companies to compete with Illumina.

1516. An investor question posed to Illumina's board of directors was to "describe [Illumina's] competitive position." Illumina's response to this question was "[w]e have maintained our market share leadership position despite competitive announcements as evidenced by a stable win-rate. Customer feedback has been that the Sequel instrument by Pacific Biosciences is complimentary and that the recent [Thermo Fisher] Ion Torrent (Ion S5 and Ion S5 XL) are more revisions of the current platforms than a meaningful

advancement." (PX2551 (Illumina) at 12 (Illumina, Board of Directors Meeting Key Investor Q&A, Jan. 25, 2016)).

Response to Finding No. 1516:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 23), and while Complaint Counsel introduced this document at Mr. deSouza's deposition, they did not question Mr. de Souza on the particular language quoted. Thus, this portion of the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

b) Illumina Has an Extensive Patent Portfolio That Prevents Entry

1517. Dr. Aravanis prepared a response to anticipated investor questions for a large group investor meeting on Monday, February 22, 2021 representing that "Illumina owns a spectrum of IP covering various improvements that enable Illumina's superior sequencing accuracy, speed, and efficiency. These patents and pending applications have expiration dates ranging from 2023 to beyond 2030. Our patented innovations touch every aspect of the sequencing workflow, including nucleotides, enzymes, reagent mixes, instruments, optics, analysis software, and bioinformatics, which result from Illumina's significant investments in research and development." (deSouza (Illumina) Tr. 2229-32; PX2822 (Illumina) at 006-007 (Illumina, Baird Non-Deal Roadshow with Alex Aravanis, Feb. 22, 2021)).

Response to Finding No. 1517:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss the particular language quoted at trial, (deSouza (Illumina) Tr. 2229–32), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents have no specific response except to note that [redacted] (*See* PFF ¶¶ 924.1–924.3.) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States.

Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

In addition to the deficiencies in this proposed finding shown by the evidence in the record, Respondents note that RX3929 that was not admitted into evidence shows that the NGS market is ripe for the imminent entry of several alternative platforms including Singular and Element and further undermines this finding.

1518. Illumina represented to investors in early January 2021, that it has "an extensive intellectual property portfolio" including "exclusive licenses to 901 issued U.S. patents and 650 pending U.S. patent applications …. [Illumina's] issued and pending patents cover various aspects of our arrays, assays, oligo synthesis, sequencing technology, instruments, digital microfluidics, software, bioinformatics, and chemical-detection technologies, and have terms that expire between 2021 and 2041. [Illumina] continue[s] to file new patent applications to protect the full range of our technologies." (PX0061 at 009 (Illumina 10K, Jan. 3, 2021)).

Response to Finding No. 1518:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1517, which Respondents incorporate herein.

1519. Singular Genomics describes the NGS sequencer market as characterized by "extensive intellectual property disputes and litigation." (PX0068 at 013 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1519:

Respondents have no specific response except to note that the proposed finding is misleading to the extent it implies that Singular's S-1 reflects anything but Singular's opinion. Further, Mr. Velarde testified that [redacted] (Velarde (Singular Genomics) Tr. 4569–70.)

1520. Singular Genomics describes the NGS sequencing market as an "area in which there are numerous issued patents and patent applications and in which there has been substantial litigation regarding patent and other intellectual property rights." (PX0068 at 046 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1520:

Respondents have no specific response except to note that the proposed finding is misleading to the extent it implies that Singular's S-1 reflects anything but Singular's opinion. Further, Mr. Velarde testified that [redacted] (Velarde (Singular Genomics) Tr. 4569–70.) He also testified that [redacted] (Velarde (Singular Genomics) Tr. 4569–70.)

1521. [redacted] (Velarde (Singular Genomics) Tr. 4548 (*in camera*)).

Response to Finding No. 1521:

Respondents have no specific response except to note that the proposed finding is misleading to the extent it implies that Mr. Velarde's testimony reflects anything but his own personal opinion and/or Singular's opinion. Further, Mr. Velarde testified that [redacted] (Velarde (Singular Genomics) Tr. 4569–70.) He also testified that [redacted] (Velarde (Singular Genomics) Tr. 4569–70.)

1522. [redacted] (*See* PX7050 (Nolan (Freenome) IHT at 101-03 (*in camera*))).

Response to Finding No. 1522:

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) There is nothing in the record supporting Mr. Nolan's ability to credibly speak about the relative strengths of the patents in the NGS IP landscape. Mr. Nolan has only held commercial and management roles at Freenome, having been Chief Commercial Officer, Chief Business Officer, and CEO. (Nolan (Freenome) Tr. 2695.) He has no background in patents, the law, or patent litigation. (Nolan (Freenome) Tr. 2695.) The testimony cited is also impermissible lay witness testimony to the extent it purports to provide an opinion regarding entry into the NGS.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Further, Respondents incorporate their responses to CCFF ¶ 945 herein.

1523. [redacted] (PX7071 (Song (Omniome) IHT at 40) (*in camera*)).

Response to Finding No. 1523:

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) The testimony cited is also impermissible lay

witness testimony to the extent it purports to provide an opinion regarding entry into the NGS market.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1524. Mr. Song of Omniome testified that Illumina has "amassed a fairly large IP estate" surrounding NGS platforms and that Illumina "will use it almost as a weapon … to try and ensure that they maintain their dominance in the sequencing space." (PX7071 (Song (Omniome) IHT at 40)).

Response to Finding No. 1524:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1524, which Respondents incorporate herein.

1525. Natera represented to investors in its Form 10-K that "in the event that it is in our commercial or financial interest or we are forced to transition sequencing platforms … we may be unable to do so in a commercially sustainable way and that could survive claims of infringement of intellectual property rights of Illumina and other competitors in a timely manner or at all." (PX0155 at 32 (Natera, 2020 Form 10-K, Dec. 31, 2020)).

Response to Finding No. 1525:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 2), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1526. [redacted] (Rabinowitz (Natera) Tr. 337 (*in camera*)).

Response to Finding No. 1526:

The proposed finding is not supported by the cited evidence. Mr. Rabinowitz testified as follows: [redacted]

[redacted] (Rabinowitz (Natera) Tr. 337 (in camera) (emphasis added)). [redacted] Respondents also incorporate their responses to CCFF ¶ 1293 herein.

2. Even if a Company Develops a New NGS Platform, Significant Barriers to Commercialization Exist and It Will Take Years for a New Entrant to Gain the Reputation and Enough Widespread Commercial Use to Be an Option for MCEDs

a) Illumina Has Widespread Adoption and Good Reputation for Reliability

1527. Dr. Chahine testified at trial that Illumina is the preferred NGS platform because "from a business standpoint [ ] it is just considered the top technology with respect to its ability to sequence [ ] accurately . . . at larger scales" that create "some [very useful] economies of scale." (Chahine (Helio) Tr. 1044).

Response to Finding No. 1527:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

Contrary to the proposed finding, [redacted]

[redacted].) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 1177–79 and 1293 herein.

1528. Dr. Chahine testified at trial that the Illumina platform is "by far [ ] the preferred one that's used even at third-party shops" and the "leading one for many different [ ] reasons." (Chahine (Helio) Tr. 1044).

Response to Finding No. 1528:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Respondents incorporate their responses to CCFF ¶ 1527 herein.

The proposed finding is also based entirely on inadmissible hearsay testimony because Dr. Chahine refers to "the preferred one that's used even at third-party shops", which is not based on Dr. Chahine's own experience, therefore, it should be accorded little weight.

1529. Dr. Chahine testified Helio is "very familiar with Illumina. That's what most people trust. That's what most people have equipment, even third parties." (PX7077 (Chahine (Helio) Dep. at 26)).

Response to Finding No. 1529:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Respondents incorporate their responses to CCFF ¶ 1527 herein.

The proposed finding is also based entirely on inadmissible hearsay testimony because Dr. Chahine refers to "That's what most people trust. That's what most people have equipment, even third parties", which is not based on Dr. Chahine's own experience, therefore, it should be accorded little weight. The proposed finding is also irrelevant because it doesn't appear to relate to MCED tests.

1530. Mr. Gao testified that "unless you show superiority over Illumina, why [would] we want to throw away what we have done to go with you, so we never go with any other company." (PX7042 (Gao (Singlera) IHT at 60)).

Response to Finding No. 1530:

The proposed finding is inaccurate, incomplete and misleading. Dr. Gao of Singlera testified that the PanSeer test only needs over 5 million reads (Gao (Singlera) Tr. at 2893) and can be run using alternative NGS instruments such as Illumina's MiSeq and Thermo Fisher equipment. (*See* Gao (Singlera) Tr. at 2928–31; PFF ¶¶ 780–780.6.) [redacted] (PFF ¶¶ 778–778.2; 2085.) Thermo Fisher's Ion Torrent sequencers are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) [redacted]

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 982 and 1171 herein.

1531. When Singlera chose to use Illumina, it chose the winner: "We had to be solid." (PX7042 (Gao (Singlera) IHT at 63)).

Response to Finding No. 1531:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Respondents incorporate their responses to CCFF ¶ 1530 herein.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1532. Dr. Vogelstein testified that Illumina's NGS sequencers are "incredibly reliable" and elaborated that they "work time and time again, over and over, both in our lab and numerous other labs." (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 59)).

Response to Finding No. 1532:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Respondents incorporate their responses to CCFF ¶ 929 herein.

Further, Dr. Vogelstein, the founder of Thrive stated, [redacted]

BGI already has a commercially available NGS platform. (PFF ¶¶ 777–777.5.) [redacted] BGI recently won a jury

verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

1533. With respect to Illumina's NGS sequencers, Dr. Vogelstein testified that Illumina's "service is superb" and elaborated that his lab does "studies in which [they] have to return results to patients every week and [they're] on constant alert and anxiety to make sure the instruments don't break down because patients' lives depend on them" so they "need absolutely reliable instruments." (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 59-60)).

Response to Finding No. 1533:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Respondents incorporate their responses to CCFF ¶¶ 929 and 1532 herein.

1534. Dr. Vogelstein testified that the "know-how that has been obtained on" Illumina's NGS sequencers "since their beginning is unbelievably strong" and he would characterize as "priceless." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 59)).

Response to Finding No. 1534:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Respondents incorporate their responses to CCFF ¶¶ 929 and 1532 herein.

1535. [redacted] (PX7105 (Getty (Guardant) Dep. at 239-40) (*in camera*)).

Response to Finding No. 1535:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Respondents incorporate their responses to CCFF ¶ 927 herein.

Mr. Getty admitted that Thermo Fisher Scientific Inc., and other companies developing next-generation sequencing platforms also provide NGS platforms that could be used for liquid biopsy testing. (Getty (Guardant) Tr. 2642.) [redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.)

BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted]) BGI recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

Oxford Nanopore's PromethION sequencer has sequencing costs of as low as $2.55 per gigabase, which is lower than the per gigabase sequencing costs using Illumina's NovaSeq 6000. (*See* PFF ¶¶ 603–603.3.) Using Oxford Nanopore's PromethION with a throughput of 10 Tb in up to 72 hours (PFF ¶ 599 (RX3536 (ONT); RX3869 (Cote Expert Report) ¶ 293)), [redacted] —*a few more* samples in the same time frame. Respondents also incorporate their responses to CCFF ¶¶ 1115 and 1118 herein.

The proposed finding is based in part on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶ 927 herein.

1536. Dr. Lengauer explained:

[redacted]

(PX7051 (Lengauer (Third Rock Ventures) IHT at 109-10) (*in camera*)).

Response to Finding No. 1536:

The proposed finding is incomplete and misleading with respect to Exact/Thrive's purported reliance on Illumina's NGS systems. Respondents incorporate their responses to CCFF ¶ 929 herein. Respondents also note that Dr. Lengauer testified at trial that [redacted]

[redacted] (Lengauer (Exact/Thrive) Tr. 238–40.) Respondents also incorporate their responses to CCFF ¶ 1532 herein.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2. Even if a Company Develops a New NGS Platform, Significant Barriers to Commercialization Exist and It Will Take Years for a New Entrant to Gain the Reputation and Enough Widespread Commercial Use to Be an Option for MCEDs

b) MCED Customers Would Not Switch to a New Platform Until It Has Widespread Adoption and Demonstrated Reliability

1537. [redacted] (PX7107 (deSouza (Illumina) Dep. at 259 (*in camera*) (referring to PX2544 (Illumina)-025)).

Response to Finding No. 1537:

Respondents have no specific response.

1538. In a conference call with investors, Illumina CEO Mr. deSouza noted the U.S. NGS market poses "significant hurdles" for entry and that Illumina "continue[s] to push this at a higher and higher bar in the market":

> [T]he U.S. is a very sophisticated genomics market both in terms of the research market and the clinical market. And so customers here have high expectations around the quality of the products, the accuracy of the product, the reliability of the product, the ease of the workflow, the validation of the products by the rest of the market. And so these present significant hurdles for anyone else coming in that we do believe that we continue to push this at a higher and higher bar in the market.

(PX2544 (Illumina) at 025 (Email from T. Peterson, JP Morgan, to F. deSouza, Sept. 5, 2019, attaching JP Morgan Life Sciences CEO Conference Call Transcript, Sept. 3, 2019)).

Response to Finding No. 1538:

The proposed finding is incomplete and misleading. When asked about the [redacted] (PX7107 (de Souza (Illumina) Dep. at 258–59.)) Mr. deSouza was merely pointing out that any NGS company that provided customers with inaccurate results, accuracy of results being a basic requirement, would struggle to succeed in the NGS market.

The proposed finding is also misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for achieving the accuracy required for an early detection test. As Dr. Vogelstein has stated, there are other viable NGS platforms on the market that compare to Illumina's level of accuracy. BGI's DNBSEQ sequencer's reported accuracy is comparable to that of Illumina's sequencers, at over 99.9% accuracy (>80% of bases >Q30). (PFF ¶ 591 (RX3465 (MGI Tech); RX3067 (BGI)).) Specifically, Dr. Vogelstein stated, [redacted]

Oxford Nanopore claims its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1; RX3535 (ONT) at 1 *with* RX3368 (Illumina).)

Singular Genomics' G4 System's reported performance characteristics are comparable to those of Illumina's NextSeq and NovaSeq systems, with high accuracy of 99.7% on 150 base reads. (PX8561 (Singular) at 4-5; [redacted]

1539. A February 2020 UBS/DeciBio presentation on NGS use generally stated that "[d]espite increasing competition, Illumina is poised to maintain its leadership position over the next 5+ years" and notes that "NGS users have created an 'Illumina ecosystem' (e.g., bioinformatics pipeline) making it hard for competing technologies." (PX2030 (Illumina) at 006 (UBS/DeciBio, NGS and Spatial Omics Landscape and Trends, Feb. 24, 2020)).

Response to Finding No. 1539:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 5), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1540. The same UBS/DeciBio presentation states that ""Many players are expected to enter the market in the coming years but are unlikely to materially affect the market in the near term due to R&D timelines and Illumina ecosystem incompatibility." (PX2030 (Illumina) at 010 (UBS/DeciBio, NGS and Spatial Omics Landscape and Trends, Feb. 24, 2020)).

Response to Finding No. 1540:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 5), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1541. The same UBS/DeciBio presentation projects that "Illumina will continue to dominate the space," with other sequencing firms "carving out niches." (PX2030 (Illumina) at 009 (UBS/DeciBio, NGS and Spatial Omics Landscape and Trends, Feb. 24, 2020) (referring specifically to Thermo Fisher's "ex-U.S. commercial reach" and BGI's "(ex-U.S.) leadership position").

Response to Finding No. 1541:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 5), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1542. Illumina CEO Mr. deSouza distinguished U.S. clinical customers as being particular focused on "high accuracy results": "[O]n the clinical side, it's especially important that products deliver high accuracy results." (PX2544 (Illumina) at 025 (Email from T. Peterson, JP Morgan, to F. deSouza, Sept. 5, 2019, attaching JP Morgan Life Sciences CEO Conference Call Transcript, Sept. 3, 2019)).

Response to Finding No. 1542:

The proposed finding is incomplete. When questioned about the "high accuracy" language, Mr. deSouza testified that by "high accuracy" [redacted] (PX7107 (deSouza (Illumina) Dep. at 260.)) Respondents also incorporate their responses to CCFF ¶ 1538 herein.

1543. When Illumina launches a new platform, clinical customers do not immediately switch, but rather wait a year or two to observe the platform's performance. (deSouza (Illumina) Tr. 2409-10).

Response to Finding No. 1543:

Respondents have no specific response except to note that third-party testimony also shows that switching between Illumina platforms, which customers have to do every few years, poses a similar burden to switching from an Illumina platform to a non-Illumina platform. (*See* PFF ¶ 678.2.) For example, [redacted] Further, neither Complaint Counsel nor Dr. Scott Morton offered any empirical assessment of the *incremental* cost of switching from an Illumina platform to a third-party platform as compared to the switching cost that would be incurred by a test developer that seeks to upgrade to Illumina's next generation system. (PFF ¶ 948.2; RX3871 (Willig Expert Report) ¶¶ 46, 48.) Respondents also incorporate their responses to CCFF ¶ 1088 herein.

1544. Once customers have observed how a new sequencer "performs in the real market," customers will bring in a single sequencer to validate their workflows and train people on the new sequencer. (deSouza (Illumina) Tr. 2410).

Response to Finding No. 1544:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1543 herein.

1545. The validation process for evaluating a new sequencer takes months or quarters. (deSouza (Illumina) Tr. 2410).

Response to Finding No. 1545:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1543 herein.

1546. Only after observing the sequencer's performance in the market and validating the customer's workflow on the new sequencer will a customer begin selling its tests on a new sequencer. (deSouza (Illumina) Tr. 2409-10).

Response to Finding No. 1546:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1543 herein.

1547. It is "not uncommon" for clinical customers to wait years to adopt a new sequencer—"it could be three-plus years after a new sequencer comes out." (deSouza (Illumina) Tr. 2410).

Response to Finding No. 1547:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1543 herein.

1548. Clinical customers take years to adopt a new sequencer, because they wait to see how it will perform in the real world, then perform validation. (deSouza (Illumina) Tr. 2450).

Response to Finding No. 1548:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1543 herein.

1549. Clinical customers will ramp up on a new sequencer 2.5 to 3 years after the sequencer's launch. (deSouza (Illumina) Tr. 2450).

Response to Finding No. 1549:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1543 herein.

1550. Mr. deSouza pointed to customer adoption of the NovaSeq to exemplify how clinical customers' adoption cycles can take years: "For example, NovaSeq was launched on -- in 2017, first half of 2017, and we still have a substantial portion of our NovaSeq customers

that are new to high throughput or new to Illumina, and they are only now bringing the NovaSeq into their environment." (deSouza (Illumina) Tr. 2410-11).

Response to Finding No. 1550:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1543 herein.

1551. In evaluating a new NGS Platform, Dr. Lengauer testified that [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 105) (*in camera*)).

Response to Finding No. 1551:

The proposed finding is incomplete and misleading to the extent it suggests that only Illumina's platform can support Exact/Thrive's CancerSEEK test. Respondents also note that Dr. Lengauer testified at trial that [redacted] (Lengauer (Exact/Thrive) Tr. 238–40.)

Further, Dr. Vogelstein, the founder of Thrive stated, [redacted]

Respondents also incorporate their responses to CCFF ¶¶ 929 and 1532 herein.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1552. [redacted]

[redacted]
(PX7051 (Lengauer (Third Rock Ventures) IHT at 105) (*in camera*)).

Response to Finding No. 1552:

The proposed finding is incomplete and misleading to the extent it suggests that only Illumina's platform can support Exact/Thrive's CancerSEEK test. Respondents also incorporate their responses to CCFF ¶¶ 929, 1532 and 1551 herein.

Respondents also note that [redacted] The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 2833, which Respondents incorporate herein.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1553. [redacted]
(PX7045 (Chudova (Guardant) IHT at 115-16) (*in camera*)).

Response to Finding No. 1553:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that only Illumina's NovaSeq instrument is suitable for supporting Guardant's putative MCED test. [redacted]

[redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) Further, BGI is not a new platform: it launched its first NGS sequencer in 2015. (PFF ¶ 587 (RX3063 (BGI)).)

BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted] RX3869 (Cote Expert Report) ¶ 287; [redacted].) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1554. [redacted] (Chudova (Guardant) Tr. 1228-29) (*in camera*).

Response to Finding No. 1554:

Respondents have no specific response except to incorporate PFF ¶¶ 645–656.1 and Respondents' responses to CCFF ¶¶ 927 and 1553 herein.

In particular, switching between Illumina's platform and alternative platforms is feasible. (PFF ¶ 645; RX3869 (Cote Expert Report) ¶ 336.) In fact, cancer screening developers will inevitably need to switch between different Illumina instruments in the course of developing their respective screening tests. (PFF ¶ 646; RX3869 (Cote Expert Report) ¶ 336.) Illumina's own model contemplates that a portion of test developers will switch to an alternative sequencing platform developer in the process of upgrading Illumina instruments. (PFF ¶ 646.1; PX7087 (Goswami (Illumina) Dep. at 16).)

Further, other NGS platforms have specifically been designed for ease of switching from one platform to another. [redacted]

1555. [redacted] (PX7055 (Otte (Freenome) IHT at 74) (*in camera*)).

Response to Finding No. 1555:

The proposed finding is incomplete and misleading to the extent it suggests that only Illumina's platform can support Freenome's putative MCED test. In particular, [redacted]

[redacted].) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

Respondents also note that Singular's G4 NGS System's performance characteristics are stated to be comparable or better to Illumina's NextSeq and NovaSeq systems and that Singular states that the G4 System will compete with Illumina for sales to MCED test developers. (*See* PFF ¶¶ 609–10.) Singular has received positive feedback from cancer-screening test developers. (*See* PFF ¶ 612.)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

c) Gaining Widespread Adoption Among Customers is Time Consuming and Difficult Because of Contracting Practices and Reputational Barriers

1556. Singular represented to investors that "customers' willingness and ability to adopt new products and workflows, including in light of commercial pressures applied by our competitors and pre-existing long-term contracts with our competitors" is a commercial risk that could prevent customer adoption of a new NGS Sequencing platform. (PX0068 at 031-32 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1556:

Respondents have no specific response except to note that the cited source also observes that: (1) Singular's G4 System has performance characteristics Singular states are comparable or better than Illumina's NextSeq and NovaSeq (PX8561 (Singular) at 4–5); (2) Singular launched the G4 System at the end of 2021 and will begin shipping the G4 System in the first half of 2022 (PX8561 (Singular) at 1–2).

1557. [redacted] (Velarde (Singular Genomics) Tr. 4550 (*in camera*)).

Response to Finding No. 1557:

Respondents have no specific response except to note that Mr. Velarde also testified that [redacted] (Velarde (Singular) Tr. 4522, 4537; PX7117 (Velarde (Singular) Dep. at 97–98, 111–12).)

Respondents also note that under the Open Offer, any customer that has a long-term supply agreement with Illumina has the unilateral right to terminate its supply relationship with Illumina at any time and for any reason without termination liability upon ninety (90) days' prior written notice to Illumina. (PFF ¶ 1001.1; PX0064 (Illumina) at 10.)

1558. Dr. He testified that Element Biosciences is "worried … that Illumina can use its market power … and perhaps lock down their customers with multi-year agreements … to prevent any new NGS provider[] from entering the space or just make that very, very difficult." (PX7124 (He (Element) Dep. at 122)).

Response to Finding No. 1558:

The proposed finding is based on testimony for which the witness lacks personal knowledge and foundation. When asked by Complaint Counsel what Dr. He based the expressed belief quoted by Complaint Counsel, Dr. He testified that she "[did] not have specifics". Therefore, Dr. He's testimony is based on pure speculation and should be given no weight.

Respondents also note that under the Open Offer, any customer that has a long-term supply agreement with Illumina has the unilateral right to terminate its supply relationship with Illumina at any time and for any reason without termination liability upon ninety (90) days' prior written notice to Illumina. (PFF ¶ 1001.1; PX0064 (Illumina) at 10.)

1559. [redacted] (PX7071 (Song (Omniome) IHT at 58-59) (*in camera*)).

Response to Finding No. 1559:

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also note that under the Open Offer, any customer that has a long-term supply agreement with Illumina has the unilateral right to terminate its supply relationship with Illumina at any time and for any reason without termination liability upon ninety (90) days' prior written notice to Illumina. (PFF ¶ 1001.1; PX0064 (Illumina) at 10.)

1560. Singular represented to investors that "[i]f our products fail to achieve early customer and scientific acceptance, we may not be able to achieve broader market acceptance for our products and our revenue and prospects may be harmed." (PX0068 at 025 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1560:

Respondents have no specific response except to incorporate their responses to Proposed CCFF ¶¶ 1556–57 herein. [redacted] (Velarde (Singular) Tr. 4522, 4537; PX7117 (Velarde (Singular) Dep. at 97–98, 111–12).)

1561. Singular represented to investors that "the life sciences community is comprised of a small number of early adopters and key opinion leaders (KOLs) who significantly influence the rest of the community and the market-place in general." (PX0068 at 026 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1561:

Respondents have no specific response except to incorporate their responses to Proposed CCFF ¶¶ 1556–57 herein. [redacted] (Velarde (Singular) Tr. 4522, 4537; PX7117 (Velarde (Singular) Dep. at 97–98, 111–12).)

1562. Singular represented to investors that "[e]nsuring that early adopters and KOLs publish research involving the use of our products is critical to ensuring our products gain widespread acceptance and market growth." (PX0068 at 026 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1562:

Respondents have no specific response except to incorporate their responses to Proposed CCFF ¶¶ 1556–57 herein. [redacted] (Velarde (Singular) Tr. 4522, 4537; PX7117 (Velarde (Singular) Dep. at 97–98, 111–12).)

1563. Singular represented to investors that "[i]f early adopters and KOLs do not favorably describe the use of our products, do not compare our products favorably to existing product and technologies, or negatively describe the use and operation of our products in publications, it may drive potential customers away from our products and prevent broader market acceptance of our products, which could harm our business, financial condition and results of operations. (PX0068 at 026 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1563:

Respondents have no specific response except to incorporate their responses to Proposed CCFF ¶¶ 1556–57 herein. [redacted] (Velarde (Singular) Tr. 4522, 4537; PX7117 (Velarde (Singular) Dep. at 97–98, 111–12).)

1564. [redacted]

[redacted] (PX7070 (Felton (Thermo Fisher) IHT at 28) (*in camera*)).

Response to Finding No. 1564:

The proposed finding is incomplete and misleading. Contrary to the proposed finding, evidence and testimony shows that entry into the NGS market is feasible and ongoing and switching from Illumina to a non-Illumina platform is feasible, unlikely to affect the timeline for MCED test development, and poses a similar burden to switching between Illumina platforms. (*See* PFF ¶¶ 605–74.) The proposed finding is also vague as to what Dr. Felton means by "dominant player"; even if Illumina has greater than 50 percent market share, there are many other sequencing alternatives for putative MCED test developers.

Furthermore, [redacted] Dr. Felton also testified that Thermo Fisher would be competing with BGI if they entered the U.S. market (Felton (Thermo Fisher) Tr. 1999) and that BGI (along with Illumina) was economical to deploy in an MCED testing environment. (RX3823 (Felton (Thermo Fisher) Dep. at 173).)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1565. Mr. Conroy explained his expectation that once a company signs a supply agreement with Illumina, [redacted] (PX7058 (Conroy (Exact) IHT at 150-151) (*in camera*)).

Response to Finding No. 1565:

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also inaccurate and misleading. Under the Open Offer, any customer that has a long-term supply agreement with Illumina has the unilateral right to terminate its supply relationship with Illumina at any time and for any reason without termination liability upon ninety (90) days' prior written notice to Illumina. (PFF ¶ 1001.1; PX0064 (Illumina) at 10.)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1566. Natera represented to investors in its Form 10-K that although it is "not bound to use exclusively Illumina's sequencing instruments and reagents for conducting our sequencing, … if we use other sequencing and reagents for more than specified percentages of our total NIPT clinical volume, we may no longer be entitled to discounts from Illumina." (PX0155 at 15 (Natera 2020 Form 10-K, Dec. 31, 2020).

Response to Finding No. 1566:

The proposed finding is irrelevant, including because it relates to NIPT and not oncology screening. Regardless of whatever Natera has stated about its supply agreement, the pricing in the Open Offer is not contingent on the customer purchasing any other products: any customer buying sequencing reagents for use with a cancer screening test will pay the Open Offer price, regardless of whether customer is purchasing a certain percentage of its oncology clinical volume from Illumina. (PX0064 (Illumina) at 6–7, 12–27; Berry (Illumina) Tr. 864–65.)

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 2), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

d) [redacted]

1567. [redacted]

Response to Finding No. 1567:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

In any event, [redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted]; RX3869 (Cote Expert Report) ¶ 287; [redacted].) BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.)

Guardant itself also admits the viability of using Thermo Fisher equipment for "liquid biopsy" tests. (Getty (Guardant) Tr. 2642 (discussing statements made in Guardant's 10-K).) [redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 927, 1115 and 1118 herein.

Further, BGI and Thermo Fisher are not a new platforms: BGI launched its first NGS sequencer in 2015 (PFF ¶ 587; RX3063 (BGI)); and Thermo Fisher released its Ion Torrent NGS sequencers in 2010. (PFF ¶ 578; PX2482 (Thermo Fisher) at 50).)

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 2273, which Respondents incorporate herein. Given the stage of [redacted] (Cote Tr. 3776, 3833–34.)

1568. [redacted]

Response to Finding No. 1568:

Respondents have no specific response.

1569. [redacted]

Response to Finding No. 1569:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1567, which Respondents incorporate herein. Dr. Chudova also testified that [redacted] (Chudova (Guardant) Tr. 1300–01.) Respondents also incorporate their responses to CCFF ¶¶ 927–28, 1115 and 1118 herein.

1570. [redacted]

Response to Finding No. 1570:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1567, which Respondents incorporate herein. The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1571. [redacted]

Response to Finding No. 1571:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1567, which Respondents incorporate herein. The proposed finding relies on IH testimony which is hearsay and which Respondents had no

opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1572. [redacted]

Response to Finding No. 1572:

Respondents have no specific response.

e) MCED Customers Would Be Reluctant to Use NGS Platform with Unclear Freedom to Operate from Illumina's Patents

1573. Dr. Gao testified that Singlera has "invested tens of millions, hundreds of millions [of] dollars into product development" and it will "only work with [a] company with clear IP rights." (Gao (Singlera) Tr. 2895).

Response to Finding No. 1573:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 896 and 1011, which Respondents incorporate herein.

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276, 1290 and 1318, which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 982 and 2406, which Respondents incorporate herein. Given the stage of Singlera's putative MCED test development, Singlera could switch platforms without affecting its development timeline. (Cote Tr. 3776, [redacted].)

1574. [redacted]

Response to Finding No. 1574:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1269, 1276 and 1287, which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1575. Multiple MCED customers are reluctant to work with BGI because of the uncertainty of BGI's freedom to operate in the U.S. without infringing Illumina's patents. (*See supra* Section V.E.2.c).

Response to Finding No. 1575:

BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777–777.3.) *Illumina, Inc. v. BGI Genomics, Co.*, 20-cv-01465-WHO (N.D. Cal. Mar. 27, 2022), ECF No. 665 at 48 ("If [BGI] make[s] offers to sell Accused Products in the U.S. before the expiration of the patents-in-suit—as they are permitted—they must include the following conspicuous written

disclaimer: 'No sales will occur, and no purchase orders will be accepted, until after August 23, 2022.'") It acquired California-based sequencing company Complete Genomics in 2013 and launched its BGISEQ-500 NGS sequencer in 2015. (PFF ¶ 587; RX3063 (BGI).)

BGI recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022).

3. No NGS Platform Likely to Enter the NGS Market That Would Be a Viable Option for MCED Test Developers in a Timely Manner

1576. [redacted] (PX7050 (Nolan (Freenome) IHT at 101-104) (*in camera*)).

Response to Finding No. 1576:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The testimony also constitutes impermissible and purely speculative lay witness testimony to the extent it purports to offer a general opinion on the feasibility of

entry into the NGS market. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

[redacted] Cote Tr. 3776, [redacted].)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

a) Thermo Fisher

1577. [redacted] (Felton (Thermo Fisher) Tr. 2011) (*in camera*)).

Response to Finding No. 1577:

Respondents have no specific response.

1578. [redacted] (Felton (Thermo Fisher) Tr. at 2012) (*in camera*)).

Response to Finding No. 1578:

Respondents have no specific response.

1579. [redacted] (Felton (Thermo Fisher) Tr. 2012-2013) (*in camera*)).

Response to Finding No. 1579:

The proposed finding is misleading to the extent that it implies that [redacted] (*See* PFF ¶¶ 1924–25.)

For example, putative MCED test developers *do* use Illumina's lower throughput NextSeq and MiSeq instruments for their early detection tests. For example, Singlera's PanSeer test only requires approximately 2 million sequencing reads per sample, and is compatible with both Illumina's MiSeq or NextSeq systems and Thermo Fisher's Ion Torrent S5 systems, though it appears to primarily use the NextSeq 550Dx system from Illumina. (PFF ¶ 533 (RX3115 (Chen et al., 2020) at 7; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2875, 2894, 2928–29; PX7102 (Gao (Singlera) Dep. at 78); RX3869 (Cote Expert Report) ¶ 239).) Helio currently uses Illumina's MiSeq sequencer for its Helio Liver test. (Chahine (Helio) Tr. 1010-12). Dr. Chahine testified Helio uses the MiSeq because "a smaller machine is more efficient" as a "company in its early stage" prior to "ramp[ing] up." (Chahine (Helio) Tr. 1012). [redacted] (Rabinowitz (Natera) Tr. 361) (*in camera*)). Respondents also incorporate their responses to CCFF ¶¶ 928, 980 and 1115 herein.

1580. [redacted]

[redacted] (PX7070 (Felton (Thermo Fisher) IHT at 55) (*in camera*)).

Response to Finding No. 1580:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1579, which Respondents incorporate herein.

Respondents also note that [redacted] (RX3869 (Cote Expert Report) ¶ 285; *see* PFF ¶¶ 1924–25.)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1581. Respondents' own expert, Dr. Richard Cote, acknowledged that Thermo Fisher's sequencing platform is "somewhere between the mid and low throughput" Illumina sequencing platforms. (Cote Tr. 3760).

Response to Finding No. 1581:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1579–80 herein.

1582. [redacted] (Felton (Thermo Fisher) Tr. 2013) (*in camera*)).

Response to Finding No. 1582:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1579–80 herein. The proposed finding is also irrelevant because many test developers are pursuing test development using platforms without lower throughput than the NovaSeq.

1583. [redacted]

[redacted] (PX7070 (Felton (Thermo Fisher) IHT at 56) (*in camera*)).

Response to Finding No. 1583:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1579–80 herein. The proposed finding is also irrelevant because many test developers are pursuing test development using platforms without lower throughput than the NovaSeq.

1584. Thermo Fisher's Dr. Felton acknowledged that despite its research and development work, [redacted] (PX7070 (Felton (Thermo Fisher) IHT at 59-60) (*in camera*); *see also* PX7070 (Felton (Thermo Fisher) IHT at 60-61) (testifying that NGS platforms offered by Thermo Fisher, Pacific Biosciences and Oxford Nanopore "are really not suited to [MCED] testing.")).

Response to Finding No. 1584:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1579–80 herein.

Contrary to the cited testimony, [redacted]

Further, at least one putative MCED test developer already uses Thermo Fisher's platform. For example, Singlera's PanSeer test only requires approximately 2 million sequencing reads per sample, and is compatible with both Illumina's MiSeq or NextSeq systems and Thermo Fisher's Ion Torrent S5 systems. (PFF ¶ 533 (RX3115 (Chen et al., 2020) at 7; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2875, 2894, 2928–29; PX7102 (Gao (Singlera) Dep. at 78); RX3869 (Cote Expert Report) ¶ 239).)

Dr. Aravanis also testified that Thermo Fisher's Ion Torrent can be used as an alternative for many Illumina applications; that the Ion Torrent platform is adequate in terms of the type of sequencing data it produces, the accuracy and the cost and that Thermo Fisher markets the Ion Torrent as an alternative to Illumina. (PFF ¶ 1305 (Aravanis (Illumina) Tr. 1848–52).)

With respect to Oxford Nanopore, Oxford Nanopore's PromethION has total throughput per run of up to 10 Tb, much higher than the up to 50 Gb per run generated by Thermo Fisher's Ion GeneStudio S5. (*See* PFF ¶¶ 579, 598–604.1.) Dr. Felton did not consider the new technology of using concatenation to read cfDNA fragments using nanopore sequencing. Respondents also incorporate their responses to CCFF ¶ 904 herein.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1585. [redacted] (Felton (Thermo Fisher) Tr. 2015) (*in camera*)).

Response to Finding No. 1585:

The proposed finding is incomplete to the extent it suggests that Thermo Fisher does not already have an FDA-approved NGS sequencer. Dr. Felton explained how the PGM Dx

platform, a fully FDA-approved system, is used in oncology applications. (Felton (Thermo Fisher) Tr. 1983–87.) [redacted]

The proposed finding is also misleading to the extent it implies that a distributed IVD model will be part of the plan for any putative MCED test. Several features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) ¶ 359.) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.)

b) Omniome

1586. Omniome was founded in 2013. (PX7071 (Song (Omniome) IHT at 13)).

Response to Finding No. 1586:

Respondents have no specific response.

1587. Omniome currently does not have a commercial NGS platform on the market. (deSouza (Illumina) Tr. 2473-74).

Response to Finding No. 1587:

Respondents have no specific response.

1588. [redacted] (PX7071 (Song (Omniome), IHT at 38-39) (*in camera*)).

Response to Finding No. 1588:

Respondents have no specific response.

(1) [redacted]

1589. [redacted] (PX7096 (Song (Omniome) Dep. at 13–16) (*in camera*)).

Response to Finding No. 1589:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1591 herein.

1590. [redacted] (PX7096 (Song (Omniome) Dep. at 17–18) (*in camera*)).

Response to Finding No. 1590:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1591 herein.

1591. [redacted] (PX7096 (Song (Omniome) Dep. at 18–19) (*in camera*)).

Response to Finding No. 1591:

Respondents have no specific response except to note that [redacted] (PX7096 (Song (Omniome) Dep. at 53–54, 56.))

Since Dr. Song testified, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).) Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Omniome's sequencer will reportedly have comparable throughput and run times to Illumina's NextSeq sequencers, but with better accuracy—98%> Q50 to 99% Q70—10 to 100x better than the accuracy of Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 82, 100–01); [redacted] (PX7096 (Song (Omniome) Dep. at 28–29, 56).)

1592. [redacted] (PX7096 (Song (Omniome) Dep. at 20-27) (*in camera*)).

Response to Finding No. 1592:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1591 herein.

1593. [redacted] (PX7071 (Song (Omniome) IHT at 27–28) (*in camera*)).

Response to Finding No. 1593:

Since Dr. Song testified, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).) Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted]

[redacted] (PX7096 (Song (Omniome) Dep. at 28–29, 56).)

1594. [redacted] (PX7096 (Song (Omniome) Dep at 28) (*in camera*)).

Response to Finding No. 1594:

The proposed finding is incomplete. [redacted] (PX7096 (Song (Omniome) Dep. at 28–29, 56).)

1595. [redacted] (PX7096 (Song (Omniome) Dep at 28–29) (*in camera*)).

Response to Finding No. 1595:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1591 herein.

1596. [redacted] (PX7096 (Song (Omniome) Dep. at 13–29)) (*in camera*)).

Response to Finding No. 1596:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1591 herein.

1597. [redacted] (PX7071 (Song (Omniome) IHT at 22-25) (*in camera*)).

Response to Finding No. 1597:

Since Dr. Song testified, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).) Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted]

[redacted] (PX7096 (Song (Omniome) Dep. at 28–29, 56).)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

(2) [redacted]

1598. [redacted] (PX7096 (Song (Omniome) Dep. at 144-45) (*in camera*)).

Response to Finding No. 1598:

The proposed finding is speculative. Dr. Song testified that there had been discussions about whether or not to change Omniome's instrument before commercial release, whether there would be time, and the impact this would have. (PX7096 (Song (Omniome) Dep. at 144–45).)

1599. Omniome has had to make changes to the design of its sequencer "quite a bit" since it began development. (PX7096 (Song (Omniome) Dep. at 143) (*in camera*)).

Response to Finding No. 1599:

Respondents have no specific response except to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1600. [redacted] (PX7096 (Song (Omniome) Dep. at 143) (*in camera*)).

Response to Finding No. 1600:

Respondents have no specific response except to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent

costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1601. [redacted] (PX7096 (Song (Omniome) Dep. at 144) (*in camera*)).

Response to Finding No. 1601:

Respondents have no specific response except to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1602. [redacted] (PX7096 (Song (Omniome) Dep. at 144–45) (*in camera*)).

Response to Finding No. 1602:

Respondents have no specific response except to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1603. [redacted] (PX7096 (Song (Omniome) Dep. at 144–45) (*in camera*)).

Response to Finding No. 1603:

Respondents have no specific response except to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1604. [redacted] (PX7096 (Song (Omniome) Dep. at 145) (*in camera*)).

Response to Finding No. 1604:

Respondents have no specific response except to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72); [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1605. [redacted] (PX7096 (Song (Omniome) Dep. at 145) (*in camera*)).

Response to Finding No. 1605:

Respondents have no specific response to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72); [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1606. The role of early access customers is to provide manufacturers with feedback on a multitude of different factors. (PX7096 (Song (Omniome) Dep. at 145–46)).

Response to Finding No. 1606:

Respondents have no specific response to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72); [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1607. Dr. Song testified that depending on the feedback that early access customers provide, companies think about whether they want to delay the commercial launch to incorporate the feedback into the instrument. (PX7096 (Song (Omniome) Dep. at 146)).

Response to Finding No. 1607:

Respondents have no specific response to note that Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than

Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Respondents also incorporate their responses to CCFF ¶ 1591 herein.

1608. Mr. Song warned that, [redacted] (PX7071 (Song (Omniome) IHT at 28) (*in camera*)).

Response to Finding No. 1608:

Since Dr. Song testified, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).) Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] (PX7096 (Song (Omniome) Dep. at 28–29, 56).)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1609. [redacted] (PX7071 (Song (Omniome) IHT at 27-28) (*in camera*)).

Response to Finding No. 1609:

Since Dr. Song testified, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).) Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted] Omniome's sequencer will reportedly have comparable throughput and run times to Illumina's NextSeq sequencers, but with better accuracy—98%> Q50 to 99% Q70—10 to 100x better than the

accuracy of Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 82, 100–01); [redacted] (PX7096 (Song (Omniome) Dep. at 28–29, 56).)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1610. [redacted] (PX7071 (Song (Omniome) IHT at 24-25) (*in camera*)).

Response to Finding No. 1610:

The proposed finding is misleading and inaccurate. [redacted] (PX7096 (Song (Omniome) Dep. at 53–54, 56.))

1611. Omniome anticipates spending another $60 to $80 million before having an NGS platform ready for early access. (PX7071 (Song (Omniome) IHT at 26)).

Response to Finding No. 1611:

Since Dr. Song testified, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1612. Depending on the feedback from early access release, [redacted] (PX7071 (Song (Omniome) IHT at 26-27) (*in camera*)).

Response to Finding No. 1612:

Since Dr. Song testified, Omniome was acquired by PacBio for $800 million in July 2021. (RX3533 (Omniome).)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

(3) [redacted]

1613. [redacted] (PX7071 (Song (Omniome) IHT at 15) (*in camera*)).

Response to Finding No. 1613:

Respondents have no specific response.

1614. [redacted] (PX7071 (Song (Omniome) IHT at 22) (*in camera*)).

Response to Finding No. 1614:

The proposed finding is misleading and incomplete. Omniome's sequencer will reportedly have comparable throughput and run times to Illumina's NextSeq sequencers, but with better accuracy—98%> Q50 to 99% Q70—10 to 100x better than the accuracy of Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 82, 100–01); [redacted] Omniome has stated that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72); [redacted] In a recent earnings call,

PacBio CEO Christian Henry claimed that PacBio/Omniome's "error rates are so low, we're more than 15-fold better than what other SBS players can do today". (RX4050 (PacBio) at 7.)

Additionally, to the extent the proposed finding suggests that only high throughput sequencers that are comparable to the NovaSeq may be used for MCED, putative MCED test developers *do* use Illumina's lower throughput NextSeq and MiSeq instruments. For example, Singlera's PanSeer test only requires approximately 2 million sequencing reads per sample, and is compatible with both Illumina's MiSeq or NextSeq systems and Thermo Fisher's Ion Torrent S5 systems, though it appears to primarily use the NextSeq 550Dx system from Illumina. (PFF ¶ 533 (RX3115 (Chen et al., 2020) at 7; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2875, 2894, 2928–29; PX7102 (Gao (Singlera) Dep. at 78); RX3869 (Cote Expert Report) ¶ 239).) Helio currently uses Illumina's MiSeq sequencer for its Helio Liver test. (Chahine (Helio) Tr. 1010-12). Dr. Chahine testified Helio uses the MiSeq because "a smaller machine is more efficient" as a "company in its early stage" prior to "ramp[ing] up." (Chahine (Helio) Tr. 1012).

[redacted] (Rabinowitz (Natera) Tr. 361) (*in camera*)). Respondents also incorporate their responses to CCFF ¶¶ 928 and 1115 herein.

1615. [redacted] (PX7055 (Otte (Freenome) IHT at 121-22) (*in camera*)).

Response to Finding No. 1615:

The proposed finding is inadmissible hearsay and should be accorded little weight.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1616. [redacted] (PX7121 (Otte (Freenome) Dep. at 63) (*in camera*)).

Response to Finding No. 1616:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1591 herein.

1617. [redacted] (PX7121 (Otte (Freenome) Dep. at 63-64) (*in camera*)).

Response to Finding No. 1617:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1614, which Respondents incorporate herein. Omniome states that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72); [redacted]

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1618. [redacted] (PX7121 (Otte (Freenome) Dep. at 64) (*in camera*)).

Response to Finding No. 1618:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1617, which Respondents incorporate herein.

1619. [redacted] (PX7055 (Otte (Freenome) IHT at 121-22) (*in camera*)).

Response to Finding No. 1619:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1614, which Respondents incorporate herein. The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1620. Freenome's current CEO testified that Freenome determined that "[Omniome (and others) isn't] far enough along and that [it's] ability to meet [Freenome's] requirements, even just the high-level must-have requirements wasn't sufficient[.]" (Nolan (Freenome) Tr. 2741).

Response to Finding No. 1620:

The proposed finding is misleading and inaccurate. Mr. Nolan did not mention any specific company in the answer Complaint Counsel quotes above. The mention of Omniome has been implied into the answer by Complaint Counsel, as evidenced by the brackets. Moreover, Mr. Nolan admitted that, consistent with his IH testimony, *he was not aware that Freenome had evaluated any non-Illumina platform*. (Nolan (Freenome) Tr. 2736–37.) Further, Respondents incorporate their responses to CCFF ¶ 945 herein.

1621. [redacted] (PX7071 (Song (Omniome) IHT at 41-42) (*in camera*)).

Response to Finding No. 1621:

The proposed finding is based on pure speculation and relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76). To date, Illumina has not filed any litigation against Omniome.

c) [redacted]

1622. [redacted]

Response to Finding No. 1622:

Respondents have no specific response.

1623. [redacted]

Response to Finding No. 1623:

Respondents have no specific response.

1624. [redacted]

Response to Finding No. 1624:

The proposed finding is vague and misleading. [redacted] (RX2697 (Roche) at 5; PX7074 (Perettie (FMI) Dep. at 110–11); PX7043 (Gunn (Roche) IHT at 164).) [redacted] (PX7043 (Gunn (Roche) IHT at 94).

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1625. [redacted]

Response to Finding No. 1625:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1624, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1626. [redacted]

Response to Finding No. 1626:

Respondents have no specific response.

1627. [redacted]

Response to Finding No. 1627:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1628. [redacted]

Response to Finding No. 1628:

Respondents have no specific response except to note that Roche intends to launch a research use only version of its platform around 2024. (*See* PX7043 (Gunn (Roche) IHT at 93-94) (*in camera*)).

1629. [redacted]

Response to Finding No. 1629:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1624 herein.

1630. [redacted]

Response to Finding No. 1630:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1631. [redacted]

Response to Finding No. 1631:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1632. [redacted]

Response to Finding No. 1632:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1633. [redacted]

Response to Finding No. 1633:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1634. [redacted]

Response to Finding No. 1634:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1624 herein. [redacted] (RX2697 (Roche) at 5; PX7074 (Perettie (FMI) Dep. at 110–11); PX7043 (Gunn (Roche) IHT at 164).) [redacted] (PX7043 (Gunn (Roche) IHT at 94).

1635. [redacted]

Response to Finding No. 1635:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1624 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1636. [redacted]

Response to Finding No. 1636:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1624 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1637. [redacted]

Response to Finding No. 1637:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1624 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1638. [redacted]

Response to Finding No. 1638:

The proposed finding is incomplete and misleading to the extent it suggests that Roche's final per gigabase cost will be the same as what it observes with the prototype instrument, nearly two years before launch. [redacted] (RX2697 (Roche) at 16; PX7043 (Gunn (Roche) IHT at 110).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1639. [redacted]

Response to Finding No. 1639:

The proposed finding is incomplete and misleading. [redacted] (RX2697 (Roche/FMI) at 26; PX7074 (Perettie (FMI) Dep. at 115).) Respondents also incorporate their responses to CCFF ¶ 1624 herein. (*See also* PFF ¶¶ 627–628.1, 631.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1640. [redacted]

Response to Finding No. 1640:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1639, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1641. [redacted]

Response to Finding No. 1641:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1639, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1642. [redacted]

Response to Finding No. 1642:

Respondents have no specific response except to note that the cited testimony supports the proposition that Roche's NGS platform is likely to compete with Illumina's offerings and establish a nearly 10% market share by 2030. (PFF ¶¶ 627–28.1, 631.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1643. [redacted]

Response to Finding No. 1643:

The proposed finding is vague and misleading. [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1644. [redacted]

Response to Finding No. 1644:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is irrelevant because it does not relate to MCED tests. [redacted]

[redacted]

Dr. Fiedler also testified that: [redacted] (Fiedler (FMI) Tr. 4471–72.) Further, Respondents incorporate their responses to CCFF ¶ 904 and 1190–91 herein, and refer to Section IV of PFF (PFF ¶¶ 574–678.5), which sets out the extensive upstream competition facing Illumina.

1645. [redacted]

Response to Finding No. 1645:

The proposed finding is incomplete and misleading to the extent it suggests that Roche's final platform accuracy will be the same as what it observes with the prototype instrument, nearly two years before launch. [redacted] (RX2697 (Roche) at 14; PX8447 (Roche) at 19; PX7074 (Perettie (FMI) Dep. at 121–22).) Respondents also note that although [redacted] (RX2697 (Roche) at 15; PX7074 (Perettie (FMI) Dep. at 122, 213).) [redacted] (RX2697 (Roche) at 16; PX7043 (Gunn (Roche) IHT at 110).)

1646. [redacted]

Response to Finding No. 1646:

The proposed finding is incomplete and misleading. In particular, Freenome's current CEO, Mr. Nolan admitted that, consistent with his IH testimony, *he was not aware that Freenome had evaluated any non-Illumina platform*. (Nolan (Freenome) Tr. 2736–37.) Further,

Respondents incorporate their responses to CCFF ¶¶ 945 and 1620 herein. Given the stage of Freenome's putative MCED test development, Freenome could switch platforms without affecting its development timeline. (Cote Tr. 3776, [redacted].)

1647. [redacted] (Chudova (Guardant) Tr. 1225) (*in camera*).

Response to Finding No. 1647:

The proposed finding is misleading. Virtually immediately prior to giving the testimony cited, [redacted] (Chudova (Guardant) Tr. 1225) (in camera). Respondents also incorporate their responses to CCFF ¶ 904 and 927 herein.

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 927 and 2273, which Respondents incorporate herein. Given the stage of [redacted] (Cote Tr. 3776, 3833–34.)

1648. [redacted] (PX7045 (Chudova (Guardant) IHT at 114) (*in camera*)).

Response to Finding No. 1648:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1649. [redacted] (PX2776 (Illumina) at 001 (Email from J. Seaton, Illumina, to F. deSouza, Illumina, Feb. 13, 2018) (*in camera*)).

Response to Finding No. 1649:

The proposed finding is outdated, incomplete and misleading. Although the cited source is from February 2018, the proposed finding appears to suggest that, [redacted]. (RX2697 (Roche) at 9–10.) [redacted]

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 31), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1650. [redacted] (PX2776 (Illumina) at 001 (Email from J. Seaton, Illumina, to F. deSouza, Illumina, Feb. 13, 2018) (*in camera*)).

Response to Finding No. 1650:

The proposed finding is outdated, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1649, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention, [redacted] (Project "HTP XT"). (RX2697 (Roche) at 9–10.)

1651. [redacted] (PX2776 (Illumina) at 001 (Email from J. Seaton, Illumina, to F. deSouza, Illumina, Feb. 13, 2018) (*in camera*)).

Response to Finding No. 1651:

The proposed finding is outdated, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1649, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention, [redacted] (Project "HTP XT"). (RX2697 (Roche) at 9–10.)

1652. [redacted] (PX2776 (Illumina) at 001 (Email from J. Seaton, Illumina, to F. deSouza, Illumina, Feb. 13, 2018) (*in camera*)).

Response to Finding No. 1652:

The proposed finding is outdated, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1649, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention, [redacted]

[redacted] (Project "HTP XT"). (RX2697 (Roche) at 9–10.)

1653. [redacted] (PX2776 (Illumina) at 001 (Email from J. Seaton, Illumina, to F. deSouza, Illumina, Feb. 13, 2018) (*in camera*)).

Response to Finding No. 1653:

The proposed finding is outdated, incomplete and misleading. Although the cited source is from February 2018, the proposed finding appears to suggest that, even today, more than four years later, the internal emails reflect Illumina's current thinking. [redacted] (Leite (Illumina/InterVenn) Tr. 2127–28; RX3973 (Roche) at 4.)

1654. [redacted] (PX2776 (Illumina) at 001 (Email from J. Seaton, Illumina, to F. deSouza, Illumina, Feb. 13, 2018) (*in camera*)).

Response to Finding No. 1654:

The proposed finding is incomplete and misleading. [redacted] (RX2697 (Roche/FMI) at 26; PX7074 (Perettie (FMI) Dep. at 115).) Respondents also incorporate their responses to CCFF ¶ 1624 herein. (*See also* PFF ¶¶ 627–628.1, 631.)

d) Singular Genomics

1655. Singular is developing an NGS sequencer called the G4 sequencer. (Velarde (Singular Genomics) Tr. 4513).

Response to Finding No. 1655:

Respondents have no specific response.

1656. Singular's target throughput for its sequencer is [redacted] (PX7117 (Velarde (Singular Genomics) Dep. at 48-49) (*in camera*)).

Response to Finding No. 1656:

Respondents have no specific response.

1657. [redacted] (*See* PX7117 (Velarde (Singular Genomics) Dep. at 48-49 (*in camera*)); *see also* PX0085 at 001 (Illumina NovaSeq 6000 System Specifications); *see also* (PX2169 (Illumina) at 025 (Illumina Strategic Plan 2021-2025, Board Discussion Document, Oct. 23, 2020) (*in camera*)).

Response to Finding No. 1657:

The proposed finding is misleading. [redacted] The G4 Systems's performance characteristics claim to be comparable to that of Illumina's NextSeq and NovaSeq systems, with read lengths of 50 to 150 bases, targeted 400 Gbs per sequencing run, high speed sequencing at 4–minute cycle times and high accuracy of 99.7% on 150 base reads. (PFF ¶ 783.1; PX8561 (Singular) at 4–5; [redacted]

Additionally, to the extent the proposed finding suggests that only high throughput sequencers that are comparable to the NovaSeq may be used for MCED, putative MCED test developers *do* use Illumina's lower throughput NextSeq and MiSeq instruments. For example,

Singlera's PanSeer test only requires approximately 2 million sequencing reads per sample, and is compatible with both Illumina's MiSeq or NextSeq systems and Thermo Fisher's Ion Torrent S5 systems, though it appears to primarily use the NextSeq 550Dx system from Illumina. (PFF ¶ 533 (RX3115 (Chen et al., 2020) at 7; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2875, 2894, 2928–29; PX7102 (Gao (Singlera) Dep. at 78); RX3869 (Cote Expert Report) ¶ 239).) Helio currently uses Illumina's MiSeq sequencer for its Helio Liver test. (Chahine (Helio) Tr. 1010-12). Dr. Chahine testified Helio uses the MiSeq because "a smaller machine is more efficient" as a "company in its early stage" prior to "ramp[ing] up." (Chahine (Helio) Tr. 1012).

[redacted] (Rabinowitz (Natera) Tr. 361) (*in camera*)). Respondents also incorporate their responses to CCFF ¶¶ 928 and 1115 herein.

1658. [redacted] (Velarde (Singular Genomics) Tr. 4549-50 (*in camera*)).

Response to Finding No. 1658:

The proposed finding is misleading and incomplete. While Mr. Velarde admitted the statements in Singular's S-1 that Complaint Counsel identified (of which the proposed finding is one), Mr. Velarde also confirmed that [redacted]

[redacted] (Velarde (Singular) Tr. 4514, 4569–70.)

1659. [redacted] (Velarde (Singular Genomics) Tr. 4545 (*in camera*)).

Response to Finding No. 1659:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1660. [redacted] (Velarde (Singular Genomics) Tr. 4545 (*in camera*)).

Response to Finding No. 1660:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1661. Singular identified as a risk to its investors that "we may not be able to generate sufficient revenue to achieve and maintain profitability." (PX0068 at 023 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1661:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1662. [redacted] (Velarde (Singular Genomics) Tr. 4552 (*in camera*)).

Response to Finding No. 1662:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein. [redacted] (Velarde (Singular) Tr. 4514, 4569–70.)

1663. [redacted] (Velarde (Singular Genomics) Tr. 4552 (*in camera*)).

Response to Finding No. 1663:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein. [redacted] (Velarde (Singular) Tr. 4514, 4569–70.)

1664. [redacted] (Velarde (Singular Genomics) Tr. 4555 (*in camera*)).

Response to Finding No. 1664:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein. [redacted] (Velarde (Singular) Tr. 4514, 4569–70.)

1665. Singular identified as a risk to its investors that "our limited operating history makes it difficult to evaluate our future prospects." (PX0068 at 023 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1665:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1666. Singular identified as a risk to its investors that "we may require substantial additional funding." (PX0068 at 035 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1666:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein. [redacted]

1667. Singular identified as a risk to its investors that if it is unable to obtain additional funding, it may be required "to delay, scale back, or cease our product development or commercialization activities." (PX0068 at 035 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1667:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein. [redacted]

1668. Singular represented to investors that "[i]f we are sued for infringing, misappropriating or otherwise violating intellectual property rights of third parties, such litigation could be costly and time consuming and could prevent or delay us from developing or commercializing our product candidates." (PX0068 at 045 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1668:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1669. Singular represented to investors that it "expect[s] to be exposed to, or threatened with, future litigation by third parties, including our primary competitors, who have patent and other intellectual property rights and may allege that our research and development activities, products, manufacturing methods, software and/or technologies infringe, misappropriate or otherwise violate their intellectual property rights." (PX0068 at 046 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1669:

The proposed finding is incomplete, and misleading for the reasons explained in

Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1670. Singular represented to investors that it "expect[s] that [it's] competitors will, in connection with our launch of our G4 Integrated Solution and our planned PX Integrated Solution and later stage product offerings assert that we are infringing, or have in the past infringed, as part of our research and development activities, their patent and other intellectual property rights and that we are employing their proprietary technology without authorization." (PX0068 at 046 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1670:

The proposed finding is incomplete, and misleading for the reasons explained in

Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1671. Singular represented to investors that as a result of another company initiating a patent lawsuit against Singular upon launch of its NGS sequencer, "[w]e could also be required to obtain a license to such patents in order to continue the development and commercialization of the infringing product or technology" which "may require substantial payments or cross-licenses" and "have a material adverse effect on our business, financial condition, results of operation or prospects." (PX0068 at 046 (Singular Genomics S-1, May 2021)).

Response to Finding No. 1671:

The proposed finding is incomplete, and misleading for the reasons explained in

Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1672. [redacted]
(Velarde (Singular Genomics) Tr. 4548 (*in camera*)).

The proposed finding is incomplete, and misleading for the reasons explained in

Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1673. [redacted]
(Velarde (Singular Genomics) Tr. 4549 (*in camera*)).

Response to Finding No. 1673:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1674. [redacted] (Velarde (Singular Genomics) Tr. 4548 (*in camera*)).

Response to Finding No. 1674:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein.

1675. [redacted] (Velarde (Singular Genomics) Tr. 4548-49 (*in camera*)).

Response to Finding No. 1675:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1658, which Respondents incorporate herein. Respondents also note that Singular commercially launched its G4 instrument in 2021. (PFF ¶ 607; Velarde (Singular) Tr. 4515–16, 4522; *see also* PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at [redacted]–31).)

1676. [redacted] (Velarde (Singular Genomics) Tr. 4549 (*in camera*)).

Response to Finding No. 1676:

Respondents have no specific response.

1677. [redacted] (PX7058 (Conroy (Exact) IHT at 127) (*in camera*)).

Response to Finding No. 1677:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1678. [redacted] (Conroy (Exact) Tr. 1754 (*in camera*)).

Response to Finding No. 1678:

Respondents have no specific response.

1679. [redacted] (PX7058 (Conroy (Exact) IHT at 127 (*in camera*)).

Response to Finding No. 1679:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929 and 1657–58, which Respondents incorporate herein. Respondents also note that Mr. Conroy also testified that [redacted] (Conroy (Exact/Thrive) Tr. 1756–57). Respondents also note that the CEO of Singular Genomics, Dave Daly, is the former CEO of Thrive. (RX3835 (Daly (Singular/Thrive) Dep. at 13–14).) (showing that Daly was CEO of Thrive)

1680. [redacted] (PX7058 (Conroy (Exact) IHT at 127-28 (*in camera*)).

Response to Finding No. 1680:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1657–58 and 1679 herein.

The G4 Systems's performance characteristics claim to be comparable to that of Illumina's NextSeq and NovaSeq systems, with read lengths of 50 to 150 bases, targeted 400 Gbs per sequencing run, high speed sequencing at 4–minute cycle times and high accuracy of 99.7% on 150 base reads. (PFF ¶ 783.1; PX8561 (Singular) at 4–5; [redacted]

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1681. [redacted] (PX7058 (Conroy (Exact) IHT at 129) (*in camera*)).

Response to Finding No. 1681:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1657–58, 1679 herein.

Mr. Conroy also did not describe any so-called technological hurdles that are faced by Singular. To the contrary, Singular Genomics's G4 sequencer is reportedly [redacted] (PFF ¶ 609-609.6.)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1682. [redacted] (Conroy (Exact) Tr. 1760 (*in camera*)).

Response to Finding No. 1682:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1657–58, 1679 and 1682 herein.

[redacted] The G4 Systems's performance characteristics claim to be comparable to that of Illumina's NextSeq and NovaSeq systems, with read lengths of 50 to 150 bases, targeted 400 Gbs per sequencing run, high speed sequencing at 4–minute cycle times and high accuracy of 99.7% on 150 base reads. (PFF ¶ 783.1; PX8561 (Singular) at 4–5; [redacted]

[redacted]

Third, switching is unlikely to impact Exact/Thrive's development timeline. [redacted] RX3419 (Lennon et al., 2020) at 18; RX3772 (Cohen 2018 Supplementary Material) at 2–3.) [redacted] (PFF ¶ 441; Conroy (Exact/Thrive) Tr. 1709,

1717; [redacted]

1683. Mr. Michael Nolan of Freenome testified that [redacted] (PX7094 (Nolan (Freenome) Dep. at 168-69) (*in camera*)).

Response to Finding No. 1683:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1658, 1679 and 1682 herein. At trial, Mr. Nolan admitted that, consistent with his IH testimony, *he was not aware that Freenome had evaluated any non-Illumina platform*. (Nolan (Freenome) Tr. 2736–37.)

From a technical perspective, there is no reason why Freenome could not switch to Singular. (*See* RRFF ¶ 1682). Similarly, Singular has developed a framework to allow test developers to switch. (*See* RRFF ¶ 1682). Further, [redacted] (*See* RRFF ¶¶ 945 and 2355.)

e) [redacted]

1684. [redacted]

Response to Finding No. 1684:

The proposed finding is misleading and incomplete. [redacted]

Respondents also incorporate their responses to CCFF ¶ 1115 herein.

1685. As of June 2021, Ultima hopes to [redacted]

1711. [redacted]

Response to Finding No. 1711:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1703–1704 and 1707, which Respondents incorporate herein.

1712. [redacted]

Response to Finding No. 1712:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1703–1704 and 1707, which Respondents incorporate herein.

1713. [redacted]

Response to Finding No. 1713:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1703–1704 and 1707, which Respondents incorporate herein.

1714. [redacted]

Response to Finding No. 1714:

The proposed finding is incomplete and misleading. Dr. He also testified that [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1703–1704 and 1707 herein.

1715. [redacted]

Response to Finding No. 1715:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1703–1704 and 1707, which Respondents incorporate herein.

1716. [redacted]

Response to Finding No. 1716:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1703–1704 and 1707, which Respondents incorporate herein.

1717. [redacted]

Response to Finding No. 1717:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1703–1704 and 1707 herein.

1718. [redacted] (Chudova (Guardant) Tr. 1225 (*in camera*)).

Response to Finding No. 1718:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1703–1704 and 1707 herein.

1719. [redacted] (Chudova (Guardant) Tr. 1226-27) (*in camera*).

Response to Finding No. 1719:

Respondents have no specific response.

1720. [redacted] (PX7055 (Otte (Freenome) IHT at 121-22) (*in camera*)).

Response to Finding No. 1720:

Respondents have no specific response.

1721. [redacted] (PX7055 (Otte (Freenome) IHT at 121-22) (*in camera*)).

Response to Finding No. 1721:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1703–1704 and 1707 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1722. [redacted] (PX7121 (Otte (Freenome) Dep. at 65) (*in camera*)).

Response to Finding No. 1722:

The proposed finding is incomplete and misleading and relies on inadmissible hearsay. [redacted] (PX7124 (He (Element) Dep. at 61–62, 64.)) Respondents also incorporate their responses to CCFF ¶¶ 1703–1704 and 1707 herein.

1723. [redacted]

Response to Finding No. 1723:

The proposed finding is misleading and inaccurate. Mr. Nolan did not mention any specific company in the answer Complaint Counsel quotes above. The mention of Element has been implied into the answer by Complaint Counsel, as evidenced by the brackets. Moreover, Mr. Nolan admitted that, consistent with his IH testimony, *he was not aware that Freenome had evaluated any non-Illumina platform*. (Nolan (Freenome) Tr. 2736–37.) Further, Respondents incorporate their responses to CCFF ¶ 945 herein.

g) No Other NGS Platforms in Development Is Likely to Replace Illumina

1724. Dr. Vogelstein testified that although "[t]here may be other companies that are developing sequencing platforms . . . [,] the only effective platform today is Illumina's platform." (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 67-68)).

Response to Finding No. 1724:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 904, 928, 1293, 1614, 1624, 1649, 1658, 1679, 1686, 1691, 1703–1704 and 1709 herein. Dr. Vogelstein, the founder of Thrive stated, [redacted] (Lengauer (Exact/Thrive) Tr. 238–40.)

Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1725. [redacted] (Conroy (Exact) Tr. 1582 (*in camera*)).

Response to Finding No. 1725:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1682 and 1724, which Respondents incorporate herein.

[redacted] (Lengauer (Exact/Thrive) Tr. 190–91; PX8572 (Exact/Thrive) at 135–39; PX7110 (Conroy (Exact/Thrive) Dep. at 33).) [redacted] (Lengauer (Exact/Thrive) Tr. 215; PX8572 (Exact/Thrive) at 48; RX3869 (Cote Expert Report) ¶ 183.)

Moreover, [redacted] (PX7085 (Harada (Exact/Thrive) Dep. at 239); PX7091 (Lengauer (Exact/Thrive) Dep. at 38, 106).) [redacted] (PX7091 (Lengauer (Exact/Thrive) Dep. at 41–42).) However, [redacted] (RX3869 (Cote Expert Report) ¶ 340.)

In addition to Singular (*see* RRFF ¶ 1682), other sequencing alternatives that are available to Exact/Thrive include BGI, Thermo Fisher and Oxford Nanopore. As noted in RRFF ¶ 1724, CancerSEEK can be performed using BGI's sequencing platform. While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1;

RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

Further, Respondents incorporate their responses to CCFF ¶ 929 and 1724 herein.

1726. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 117-18) (*in camera*)).

Response to Finding No. 1726:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682 and 1724–25, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1727. Mr. Nolan testified that "with the information I have today, I don't know of a suitable substitute [for Illumina's NGS platform] anywhere on the near or midterm horizon." (Nolan (Freenome) Tr. 2729).

Response to Finding No. 1727:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945 and 1724 herein. Mr. Nolan also admitted that,

consistent with his IH testimony, he was not aware that Freenome had evaluated any non-Illumina platform. (Nolan (Freenome) Tr. 2736–37).

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1728. Guardant's Mr. Getty testified at trial that Guardant cannot run its MCED test on non-Illumina NGS platforms like those from companies currently developing NGS sequencing platforms. (Getty (Guardant) Tr. 2688).

Response to Finding No. 1728:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927–28 and 1724 herein. Mr. Getty admitted that Thermo Fisher Scientific Inc., and other companies developing next-generation sequencing platforms also provide NGS platforms that could be used for liquid biopsy testing. (Getty (Guardant) Tr. 2642.)

[redacted]

[redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1729. Mr. Nolan testified that switching to an alternative to Illumina's NGS platform, "within three years . . . would be highly unlikely, and I'm not sure if it's even, you know -- when it would be possible after that." (Nolan (Freenome) Tr. 2729-30).

Response to Finding No. 1729:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1140 and 1724 herein. Mr. Nolan admitted that, consistent with his IH testimony, he was not aware that Freenome had evaluated any non-Illumina platform. (Nolan (Freenome) Tr. 2736–37).

In particular, [redacted]

BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted]; RX3869 (Cote Expert Report) ¶ 287; [redacted].) BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Furthermore, switching between Illumina's platform and alternative platforms is feasible and would not delay the MCED test' development timeline. (*See* PFF ¶¶ 645–674.)

1730. [redacted] (PX7055 (Otte (Freenome) IHT at 74) (*in camera*)).

Response to Finding No. 1730:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1140 and 1724 herein.

[redacted]; RX3869 (Cote Expert Report) ¶ 287; [redacted].) BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1731. [redacted] (Rabinowitz (Natera) Tr. 341 (*in camera*)).

Response to Finding No. 1731:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1293 and 1724 herein.

Natera and BGI Genomics formed a partnership to commercialize Natera's Signatera NGS-based cancer monitoring test on BGI's DNBSEQ platform in China, and has now launched a version of the Signatera test in China "that incorporates MGI sequencing platforms." [redacted] RX3062 (BGI) at 1.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

[redacted] (RX3869 (Cote Expert Report) ¶ 227; [redacted]

[redacted] the last time Natera mentioned anything related to early-detection appears to be 2017 ((RX3495 (Natera) at 7 (discussing exploring breast and ovarian cancer screening); RX3491 (Natera) at 18.) and Natera's CEO has publicly stated that "[Natera is] ***not focused on asymptomatic cancers strain or early detection.***" (RX3492 (Natera) at 6.) Respondents also incorporate their responses to CCFF ¶¶ 928, 965, 1099, 1269 and 1293 herein.

4. Even if Another NGS Platform Entered the U.S. Market Comparable to Illumina's Current Platform, Illumina Plans to Continue to Improve its Existing Platform

1732. [redacted] (Aravanis (Illumina) Tr. 1794 (*in camera*); deSouza (Illumina) Tr. 2270-2271 (*in camera*); PX2169 (Illumina) at 024 (Illumina Strategic Plan 2021-2025, Oct. 23, 2020) (*in camera*); PX5026 (Illumina) at 009 (FY20-25 Strategic Plan Initial Revenue Discussion, Jun. 4, 2020) (*in camera*)).

Response to Finding No. 1732:

Complaint Counsel did not present the exhibit PX5026 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 54), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 1044 herein.

1733. [redacted] (*in camera*)).

Response to Finding No. 1733:

Respondents have no specific response except to note that BGI's highest throughput instrument, the DNBSEQ-T10, has a higher reported throughput (20 Tb per day) than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell (up to 6 Tb/run), [redacted]

[redacted] (PFF ¶ 592; *compare* RX4004 (MGI Tech) at 1–2 *with* RX3357 (Illumina) at 7; [redacted]

Complaint Counsel did not present the exhibit RX1254 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (RC Exhibit Index at 64), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶ 1045 herein.

1734. [redacted] (Aravanis (Illumina) Tr. 1797; PX6056 (Illumina) at 017 (Illumina, Narrative Response of Illumina, Inc. to the Second Request, Mar. 1, 2021) (*in camera*) [redacted]; RX1254 (Illumina) at 010 (*in camera*) [redacted]); PX2558 (Illumina) at 005 (Board of Directors Executive Session, Feb. 9, 2021) (*in camera*) [redacted]; PX2169 (Illumina) at 025 (Illumina Strategic Plan 2021 - 2025, Oct. 23, 2020) (*in camera*) [redacted]).

Response to Finding No. 1734:

Respondents have no specific response except to note that [redacted] (deSouza (Illumina) Tr. 2301 (in camera)). Furthermore, [redacted]

(RX1600 (Illumina) at 19, 25; Cote Tr. 3743–44; RX3869 (Cote Expert Report) ¶ 287.)

Respondents also note that BGI announced that its DNBSEQ-T10×4RS sequencers can generate $100 genomes, making it per Gb cost only $1.00. (PFF ¶ 594.2; RX4004 (MGI); *see*

also deSouza (Illumina) Tr. 2331 ("Last year, BGI announced its hundred-dollar genome and has talked about its T-10 being ready to be deployed around the world").

Complaint Counsel did not present the exhibit RX1254 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (RC Exhibit Index at 64), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 1044–46 herein.

1735. [redacted] (Aravanis (Illumina) Tr. 1799 (*in camera*); PX2612 (Illumina) at 013 [redacted] (*in camera*)).

Response to Finding No. 1735:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1734 herein.

1736. [redacted] (deSouza (Illumina) Tr. 2301 (*in camera*)).

Response to Finding No. 1736:

Respondents have no specific response.

1737. [redacted] (PX2558 (Illumina) at 005-006 (Board of Directors Executive Session, Feb. 9, 2021) (*in camera*); PX2560 (Illumina) at 007 [redacted] **(*in camera*).** [redacted] (Aravanis (Illumina) Tr. 1800) (*in camera*)).

Response to Finding No. 1737:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1734 herein. Respondents also note that other NGS platform developers are also working to

reduce their sequencing prices. For example, BGI announced that its DNBSEQ-T10×4RS sequencers can generate $100 genomes, making it per Gb cost only $1.00. (PFF ¶ 594.2; RX4004 (MGI); *see also* deSouza (Illumina) Tr. 2331 ("Last year, BGI announced its hundred-dollar genome and has talked about its T-10 being ready to be deployed around the world"). Oxford Nanopore's PromethION sequencer is reported to have sequencing costs of as low as $2.55 per gigabase. (*See* PFF ¶¶ 603–603.3.) [redacted] (RX2697 (Roche) at 16; PX7043 (Gunn (Roche) IHT at 110).)

1738. [redacted] (Aravanis (Illumina) Tr. 1788, 1797-1798) (*in camera*)).

Response to Finding No. 1738:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1739. [redacted] (Aravanis (Illumina) Tr. 1788; PX2595 (Illumina) at 005 (Board of Directors Executive Session, Feb. 9, 2021) (*in camera*)).

Response to Finding No. 1739:

The proposed finding is incomplete, and misleading for the reasons explained in CCFF ¶¶ 928, 1115, 1118, 1734 and 1737 herein. BGI's second highest throughput instrument, the DNBSEQ-T7, is reported to simultaneously sequence 20 billion DNA fragments in less than 24 hours, which is less than the 45 hours required for the NovaSeq to sequence the same number of fragments. (PFF ¶ 590.) BGI's highest throughput instrument, the DNBSEQ-T10, is reported to simultaneously sequence 80 billion DNA fragments in less than 24 hours. (PFF ¶ 590.) Oxford Nanopore states that its highest throughput instrument, PromethION, has a higher throughput

than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell. (RX3543 (ONT); RX1205 (Illumina); RX3869 (Cote Expert Report) ¶ 294.) (*See also* PFF ¶¶ 287, 294.)

1740. [redacted] (PX2595 (Illumina) at 005 (Board of Directors Executive Session, Feb. 9, 2021) (*in camera*)).

Response to Finding No. 1740:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein. BGI's highest throughput instrument, the DNBSEQ-T10, is reported to simultaneously sequence 80 billion DNA fragments in less than 24 hours. (PFF ¶ 590.)

1741. [redacted] (Aravanis (Illumina) Tr. 1799 (*in camera*); PX2169 (Illumina) at 025, 028 (Illumina Strategic Plan 2021-2025, Oct. 23, 2020) (*in camera*) [redacted].

Response to Finding No. 1741:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein. While [redacted] (PX2595 (Illumina) at 005 (Board of Directors Executive Session, Feb. 9, 2021) (*in camera*)), BGI's highest throughput instrument, the DNBSEQ-T10, is reported to simultaneously sequence 80 billion DNA fragments in less than 24 hours. (PFF ¶ 590.)

1742. [redacted] (RX1254 (Illumina) at 014 [redacted] (*in camera*)). [redacted]

[redacted] (RX1254 (Illumina) at 014 [redacted] (*in camera*)).

Response to Finding No. 1742:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1743. [redacted] (*in camera*)).

Response to Finding No. 1743:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1744. [redacted] (Aravanis (Illumina) Tr. 1799-1800) (*in camera*); PX6056 (Illumina) at 017 (Illumina, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*); RX1254 (Illumina) at 018 [redacted] (*in camera*); PX5026 (Illumina) at 009 (FY20-25 Strategic Plan Initial Revenue Discussion, Jun. 4, 2020 [redacted] (*in camera*)); PX2581 (Illumina) at 001, 003 [redacted] (*in camera*); PX7072 (deSouza (Illumina) IHT at 247) (*in camera*)).

Response to Finding No. 1744:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1745. [redacted] (PX2560 (Illumina) at 004-005 [redacted] (*in camera*); PX2558 (Illumina) at 006, 008 (Board of Directors Executive Session, Feb. 9, 2021) (*in camera*); *see* PX7107 (deSouza (Illumina) Dep. at 271) (*in camera*)).

Response to Finding No. 1745:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1746. [redacted] (RX1994 (Illumina) at 023, 025 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching "Illumina Strategic Plan 2021 - 2025," Nov. 5, 2020) (*in camera*)). [redacted] (RX1994 (Illumina) at 025 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching "Illumina Strategic Plan 2021 - 2025," Nov. 5, 2020) (*in camera*)).

Response to Finding No. 1746:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein. Respondents also note that other NGS platform developers are also working to reduce their sequencing prices. For example, BGI announced that its DNBSEQ-T10×4RS sequencers can generate $100 genomes, making it per Gb cost only $1.00. (PFF ¶ 594.2; RX4004 (MGI); *see also* deSouza (Illumina) Tr. 2331 ("Last year, BGI announced its hundred-dollar genome and has talked about its T-10 being ready to be deployed around the world").

1747. [redacted] (Aravanis (Illumina) Tr. 1801).

Response to Finding No. 1747:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1748. [redacted] (PX7107 (deSouza (Illumina) Dep. at 277-78) (*in camera*)).

Response to Finding No. 1748:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1749. [redacted]

(RX1254 (Illumina) at 013 [redacted] (*in camera*)).

Response to Finding No. 1749:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (Respondents' Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1750. [redacted] (***in camera***)). (RX1254 (Illumina) at 013 [redacted]

Response to Finding No. 1750:

Respondents have no specific response except to note that [redacted] Conroy (Exact/Thrive) Tr. 1583; Chudova (Guardant) Tr. 1196; Nolan (Freenome) Tr. 2715; PX7112 (Bailey (PGDx) Dep. at 107).)

1751. [redacted] (RX1254 (Illumina) at 029 [redacted] (*in camera*)).

Response to Finding No. 1751:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1750 herein. Respondents also note that the proposed finding is in contravention of the parties' agreement because it mentions Caris. (*See* Feb. 16, 2022 Order Granting Feb. 9, 2022 Joint Stipulation to Exclude Caris-Related Materials from the Record.)

1752. [redacted] (*in camera*)).

Response to Finding No. 1752:

The proposed finding is incomplete. Mr. deSouza clarified that [redacted] (deSouza (Illumina) Tr. 2276–77.)

Respondents also note that other NGS platform developers are also working to reduce their sequencing prices. For example, BGI announced that its DNBSEQ-T10×4RS sequencers can generate $100 genomes, making it per Gb cost only $1.00. (PFF ¶ 594.2; RX4004 (MGI); *see also* deSouza (Illumina) Tr. 2331 ("Last year, BGI announced its hundred-dollar genome and has talked about its T-10 being ready to be deployed around the world"). Respondents also incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1753. [redacted] (*in camera*)).

Response to Finding No. 1753:

The proposed finding is incomplete and misleading. RX1254 was prepared before the Open Offer issued in March 2021. The Open Offer requires Illumina to provide customers with the same access to purchase sequencing instruments and core consumables that GRAIL or any other For-Profit Entity has within 5 days of when GRAIL or such For-Profit Entity receives access. (PFF ¶ 1007; Berry (Illumina) Tr. 878–79; deSouza (Illumina) Tr. 2434–35, 2437–38; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) The Open Offer also requires Illumina to give customers access to purchase any Pre-Release Sequencing Products to which GRAIL or any For-Profit Entity is offered access within 5 days of when GRAIL or such For-Profit Entity is offered access. (PFF ¶ 1008; [redacted] Berry (Illumina) Tr. 702; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) Respondents also incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1754. [redacted] (PX7123 (Fellis (Illumina) Dep. at 29) (*in camera*)).

Response to Finding No. 1754:

Respondents have no specific response.

1755. [redacted] (deSouza (Illumina) Tr. 2273-2274 (*in camera*); PX2334 (Illumina) at 003 (Email from A. Aravanis, Illumina, to F. deSouza, Illumina, attaching "Factory Sequencing Roadmap," Nov. 4, 2020) (*in camera*)).

Response to Finding No. 1755:

Respondents have no specific response.

1756. [redacted] (deSouza (Illumina) Tr. 2273 (*in camera*); PX2334 (Illumina) at 003 (Email from A. Aravanis, Illumina, to F. deSouza, Illumina, attaching "Factory Sequencing Roadmap," Nov. 4, 2020) (*in camera*)).

Response to Finding No. 1756:

Respondents have no specific response except to note [redacted].

1757. [redacted] (deSouza (Illumina) Tr. 2273-74 (*in camera*)).

Response to Finding No. 1757:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 1734, 1737 and 1739 herein.

1758. [redacted] (deSouza (Illumina) Tr. 2277-2278 (*in camera*)).

Response to Finding No. 1758:

Respondents have no specific response.

1759. [redacted] (deSouza (Illumina) Tr. 2269-2270 (*in camera*)).

Response to Finding No. 1759:

Respondents have no specific response.

1760. [redacted] (deSouza (Illumina) Tr. 2277-2278 (*in camera*)).

Response to Finding No. 1760:

Respondents have no specific response except to note it is possible to run IVD assays on the RUO side, not Dx, of an Illumina NGS platform. (Leite (Illumina/InterVenn) Tr. 2160.)

1761. [redacted] (deSouza (Illumina) Tr. 2277-2279 (*in camera*); PX2853 (Illumina) at 001, 004 (Email from E. Milsovic, Illumina, to F. deSouza, Illumina, attaching "Executive Session," May 2, 2021) (*in camera*)).

Response to Finding No. 1761:

Respondents have no specific response.

1762. [redacted]
(deSouza (Illumina) Tr. 2277-2279; PX2853 (Illumina) at 001, 004 (Email from E. Milsovic, Illumina, to F. deSouza, Illumina, attaching "Executive Session," May 2, 2021) (*in camera*)).

Response to Finding No. 1762:

Respondents have no specific response.

1763. [redacted]
(deSouza (Illumina) Tr. 2277-2279 (*in camera*); PX2853 (Illumina) at 004 (Email from E. Milsovic, Illumina, to F. deSouza, Illumina, attaching "Executive Session," May 2, 2021) (*in camera*)).

Response to Finding No. 1763:

The proposed finding is incomplete and misleading. When questioned about the language quoted above, Mr. deSouza testified that [redacted] (deSouza (Illumina) Tr. 2280.)

1764. According to Illumina's Strategic Plan, [redacted] (RX1994 (Illumina) at 025 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching "Illumina Strategic Plan 2021 - 2025," Nov. 5, 2020) (*in camera*) (*see* inset image).

[redacted]

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (Respondents' Exhibit Index at 92), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1765. [redacted] (RX1994 (Illumina) at 029 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching "Illumina Strategic Plan 2021 - 2025," Nov. 5, 2020) (*in camera*)).

Response to Finding No. 1765:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (Respondents' Exhibit Index at 92), or in any deposition, and

therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1766. [redacted] (RX1994 (Illumina) at 029 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching "Illumina Strategic Plan 2021 - 2025," Nov. 5, 2020) (*in camera*)).

Response to Finding No. 1766:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (Respondents' Exhibit Index at 92), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1767. [redacted] (RX1994 (Illumina) at 037 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching "Illumina Strategic Plan 2021 - 2025," Nov. 5, 2020) (*in camera*)).

Response to Finding No. 1767:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (Respondents' Exhibit Index at 92), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

H. SWITCHING TO ANOTHER NGS PLATFORM WOULD CAUSE SIGNIFICANT DELAYS, REQUIRE SIGNIFICANT COSTS, AND POSE REGULATORY AND FINANCIAL RISKS FOR MCED TEST DEVELOPERS

1. MCED Tests are Developed to Run on a Specific NGS Platform

1768. [redacted] (Lengauer (Third Rock Ventures) Tr. 179 (*in camera*)).

Response to Finding No. 1768:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1682, which Respondents incorporate herein.

Dr. Lengauer testified that [redacted] RX3419 (Lennon et al., 2020) at 18; RX3772 (Cohen 2018 Supplementary Material) at 2–3.) [redacted] (PX7085 (Harada (Exact/Thrive) Dep. at 239); PX7091 (Lengauer (Exact/Thrive) Dep. at 38, 106).) [redacted] (PX7091 (Lengauer (Exact/Thrive) Dep. at 41–42).) However, [redacted] (RX3869 (Cote Expert Report) ¶ 340.)

Furthermore, [redacted] (Conroy (Exact/Thrive) Tr. 1754–55); [redacted]

[redacted] (Conroy (Exact/Thrive) Tr. 1756–57.)

Respondents also incorporate their responses to CCFF ¶ 929 herein.

1769. [redacted] (Lengauer (Third Rock Ventures) Tr. 179 (*in camera*)).

Response to Finding No. 1769:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682 and 1768, which Respondents incorporate herein.

Respondents also note that Dr. Vogelstein, a founder of Thrive, stated, [redacted]

Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1770. Thrive's Lengauer testified, [redacted]

[redacted]
(PX7051 (Lengauer (Third Rock Ventures) IHT at 71-72 (*in camera*); *see also* PX7051 (Lengauer (Third Rock Ventures) IHT at 70) (*in camera*)).

Response to Finding No. 1770:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682 and 1768, which Respondents incorporate herein.

1771. [redacted]

(PX7110 (Conroy (Exact) Dep. at 66-67) (*in camera*)).

Response to Finding No. 1771:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682 and 1768, which Respondents incorporate herein.

1772. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 124) (*in camera*)).

Response to Finding No. 1772:

The proposed finding is inaccurate, incomplete, and misleading.

Switching between Illumina's platform and alternative platforms is feasible. (RX3869 (Cote Expert Report) ¶ 338.) [redacted]

In fact, cancer screening developers will inevitably need to switch between different Illumina instruments in the course of developing their respective screening tests. (RX3869 (Cote

Expert Report) ¶ 338.) [redacted] (PFF ¶ 646.1 (PX7087 (Goswami (Illumina) Dep. at 16).) Test developers routinely re-validate their tests to account for new developments in their tests, new and improved technology relating to consumables or sequencers, or for any number of other reasons. (RX3869 (Cote Expert Report) ¶ 338.) These revalidations are part of a good test developer's business plan. (RX3869 (Cote Expert Report) ¶ 338.) It is routine to switch or to upgrade platforms (which from a re-validation point of view is equivalent). (Cote Tr. 3739; Aravanis (Illumina) Tr. 1865; (RX3869 (Cote Expert Report) ¶ 338.) This is built into all clinical labs' workflow and plan for long-term functioning for the lab. (Cote Tr. 3771.) (*See* generally PFF ¶¶ 645–74.)

Respondents also incorporate their responses to CCFF ¶ 904, 928, 929, 1074, 1088, 1115 and 1293 herein.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1773. Exact's CEO, Kevin Conroy, testified, [redacted] (PX7058 (Conroy (Exact) IHT at 128-129) (*in camera*)).

Response to Finding No. 1773:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, misleading for the reasons explained in Respondent's responses to CCFF ¶¶ 929, 1084 and 1772 herein. [redacted]

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1774. (Chudova (Guardant) Tr. 1301-1302 (*in camera*)).

Response to Finding No. 1774:

The proposed finding is inaccurate, incomplete, misleading for the reasons explained in Respondent's responses to CCFF ¶¶ 927–28 and 1772 herein. Further, Dr. Chudova admitted

(Chudova (Guardant) Tr. 1303.) Dr Chudova also admitted

(Chudova (Guardant) Tr. 1301.)

(Cote Tr. 3776, 3833–34.) (*See* RRFF ¶¶ 927 and 2273).

1775. (PX7045 (Chudova (Guardant) IHT at 40-41) (*in camera*)).

Response to Finding No. 1775:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, misleading for the reasons explained in Respondent's responses to CCFF ¶¶ 927, 1772 and 1774 herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1776. According to Nitin Sood, Guardant's Senior VP of Product, "Illumina is central to what we do. . . . [W]e built part of our world around the Illumina ecosystem." (PX7090 (Sood (Guardant) Dep. at 112-13)).

Response to Finding No. 1776:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, misleading for the reasons explained in Respondent's responses to CCFF ¶¶ 927, 1772 and 1774 herein. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 928, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

1777. [redacted] (Rabinowitz (Natera) Tr. 415 (*in camera*)).

Response to Finding No. 1777:

The proposed finding is inaccurate, incomplete, and misleading. Dr. Rabinowitz admitted [redacted] (Rabinowitz (Natera) Tr. 415–17, 419.) Respondents also incorporate their responses to CCFF ¶¶ 928 and 1293, which discusses, *inter alia*, the availability of alternative sequencing platforms, herein.

[redacted] (RX3869 (Cote Expert Report) ¶ 227; [redacted] the last time Natera mentioned anything related to early-detection appears to be 2017 ((RX3495 (Natera) at 7 (discussing exploring breast and ovarian cancer screening); RX3491 (Natera) at 18.) and Natera's CEO has

publicly stated that "[Natera is] ***not focused on asymptomatic cancers strain or early detection.***" (RX3492 (Natera) at 6.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 928, 965, 1099, 1269 and 1293 herein.

1778. [redacted] (Chahine (Helio) Tr. 1071 (*in camera*)).

Response to Finding No. 1778:

The proposed finding is incomplete and misleading to the extent that it seems to suggest that Illumina's NGS sequencers are essential for an earlier detection test, which they are not. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1772 and 1774 herein. Further, Dr. Chahine admitted [redacted]

1779. [redacted] (PX6049 (Grail) at 023 (Grail, Narrative Response to FTC Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 1779:

The proposed finding is incomplete and misleading. [redacted] (PX6049 (Grail) at 023 (Grail, Narrative Response to FTC Second Request, Mar. 1, 2021) (in camera)).

Dr. Aravanis testified that GRAIL considered BGI, Thermo Fisher, Oxford Nanopore and Genapsys NGS sequencers for GRAIL's Galleri test, and determined that many of them would be a viable alternative. (PFF ¶ 1311 (Aravanis (Illumina) Tr. 1862–63).) Dr. Aravanis also testified that BGI's systems are used for liquid biopsy applications; BGI has an NGS sequencing product that could be used for multicancer screening; BGI competes with Illumina for liquid biopsy applications in the countries in which it operates; BGI markets its NGS offerings as an alternative to Illumina. (PFF ¶ 1306 (Aravanis (Illumina) Tr. 1852–54).)

Dr. Aravanis also testified that Thermo Fisher's Ion Torrent can be used as an alternative for many Illumina applications; that the Ion Torrent platform is adequate in terms of the type of

sequencing data it produces, the accuracy and the cost and that Thermo Fisher markets the Ion Torrent as an alternative to Illumina. (PFF ¶ 1305 (Aravanis (Illumina) Tr. 1848–52).)

Dr. Aravanis further testified that it is possible to do short-read sequencing on Oxford Nanopore's platforms at very low cost; the Oxford Nanopore platform is a very high-output sequencing platform; the amount of data and cost per data is comparable to the high-end Illumina systems; Oxford Nanopore's NGS sequencing product can be used and have been for liquid biopsy oncology testing; Oxford Nanopore markets its NGS offering as an alternative to Illumina and Illumina views Oxford Nanopore as a competitor in NGS sequencing. (PFF ¶ 1308 (Aravanis (Illumina) Tr. 1856–59).) (*See also* PFF ¶¶ 1304–1310.)

2. Every MCED Test Developer Testified that Switching NGS Platforms is Difficult, Time Consuming, Expensive, and Would Substantially Delay Development and Commercialization

a) Grail

1780. [redacted] (Freidin (Grail) Tr. 3066 (*in camera*)).

Response to Finding No. 1780:

The proposed finding is misleading to the extent that it suggests that [redacted] To the contrary, Mr. Bishop (GRAIL's CEO at the time of trial) testified that, while GRAIL uses the Illumina NovaSeq, the choice to use it relates mainly to the fact that it was used when Illumina founded GRAIL; GRAIL uses a variety of reagents and consumables and not all of these inputs are from Illumina; and Illumina has no role in running the Galleri test. (PFF ¶ 1560; Bishop (GRAIL) Tr. 1381–82.) Respondents also incorporate their responses to CCFF ¶¶ 341, 928, 969 and 1293 herein.

Similarly, Dr. Alex Aravanis testified that when he was at GRAIL, GRAIL considered using BGI, Thermo Fisher and Oxford Nanopore; GRAIL evaluated these platforms and

determined that many of them would be a viable alternative. (Aravanis (Illumina) Tr. 1863.) Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, GRAIL would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

Respondents also note that GRAIL has used both Illumina's HiSeq platform and NovaSeq platform with S2 and S4 flow cells (Cote Tr. 3739–40; PX7104 (Aravanis (Illumina) Dep.) at 168–69; RX3773 (Supplement Information to Klein 2021) at 11, 13, 15–16), and [redacted] (PX7103 (Jamshidi (GRAIL) Dep. at 189–90.)

Further, Mr. Freidin is the Senior Vice President of Finance at GRAIL; in this finance role, his key responsibilities are to develop budgets and put together long-range plans. He is not an expert in NGS technology, and cannot compare Illumina's platform with others. (Freidin (GRAIL) Tr. 2967.)

Respondents also incorporate their responses to CCFF ¶¶ 928, 1074 and 1772 herein.

1781. [redacted] (PX7066 (Freidin (Grail) IHT at 212-13) (*in camera*)).

Response to Finding No. 1781:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which they incorporate herein.

Further, Mr. Freidin is the Senior Vice President of Finance at GRAIL; in this finance role, his key responsibilities are to develop budgets and put together long-range plans. He is not an expert in NGS technology, and cannot compare Illumina's platform with others. (Freidin (GRAIL) Tr. 2967.)

The proposed finding relies on IH testimony in which Respondents had no opportunity to conduct re-direct or meaningfully object and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1782. [redacted] (PX7066 (Freidin (Grail) IHT at 212-13) (*in camera*)).

Response to Finding No. 1782:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which they incorporate herein.

Further, Mr. Freidin is the Senior Vice President of Finance at GRAIL; in this finance role, his key responsibilities are to develop budgets and put together long-range plans. He is not an expert in NGS technology, and cannot compare Illumina's platform with others. (Freidin (GRAIL) Tr. 2967.)

The proposed finding relies on IH testimony in which Respondents had no opportunity to conduct re-direct or meaningfully object and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 928, 1074 and 1772 herein.

b) [redacted]

1783. [redacted]

Response to Finding No. 1783:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. Dr. Cote estimates that re-validating a test on a new NGS platform would take approximately 6–12 months. (Cote Tr. 3774–75.) Respondents also incorporate their responses to CCFF ¶¶ 929, 1772, 1774 and 1780 herein.

1784. [redacted]

Response to Finding No. 1784:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682, 1772, 1774 and 1780, which Respondents incorporate herein.

Dr. Cote estimates that re-validating a test on a new NGS platform would take approximately 6–12 months. (Cote Tr. 3774–75.) Similarly, Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, GRAIL would need to do an analytical

bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.) According to Dr. Febbo, Illumina's Chief Medical Officer, switching an LDT's NGS platform takes approximately six to twelve months. (Febbo (Illumina) Tr. 4325).

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Exact Sciences does not have any tests that use NGS technology and Exact Sciences was not an Illumina customer until its acquisition of Thrive. (*See* Conroy (Exact Sciences) Tr. 1542–43, [redacted].)

The proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1785. [redacted]

Response to Finding No. 1785:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed

finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682, 1772, 1774, 1780 and 1784, which Respondents incorporate herein.

[redacted]

Similarly, Natera switched from Illumina to the BGI platform. [redacted] (PX7111 (Fesko (Natera) Dep. at 251–52); RX3062 (BGI) at 1.) Natera's Signatera test was initially validated on Illumina's HiSeq 2500 NGS platform. (RX3499 (Natera) at 6.)

Second, switching is unlikely to impact Exact/Thrive's development timeline. [redacted]

[redacted] This is likely to be true if Thrive switches from Illumina to BGI or to Singular. [redacted] (Lengauer (Exact/Thrive) Tr. 190–91; PX8572 (Exact/Thrive) at 135–39; PX7110 (Conroy (Exact/Thrive) Dep. at 33).) [redacted] (Lengauer (Exact/Thrive) Tr. 215; PX8572 (Exact/Thrive) at 48; RX3869 (Cote Expert Report) ¶ 183.)

In addition to Singular (*see* RRFF ¶ 1682), other sequencing alternatives that are available to Exact/Thrive before it commences the SOAR trial, including BGI, Thermo Fisher and Oxford Nanopore. As noted in RRFF ¶ 1724, CancerSEEK can be performed using BGI's sequencing platform. While Singular, Thermo Fisher and Oxford Nanopore are all currently

available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; [redacted]), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Respondents incorporate their responses to CCFF ¶ 1784 herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1786. [redacted]

Response to Finding No. 1786:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper

Lay Witness Opinion Testimony (Aug. 5, 2021).) Respondents also incorporate their responses to CCFF ¶¶ 929, 1682, 1772, 1774 and 1780 herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1787. [redacted]

Response to Finding No. 1787:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein.

Respondents also note Dr. Lengauer confirmed that: [redacted]" (Lengauer (Exact/Thrive) Tr. 238–39.)

The proposed finding is also misleading to the extent it suggests that other NGS platforms would not support the CancerSEEK test. For example, Dr. Vogelstein, the founder of Thrive stated, [redacted] [redacted]

[redacted]

The proposed finding relies on IH testimony [which is hearsay and] which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 929, 1682, 1772, 1774 and 1780 herein.

1788. [redacted]

Response to Finding No. 1788:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein.

[redacted]

[redacted] This is likely to be true if Thrive switches from Illumina to BGI or to Singular. [redacted]

The proposed finding is also misleading to the extent it suggests that other NGS platforms would not support the CancerSEEK test. For example, Dr. Vogelstein, the founder of Thrive stated, [redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 929, 1682, 1772, 1774 and 1780 herein.

1789. [redacted]

Response to Finding No. 1789:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed

finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein. Specifically, Dr. Cote estimated that re-validating a test on a new NGS platform would take approximately 6–12 months. (Cote Tr. 3774–75.) Similarly, Dr. Aravanis testified that if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

[redacted] This is likely to be true if Thrive switches from Illumina to BGI or to Singular. [redacted]

The proposed finding is also misleading to the extent it suggests that other NGS platforms would not support the CancerSEEK test. For example, Dr. Vogelstein, the founder of Thrive stated, [redacted].

[redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 929, 1682, 1772, 1774 and 1780 herein.

1790. [redacted]

Response to Finding No. 1790:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein.

[redacted] This is likely to be true if Thrive switches from Illumina to BGI or to Singular. [redacted]

The proposed finding is also misleading to the extent it suggests that other NGS platforms would not support the CancerSEEK test. For example, Dr. Vogelstein, the founder of Thrive stated, [redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 929, 1682, 1772, 1774 and 1780 herein.

1791. [redacted]

Response to Finding No. 1791:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1252, 1784–85, which Respondents incorporate herein. [redacted]

[redacted]

Respondents also note Dr. Lengauer confirmed that: [redacted]

[redacted]

" (Lengauer (Exact/Thrive) Tr. 238–39.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 929, 952, 1682, 1772, 1774 and 1780 herein.

1792. [redacted]

Response to Finding No. 1792:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 929, 952, 1682, 1772, 1774 and 1780 herein.

1793. [redacted]

Response to Finding No. 1793:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 929, 952, 1682, 1772, 1774 and 1780 herein.

1794. [redacted]

Response to Finding No. 1794:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1784–85, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents also incorporate their responses to CCFF ¶¶ 929, 1682, 1772, 1774 and 1780 herein.

c) [redacted]

1795. [redacted]

Response to Finding No. 1795:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 965, 1105, 1293, 1331–42, 1772 and 1780, which Respondents incorporate herein.

Contrary to the statement that Natera has not "validated any alternative sequencing platform", [redacted] (PX7111 (Fesko (Natera) Dep. at 251–52); RX3062 (BGI) at 1.) Natera's Signatera test was initially validated on Illumina's HiSeq 2500 NGS platform. (RX3499 (Natera) at 6.)

Complaint Counsel did not present the exhibit PX0155 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 2), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1796. [redacted]

Response to Finding No. 1796:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 929, 1293, 1331–41, 1772, 1780 and 1795 herein.

1797. [redacted]

Response to Finding No. 1797:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. Specifically, Dr. Cote estimated that re-validating a test on a new NGS platform would take approximately 6–12 months. (Cote Tr. 3774–75.) Similarly, Dr. Aravanis testified that if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

The proposed finding is also misleading to the extent that it suggests that switching from Illumina to BGI was a hypothetical endeavor. To the contrary, in June of 2021, BGI and Natera announced that, after two years of development alongside BGI, Natera was officially launching its Signatera MRD test in China, using BGI sequencers. (RX3473 (Natera) at 1.) [redacted] Respondents also incorporate their responses to CCFF ¶¶ 929, 1293, 1331–41, 1772, 1780 and 1795 herein.

1798. [redacted]

Response to Finding No. 1798:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. Respondents also incorporate their responses to CCFF ¶¶ 929, 1293, 1331–41, 1772, 1780 and 1795 herein. Specifically, Dr. Cote estimated that re-validating a test on a new NGS platform would take approximately 6–12 months. (Cote Tr. 3774–75.) Similarly, Dr. Aravanis testified that if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

d) Guardant

1799. [redacted] (PX7045 (Chudova (Guardant) IHT at 109-10) (*in camera*)).

Response to Finding No. 1799:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772 and 1780, which Respondents incorporate herein. Dr. Chudova admitted [redacted]

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1785, which Respondents incorporate herein.

From a technical perspective, there is no reason why Guardant could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). [redacted] (*See* RRFF ¶¶ 927 and 2273.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1800. [redacted]

[redacted] (*in camera*)).

Response to Finding No. 1800:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses CCFF ¶¶ 927, 1772, 1780 and 1799, which Respondents incorporate herein.

Respondents note that Dr. Chudova's testimony is contradicted by that of other witnesses testifying for Complaint Counsel. For example, [redacted]

1801. [redacted] (Chudova (Guardant) Tr. 1234-35) (*in camera*)).

Response to Finding No. 1801:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

Dr. Cote testified that for a single-site IVD test approved by the FDA, if the clinical testing portion of the IVD test has changed since the clinical trial demonstrating its efficacy, the FDA requires the IVD sponsor to provide data from a bridging or comparison study to demonstrate that the new clinical test using the third party NGS platform "has performance characteristics that are very similar to those of the test that was used in the trial," *i.e.*, using the Illumina platform. (Cote Tr. 3776; RX3218 (FDA) at 30).) The performance similarity is often demonstrated in a bridging or comparison study by performing the new test using original clinical trial samples and a pre-specified statistical analysis plan, thereby showing both concordance and discordance between the two tests using the same specimens. (RX3218 (FDA) at 30.)

Such a requirement also means that a costly new clinical trial need not be conducted: the IVD sponsor just need to run the new test on the already collected sample to show consistent results. (RX3869 (Cote Expert Report) ¶ 350.) If the results of the bridging or comparison study

demonstrate that the two platforms lead to equivalent performance, no additional clinical trials may be required. (RX3869 (Cote Expert Report) ¶ 350.) Dr. Cote estimates that conducting the bridging or comparison study—including a repeatability study—would take approximately one month to complete. (Cote Tr. 3773.) It would cost approximately $1 million to $2 million if samples need to be purchased. (Cote Tr. 3775.) [redacted] The time and cost of these bridging or comparison studies are both relatively low compared to overall development time and cost for clinical tests. (PX7065 (Aravanis (Illumina) IHT at 164–66); RX3869 (Cote Expert Report) ¶ 351.)

1802. [redacted] (Chudova (Guardant) Tr. 1234-35) (*in camera*)).

Response to Finding No. 1802:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very

similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

1803. [redacted] (Chudova (Guardant) Tr. 1307-08 (*in camera*)).

Response to Finding No. 1803:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

1804. [redacted] (Chudova (Guardant) Tr. 1308-09) (*in camera*)).

Response to Finding No. 1804:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

1805. [redacted]

(PX7045 (Chudova (Guardant) IHT at 49-51) (*in camera*)).

Response to Finding No. 1805:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1806. [redacted] (Chudova (Guardant) Tr. 1234-35 (*in camera*)).

Response to Finding No. 1806:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed

finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

1807. [redacted] (Chudova (Guardant) Tr. 1234-35 (*in camera*)).

Response to Finding No. 1807:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

(Aravanis (Illumina) Tr. 1861–65.)

1809. [redacted] (Chudova (Guardant) Tr. 1236) (*in camera*)).

Response to Finding No. 1809:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1785, which Respondents incorporate herein.

From a technical perspective, there is no reason why Guardant could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1582–83 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). [redacted] (*See* RRFF ¶¶ 927 and 2273.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market

as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928.)

1810. After redesigning its MCED test, a test developer would need to revalidate its test on the new platform and, at a minimum, perform "a smaller scale clinical sample analysis." (PX7100 (Chudova (Guardant) Dep. at 82)).

Response to Finding No. 1810:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

1811. To switch to a new platform, an MCED test developer must redesign its test to be compatible with the new NGS instrument, which although "theoretically possible" involves a "significant amount of development work." (PX7045 (Chudova (Guardant) IHT at 53-56)).

Response to Finding No. 1811:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1812. [redacted] (PX7045 (Chudova (Guardant) IHT at 88) (*in camera*)).

Response to Finding No. 1812:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed

finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1813. [redacted] (PX7045 (Chudova (Guardant) IHT at 109-10) (*in camera*)).

Response to Finding No. 1813:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Contrary to Complaint Counsel's unproven contention, Mr. Getty admitted that Thermo Fisher Scientific Inc., and other companies developing next-generation sequencing platforms also provide NGS platforms that could be used for liquid biopsy testing. (Getty (Guardant) Tr. 2642.) [redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted]**.)**

BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) Respondents also incorporate their responses to CCFF ¶¶ 1115 and 1118 herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1814. [redacted]

(PX7045 (Chudova (Guardant) IHT at 109-10) (*in camera*)).

Response to Finding No. 1814:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

Dr. Aravanis noted that that customers switch from one Illumina NGS platform to another every few years; in order to switch from an Illumina NGS platform to another NGS platform, a putative MCED test developer would need to do an analytical bridging study to demonstrate that the test performs similarly on an alternative sequencing platform, there might be other steps where minor modifications to some of the library prep or analysis would also be

required; an alternative NGS platform would not need FDA approval before it could be used for development or commercialization of an MCED test like Galleri; if the platform produces very similar data it would take a couple of months and a few hundred thousand dollars to switch and if the platforms had more substantially different data it could take six to twelve months and millions of dollars to switch. (Aravanis (Illumina) Tr. 1861–65.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1815. Dr. Chudova testified that after Guardant receives FDA approval for its screening test "[t]he cost of switching [to a new platform] would increase" because "if we have approval on existing sequencing configuration today and then we go back into development to adapt our library preparation workflows to be compatible with different sequencing system and then adapt the software to the new system, we have to go through the same validation cycle again given the amount of modifications in the workflow, so we'll have to conduct full analytical validation of the system given that scope of change." (PX7045 (Chudova (Guardant) IHT at 111-12)).

Response to Finding No. 1815:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799, 1800 and 1873, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1816. Guardant's Dr. Chudova testified that the costs of switching could be so significant that it may no longer make business sense to pursue the test because switching would "delay and potentially annihilate existence of such test on the market because the cost of development and implementation would start being prohibitive from a business standpoint to continue on that path, so again I think it would lead from the path to 2023 launch to infinite path to launch." (PX7045 (Chudova (Guardant) IHT at 118-19)).

Response to Finding No. 1816:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1817. Dr. Chudova testified that the only circumstance in which Guardant would consider switching from Illumina to Roche is "in a very hypothetical space, if Illumina cuts all of the supply to their reagents and instruments and there's nobody else on the market that becomes—and they have something that works, which they don't today, we could discuss that option. I don't think it's a serious discussion for us today given the three above are not met." (PX7045 (Chudova (Guardant) IHT 114)).

Response to Finding No. 1817:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1818. Guardant represented to investors in its 2019 Form 10-K filed with the Securities and Exchange Commission that:

> The use of equipment or materials furnished by [any] replacement suppliers would require us to alter our laboratory operations. Transitioning to a new supplier would be time-consuming and expensive, may result in interruptions in our laboratory operations, could affect the performance specification of our laboratory operations or could require that we revalidate our tests. There can be no assurance that we will be able to secure alternative equipment, reagents and other materials, bring such equipment, reagents and materials on line, and revalidate our tests without experiencing disruptions in workflow. In the case

> of alternative supplier for Illumina, for example, there can be no assurance that replacement sequencers and various associated reagents will be available or will meet our quality control and performance requirements for our laboratory operations.

(PX0059 at 045 (Guardant 2019 Form 10-K)).

Response to Finding No. 1818:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1772, 1780, 1799 and 1800, which Respondents incorporate herein.

e) [redacted]

1819. [redacted]

Response to Finding No. 1819:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780 and 1785, which Respondents incorporate herein.

From a technical perspective, there is no reason why Freenome could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). Further, [redacted]

[redacted] (*See* RRFF ¶¶ 945 and 2355.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Freenome's current CEO, Mr. Nolan admitted that, consistent with his IH testimony, *he was not aware that Freenome had evaluated any non-Illumina platform*. (Nolan (Freenome) Tr. 2736–37.) Further, Respondents incorporate their responses to CCFF ¶¶ 945 and 1620 herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1820. [redacted]

Response to Finding No. 1820:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780 and 1819, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1821. [redacted]

Response to Finding No. 1821:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780 and 1819, which Respondents incorporate herein.

Further, Mr. Nolan admitted that, consistent with his IH testimony, he was not aware that Freenome had evaluated switching to any non-Illumina platform. (Nolan (Freenome) Tr. 2736–37)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1822. [redacted]

Response to Finding No. 1822:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780, 1819 and 1821, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1823. [redacted]

Response to Finding No. 1823:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780, 1819 and 1821, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1824. [redacted]

Response to Finding No. 1824:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed

finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780, 1819 and 1821, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

f) Singlera

1825. Even if a hypothetical NGS platform had similar characteristics to Illumina, MCED test developers would not necessarily use the new platform due to high switching costs. (*See* PX7042 (Gao (Singlera) IHT at 55-56)).

Response to Finding No. 1825:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1011, 1772, 1780 and 1785, which Respondents incorporate herein.

From a technical perspective, there is no reason why Singlera could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). Further, [redacted] (*See* RRFF ¶¶ 982 and 2406.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2;

PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1826. Singlera's Dr. Gao testified that switching would mean "redevelopment . . . . You [have] to redo it every – replicate it every study you done on Illumina . . . to convince yourself this is comparable." (PX7042 (Gao (Singlera) IHT at 55-56)).

Response to Finding No. 1826:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780 and 1825, which Respondents incorporate herein.

Further, Dr. Gao admitted that Singlera's PanSeer test was not designed to solely on Illumina equipment and it is compatible with Thermo Fisher's NGS systems, including the Ion Torrent S5. (Gao (Singlera) Tr. 2928.) Dr. Gao estimates that it would take about six months to a year to switch from Illumina to Thermo Fisher NGS equipment for the PanSeer test; if Singlera were to switch to Thermo Fisher equipment today, it would not have to rerun any clinical trial that it had previously run for PanSeer, would not even need any bridging study to revalidate any PanSeer trial results, and would not disrupt any ongoing clinical trial work for PanSeer. (Gao (Singlera) Tr. 2942–43.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1827. Dr. Gao testified that Singlera would have to conduct a new viability trial if Singlera switched to a non-Illumina NGS platform. (PX7042 (Gao (Singlera) IHT at 56-57)).

Response to Finding No. 1827:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780 and 1825–26, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1828. Singlera would not be able to use data from its trials using Illumina's instrument in a new viability trial if Singlera switched to a non-Illumina sequencer. (PX7042 (Gao (Singlera) IHT at 57)).

Response to Finding No. 1828:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780 and 1825–26, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1829. Switching to a new NGS platform would mean that "many years [have] gone down the drain and there's hundreds of million[s of] dollar[s] down the drain" which would be bad for business and for investors. (PX7042 (Gao (Singlera) IHT at 58)).

Response to Finding No. 1829:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780 and 1825–26, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1830. Dr. Gao testified that if Singlera switched from Illumina's NGS platform to Thermo Fisher's NGS platform, for example, "you just need to spend more money, more time to develop, and why we want bother [sic] with that." (PX7042 (Gao (Singlera) IHT at 48-49)).

Response to Finding No. 1830:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780 and 1825–26, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1831. Singlera's Gao testified that switching to a non-Illumina NGS platform would delay the commercial launch of Singlera's cancer screening test "at least a year or two . . . or it could be five, seven years longer, because we had to make sure every study we did with Illumina, which works or won't work. Then we had to publish again on a journal to show [that the non-Illumina platform] work[s]. That will be a long process." (PX7042 (Gao (Singlera) IHT at 56)).

Response to Finding No. 1831:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780 and 1825–26, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

g) [redacted]

1832. [redacted]

Response to Finding No. 1832:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1772, 1780 and 1785, which Respondents incorporate herein. Further, [redacted] (Chahine (Helio) Tr. 1109–11.)

From a technical perspective, there is no reason why Helio could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293

(BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). Further, [redacted] (*See* RRFF ¶ 1177.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

1833. [redacted]

Response to Finding No. 1833:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1772, 1780 and 1832, which Respondents incorporate herein.

1834. [redacted]

Response to Finding No. 1834:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1772, 1780, 1832 and 1873, which Respondents incorporate herein.

h) [redacted]

1835. [redacted]

Response to Finding No. 1835:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780 and 1785, which Respondents incorporate herein. Further, [redacted] is using Illumina's HiSeq 2500 and 4000 as its NGS platforms for the FoundationOne CDx test for tissue biopsy sample based therapy selection, but switched to Illumina's NovaSeq 6000 for its FoundationOne® Liquid CDx test for liquid biopsy sample based therapy selection. (RX3231 (FMI) at 4; RX3234 (FMI) at 7.) [redacted]. (RX3869 (Cote Expert Report) ¶ 341.)

From a technical perspective, there is no reason why [redacted] could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche

Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). [redacted] *See* RRFF ¶ 1190.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1836. [redacted]

Response to Finding No. 1836:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780 and 1835, which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1837. [redacted]

Response to Finding No. 1837:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780 and 1835 which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

[redacted]

1838. [redacted]

Response to Finding No. 1838:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780 and 1835, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1839. [redacted]

[redacted]

Response to Finding No. 1839:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780 and 1835, which Respondents incorporate herein.

3. Illumina, Grail, and Other NGS Market Participants Recognize High Switching Costs

a) Despite the Risks From Having a Sole Supplier, Grail Is Not Likely to Switch NGS Platforms

1840. If Grail were to switch to a non-Illumina sequencer, Grail CEO Hans Bishop testified that it's "a reasonable assumption" that Grail would need to revalidate its test on the non-Illumina sequencer. (Bishop (Grail) Tr. 1339).

Response to Finding No. 1840:

The proposed finding is misleading to the extent that it suggests that [redacted] Respondents have no specific response other than to incorporate their responses to CCFF ¶¶ 1772 and 1780 herein.

1841. Grail identified the risks associated with switching its MCED test to a new NGS system. (Bishop (Grail) Tr. 1339-41).

Response to Finding No. 1841:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the

reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1842. [redacted] (Freidin (Grail) Tr. 3133 (*in camera*)).

Response to Finding No. 1842:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

Dr. Aravanis testified that GRAIL considered BGI, Thermo Fisher, Oxford Nanopore and Genapsys NGS sequencers for GRAIL's Galleri test, and determined that many of them would be a viable alternative. (PFF ¶ 1311 (Aravanis (Illumina/Fmr. GRAIL) Tr. 1862–63).) Dr. Aravanis also testified that BGI's systems are used for liquid biopsy applications; BGI has an NGS sequencing product that could be used for multicancer screening; BGI competes with Illumina for liquid biopsy applications in the countries in which it operates; BGI markets its NGS offerings as an alternative to Illumina. (PFF ¶ 1306 (Aravanis (Illumina) Tr. 1852–54).) Dr. Aravanis also testified that Thermo Fisher's Ion Torrent can be us as an alternative for many Illumina applications; that the Ion Torrent platform is adequate in terms of the type of sequencing data it produces, the accuracy and the cost and that Thermo Fisher markets the Ion Torrent as an alternative to Illumina. (PFF ¶ 1305 (Aravanis (Illumina) Tr. 1848–52).) Dr. Aravanis further testified that it is possible to do short-read sequencing on Oxford Nanopore's platforms at very low cost; the Oxford Nanopore platform is a very high-output sequencing platform; the amount of data and cost per data is comparable to the high-end Illumina systems; Oxford Nanopore's NGS sequencing product can be used and have been for liquid biopsy

oncology testing; Oxford Nanopore markets its NGS offering as an alternative to Illumina and Illumina views Oxford Nanopore as a competitor in NGS sequencing. (PFF ¶ 1308 (Aravanis (Illumina) Tr. 1856–59).) (*See also* PFF ¶¶ 1304–1310.)

1843. [redacted] (Freidin (Grail) Tr. 3066 (*in camera*)).

Response to Finding No. 1843:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1844. Grail's Freidin testified that [redacted] (PX7066 (Freidin (Grail) IHT at 183) (*in camera*)).

Response to Finding No. 1844:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1845. [redacted] (PX7066 (Freidin (Grail) IHT at 212-13) (*in camera*)).

Response to Finding No. 1845:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1846. [redacted] (PX7066 (Freidin (Grail) IHT at 212-13) (*in camera*)).

Response to Finding No. 1846:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1847. [redacted] (PX7066 (Freidin (Grail) IHT at 212-13) (*in camera*)).

Response to Finding No. 1847:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1848. [redacted] (PX7103 (Jamshidi (Grail) Dep. at 169) (*in camera*)).

Response to Finding No. 1848:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1849. Grail has never physically performed technical evaluations of non-Illumina sequencers. (PX7103 (Jamshidi (Grail) Dep. at 33)).

Response to Finding No. 1849:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

Dr. Aravanis testified that GRAIL considered BGI, Thermo Fisher, Oxford Nanopore and Genapsys NGS sequencers for GRAIL's Galleri test, and determined that many of them would be a viable alternative. (PFF ¶ 1311 (Aravanis (Illumina/fmr. GRAIL) Tr. 1862–63).) Dr. Aravanis also testified that BGI's systems are used for liquid biopsy applications; BGI has an NGS sequencing product that could be used for multicancer screening; BGI competes with Illumina for liquid biopsy applications in the countries in which it operates; BGI markets its NGS offerings as an alternative to Illumina. (PFF ¶ 1306 (Aravanis (Illumina) Tr. 1852–54).) Dr. Aravanis also testified that Thermo Fisher's Ion Torrent can be us as an alternative for many

Illumina applications; that the Ion Torrent platform is adequate in terms of the type of sequencing data it produces, the accuracy and the cost and that Thermo Fisher markets the Ion Torrent as an alternative to Illumina. (PFF ¶ 1305 (Aravanis (Illumina) Tr. 1848–52).) Dr. Aravanis further testified that it is possible to do short-read sequencing on Oxford Nanopore's platforms at very low cost; the Oxford Nanopore platform is a very high-output sequencing platform; the amount of data and cost per data is comparable to the high-end Illumina systems; Oxford Nanopore's NGS sequencing product can be used and have been for liquid biopsy oncology testing; Oxford Nanopore markets its NGS offering as an alternative to Illumina and Illumina views Oxford Nanopore as a competitor in NGS sequencing. (PFF ¶ 1308 (Aravanis (Illumina) Tr. 1856–59).) (*See also* PFF ¶¶ 1304–1310.)

1850. Dr. Jamshidi testified that, to his knowledge, Grail has never conducted any feasibility analyses of running Galleri on alternative platforms. (PX7103 (Jamshidi (Grail) Dep. at 171)).

Response to Finding No. 1850:

The proposed finding is misleading to the extent that it suggests that [redacted] [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1851. Dr. Jamshidi explained that if Grail replaced Illumina's NGS platform with a NGS platform from another provider, Grail "would have to probably do some additional work just to make sure, for example, that the key metrics are in line with the new instruments that you are bringing in." (PX7103 (Jamshidi (Grail) Dep. at 181-82)).

Response to Finding No. 1851:

The proposed finding is misleading to the extent that it suggests that [redacted] [redacted] The proposed finding is misleading and incomplete for the

reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1852. Grail's Jamshidi testified, "even if you, you know, just bring in a new instrument of a similar brand and characteristics, you would actually do some qualification on that instrument where you would test it and just make sure it works properly and has the right characterizations." (PX7103 (Jamshidi (Grail) Dep. at 182)).

Response to Finding No. 1852:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1853. Grail's Form S-1 identified several risks to Grail from switching suppliers, including its NGS supply from Illumina, as follows:

> Transitioning to a new supplier for this equipment or these materials would be time-consuming and expensive, could result in interruptions in or otherwise affect the performance specifications of our laboratory operations and sample processing or could require that we revalidate our products and, if we receive FDA clearance or approval for our products, could require a new submission to FDA and other regulatory bodies to approve or clear such changes.

(PX4082 (Grail) at 034 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 1853:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1854. At trial, Mr. Bishop confirmed the risk of switching suppliers as stated in the Form S-1, stating: "our understanding of the risks are as written in the sentence you've highlighted for us. Transitioning to a new supplier for the equipment or materials listed above could take time, could be expensive, could result in interruptions and, as it goes on to say, could require that we revalidate our products if we receive FDA clearance or approval for those products, so it's speculating on a number of scenarios." (Bishop (Grail) Tr. 1341).

Response to Finding No. 1854:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1855. Grail's Form S-1 identified a "consistent source of supply" as a risk to Grail that could force Grail to alter its laboratory operations and test procedures: "[W]e purchase certain products on a purchase order basis and cannot guarantee a consistent source of supply. The use of equipment or materials provided by a replacement supplier could require us to alter our laboratory operations and sample collection and processing and related procedures." (PX4082 (Grail) at 034 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 1855:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1856. Grail's Form S-1 specifies that a qualitative substitute for Illumina "may not be available at all": "In the case of attempting to obtain an alternative supplier for Illumina, Streck, or Twist, replacement instruments and associated reagents, tubes, and panels that meet our quality control and performance requirements may not be available at all, or may not be available on reasonable terms or in a timely manner." (PX4082 (Grail) at 034 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 1856:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1857. Grail's Form S-1 explains how delays or difficulty in securing supply or revalidating equipment and reagents could cause "significant delays in commercializing" Grail's products and alter Grail's financial condition:

> If we encounter delays or difficulties in securing, reconfiguring or revalidating the equipment, reagents and other materials that we require for our laboratory operations and sample collection and processing, we would likely face significant delays in commercializing our products and our business, financial condition, results of operations, and growth prospects would be adversely affected.

(PX4082 (Grail) at 034 (Email attaching Grail 2020 S-1/Amended, Sept. 2020)).

Response to Finding No. 1857:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

1858. [redacted]
(PX4140 (Grail) at 004 (R&D Portfolio Planning - Part B, Sequencing Technology) (*in camera*)).

Response to Finding No. 1858:

The proposed finding is misleading to the extent that it suggests that [redacted] The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 38), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

b) Illumina Recognizes High Switching Costs

1859. [redacted] (*in camera*)).

Response to Finding No. 1859:

The proposed finding is incomplete and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772, 1780, 1785 and 1873, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 8), and did not ask any deposition witness about the specific language quoted, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1860. According to Dr. Febbo, Illumina's Chief Medical Officer, switching an LDT's NGS platform takes approximately six to twelve months. (Febbo (Illumina) Tr. 4325).

Response to Finding No. 1860:

Respondents have no specific response.

1861. Illumina represented to investors in its 2020 Form 10-K that "customers invest time in selecting and learning to use a new product and may be reluctant to switch once that selection is made." (PX0061 at 013 (Illumina 2020 Form 10-K)).

Response to Finding No. 1861:

The proposed finding is incomplete and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable

cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this particular language quoted at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1862. Illumina represented to investors in its 2020 Form 10-K that "customers in our markets display a significant amount of loyalty to their initial supplier of a particular product ….") (PX0061 at 015 (Illumina 2020 Form 10-K)).

Response to Finding No. 1862:

The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein.

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this particular language quoted at trial, or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

c) Other Industry Participants Acknowledge High Switching Costs

1863. Dr. Felton explained, "it's very difficult once you generated your data sets to show that you can detect that. Typically those data sets require many tens to hundreds of thousands of patient samples to show that you can detect it sensitively and specifically. And you would have to do some level of equivalence testing to show the new technology could recapitulate the data you generated on that original data set, which is not an insubstantial amount of work in and of itself." (PX7070 (Felton (Thermo Fisher) IHT at 61)).

Response to Finding No. 1863:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable

cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 952, 1772 and 1780, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Dr. Felton [redacted]

1864. [redacted] (Felton (Thermo Fisher) Tr. 2009-2010 (*in camera*)).

Response to Finding No. 1864:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 952, 1772, 1780 and 1863, which Respondents incorporate herein. Dr. Felton [redacted]

[redacted]

1865. Dr. Felton explained, "[f]or comparability of data sets. You want to ensure that your data from one technology platform is as comparable as possible. Introducing new technologies can lead to difficulty in interpreting between the two data sets." (PX7070 (Felton (Thermo Fisher) IHT at 29)).

Response to Finding No. 1865:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 952, 1772, 1780 and 1864, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1866. Dr. Felton testified that customers are reluctant to switch NGS platforms because once "you have generated research data sets on a single platform, it's generally preferable that you continue to use the same platform for comparability over time, and … changing technologies becomes more difficult[] unless there are very compelling reasons to do so." (PX7070 (Felton (Thermo Fisher) IHT at 29)).

Response to Finding No. 1866:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in

Respondents' responses to CCFF ¶¶ 952, 1772, 1780 and 1864, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1867. [redacted]

[redacted]

Response to Finding No. 1867:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772 and 1780, which Respondents incorporate herein. Ariosa (at the time part of Roche) switched its Harmony non-invasive prenatal test from an NGS-based approach to a microarray-based approach, and claimed to have achieved lower cost and decreased turnaround time for the test. (PX7096 (Song (Omniome/Fmr. Ariosa) Dep. at 124– 28); RX3400 (Juneau et al., 2014).) Ariosa completed this platform switching without interrupting the commercial availability of the Harmony test. (PX7096 (Song (Omniome/Fmr. Ariosa) Dep. at 125–26).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1868. [redacted]

Response to Finding No. 1868:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772, 1780 and 1867, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1869. [redacted]

Response to Finding No. 1869:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in

Respondents' responses to CCFF ¶¶ 1772, 1780 and 1867, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1870. [redacted]**).**

Response to Finding No. 1870:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772, 1780 and 1867, which Respondents incorporate herein. Roche [redacted]

[redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1871. [redacted]

Response to Finding No. 1871:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1772, 1780, 1867 and 1870, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

4. Switching NGS Platforms Is Even More Difficult if the MCED Test Has Begun the FDA Approval Process

1872. [redacted] (PX7058 (Conroy (Exact) IHT at 151-54) (*in camera*)).

Response to Finding No. 1872:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1873, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 346, 929, 1682, 1348 and 1785 herein.

1873. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 78-80) (*in camera*)).

Response to Finding No. 1873:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is inaccurate, incomplete, and misleading. For a single-site IVD test approved by the FDA, if the clinical testing portion of the IVD test has changed since the clinical trial demonstrating its efficacy, the FDA requires the IVD sponsor to provide data from a bridging or comparison study to demonstrate that the new clinical test using the third party NGS platform "has performance characteristics that are very similar to those of the test that was used in the trial," *i.e.*, using the Illumina platform. (Cote Tr. 3776; RX3218 (FDA) at 30).) The performance similarity is often demonstrated in a bridging or comparison study by performing the new test using original clinical trial samples and a pre-specified statistical analysis plan, thereby showing both concordance and discordance between the two tests using the same specimens. (RX3218 (FDA) at 30.)

Such a requirement also means that a costly new clinical trial need not be conducted: the IVD sponsor just need to run the new test on the already collected sample to show consistent results. (RX3869 (Cote Expert Report) ¶ 350.) If the results of the bridging or comparison study demonstrate that the two platforms lead to equivalent performance, no additional clinical trials may be required. (RX3869 (Cote Expert Report) ¶ 350.) Dr. Cote estimates that conducting the bridging or comparison study—including a repeatability study—would take approximately one month to complete. (Cote Tr. 3773.) It would cost approximately $1 million to $2 million if samples need to be purchased. (Cote Tr. 3775.) [redacted] The time and cost of these bridging or comparison studies are both

relatively low compared to overall development time and cost for clinical tests. (PX7065 (Aravanis (Illumina) IHT at 164–66); RX3869 (Cote Expert Report) ¶ 351.)

The chance for a bridging or comparison study failing to show the Illumina platform and the third-party platform to be equivalent is very low, because given the comparable accuracy of the third-party platforms, they should be able to accurately reproduce the sequence obtained using the Illumina platform. (Cote Tr. 3775–76; RX3869 (Cote Expert Report) ¶ 352.)

Respondents incorporate their responses to CCFF ¶ 929 herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1874. [redacted] (PX7058 (Conroy (Exact) IHT at 151-52) (*in camera*)).

Response to Finding No. 1874:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682, 1785 and 1873, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1877. [redacted] (PX7058 (Conroy (Exact) IHT at 153) (*in camera*)).

Response to Finding No. 1877:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682, 1785 and 1873, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Exact Sciences does not have any tests that use NGS technology and Exact Sciences was not an Illumina customer until its acquisition of Thrive. (*See* Conroy (Exact Sciences) Tr. 1542–43, [redacted].)

1878. [redacted] (Conroy (Exact) Tr. 1582).

Response to Finding No. 1878:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. Respondents have no specific response other than to incorporate their responses to CCFF ¶¶ 929, 1682, 1785 and 1873 herein.

1879. [redacted] (Conroy (Exact) Tr. 1583).

Response to Finding No. 1879:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. Respondents have no specific response other than to incorporate their responses to CCFF ¶¶ 929, 1682, 1785 and 1873 herein.

1880. [redacted] (Conroy (Exact) Tr. 1582).

Response to Finding No. 1880:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a

reasonable timeframe and for a reasonable cost. The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1725, which Respondents incorporate herein.

1881. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 87-88) (*in camera*)).

Response to Finding No. 1881:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 929, 1682, 1785 and 1873, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1882. [redacted] (Chudova (Guardant) Tr. 1286-87 (*in camera*)).

Response to Finding No. 1882:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1785 and 1873, which Respondents incorporate herein.

Respondents also note that switching between two Illumina NGS platforms will also require additional clinical validation. For example, [redacted]

From a technical perspective, there is no reason why Guardant could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). Further, [redacted] (*See* RRFF ¶¶ 927 and 2273.) While

Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1883. Guardant's Chudova explained that clinical trials and regulatory approvals are tied to the particular NGS instrument and its associated reagents used to develop an MCED test:

> [O]nce you've submitted the data to -- and once you've locked the system, characterized it through analytical validation and submitted your data from that analytical validation for consideration for an IDE ["Investigational Device Exemption"], you're locked. You cannot modify reagents. You cannot modify any component of the system without additional validation and approval from the agency to continue conducting the clinical trial with a modified device.

(PX7045 (Chudova (Guardant) IHT at 73-74)).

Response to Finding No. 1883:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and

incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 927, 1873 and 1882, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1884. [redacted]

Response to Finding No. 1884:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780, 1785 and 1873, which Respondents incorporate herein.

From a technical perspective, there is no reason why Roche/FMI could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF

¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). Further, [redacted]. (*See* RRFF ¶ 1190.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

1885. [redacted]

Response to Finding No. 1885:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780, 1873 and 1884, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1886. [redacted]

Response to Finding No. 1886:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780, 1873 and 1884, which Respondents incorporate herein.

Further, [redacted] (*See* RRFF ¶ 1190.) [redacted] While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1887. [redacted]

Response to Finding No. 1887:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1190, 1772, 1780, 1873 and 1884, which Respondents incorporate herein.

Further, [redacted] (*See* RRFF ¶ 1190.) [redacted] While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3;

RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1888. Switching may also require redoing entire clinical trials or obtaining new regulatory approvals, which could take "a couple years to finish, then a couple years to basically submit and get published." (PX7042 (Gao (Singlera) IHT at 57)).

Response to Finding No. 1888:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780, 1785 and 1873, which Respondents incorporate herein. Dr. Gao of Singlera testified that the PanSeer test only needs over 5 million reads (Gao (Singlera) Tr. at 2893) and can be run using alternative NGS instruments such as Illumina's MiSeq and Thermo Fisher equipment. (*See* Gao (Singlera) Tr. at 2928–31; PFF ¶¶ 780–780.6.)

From a technical perspective, there is no reason why Singlera could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). [redacted]

[redacted]

[redacted] (*See* RRFF ¶¶ 982 and 2406.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1889. Singlera could not use the data it has already accumulated using Illumina's system—"there's no practical use." (PX7042 (Gao (Singlera) IHT at 57)).

Response to Finding No. 1889:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 982, 1011, 1772, 1780, 1873 and 1888, which Respondents incorporate herein. Dr. Gao of Singlera testified that the PanSeer test only needs over 5 million reads (Gao (Singlera) Tr. at 2893) and can be run using alternative NGS instruments such as Illumina's MiSeq and Thermo Fisher equipment. (*See* Gao (Singlera) Tr. at 2928–31; PFF ¶¶ 780–780.6.)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1890. Freenome's Nolan testified that [redacted]

[redacted]

(PX7050 (Nolan (Freenome) IHT at 111) (*in camera*)).

Response to Finding No. 1890:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780, 1785 and 1873, which Respondents incorporate herein.

From a technical perspective, there is no reason why Freenome could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). [redacted]

[redacted] (*See* RRFF ¶¶ 945 and 2355.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2;

PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

In particular, Freenome's current CEO, Mr. Nolan admitted that, consistent with his IH testimony, *he was not aware that Freenome had evaluated any non-Illumina platform*. (Nolan (Freenome) Tr. 2736–37.) Further, Respondents incorporate their responses to CCFF ¶¶ 945 and 1620 herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1891. [redacted]

(PX7050 (Nolan (Freenome) IHT at 112) (*in camera*)).

Response to Finding No. 1891:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 945, 1772, 1780, 1785, 1873 and 1890, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1892. [redacted] **(Chahine (Helio) Tr. 1070-71 (*in camera*)).**

Response to Finding No. 1892:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 1177, 1772, 1780 and 1873, which Respondents incorporate herein.

From a technical perspective, there is no reason why Helio could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293 (BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF

¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). [redacted] (*See* RRFF ¶ 1177.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

1893. [redacted]

Response to Finding No. 1893:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1264, 1293, 1772, 1780, 1785 and 1873, which Respondents incorporate herein.

From a technical perspective, there is no reason why Natera could not switch to BGI, Singular, ONT, Thermo Fisher virtually immediately, or Omniome, Element, Roche Nanopore or Ultima in the foreseeable future. (*See* RRFF ¶¶ 901 (ONT), 928 (all sequencers), 1293

(BGI), 1567 (Thermo Fisher), 1579 (Thermo Fisher), 1584 (Thermo Fisher), 1682 (Singular)). Similarly, each of these sequencing platforms has developed a framework to allow test developers to switch or test developers have successfully switched historically. (*See* RRFF ¶¶ 928 (BGI), 1293 (BGI), 1682 (Singular), 1785 (Thermo Fisher)). [redacted] (*See* RRFF ¶ 928.) While Singular, Thermo Fisher and Oxford Nanopore are all currently available in the United States (PFF ¶¶ 607 ((Velarde (Singular) Tr. 4515–16, 4522; see also PX8561 (Singular) at 1–2; PX7117 (Velarde (Singular) Dep. at 30–31)), 579 (RX3688 (Thermo Fisher); RX3689 (Thermo Fisher); RX3687 (Thermo Fisher); RX3685 (Thermo Fisher)), 599 (RX3913 (ONT,) at 1–5; RX3543 (ONT) at 1; RX3536 (ONT); RX3542 (ONT)), BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3; RRFF ¶ 928.) Omniome, Element, Roche Nanopore and Ultima all state that they will enter in the foreseeable future. (RRFF ¶ 928; PFF ¶¶ 614–644.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. At 275–76.)

1894. [redacted]

Response to Finding No. 1894:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a

reasonable timeframe and for a reasonable cost. Respondents incorporate their responses to CCFF ¶¶ 928, 1293, 1772, 1780, 1785, 1873 and 1893. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1895. [redacted]

Response to Finding No. 1895:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. Respondents incorporate their responses to CCFF ¶¶ 928, 1293, 1772, 1780, 1785, 1873 and 1893.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1896. [redacted]

Response to Finding No. 1896:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1293, 1772, 1780, 1785, 1873 and 1893, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1897. [redacted]

Response to Finding No. 1897:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1293, 1772, 1780, 1785, 1873 and 1893, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1898. [redacted]

Response to Finding No. 1898:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. Respondents incorporate their responses to CCFF ¶¶ 928, 1293, 1772, 1780, 1785, 1873 and 1893 herein. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1899. [redacted]

Response to Finding No. 1899:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 928, 1293, 1772, 1780, 1785, 1873 and 1893, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1900. Thermo Fisher's Felton testified that in order for an MCED test developer to switch NGS instruments after it received FDA approval on a particular instrument, "you have to generate equivalence data to show that the answers that you generate of the second technology are exactly the same as the first technology. And the FDA may require -- may require a lot of data to generate that evidence." (PX7070 (Felton (Thermo Fisher) IHT at 64)).

Response to Finding No. 1900:

The proposed finding is inaccurate and misleading to the extent it suggests that it is not possible to switch between sequencing platforms, including for an FDA approved product, in a reasonable timeframe and for a reasonable cost. The proposed finding is misleading and incomplete for the reasons explained in Respondents' responses to CCFF ¶¶ 952, 1772, 1780 and 1873, which Respondents incorporate herein.

[redacted]

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine—it should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies in part on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

1901. According to Phillip Febbo, Illumina's Chief Medical Officer, switching a test's NGS platform when that test has already received a PMA could take nine to 18 months. (Febbo (Illumina) Tr. 4325-26).

Response to Finding No. 1901:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1873 herein.

VI. COMPETITORS ARE RACING TO DEVELOP MCED TESTS

1902. [redacted] (PX6049 (Grail) at 034 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 1902:

The proposed finding is incomplete and misleading. Respondents incorporate their responses to CCFF ¶¶ 378, 382, 398 and 709 herein.

1903. [redacted] (PX6049 (Grail) at 034 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 1903:

The proposed finding is incomplete and misleading. Respondents incorporate their responses to CCFF ¶¶ 378, 382, 398 and 709 herein.

A. EXACT SCIENCES IS DEVELOPING AN MCED TEST CALLED CANCERSEEK

1. Exact Is a Commercial Oncology Company That Launched Cologuard, an FDA-Approved and CMS-Reimbursed Stool-Based Colorectal Cancer Screening Test

1904. Exact is headquartered in Madison, Wisconsin with locations across the United States and in Europe. (PX7058 (Conroy (Exact) IHT at 33-34)).

Response to Finding No. 1904:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1905. Exact has experience bringing cancer screening tests to market from initial biomarker identification all the way to the patient. (PX7058 (Conroy (Exact) IHT at 24)).

Response to Finding No. 1905:

The proposed finding is inaccurate and misleading because it refers to "cancer screening tests". Exact's experience was limited to Cologuard, which is a single cancer screening test for colon cancer; Exact does not have experience bringing an MCED test from biomarker identification to the patient. (Conroy (Exact) Tr. 1533.) The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Contrary to Complaint Counsel's unproven contention, Exact has not completed initial biomarker identification for any test. (*See* PPF ¶ 442 (Lengauer (Exact/Thrive) Tr. 212–13.) Exact acquired Thrive, which had started biomarker identification for its CancerSEEK test as part of PapGene. Respondents note that CancerSEEK is still under development (PFF ¶ 417 (Lengauer (Exact/Thrive) Tr. 158)), that [redacted] (Conroy (Exact) Tr. 1717) Respondents also note that Exact has not commercialized any MCED test. (Conroy (Exact) Tr. 1621.) Respondents further incorporate PFF ¶¶ 414–43, 709.3, 717.1.1, 721.1–21.2, 726–26.8, 735, 738–40.1 and their responses to CCFF ¶¶ 413–14, 697, 703, 736, 773–76, and 929 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1906. Exact has five core values, one of which is innovation. (Conroy (Exact) Tr. 1541).

Response to Finding No. 1906:

The proposed finding is irrelevant.

1907. At trial, Mr. Conroy explained what innovation means to Exact:

> Innovation means looking at a complex problem and thinking about it in different ways, ways that maybe others have never thought about solving those problems, and then investing in a collaborative effort to solve them, bringing together people of all different perspectives and backgrounds and experiences and skill sets to do so. Cologuard is an example of that. Oncotype DX is an example of that. These were far-out-there ideas when first thought of, and so it is a core value to constantly innovate and work with others internally and externally so that you can make a difference in people's lives.

(Conroy (Exact) Tr. 1541-42).

Response to Finding No. 1907:

The proposed finding is irrelevant.

1908. In April 2009, Exact's start-up business was developing a colon cancer screening test and a pan-cancer screening test from a blood draw. (Conroy (Exact) Tr. 1532).

Response to Finding No. 1908:

The proposed finding is inaccurate, incomplete and misleading, and not supported by the cited evidence. Mr. Conroy expressly states in the cited testimony that in April 2009, it was merely "an idea" for Exact to develop "a pan-cancer screening test or a universal cancer screening test from a simple blood draw" in the "long term". (Conroy (Exact) Tr. 1532). In addition, there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.)

1909. Today, Exact develops and sells tests that look at hereditary or germline cancers, that screen for cancer, that indicate the best cancer treatment for a patient's cancer, and a test that detects the recurrence of cancer. (Conroy (Exact) Tr. 1531).

Response to Finding No. 1909:

The proposed finding is irrelevant to the extent it discusses hereditary or germline cancers, therapy selection tests (*i.e.*, tests that indicate the best cancer treatment for a patient's cancer) and MRD tests (a test that detects the recurrence of cancer). The proposed finding is also inaccurate and misleading because it refers to "tests that screen for cancer". Exact's experience is limited to Cologuard, which is a single cancer screening test for colon cancer.

1910. [redacted] (PX7058 (Conroy (Exact) IHT at 19-20; 54-55) (*in camera*)).

Response to Finding No. 1910:

Respondents have no specific response except to note that [redacted] (Conroy (Exact) Tr. 1597).

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1911. [redacted] (Lengauer (Third Rock Ventures) Tr. 157; PX7091 (Lengauer (Third Rock Ventures) Dep. at 13-14) (*in camera*); PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29, 29-32) (*in camera*)).

Response to Finding No. 1911:

The proposed finding is incomplete and misleading including insofar as it suggests that Exact/Thrive is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Respondents note that [redacted] (Conroy (Exact) Tr. 1621.) Respondents incorporate PFF ¶¶ 414–43, 709.3, 717.1.1, 721.1–

21.2, 726–26.8, 735, 738–40.1 and their responses to CCFF ¶¶ 413–14, 697, 703, 736, 773–76, and 929 herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1912. [redacted] (Lengauer (Third Rock Ventures) Tr. 158; PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29) (*in camera*)).

Response to Finding No. 1912:

The proposed finding is inaccurate, incomplete and misleading. CancerSEEK requires a whole-body PET-CT scan, which [redacted] (*See*, *e.g.*, Lengauer (Exact/Thrive) Tr. 248; RX3419 (Lennon et al., 2020) at 3; [redacted]; PFF ¶¶ 419, [redacted], 425, [redacted], [redacted] 739, 760, [redacted] 841.3, [redacted], 1723–24.) Consequently, CancerSEEK is not [redacted]

Respondents also note that whole body PET-CT scans are not recommended for routine early cancer screening, because of cost and radiation concerns, as well as the inability of PET-CT scanning to detect very small tumors. (RX3624 (Schöder & Gonen 2007) at 9–10; Cote Tr. 3812–13; RX3869 (Cote Expert Report) ¶ 72.) Diagnostic PET-CT will necessitate further evaluation of true-positive or false-positive finding and therefore impose downstream costs on the health care system as a whole. (RX3624 (Schöder & Gonen 2007) at 9–10.) Whole-body PET-CT scan [redacted]

The proposed finding is incomplete and misleading including insofar as it suggests that Exact/Thrive is an actual competitor to GRAIL today or will be a competitor to GRAIL in the

foreseeable future. Respondents note that CancerSEEK is still under development (PFF ¶ 417 (Lengauer (Exact/Thrive) Tr. 158)), that [redacted] (Conroy (Exact) Tr. 1717), and that CancerSEEK is combined with a whole-body PET-CT, which [redacted] (*See*, *e.g.*, Lengauer (Exact/Thrive) Tr. 248; RX3419 (Lennon et al., 2020) at 3; [redacted]; PFF ¶¶ 419, [redacted] 425, [redacted], 739, 760, [redacted] 841.3, [redacted], 1723–24.) Respondents also note that Exact has not commercialized any MCED test. (Conroy (Exact) Tr. 1621.) Respondents incorporate PFF ¶¶ 414–43, 709.3, 717.1.1, 721.1–21.2, 726–26.8, 735, 738–40.1 and their responses to CCFF ¶¶ 389, 413–14, 418–19, 696–97, 703, 715, 736, 738-39, 773–76, 785, and 929 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1913. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 28) (*in camera*)).

Response to Finding No. 1913:

The proposed finding is irrelevant because it does not relate to MCED tests.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1914. [redacted] (PX7058 (Conroy (Exact) IHT at 19-20; 83-84) (*in camera*)).

Response to Finding No. 1914:

The proposed finding is also misleading to the extent [redacted] (PX7058 (Conroy (Exact) IHT at 19-20; 83-84.) The proposed finding is irrelevant because it does not relate to MCED tests. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1915. [redacted] (PX7058 (Conroy (Exact) IHT at 83-84) (*in camera*)).

Response to Finding No. 1915:

The proposed finding is irrelevant because it does not relate to MCED tests. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2. In January 2021, Exact Acquired Thrive, the Developer of an MCED Test Called CancerSEEK

1916. [redacted] (PX7110 (Conroy (Exact) Dep. at 12) (*in camera*); PX7058 (Conroy (Exact) IHT at 201-02) (*in camera*); Conroy (Exact) Tr. 1550-51)).

Response to Finding No. 1916:

Respondents have no specific response except to note that Exact announced its agreement to acquire Thrive one month after Illumina announced its agreement to acquire GRAIL. (PFF ¶ 929.1; RX3196 (Exact) at 1; *see also* PFF ¶ 929.2.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1917. Exact completed its acquisition of Thrive in early January 2021. (PX4331 (Grail) (Email Attaching Exact Sciences Completes Acquisition of Thrive Earlier Detection, Creating a Leader in Blood-Based, Multi-Cancer Screening, Jan. 5, 2021); PX7051 (Lengauer (Third Rock Ventures) IHT at 24)).

Response to Finding No. 1917:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 1917 herein.

1918. [redacted] (PX7110 (Conroy (Exact) Dep. at 12-13) (*in camera*)). [redacted] (PX7110 (Conroy (Exact) Dep. at 12-13) (*in camera*); PX7058 (Conroy (Exact) IHT at 200) (*in camera*)).

Response to Finding No. 1918:

The proposed finding is incomplete and misleading. Respondents note that Mr. Conroy states in the cited testimony that [redacted]. (PX7110 (Conroy (Exact) Dep. at 13; PX7058 (Conroy (Exact) IHT) at 200.) Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See*

Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶ 1917 herein.

1919. Thrive was founded in 2019 by Third Rock Ventures. (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 27); Lengauer (Third Rock Ventures) Tr. 155-156).

Response to Finding No. 1919:

The proposed finding is misleading. Thrive was originally founded based on the research from the company PapGene, which was founded in 2014, as well as research from Johns Hopkins University. (*See* PFF ¶¶ 296, 416, **1721**.) Respondents also incorporate their responses to CCFF ¶¶ 357–365 herein.

1920. CancerSEEK was co-developed by Dr. Bert Vogelstein at Johns Hopkins University. (Conroy (Exact) Tr. 1542-43; PX7101 (Vogelstein (Johns Hopkins University), Dep. at 27); *see* Conroy (Exact) Tr. 1542-43 (testifying that Dr. Vogelstein developed CancerSEEK within his own lab)).

Response to Finding No. 1920:

The proposed finding is misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 361–62, 365 and 1919, which Respondents incorporate herein.

1921. Thrive's predecessor in the development of the CancerSEEK test, PapGene, first described the screening test in Science magazine in approximately 2016 or 2017. (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 40, 46)).

Response to Finding No. 1921:

The proposed finding is inaccurate, incomplete and misleading. Respondents note that Dr. Vogelstein states in the cited testimony that the technology underlying CancerSEEK's blood-based screening test was first described in Science and was the basis of Dr. Vogelstein's interaction with PapGene, which was founded in 2014. (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 40; PFF ¶¶ 296, 416.) The technology underlying CancerSEEK's blood-based screening test was first described in Science Translational Medicine by Bettegowda et al. in 2014. (*See* RX3059 (Bettegowda et al., 2014).)

1922. Dr. Vogelstein "ran clinical studies to demonstrate the ability from a single blood draw to detect cancer earlier across many different types of cancer." (Conroy (Exact) Tr. 1542-43).

Response to Finding No. 1922:

The proposed finding is inaccurate, incomplete and misleading. Respondents note that Dr. Vogelstein and his group only conducted one clinical study—the Cohen study—which is a case-control study involving 1817 participants (1005 cancer patients and 812 healthy individuals) and only focused on eight cancer types. (*See* PFF ¶¶ 427, 1699.) Respondents also incorporate their responses to CCFF ¶¶ 361–62 herein.

1923. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 38) (*in camera*)).

Response to Finding No. 1923:

The proposed finding is inaccurate, incomplete and misleading. Respondents note that the cited testimony only states that the knowledge of [redacted] (PX7051 (Lengauer (Exact/Thrive) IHT at 38.) Respondents also note that CancerSEEK is still under development (PFF ¶ 417 (Lengauer (Exact/Thrive) Tr. 158)), [redacted] (Conroy (Exact) Tr. 1717).

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1924. [redacted]

[redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 38) (*in camera*)).

Response to Finding No. 1924:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1923, which Respondents incorporate herein. The proposed finding is also irrelevant.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1925. Dr. Vogelstein is the Clayton Professor of Oncology and Co-Director of the Ludwig Center for Cancer, Genetics and Therapeutics at the Sidney Kimmel Comprehensive Cancer Center of Johns Hopkins University School of Medicine. (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 63-64)).

Response to Finding No. 1925:

Respondents have no specific response.

1926. Dr. Vogelstein has devoted his career to researching and understanding the role of genetic alterations in human cancer and he, along with his team, has been credited with a number of scientific breakthroughs in this area. (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 64); PX8400 (Vogelstein (Johns Hopkins University) Decl. ¶ 2)).

Response to Finding No. 1926:

Respondents have no specific response.

1927. Dr. Vogelstein holds a joint appointment in molecular biology and genetics at the Johns Hopkins University and as an investigator at the Howard Hughes Medical Institute. (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 64)).

Response to Finding No. 1927:

Respondents have no specific response.

1928. Alongside teams of researchers, Dr. Vogelstein helped discover that "a relatively small number of genes [play] a major role in most human cancer types." (PX8400 (Vogelstein (Johns Hopkins University) Decl. ¶ 2)).

Response to Finding No. 1928:

Respondents have no specific response except to note that Dr. Vogelstein's discovery focused on "a relatively small number of genes". (PX8400 (Vogelstein (Johns Hopkins University) Decl.) ¶ 2.) These genes and corresponding protein biomarkers only focus on epithelial cancers and not non-epithelial cancers. (Cote Tr. 3810–11.) Therefore, the biomarkers interrogated by the CancerSEEK test, now owned by Exact, are not capable of detecting "all" types of cancer, but only a subset of cancer types. (Cote Tr. 3810–11.) Respondents also incorporate their responses to CCFF ¶¶ 361–62 herein.

1929. Dr. Vogelstein and the group of researchers with whom he works were awarded the international prize from the American Association of Cancer Research for "pioneering the development of liquid biopsies." (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 78-79)).

Response to Finding No. 1929:

The proposed finding is irrelevant because Dr. Vogelstein testified in the cited testimony that "our lab's current work, which considerably is quite different from what Thrive is doing". (PX7101 (Vogelstein (Johns Hopkins University), Dep.) at 54–55.) The proposed finding is incomplete and misleading to the extent it uses the term "liquid biopsies", which does not refer only to early cancer screening. (*See, e.g.*, PFF ¶¶ 123–139.) Respondents also incorporate their responses to CCFF ¶¶ 361–362 herein.

1930. Dr. Vogelstein's lab is currently working on using "the genetic alterations responsible for cancer to develop new diagnostic tests to identify cancers earlier and new therapies to treat patients with advanced disease." (PX8400 (Vogelstein (Johns Hopkins University) Decl. ¶ 4)).

Response to Finding No. 1930:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶ 1929, which Respondents incorporate herein.

1931. Dr. Vogelstein's lab is currently developing tests that rely on NGS to "find cancer DNA in a small amount of blood or bodily fluids and can be used to detect cancer in asymptomatic individuals, personalize therapies to combat the unique genetic alterations within a tumor, and to monitor cancer's response to treatment." (PX8400 (Vogelstein (Johns Hopkins University) Decl. ¶¶ 4, 6)).

Response to Finding No. 1931:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶ 1929, which Respondents incorporate herein.

1932. Dr. Vogelstein testified that his lab "published the first description of cancer genomes, what we called cancer genome landscapes, using an Illumina instrument" in approximately 2009 or 2010. (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 61)).

Response to Finding No. 1932:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶ 1929, which Respondents incorporate herein. Respondents also note that Dr. Vogelstein started PapGene in 2014, now Thrive, an Exact company, and it has still not launched a commercial version of its cancer screening test, CancerSEEK, eight years later. (*See* PFF ¶¶ 296–296.3 (PX7101 (Vogelstein (Johns Hopkins University) Dep.) at 27–28; [redacted].)

1933. Dr. Vogelstein previously served as a consultant to Thrive—a role that involved advising Thrive on the science and scientific issues associated with improving its test in development. (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 30)).

Response to Finding No. 1933:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1929 herein.

1934. Dr. Vogelstein testified that his work at Johns Hopkins University and Howard Hughes Medical Institute includes an unpaid collaboration agreement with Thrive intended to facilitate "work[ing] together to develop the best test possible for [Thrive's] earlier diagnosis of cancer." (PX7101 (Vogelstein (Johns Hopkins University), Dep. at 36-37)).

Response to Finding No. 1934:

The proposed finding is inaccurate, incomplete and misleading. Dr. Vogelstein testified in the cited testimony that he retains "an equity interest" in Thrive. (PX7101 (Vogelstein (Johns Hopkins University), Dep.) at 26.)

3. CancerSEEK is an MCED Test Designed to Detect All Cancer Types Using Multiple Analytes and Next Generation Sequencing

1935. Exact, through Thrive, is developing an MCED test called CancerSEEK. (Lengauer (Third Rock Ventures) Tr. 157; PX7091 (Lengauer (Third Rock Ventures) Dep. at 13-14) (*in camera*); PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29, 29-32) (*in camera*)).

Response to Finding No. 1935:

The proposed finding is incomplete and misleading including insofar as it suggests that Exact/Thrive is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Respondents incorporate PFF ¶¶ 414–43, 709.3, 717.1.1, 721.1–21.2, 726–26.8, 735, 738–40.1 and their responses to CCFF ¶¶ 413–14, 697, 703, 736, 773–76, 929, and 1912 herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1936. [redacted] (Lengauer (Third Rock Ventures) Tr. 158; PX7051 (Lengauer (Third Rock Ventures) IHT at 28) (*in camera*)).

Response to Finding No. 1936:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1912, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1937. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 28-29) (*in camera*)).

Response to Finding No. 1937:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1912, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1938. CancerSEEK "is a test…intended to detect all types of cancers." (Lengauer (Third Rock Ventures) Tr. 159-60).

Response to Finding No. 1938:

The proposed finding is inaccurate, incomplete and misleading. In the DETECT-A trial, which is the most recent clinical trial conducted for the Exact/Thrive CancerSEEK test (*see* (Lengauer (Exact/Thrive) Tr. 169–70, 212), [redacted] (*See* (Lengauer (Exact/Thrive) Tr. 243; Conroy (Exact/Thrive) Tr. 1706–07; PFF ¶¶ [redacted], 721.1 1699.) [redacted] Further, CancerSEEK's design does not support the proposition that it was "intended to detect all types of cancers"; to the contrary,

its biomarkers shows that it focuses on epithelial cancers. (PFF ¶ 428-29.1 (RX3419 (Lennon et al., 2020) at 9, Fig. 3; RX3869 (Cote Expert Report) ¶ 177; PFF ¶ 169.1 (Cote Tr. 3810-11)).

Respondents also incorporate PFF ¶¶ 414–43, 709.3, 717.1.1, 721.1–21.2, 726–26.8, 735, 738–40.1 and their responses to CCFF ¶¶ 389, 413–14, 418–19, 696–97, 703, 715, 736, 738-39, 773–76, 785, and 929 herein.

1939. [redacted] (Conroy (Exact) Tr. 1650 (*in camera*)).

Response to Finding No. 1939:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1938, which Respondents incorporate herein.

1940. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 53-55, 57-59) (*in camera*)).

Response to Finding No. 1940:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1941. CancerSEEK uses NGS and protein detection to accurately find cancers with a high level of specificity. (Conroy (Exact) Tr. 1544).

Response to Finding No. 1941:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that the CancerSEEK test has a "high level of specificity". Exact/Thrive's CancerSEEK test in development was shown to have a specificity of 95.3% using a single blood test in the DETECT-

A study. (PFF ¶¶ 173 ("Specificity . . . measures the proportion of actual negative samples that are correctly identified as such", so that a 95.3% specificity corresponds to a true negative rate of 95.3% and a false positive rate of 100% minus 95.3%), 428, 431 ("In the DETECT-A study, CancerSEEK obtained [a] specificit[y] of 95.3% in its baseline blood test (that is, with a single blood test).").) [redacted] (*See also* RX3419 (Lennon et al., 2020) at 8 & Table 2; PFF ¶¶ 431–432.)

The proposed finding is also inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

1942. [redacted] (PX7051 (Conroy (Exact) IHT at 29-32) (*in camera*)).

Response to Finding No. 1942:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1943. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 33-34) (*in camera*)).

Response to Finding No. 1943:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1944. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 39) (*in camera*)).

Response to Finding No. 1944:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1945. [redacted] (Lengauer (Third Rock Ventures) Tr. 175 (*in camera*); Conroy (Exact) Tr. 1544; PX7091 (Lengauer (Third Rock Ventures) Dep. at 13-14) (*in camera*); *see* PX7051 (Lengauer (Third Rock Ventures) IHT at 28-37) (*in camera*) (testifying that [redacted]).

Response to Finding No. 1945:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is inaccurate, incomplete and misleading. Although [redacted]. (*See* [redacted]) Respondents note that the cited testimony indicates that [redacted]

1946. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 34) (*in camera*)).

Response to Finding No. 1946:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1947. [redacted]

[redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 35-36) (*in camera*)).

Response to Finding No. 1947:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1948. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 35-36) (*in camera*)).

Response to Finding No. 1948:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents note that the cited testimony indicates that [redacted]. (PX7051 (Lengauer (Exact/Thrive) IHT) at 35–36.)

1949. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 36) (*in camera*)).

Response to Finding No. 1949:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1939, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents note that while [redacted]

1950. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 36) (*in camera*)).

Response to Finding No. 1950:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1949, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1951. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 36) (*in camera*)).

Response to Finding No. 1951:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1949, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1952. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 36-37) (*in camera*)).

Response to Finding No. 1952:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1949, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1953. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 144) (*in camera*)).

Response to Finding No. 1953:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938 and 1945, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1954. [redacted] (Conroy (Exact) Tr. 1571 (*in camera*)).

Response to Finding No. 1954:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39 and 1945, which Respondents incorporate herein.

Further, there is no evidence that [redacted] (*See* Conroy (Exact/Thrive) Tr. 1706–07; PFF ¶¶ [redacted], 1699). The genes and corresponding protein biomarkers "curated" by Dr. Vogelstein in his laboratory only focus on epithelial cancers and not non-epithelial cancers. (Cote Tr. 3810–11.) Therefore, the biomarkers interrogated by the CancerSEEK test, now owned by Exact, are not capable of detecting "all" types of cancer, but only a subset of cancer types. (Cote Tr. 3810–11.) Respondents also incorporate their responses to CCFF ¶¶ 361–62 herein.

1955. [redacted] (PX8572 (Exact) at 046 (Exact Sciences, Innovation & Technology Committee Spring Meeting Presentation, Apr. 16, 2021 (*in camera*)) [redacted]; PX7091 (Lengauer (Third Rock Ventures) Dep. at 17-19) (*in camera*)).

Response to Finding No. 1955:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39 and 1945, which Respondents incorporate herein.

Respondents also note that the cited testimony indicates that [redacted] (Conroy (Exact) Tr. 1717.)

1956. Exact's CEO Mr. Conroy confirmed at trial that, for CancerSEEK, Exact is continuing to explore multiple different biomarker combinations. (Conroy (Exact) Tr. 1717).

Response to Finding No. 1956:

Respondents have no specific response except to note that the cited testimony indicates that [redacted]. (Conroy (Exact) Tr. 1717.)

1957. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 39-40, 142) (*in camera*)).

Response to Finding No. 1957:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39 and 1945, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1958. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 33-37) (*in camera*)).

Response to Finding No. 1958:

Respondents have no specific response except to notet that this is a different approach from GRAIL's. [redacted] Further, the proposed finding relies on IH testimony which

Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1959. [redacted] (Conroy (Exact) Tr. 1622 (*in camera*)).

Response to Finding No. 1959:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that CancerSEEK [redacted]. The cited testimony by Mr. Conroy indicates that [redacted] (**Conroy (Exact) Tr. 1717**.)

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39 and 1945, which Respondents incorporate herein.

1960. [redacted] (Lengauer (Third Rock Ventures) Tr. 171; PX6049 (Grail) at 036 (Grail, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*) [redacted]).

Response to Finding No. 1960:

The proposed finding is inaccurate, incomplete, misleading, and not supported by the cited evidence. The cited testimony by Dr. Lengauer indicates that [redacted]

1961. [redacted] (Conroy (Exact) Tr. 1628-29 (*in camera*)).

Response to Finding No. 1961:

[redacted]

[redacted]

1962. [redacted] (Conroy (Exact) Tr. 1583 (*in camera*); *see* PX7051 (Lengauer (Third Rock Ventures) IHT at 69-70) (*in camera*) [redacted]).

Response to Finding No. 1962:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is inaccurate, incomplete and misleading with respect to Exact/Thrive's purported reliance on Illumina's NGS systems. [redacted] BGI's systems may be available in the United States as early as August 2022. [redacted]

[redacted]

Further, Dr. Vogelstein, the founder of Thrive stated, [redacted]

Respondents also incorporate their responses to CCFF ¶¶ 341, 344, 928–29, 940, 971, 980, 1115, 1118 and 2833 herein.

Respondents also note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

a) [redacted]

1963. [redacted] (Lengauer (Third Rock Ventures) Tr. 270-71 (*in camera*); *see* Conroy (Exact) Tr. 1655-56 (*in camera*)

[redacted]

Response to Finding No. 1963:

The proposed response is inaccurate, incomplete and misleading. Respondents note that full-body PET-CT is a fairly poor tool for cancer signal of origin determination. This is reflected in Exact/Thrive's own study. Of the 53 patients identified by PET-CT as having imaging concerning for cancer in the DETECT-A study, only 15 were determined to have cancer, with only a 28.3% detection rate, compared with the 88.7% accuracy of cancer signal of origin prediction achieved by GRAIL's Galleri v1 in the CCGA3 study. (*See* PFF ¶¶ 426.3–426.4.) [redacted] (*See* PFF ¶ 439.) [redacted] and the Cohen study found the PET-CT approach is not well suited to be a primary screening modality for the general population also because it is financially and operationally impractical (Conroy (Exact/Thrive) Tr. 1707–08). (*See* PFF ¶ 1700.)

Dr. Lengauer admitted that a diagnostic full-body PET-CT confers a higher radiation exposure than a standard CT; the radiation exposure from diagnostic PET-CT and follow-up imaging tests in the participants without cancer is a recognized source of potential harm associated with the DETECT-A CancerSEEK protocol; investigators of the DETECT-A trial recognized that the diagnostic PET-CT scans are not well suited to be the primary screening modality for the general population, in part because of a low disease prevalence and a relatively high rate of incidental findings; and even after the full-body PET-CT scan, there may be a need

to do additional biopsies to further characterize the cancer. (*See* Lengauer (Exact/Thrive) Tr. 248–50; PFF ¶ 1724.)

Respondents also note that [redacted] RX3419 (Lennon et al., 2020); Cote Tr. 3811–14.)

Respondents incorporate their responses to CCFF ¶¶ 1938–39 herein.

1964. [redacted] (Lengauer (Third Rock Ventures) Tr. 270-72 (*in camera*)).

Response to Finding No. 1964:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39 and 1963, which Respondents incorporate herein. The proposed finding is also inaccurate and misleading to the extent it suggests that Galleri's determination of the cancer signal of origin is inaccurate because it is an "approximation." To the contrary, Galleri v1 demonstrated a cancer signal of origin prediction accuracy of 93%. (PFF ¶ 389 (RX3430 (Liu et al., 2020) at 1, 9; RX0744 (GRAIL) at 68; RX3869 (Cote Expert Report) ¶ 143).) CCGA3, the third CCGA sub-study, reported that Galleri v2 demonstrated a cancer signal of origin prediction accuracy of 88.7%. (PFF ¶ 393 (RX3408 (Klein et al., 2021) at 10; RX3869 (Cote Expert Report) ¶ 144).)

By contrast, the CancerSEEK assay does not identify the cancer signal of origin, which is why it is combined with a whole-body PET-CT. (PFF ¶ 419 (RX3869 (Cote Expert Report) ¶ 174).) Full-body PET-CT is a fairly poor tool for cancer signal of origin determination,

compared with the 93% accuracy of cancer signal of origin prediction achieved by GRAIL's Galleri v1 in the CCGA2 study. (PFF ¶ 426.4 (RX3869 (Cote Expert Report) at n.173 (Liu 2020 at 745, 754; RX0744 (GRAIL) at 68; RX3409 (Klein et al., 2021) at 1).)

Further, [redacted]

1965. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 67-68) (*in camera*)).

Response to Finding No. 1965:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39 and 1963, which Respondents incorporate herein.

1966. [redacted] (Lengauer (Third Rock Ventures) Tr. 270-72 (*in camera*)).

Response to Finding No. 1966:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1963, which Respondents incorporate herein.

1967. [redacted] (Lengauer (Third Rock Ventures) Tr. 270-72 (*in camera*)).

Response to Finding No. 1967:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1963, which Respondents incorporate herein.

In particular, Dr. Lengauer admitted that a diagnostic full-body PET-CT confers a higher radiation exposure than a standard CT and the radiation exposure from diagnostic PET-CT and follow-up imaging tests in the participants without cancer is a recognized source of potential harm associated with the DETECT-A CancerSEEK protocol. (*See* Lengauer (Exact/Thrive) Tr. 248–50; PFF ¶ 1724.)

1968. [redacted] (PX7110 (Conroy (Exact) Dep. at 244) (*in camera*)).

Response to Finding No. 1968:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39 and 1963, which Respondents incorporate herein.

b) Exact Plans to Continue Improving CancerSEEK Using NGS to Compete with Other MCED Test Developers

1969. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 139-40) (*in camera*)).

Response to Finding No. 1969:

The proposed finding is incomplete and misleading to the extent that it suggests that CancerSEEK's sensitivity will improve. In fact, Respondents note that the cited testimony indicates that [redacted] (PX7051 (Lengauer

(Exact/Thrive) IHT) at 139–40.) Respondents also note that [redacted] There is also no reason to believe that CancerSEEK will improve when it has in fact gotten worse on some metrics. (*Compare*, *e.g.*, PFF ¶ 426.1 (RX3142 (Cohen 2018) at 3), *with* PFF ¶ 426.3 (Lengauer (Exact/Thrive) Tr. 248; RX3869 (Cote Expert Report at n.240).) Further, [redacted] (PFF ¶ 726.6; RX4007 (Exact/Thrive) at 7.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 1938–39 herein.

1970. Dr. Lengauer testified that even if performance of CancerSEEK is "outstanding," Thrive "want[s] to always improve [its] test, and with that spirit in mind, [Thrive has] engaged in further improvements of the test while [ ] preparing towards a registrational trial." (Lengauer (Third Rock Ventures) Tr. 168-69).

Response to Finding No. 1970:

The proposed finding is incomplete and misleading, including because it seems to suggest that the performance of CancerSEEK is "outstanding". To the contrary, as Thrive recognized, "[a]t present, we cannot be certain that the DETECT-A blood test used in our study helped any participant." (RX3419 (Lennon et al., 2020) at 11.) The CancerSEEK blood test obtained specificities of only 95.3% in its baseline blood test in the DETECT-A study, with a

sensitivity of only 30.2% and PPV (positive predictive value) of only 5.9%. (*See* RX3419 (Lennon et al., 2020) at 8 & Table 2; PFF ¶¶ 431–432.) [redacted] The CancerSEEK blood test identified only ten cancer types and failed to detect six cancers in the DETECT-A study. (*See* Conroy (Exact/Thrive) Tr. 1706–07; PFF ¶¶ 430.1, 1699.) [redacted] (Lengauer (Exact/Thrive) Tr. 168–69.) Respondents also incorporate their responses to CCFF ¶¶ 1938–39 and 1969 herein.

1971. Innovation has allowed Thrive and Exact to constantly improve CancerSEEK "with the use of next-generation sequencing technologies and other technologies." (Conroy (Exact) Tr. 1546).

Response to Finding No. 1971:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1970, which Respondents incorporate herein.

The proposed finding is inaccurate, incomplete and misleading, and not supported by the cited evidence. [redacted] (Conroy (Exact) Tr. 1623.) There is no evidence that there has been any improvement to the CancerSEEK test in development. [redacted]

[redacted] (Conroy (Exact) Tr. 1546.)

1972. Innovation has improved the CancerSEEK product. (Conroy (Exact) Tr. 1546).

Response to Finding No. 1972:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

1973. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 140 (*in camera*))).

Response to Finding No. 1973:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein. The proposed finding is speculative because there is no basis to show that the sensitivity and specificity of CancerSEEK will improve by the time of launch.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1974. [redacted] (*in camera*) (*see* inset image)).

[redacted]

[redacted] (RX0074 (Exact) at 008 [redacted] (*in camera*))).

Response to Finding No. 1974:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

Respondents note that the cited source indicates that [redacted].

Respondents also note that Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 5), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

1975. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 141 (*in camera*))).

Response to Finding No. 1975:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

Respondents also note that the cited testimony indicates that [redacted]

Respondents further note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1976. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 141 (*in camera*))).

Response to Finding No. 1976:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1977. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 141 (*in camera*))).

Response to Finding No. 1977:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

Respondents note that the cited testimony indicates that [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1978. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 142 (*in camera*))).

Response to Finding No. 1978:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

Respondents note that the cited testimony indicates that [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1979. [redacted] (Lengauer (Third Rock Ventures) Tr. 187 (*in camera*)).

Response to Finding No. 1979:

The proposed finding is inaccurate, incomplete and misleading, and not supported by the cited evidence, including because it seems to suggest that Illumina's switch of NGS platforms caused Thrive to change the tubes used to collect blood. Dr. Lengauer only testified in the cited testimony that [redacted]

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

1980. Mr. Conroy testified at trial that Exact plans on continuing to innovate to develop the CancerSEEK product "[e]very day." (Conroy (Exact) Tr. 1546).

Response to Finding No. 1980:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

Respondents also note that the cited testimony indicates that [redacted]. (Conroy (Exact) Tr. 1545–46.)

1981. Mr. Conroy stated at trial that Exact "absolutely" plans to continue innovating to develop the CancerSEEK product for the benefit of patients. (Conroy (Exact) Tr. 1546).

Response to Finding No. 1981:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

Respondents also note that the cited testimony indicates that [redacted] (Conroy (Exact) Tr. 1545–46.)

1982. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 140 (*in camera*))).

Response to Finding No. 1982:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1983. [redacted] (Conroy (Exact) Tr. 1615 (*in camera*)).

Response to Finding No. 1983:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

In particular, unlike CancerSEEK, GRAIL's Galleri test is based on targeted methylation. By contrast, although [redacted] Further, while Mr. Conroy claims that [redacted] (PX7051 (Lengauer (Third

Rock Ventures) IHT at 144) (*in camera*). Therefore, Complaint Counsel's witness testimony contradicts the proposed finding.

The proposed finding also seems to suggest that [redacted]. (Conroy (Exact) Tr. 1623.)

1984. [redacted] (Conroy (Exact) Tr. 1615 (*in camera*)).

Response to Finding No. 1984:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

The proposed finding is incomplete and misleading, including because it seems to suggest that [redacted]. (Conroy (Exact) Tr. 1623.) Respondents also note that [redacted]

1985. [redacted] (Conroy (Exact) Tr. 1615 (*in camera*)).

Response to Finding No. 1985:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that [redacted]

1986. [redacted] (Conroy (Exact) Tr. 1615-16 (*in camera*)).

Response to Finding No. 1986:

The proposed finding is inaccurate and misleading. As Thrive recognized about CancerSEEK in their published paper, "we cannot be certain that the DETECT-A blood test used in our study helped any participant." (RX3419 (Lennon et al., 2020) at 11.) Respondents also note that there is no CancerSEEK product in the market for people to benefit from. (Conroy (Exact) Tr. 1623.) Respondents also incorporate their responses to CCFF ¶ 1971 herein.

1987. [redacted] (Conroy (Exact) Tr. 1617 (*in camera*)).

Response to Finding No. 1987:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein. Respondents also note that this cited testimony is inconsistent with Complaint Counsel's proposed finding that CancerSEEK purportedly detects "all types" of cancer. (*See* CCFF ¶¶ 1938–39.)

1988. [redacted]

[redacted] (Conroy (Exact) Tr. 1576-77 (*in camera*)).

Response to Finding No. 1988:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1938–39, which Respondents incorporate herein.

1989. At trial, Respondents' expert, Dr. Richard Cote, agreed that [redacted] (Cote, Tr. 3823 (*in camera*)).

Response to Finding No. 1989:

The proposed finding is inaccurate, incomplete, and misleading. Dr. Cote testified in the cited testimony that [redacted]

c) [redacted]

1990. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 146-47; 157 (*in camera*)); PX7058 (Conroy (Exact) IHT at 142 (*in camera*)); PX8402 (Exact/Thrive) at 002 [redacted]

Response to Finding No. 1990:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Complaint Counsel did not present exhibit PX8402 cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 61), and therefore, the

document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents note that Mr. Conroy testified at trial that [redacted] Respondents also incorporate their responses to CCFF ¶ 1939 herein.

1991. [redacted] (Conroy (Exact) Tr. 1625 (*in camera*)).

Response to Finding No. 1991:

The proposed finding is inaccurate and misleading, especially as Exact has not yet launched its CancerSEEK test as an LDT (PFF ¶ 296.1) and Mr. Conroy testified at trial that [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 1939 herein.

1992. [redacted] (PX7058 (Conroy (Exact) IHT at 142 (*in camera*)); (Conroy (Exact) Tr. 1558 (*in camera*))).

Response to Finding No. 1992:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1993. [redacted] (Conroy (Exact) Tr. 1625 (*in camera*)). [redacted] (Conroy (Exact) Tr. 1625 (*in camera*)).

Response to Finding No. 1993:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

1994. [redacted] (Conroy (Exact) Tr. 1558 (*in camera*)).

Response to Finding No. 1994:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

1995. [redacted] (Conroy (Exact) Tr. 1627-28 (*in camera*)).

Response to Finding No. 1995:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein. Contrary to Mr. Conroy's testimony, [redacted]

1996. [redacted] (Conroy (Exact) Tr. 1558-59 (*in camera*)).

Response to Finding No. 1996:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

1997. [redacted] (Conroy (Exact) Tr. 1558 (*in camera*)).

Response to Finding No. 1997:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

1998. [redacted] (Conroy (Exact) Tr. 1558-59 (*in camera*)); PX7058 (Conroy (Exact) IHT at 143 (*in camera*)) [redacted]).

Response to Finding No. 1998:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

1999. [redacted] (Conroy (Exact) Tr. 1556-57 (*in camera*)).

Response to Finding No. 1999:

Respondents have no specific response.

2000. [redacted] (Conroy (Exact) Tr. 1626 (*in camera*)). [redacted] (Conroy (Exact) Tr. 1626 (*in camera*)).

Response to Finding No. 2000:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

The proposed finding is also speculative because CancerSEEK has not launched as an LDT, no patients have taken CancerSEEK and there is no way to know (or for Mr. Conroy to know) how many patients "could" take CancerSEEK if it launched as an LDT.

2001. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 160-62 (*in camera*))).

Response to Finding No. 2001:

The proposed finding is inaccurate, incomplete and misleading, and not supported by the cited evidence. Dr. Lengauer only testified in the cited testimony that [redacted]

The proposed finding also lacks foundation because it cites the deposition testimony of a third party without established expertise regarding FDA and CMS review processes. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2002. [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 180 (*in camera*))).

Response to Finding No. 2002:

The proposed finding is inaccurate, incomplete and misleading, and not supported by the cited evidence. Mr. Daly only testified in the cited testimony that [redacted]

The proposed finding also lacks foundation because it cites the deposition testimony of a third party without established expertise regarding the USPSTF. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2003. [redacted] (PX7058 (Conroy (Exact) IHT at 145 (*in camera*))).

Response to Finding No. 2003:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2004. [redacted] (PX7058 (Conroy (Exact) IHT at 145 (*in camera*))).

Response to Finding No. 2004:

The proposed finding is hearsay because it relies on [redacted] and the cited testimony should be accorded no weight.

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2005. [redacted] (PX7058 (Conroy (Exact) IHT at 145 (*in camera*))).

Response to Finding No. 2005:

The proposed finding is hearsay because it relies on statements from integrated health systems and the cited testimony should be accorded no weight.

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2006. [redacted] (PX7058 (Conroy (Exact) IHT at 145-46 (*in camera*))).

Response to Finding No. 2006:

The proposed finding is hearsay because it relies on statements from integrated health systems and the cited testimony should be accorded no weight.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2007. [redacted] (PX7058 (Conroy (Exact) IHT at 146 (*in camera*))).

Response to Finding No. 2007:

The proposed finding is hearsay because it relies on [redacted] and the cited testimony should be accorded no weight.

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1991, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

4. [redacted]

2008. [redacted] (PX7058 (Conroy (Exact) IHT at 141 (*in camera*))).

Response to Finding No. 2008:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1990, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2009. [redacted] (PX7110 (Conroy (Exact) Dep. at 33) (*in camera*)).

Response to Finding No. 2009:

Respondents have no specific response except to note that Mr. Conroy testified at trial that [redacted]

2010. A registrational trial is what "devices, tests, and so on [usually seek] or companies usually seek approval by the agency, in this case the FDA, that evaluates the benefit/risk ratio and… can give the approval stamp to a test." The FDA's approval stamp is "very, very important for acceptance of tests in the community" and "for potential reimbursement of the test." (Lengauer (Third Rock Ventures) Tr. 169).

Response to Finding No. 2010:

Respondents have no specific response.

2011. [redacted] (PX7051 ((Lengauer (Third Rock Ventures) Tr. 190 (*in camera*); Lengauer (Third Rock Ventures) IHT at 157 (*in camera*); PX8402 (Exact/Thrive) at 002 [redacted] (*in camera*)).

Response to Finding No. 2011:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 61), and therefore, the document

should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents incorporate their responses to CCFF ¶ 1990 herein.

2012. [redacted] (Conroy (Exact) Tr. 1628 (*in camera*)).

Response to Finding No. 2012:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1990, which Respondents incorporate herein. Respondents note that [redacted] (PFF ¶ 441; Conroy (Exact/Thrive) Tr. 1709, 1717; [redacted] Mr. Conroy testified that "there can be no guarantee that the FDA would clear or approve any future product or service that [Exact/Thrive] may develop," and that Exact Sciences' 10-K acknowledged that "[d]eveloping new or improved cancer tests is a speculative and risky endeavor". (Conroy (Exact/Thrive) Tr. 1713–18.)

2013. [redacted] (PX8402 (Exact/Thrive) at 002 [redacted] (*in camera*)).

Response to Finding No. 2013:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1990, which Respondents incorporate herein. Mr. Conroy testified that "there can be no guarantee that the FDA would clear or approve any future product

or service that [Exact/Thrive] may develop," and that Exact Sciences' 10-K acknowledged that "[d]eveloping new or improved cancer tests is a speculative and risky endeavor". (Conroy (Exact/Thrive) Tr. 1713–18.)

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 61), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2014. [redacted] (Conroy (Exact) Tr. 1556-57 (*in camera*)).

Response to Finding No. 2014:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1990, which Respondents incorporate herein. Mr. Conroy testified that "there can be no guarantee that the FDA would clear or approve any future product or service that [Exact/Thrive] may develop," and that Exact Sciences' 10-K acknowledged that "[d]eveloping new or improved cancer tests is a speculative and risky endeavor". (Conroy (Exact/Thrive) Tr. 1713–18.)

5. CancerSEEK Has Already Undergone a Prospective, Interventional Clinical Trial, and Exact is Preparing for Its FDA Registrational Trial

2015. There are two published studies on CancerSEEK. (Conroy (Exact) Tr. 1697).

Response to Finding No. 2015:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that the version of CancerSEEK that Exact/Thrive intends to launch has undergone any clinical studies; it has not. The version of CancerSEEK used in the DETECT-A trial (also known as

"Lennon") was known as Version zero. (CCFF ¶ 1976.) The version of CancerSEEK that Exact/Thrive intends to use at launch is known as version 1.1. (*See* CCFF ¶ 1975.)

a) The Cohen Study

2016. [redacted] (Conroy (Exact) Tr. 1545-46; Lengauer (Third Rock Ventures) Tr. 202 (*in camera*)).

Response to Finding No. 2016:

Respondents have no specific response except to note that the first clinical study of a different version of CancerSEEK—the Cohen study—was a case-control study that focused on only eight types of cancer. (*See* RX3142 (Cohen 2018) at 1; PFF ¶¶ 426.1, 427.) Respondents also incorporate their responses to CCFF ¶¶ 1938–39 herein.

2017. The first CancerSEEK study, referred to as the "Cohen study," was published in the Journal of Science in 2018. (RX3142 (Cohen et. al, Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test, Feb. 23, 2018)).

Response to Finding No. 2017:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2018. The Cohen study examined CancerSEEK's ability to "detect eight common cancer types through [the] assessment of the levels of circulating proteins and mutations in cell-free DNA." (RX3142 at 001 (Cohen et. al, Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test, Feb. 23, 2018)).

Response to Finding No. 2018:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2019. The Cohen study applied CancerSEEK to 1,005 patients with "nonmetastatic clinically detected cancers of the ovary, liver, stomach, pancreas, esophagus, colorectum, lung, or breast." (RX3142 (Cohen et al., Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test)).

Response to Finding No. 2019:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2020. The Cohen study focused on eight cancer types: ovary, liver, stomach, pancreas, esophagus, colorectal, lung, and breast. (RX3142 (Cohen et al., Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test)).

Response to Finding No. 2020:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2021. Mr. Conroy explained at trial that the Cohen study did not use the current version of CancerSEEK. (Conroy (Exact) Tr. 1742).

Response to Finding No. 2021:

The proposed finding is inaccurate, incomplete and misleading, including because it seems to suggest that [redacted] Respondents incorporate their responses to CCFF ¶¶ 1945 and 2016 herein.

2022. The CancerSEEK test used in the Cohen study tested "positive in a median of 70% of the eight cancer types. The sensitivities ranged from 69 to 98 percent for the detection of five cancer types (ovary, liver, stomach, pancreas, and esophagus) for which there are no screening tests available for average-risk individuals." (RX3142 at 001 (Cohen et. al, Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test, Feb. 23, 2018)).

Response to Finding No. 2022:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2023. The Cohen study acknowledged that the patient cohort was comprised of individuals who had been diagnosed with stage I to III cancers of the ovary, liver, stomach, pancreas, esophagus, colorectum, lung, or breast. (RX3142 at 002 (Cohen et. al, Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test, Feb. 23,

2018 (49% of patients had stage II cancer; 20% of patients had stage I cancer; and 31 % of patients had stage III cancer.); Conroy (Exact) Tr. 1701).

Response to Finding No. 2023:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2024. The Cohen study used a "healthy control cohort" of "812 individuals of median age 55 (range 17 to 88) with no known history of cancer, high-grade dysplasia, auto-immune disease, or chronic kidney disease." (RX3142 at 002 (Cohen et. al, Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test, Feb. 23, 2018)).

Response to Finding No. 2024:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2025. The eight cancer types were chosen because they are common in western populations and because no blood-based tests for their earlier detection are in common clinical use. (RX3142 at 001 (Cohen et. al, Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test, Feb. 23, 2018)).

Response to Finding No. 2025:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

2026. The researchers in the Cohen study estimated that the sensitivity of CancerSEEK was 55 percent among all eight cancer types selected. (Conroy (Exact) Tr. 1702-03; RX3142 at 004 (Cohen et. al, Detection and Localization of Surgically Resectable Cancers with a Multi-Analyte Blood Test, Feb. 23, 2018)).

Response to Finding No. 2026:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2016 herein.

b) The DETECT-A Study

2027. The second CancerSEEK study was "DETECT-A." (Conroy (Exact) Tr. 1703-04).

Response to Finding No. 2027:

Respondents have no specific response except to note that in the DETECT-A clinical trial: only women were studied; two blood tests were performed in the CancerSEEK workflow and individuals remaining positive after the two blood tests were then scanned using full-body PET-CT imaging; the CancerSEEK baseline blood test obtained specificities of only 95.3%, with a sensitivity of only 30.2% and PPV (positive predictive value) of only 5.9%; the CancerSEEK blood test identified only ten cancer types and failed to detect six cancers. (*See* RX3419 (Lennon et al., 2020); PFF ¶¶ 422–432, 1699.) Also, the CancerSEEK blood test does not identify the cancer signal of origin, which is why it is combined with a whole-body PET-CT. (*See* PFF ¶¶ 419 (RX3869 (Cote Expert Report) ¶ 174), [redacted] 684.2 (Lengauer (Exact/Thrive) Tr. 248), 735, 839.7, 841.3, [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1912 and 1938–39 herein.

2028. The results of DETECT-A were published in July 2020 in Science Magazine, a prominent peer-reviewed scientific journal, under the title, "Feasibility of blood testing combined with PET-CT to screen for cancer and guide intervention." (Conroy (Exact) Tr. 1703; Lengauer (Third Rock Ventures) Tr. 164-65; RX3419 (Lennon et al., Feasibility of Blood Testing Combined with PET-CT to Screen for Cancer and Guide Intervention, *Science* 369, 49 (2020))).

Response to Finding No. 2028:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2027 herein.

2029. [redacted] (PX7085 (Harada (Exact) Dep. at 20) (*in camera*)).

Response to Finding No. 2029:

The proposed finding is inaccurate, incomplete and misleading. The CancerSEEK workflow in the DETECT-A study required full-body PET-CT imaging, therefore, [redacted] (*See* PFF ¶¶ 425, **426**.)

Respondents incorporate their responses to CCFF ¶¶ 1912, 1938–39 and 2027 herein.

2030. Thrive completed a large interventional study of CancerSEEK involving the multi-cancer screening of 10,000 women called DETECT-A. (Lengauer (Third Rock Ventures) Tr. 163-65; Conroy (Exact) Tr. 1704).

Response to Finding No. 2030:

The proposed finding is incomplete and misleading including insofar as it suggests that Exact/Thrive is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Respondents incorporate their responses to CCFF ¶¶ 1912, 1938–39 and 2027 herein.

2031. DETECT-A was an exploratory prospective interventional study. (Conroy (Exact) Tr. 1703).

Response to Finding No. 2031:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2027 herein.

2032. Dr. Lengauer testified that DETECT-A was the largest and only interventional study in the screening setting of a multicancer test. (Lengauer (Third Rock Ventures) Tr. 164).

Response to Finding No. 2032:

The proposed finding is inaccurate, incomplete and misleading, including because it seems to suggest that DETECT-A was the only interventional study of a putative multicancer

screening test. PATHFINDER is also a prospective, interventional multi-center study of GRAIL's multi-cancer screening test, Galleri, in 6,662 participants. (*See* PFF ¶¶ 394–402.)

Respondents also incorporate their responses to CCFF ¶ 2027 herein.

2033. An interventional study involves testing patients, getting results, and giving those results back to the physician and patient. (Lengauer (Third Rock Ventures) Tr. 164).

Response to Finding No. 2033:

Respondents have no specific response.

2034. Dr. Lengauer testified at trial that Thrive is the only MCED test developer to conduct an interventional study. (Lengauer (Third Rock Ventures) Tr. 164).

Response to Finding No. 2034:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2032, which Respondents incorporate herein.

2035. The purpose of Thrive's DETECT-A study was to understand the sensitivity, specificity, and safety of its CancerSEEK test, as well as how it fits within the existing physician workflow. (Lengauer (Third Rock Ventures) Tr. 165).

Response to Finding No. 2035:

The proposed finding is inaccurate, incomplete and misleading. The workflow used in DETECT-A is not the final workflow that will be used for CancerSEEK if it is commercialized. (*See* PFF ¶¶ 438–48.) The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶ 2027 herein.

2036. Dr. Lengauer testified that specificity "is a measure that relates to how frequently one generates false-positives, or in other words, a false alarm; for example, if you were to say you have cancer, but it ends up being that there is no cancer." (Lengauer (Third Rock Ventures) Tr. 166).

Response to Finding No. 2036:

Respondents have no specific response.

2037. The specificity of CancerSEEK was measured in the DETECT-A study at "a little bit over 99 percent, which is an important requirement for a screening test of asymptomatic individuals." (Lengauer (Third Rock Ventures) Tr. 166-67).

Response to Finding No. 2037:

The proposed finding is inaccurate, incomplete and misleading. In the DETECT-A clinical trial, the CancerSEEK workflow obtained specificities of only 95.3% with the baseline blood test and 98.9% with both baseline and confirmational blood tests. (*See* RX3419 (Lennon et al., 2020) at 8 & Table 2; PFF ¶ 431.) [redacted]

Respondents also incorporate their responses to CCFF ¶ 2027 herein.

2038. Dr. Lengauer explained that specificity is an important requirement because CancerSEEK "is designed for individuals that are asymptomatic, which means individuals that would go to their annual exam, not that they have cancer by any means, and in that context get this test. In such a group it is very, very important that we are not causing false alarm because there are consequences." These consequences include a follow up doctor visit and interventional methods such as biopsies and other forms of surgeries to try and find the cancer after a positive screening test result. Thus, "in an asymptomatic – or maybe we call it in lay terms healthy population – when you apply a test, it's extremely important that the false-positives that such a test cause are very, very rare." (Lengauer (Third Rock Ventures) Tr. 167).

Response to Finding No. 2038:

Respondents have no specific response.

2039. Dr. Lengauer testified that sensitivity means "what's the fraction of cancers that one can identify from all the cancers that are out there in principle." (Lengauer (Third Rock Ventures) Tr. 166768).

Response to Finding No. 2039:

Respondents have no specific response.

2040. The sensitivity of CancerSEEK was measured in the DETECT-A study across all cancer types. DETECT-A makes a determination of "sensitivity for an interventional cancer type that relates to a certain organ, like breast or colon." (Lengauer (Third Rock Ventures) Tr. 168).

Response to Finding No. 2040:

The proposed finding is incomplete and misleading to the extent that it suggests that CancerSEEK can detect all cancer types. Respondents incorporate their response to CCFF ¶ 2027 herein.

2041. "Today, only 25 percent of cancers can be detected by screening methods. 75 percent of cancers are detected by symptoms, signs and symptoms, which means cancers are usually detected late." (Lengauer (Third Rock Ventures) Tr. 168-69).

Response to Finding No. 2041:

The proposed finding is incomplete and misleading. Current single-cancer screening tests can detect only five cancer types in the United States, which represents only 10% of the cancers that Galleri can detect and an even smaller percentage of all cancers that exist. (Bishop (GRAIL) Tr. 1374; Ofman (GRAIL) Tr. 3308; Abrams Tr. 3729.)

2042. The outcome of the DETECT-A study "showed that now 52 percent, which means – of cancers can be detected by screening first, which means we can now double the number[ ] of cancers first detected by screening, which means cancer in most individuals can be detected now earlier." (Lengauer (Third Rock Ventures) Tr. 169).

Response to Finding No. 2042:

The proposed finding is inaccurate, incomplete and misleading. Dr. Lengauer made no explanation of his calculations. (*See* Lengauer (Third Rock Ventures) Tr. 169.) Given that there are over 200 cancer types and CancerSEEK could only detect 10 cancer types, including one of

unknown primary, the DETECT-A clinical trial results does not account for his claim. (PFF ¶ 429 (RX3419 (Lennon et al., 2020) at 4, 6–7, 9; Lengauer (Exact/Thrive) Tr. 243, 260–61).) In the DETECT-A study, the CancerSEEK workflow obtained a sensitivity of only 30.2% in its baseline blood test (that is, with a single blood test), 27.1% with both baseline and confirmational blood tests *without* PET-CT imaging, and 15.6% with both blood tests and PET-CT imaging. (*See* RX3419 (Lennon et al., 2020) at 8 & Table 2; PFF ¶ 431.)

CancerSEEK is also unable to detect several cancers that Galleri has detected. (PFF ¶ 430.1; *compare* RX3419 (Lennon et al., 2020) at 1, 6–7, 9 *with* (RX3409 (Klein et al., 2021) at 1, 5; Cote Tr. 3818–19.) Respondents also incorporate their responses to CCFF ¶ 2027 herein.

2043. Dr. Lengauer testified that the DETECT-A study provided Thrive with a "good understanding about the performance of the [CancerSEEK] test." The results can be "summarized by saying that [CancerSEEK] could [ ] more than double the cancers detected… compared to the classical standard of screening methods." (Lengauer (Third Rock Ventures) Tr. 165-66).

Response to Finding No. 2043:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2042 herein.

2044. The DETECT-A study also showed that CancerSEEK "is very safe" and how the integration of CancerSEEK into clinical care "had no impact on compliance to the standard of care, which is a very important from a safety perspective." (Lengauer (Third Rock Ventures) Tr. 166).

Response to Finding No. 2044:

The proposed finding is inaccurate, incomplete and misleading because the authors of the Lennon paper, which reported on the DETECT-A study, also recognized many shortcomings and safety concerns from the DETECT-A CancerSEEK protocol. As Thrive recognized in DETECT-A, "[a]t present, we cannot be certain that the DETECT-A blood test used in our study helped any participant." (RX3419 (Lennon et al., 2020) at 11.) Respondents also note that

whole body PET-CT scans are not recommended for routine early cancer screening, because of cost and radiation concerns, as well as the inability of PET-CT scanning to detect very small tumors. (RX3624 (Schöder & Gonen 2007) at 9–10; Cote Tr. 3812–13; RX3869 (Cote Expert Report) ¶ 72.) Diagnostic PET-CT will necessitate further evaluation of true-positive or false-positive finding and therefore impose downstream costs on the health care system as a whole. (RX3624 (Schöder & Gonen 2007) at 9–10.) Whole-body PET-CT scan [redacted]

Respondents also incorporate their responses to CCFF ¶ 2027 herein.

2045. Overall the DETECT-A study showed how well CancerSEEK "integrates [ ] into the work flow of physicians." (Lengauer (Third Rock Ventures) Tr. 166).

Response to Finding No. 2045:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2035, which Respondents incorporate herein.

2046. DETECT-A used a three-step testing process: a baseline blood test, a confirmation blood test, and then imaging using a PET-CT scan. (Conroy (Exact) Tr. 1704; RX3419 (Lennon et al., Feasibility of Blood Testing Combined with PET-CT to Screen for Cancer and Guide Intervention, *Science* 369, 49 (2020))).

Response to Finding No. 2046:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2027 herein and note that [redacted]. (*See*, *e.g.*, [redacted]

2047. DETECT-A's baseline blood test was an early version of CancerSEEK. (Conroy (Exact) Tr. 1704).

Response to Finding No. 2047:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2027 herein.

2048. DETECT-A's confirmation blood test was given to participants that scored positive on the baseline blood test. (Conroy (Exact) Tr. 1704).

Response to Finding No. 2048:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2027 herein. Respondents also note that the confirmation blood test was used to rule out an abnormal biomarker reading due to clonal hematopiesis (CHiP), which is a blood mutation that might cause false positives in DNA or protein markers. (PFF ¶ 424.1 (Lengauer (Exact/Thrive) Tr. 247; [redacted]); RX3419 (Lennon et al., 2020) at 3).)

2049. DETECT-A used a diagnostic PET-CT scan to confirm the results of CancerSEEK and localize the potential cancer. (Conroy (Exact) Tr. 1704).

Response to Finding No. 2049:

The proposed finding is inaccurate and misleading. DETECT-A used a whole body diagnostic PET-CT scan as the third step of the CancerSEEK protocol. Respondents also incorporate their responses to CCFF ¶¶ 1963–64, 2027 and 2046 herein.

2050. CancerSEEK identified ten types of cancer in DETECT-A: appendix, breast, carcinoma, unknown primary origin, colorectal, kidney, lung, lymphoma, ovary, thyroid, and uterine. (Conroy (Exact) Tr. 1706).

Response to Finding No. 2050:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2027 herein. Respondents also note that a cancer type of unknown primary origin does not count as a cancer type that CancerSEEK can detect, insofar as CancerSEEK seeks to compete with Galleri according to the number of cancer types detected, as Galleri detects over 50 types of

cancer, the primary origin of which are known, by the same measure. (PFF ¶ 61 (PX0043 (GRAIL) at 97, 5; *see also* Ofman (GRAIL) Tr. 3312.)

2051. The DETECT-A study showed that CancerSEEK could more than double the cancers detected by standard screening methods. (Lengauer (Third Rock Ventures) Tr. 165-66).

Response to Finding No. 2051:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2042, which Respondents incorporate herein.

2052. The DETECT-A study showed that CancerSEEK is safe and integrated into clinical care in a way that had no impact on compliance with standard of care screening. (Lengauer (Third Rock Ventures) Tr. 165-66).

Response to Finding No. 2052:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2044, which Respondents incorporate herein.

2053. The DETECT-A study established that CancerSEEK's specificity was over 99 percent. (Lengauer (Third Rock Ventures) Tr. 166-67).

Response to Finding No. 2053:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2037, which Respondents incorporate herein.

2054. The DETECT-A study established that CancerSEEK's sensitivity was 52 percent, detecting double the number of cancers first detected by standard screening methods. (Lengauer (Third Rock Ventures) Tr. 168-69).

Response to Finding No. 2054:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2042, which Respondents incorporate herein.

2055. [redacted] (Lengauer (Third Rock Ventures) Tr. 273-74 (*in camera*)).

Response to Finding No. 2055:

The proposed finding inaccurate, incomplete and misleading. In the Lennon paper, where the DETECT-A study was reported, the authors (and investigators) recognized that "At present, we cannot be certain that the DETECT-A blood test used in our study helped any participant." (RX3419 (Lennon et al., 2020) at 11.) Complaint Counsel also presented no evidence that [redacted] and incorporate their responses to CCFF ¶ 2027 herein.

2056. In an email dated April 30, 2020, Ammar Qadan, Illumina's Vice President and Global Head of Market Access, explained that "[t]he data published in Science about the Thrive test shows a very carefully designed study in many ways." (PX2731 (Illumina) at 001 (Email from A. Qadan, Illumina, to J. Goswami, Illumina, Apr. 30, 2020) (adding "These guys know exactly what they're doing.") .

Response to Finding No. 2056:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2027 herein. Respondents also note that Mr. Qadan's email cited to data that was newly released in April 2020, and GRAIL has continued to conduct clinical studies and published results from those studies since that time. (*See* PX2731 (Illumina) at 1; PFF ¶¶ 403–12.) Further, since the date of Mr. Qadan's email, it has become clear that Thrive's study was highly flawed, as shown by the fact that Exact has since gone back to the drawing board with CancerSEEK. (PFF ¶ 726.6 (RX4007 (Exact/Thrive) at 7).) [redacted]

[redacted]

2057. Mr. Qadan explained in an email that, "In my humble opinion, the above could accelerate the Thrive test approval process and uptake as it is very defined[.]" (PX2731 (Illumina) at 001 (Email from A. Qadan, Illumina, to J. Goswami, Illumina, Apr. 30, 2020)).

Response to Finding No. 2057:

Respondents have no specific response except to note that the CancerSEEK test is still under development and is still years away from FDA approval. (*See* Lengauer (Exact/Thrive) Tr. 158; [redacted] As Exact Sciences' 10-K form acknowledged to its investors, "[t]he FDA's clearance or approval pathways are likely to involve significant time, as well as additional research, development and clinical study expenditures," and "[t]here can be no guarantee that the FDA would clear or approve any future product or service we may develop." (RX3197 (Exact Sciences Corp., Form 10-K for the Period Ending 12/31/20).) Respondents also incorporate their responses to CCFF ¶ 2027 herein.

2058. Since the DETECT-A study, Thrive has continued to improve CancerSEEK. (Lengauer (Third Rock Ventures) Tr. 169-70).

Response to Finding No. 2058:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 1971, which Respondents incorporate herein.

2059. [redacted] (Lengauer (Third Rock Ventures) Tr. 187-88 (*in camera*)).

Response to Finding No. 2059:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1945 and 1971, which Respondents incorporate herein.

2060. After DETECT-A, Thrive plans to further improve its test and are preparing for a registrational trial. (Lengauer (Third Rock Ventures) Tr. 169-70).

Response to Finding No. 2060:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1945 and 1971, which Respondents incorporate herein.

c) [redacted]

2061. [redacted] (Conroy (Exact) Tr. 1632-33 (*in camera*)).

Response to Finding No. 2061:

The proposed finding is inaccurate, incomplete, and misleading because there is no evidence to date that [redacted] (Conroy (Exact) Tr. 1632–33 (*in camera*).)

2062. [redacted] (Conroy, (Exact) Tr. 1633 (*in camera*)).

Response to Finding No. 2062:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2061, which Respondents incorporate herein.

2063. [redacted] (Conroy (Exact) Tr. 1633 (*in camera*)).

Response to Finding No. 2063:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2061, which Respondents incorporate herein.

2064. [redacted] (Conroy (Exact) Tr. 1564 (*in camera*)).

Response to Finding No. 2064:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2061 herein.

2065. [redacted] (Conroy (Exact) Tr. 1564) (*in camera*)).

Response to Finding No. 2065:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2061, which Respondents incorporate herein.

2066. [redacted] (Conroy (Exact) Tr. 1564 (*in camera*)).

Response to Finding No. 2066:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2061, which Respondents incorporate herein.

2067. [redacted] (Conroy (Exact) Tr. 1564 (*in camera*)).

Response to Finding No. 2067:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2061, which Respondents incorporate herein.

2068. [redacted] (Conroy (Exact) Tr. 1633 (*in camera*)).

Response to Finding No. 2068:

The proposed finding is incomplete and misleading. Mr. Conroy testified in the cited testimony that [redacted] (Conroy (Exact) Tr. 1633.)

Respondents also incorporate their responses to CCFF ¶ 2061 herein.

d) [redacted]

2069. For FDA approval, test developers undergo a "registrational trial," which allows the FDA to evaluate the benefits-to-risk ratio of a test or device. (Lengauer (Third Rock Ventures) Tr. 170).

Response to Finding No. 2069:

The proposed finding is based on testimony for which the witnesses lack personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Respondents also incorporate their responses to CCFF ¶ 528 herein.

2070. [redacted] (Conroy (Exact) Tr. 1634 (*in camera*)).

Response to Finding No. 2070:

Respondents have no specific response except to note that [redacted]

[redacted] (Conroy (Exact) Tr. 1628, 1634–35.)

2071. [redacted] (Lengauer (Third Rock Ventures) Tr. 189-190 (*in camera*)).

Response to Finding No. 2071:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2070 herein.

2072. [redacted] (Lengauer (Third Rock Ventures) Tr. 1190-91 (*in camera*)).

Response to Finding No. 2072:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2070 herein.

2073. [redacted] (Lengauer (Third Rock Ventures) Tr. 189-90 (*in camera*)).

Response to Finding No. 2073:

The proposed finding is not supported by the source provided and is inaccurate and misleading to the extent it suggests that [redacted], which there is no evidence to support. Dr. Lengauer testified, [redacted] Additionally, [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 467, 640 and 2070 herein.

2074. [redacted] (Conroy (Exact) Tr. 1559-60 (*in camera*)).

Response to Finding No. 2074:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2073, which Respondents incorporate herein.

2075. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 137) (*in camera*)).

Response to Finding No. 2075:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2073, which Respondents incorporate herein. [redacted], even though Exact and Thrive were served with respective subpoenas by both Complaint Counsel and Respondents. (*See* RX5009-RX5010, RX5044-RX5045 (Exact and Thrive)). Nor has Complaint Counsel identified such a document. Therefore, this cited testimony should be accorded little weight.

2076. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 137-38) (*in camera*)).

Response to Finding No. 2076:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2073 and 2075, which Respondents incorporate herein.

2077. [redacted] (Conroy, (Exact) Tr. 1634 (*in camera*)).

Response to Finding No. 2077:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2070 herein.

2078. [redacted] 176-77) (*in camera*); PX7091 (Lengauer (Third Rock Ventures) Dep. at 82) (*in camera*); PX8317 (Exact) at 022 [redacted] (*in camera*))).

Response to Finding No. 2078:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 59), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents incorporate their responses to CCFF ¶ 2070 herein.

2079. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 134) (*in camera*)).

Response to Finding No. 2079:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2070 herein.

2080. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 134) (*in camera*)).

Response to Finding No. 2080:

The proposed finding is hearsay and should be accorded little weight. Respondents also incorporate their responses to CCFF ¶ 2070 herein.

2081. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 134) (*in camera*)).

Response to Finding No. 2081:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2070 herein.

2082. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 135) (*in camera*)).

Response to Finding No. 2082:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2070 herein.

2083. [redacted] (Conroy (Exact) Tr. 1634 (*in camera*)).

Response to Finding No. 2083:

The proposed finding is misleading because there is no evidence that the SOAR trial has started. Therefore, the number of patients for that proposed trial is merely theoretical. Respondents also incorporate their responses to CCFF ¶ 2070 herein.

2084. [redacted] (Lengauer (Third Rock Ventures) Tr. 193 (*in camera*)).

Response to Finding No. 2084:

Respondents have no specific response.

2085. [redacted] (Lengauer (Third Rock Ventures) Tr. 192-93 (*in camera*)).

Response to Finding No. 2085:

Respondents have no specific response.

2086. In a prospective study, the patient gets a blood tube drawn before being diagnosed with cancer. (Conroy (Exact) Tr. 1744-45).

Response to Finding No. 2086:

Respondents have no specific response.

2087. A prospective study will then use another means of determining whether the patient has cancer. (Conroy (Exact) Tr. 1744-45).

Response to Finding No. 2087:

Respondents have no specific response.

2088. [redacted] (Lengauer (Third Rock Ventures) Tr. 192-93 (*in camera*)).

Response to Finding No. 2088:

Respondents have no specific response.

2089. [redacted] (Lengauer (Third Rock Ventures) Tr. 192-93 (*in camera*)).

Response to Finding No. 2089:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that [redacted] (RX3142 (Cohen 2018) at 2 ("We then used CancerSEEK to study 1005 patients *who had been diagnosed* with stage I to III cancers of the ovary, liver, stomach, pancreas, esophagus, colorectum, lung, or breast.") (emphasis added); PFF ¶¶ 426.1, 427.) By contrast, GRAIL's CCGA study is a *prospective*, multi-center, case-control, observational study with longitudinal follow-up of 15,254 participants. (PFF ¶ 370 (RX3409 (Klein 2021) at 2; (RX3430 (Liu 2020) at 1; Ofman (GRAIL) Tr. 3291–95; [redacted] RX0744 (GRAIL) at 47–48).) It is believed to be the largest case-control study that there has ever been for early detection. (Ofman (GRAIL) Tr. 3291.) The

study was unique because the samples were prospectively collected. As Dr. Cote explained: "[The] case-control trial was actually prospectively collected, and it was done under a strict protocol for the collection of all of these samples. That makes it unique in terms of the case-control study, and . . . it was designed that way to provide sample collection under circumstances that would be similar to an actual clinical collection of samples." (Cote Tr. 3794–95.)

Respondents note that GRAIL's PATHFINDER study is a prospective, interventional study of 6,662 participants over the age of 50 with a cohort with additional risk of a positive cancer result (3695; ~55% of total enrollment), and another cohort containing participants without any heightened risk (2934). (PFF ¶¶ 394 (RX3044 (GRAIL) at 1–2), 399 (Ofman (GRAIL) Tr. 3293; RX0744 (GRAIL) at 73), 1290 (Aravanis (Illumina) Tr. 1891–92).) In February 2021, GRAIL released interim prospective interventional study (PATHFINDER) results that were positive and largely confirmed the previous studies. (Ofman (GRAIL) Tr. 3293; [redacted] The interim results showed that Galleri detected three cancer types for which stage designation is not applicable (lymphoid leukemia, plasma cell neoplasm, and Waldenstrom macroglobulinemia), one recurrent cancer type at the "local" stage (prostate), and one cancer for which the stage was unknown (colon or rectum). (RX3041 at 005 (Thomasz Beer, Interim Results of Pathfinder, a Clinical Use Study Using a Methylation-Based Multi-Cancer Early Detection Test, June 4, 2021). Galleri has been shown to detect the largest number of cancer types in a prospective clinical trial.

Respondents further note that GRAIL's STRIVE study is a prospective, observational, longitudinal study of approximately 100,000 women undergoing mammography (PFF ¶ 403

(Ofman (GRAIL) Tr. 3293–95; RX0744 (GRAIL) at 71), GRAIL's SUMMIT study is a prospective, observational study of approximately 13,000 participants between the ages of 50–77 with a substantial smoking history (PFF ¶¶ 407–409 (RX3291 (GRAIL) at 1; RX0744 (GRAIL) at 46–47, 72), and [redacted] and a prospective, real-world, pragmatic, randomized clinical study in the U.K. with the NHS in 140,000 screening-eligible individuals (PFF ¶¶ 1603 (Ofman (GRAIL) Tr. 3291–300), 1648 (Freidin (GRAIL) Tr. 3008)). Respondents also incorporate their responses to CCFF ¶¶ 1938–39 and 6270 herein.

2090. According to Mr. Conroy, Grail's previous studies have been case-controlled retrospective studies. (Conroy (Exact) Tr. 1743).

Response to Finding No. 2090:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is inaccurate, incomplete and misleading, based on testimony for which the witness lacks personal knowledge or foundation, and contradicted by the weight of the evidence. GRAIL's CCGA studies are *prospective* studies with longitudinal follow-ups. (PFF ¶ 370 (RX3430 (Liu et al., 2020) at 1; Ofman (GRAIL) Tr. 3291–95; [redacted] RX0744 (GRAIL) at 47–48.)).) Like DETECT-A, GRAIL's PATHFINDER study is a *prospective*, interventional study. (PFF ¶ 394 (RX3044 (GRAIL) at 1–2).) Respondents also incorporate their responses to CCFF ¶¶ 1938–39 and 2089 herein.

2091. A case-controlled study is "a study where samples are collected from patients after they've already been diagnosed with disease." (Conroy (Exact) Tr. 1744).

Response to Finding No. 2091:

Respondents have no specific response except incorporate their responses to CCFF ¶ 1089 herein.

2092. Mr. Conroy testified that, in case-controlled studies, sensitivity is "typically significantly better because the cases that you find are typically later stage[.]" (Conroy (Exact) Tr. 1744-45).

Response to Finding No. 2092:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2089–2090, which Respondents incorporate herein.

2093. Mr. Conroy testified at trial that it is unfair to compare the sensitivity results of a prospective study to a case-control study because case-control studies almost always have higher sensitivities and typically slightly better specificities than a prospective study. (Conroy (Exact) Tr. 1745).

Response to Finding No. 2093:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2089–2090, which Respondents incorporate herein.

2094. The SOAR study has a different trial design from the Cohen study and DETECT-A. (Conroy (Exact) Tr. 1742-43).

Response to Finding No. 2094:

Respondents have no specific response except to note that the proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2095. The DETECT-A study and the SOAR study differ because the DETECT-A study only examined women in one health system. (Conroy (Exact) Tr. 1742-43).

Response to Finding No. 2095:

Respondents have no specific response.

2096. The DETECT-A study was a smaller study than SOAR. (Conroy (Exact) Tr. 1742-43).

Response to Finding No. 2096:

Respondents have no specific response.

2097. Grail is in the process of doing a prospective study in a high-risk population. (Conroy (Exact) Tr. 1743).

Response to Finding No. 2097:

The proposed finding is inaccurate, incomplete and misleading, based on testimony for which the witness lacks personal knowledge or foundation, and contradicted by the weight of the evidence. GRAIL's PATHFINDER prospective study includes a cohort containing 2,934 participants over the age of 50 without any heightened risk. (PFF ¶ 399 (Ofman (GRAIL) Tr. 3293; RX0744 (GRAIL) at 73).) Respondents note that Thrive's DETECT-A study was of 10,006 women at 65 to 75 years of age—a much higher age group that also carriers higher cancer risk than participants over the age of 50 without any heightened risk in GRAIL's PATHFINDER cohort. (RX3419 (Lennon et al., 2020) at 3.) Respondents also incorporate their responses to CCFF ¶¶ 2089–2090 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2098. Mr. Conroy testified that Grail's prospective study will have a narrower population than that of the DETECT-A study. (Conroy (Exact) Tr. 1743).

Response to Finding No. 2098:

The proposed finding is inaccurate, incomplete and misleading, based on testimony for which the witness lacks personal knowledge or foundation, and contradicted by the weight of the evidence. GRAIL's PATHFINDER prospective study of 6,662 participants over the age of 50 includes a cohort containing 2,934 participants without any heightened risk as well as a cohort of 3,695 participants with additional risk of a positive cancer result. (PFF ¶ 399 (Ofman (GRAIL) Tr. 3293; RX0744 (GRAIL) at 73).) In contrast, Thrive's DETECT-A study was of 10,006 women at 65 to 75 years of age—a single sex population at a much higher, narrower age group than GRAIL's PATHFINDER study. (RX3419 (Lennon et al., 2020) at 3.) Respondents also incorporate their responses to CCFF ¶¶ 2089–2090 and 2097 herein.

2099. [redacted] (Conroy (Exact) Tr. 1560 (*in camera*)).

Response to Finding No. 2099:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2070 and 2083 herein. Exact Sciences' 10-K itself acknowledged the risk that the FDA would not approve CancerSEEK, stating that, "[d]eveloping new or improved cancer tests is a speculative and risky endeavor", "[t]he FDA's clearance or approval pathways are likely to involve significant time, as well as additional research, development and clinical study expenditures", and "[t]here can be no guarantee that the FDA would clear or approve any future product or service we may develop." (RX3197 (Exact Sciences Corp., Form 10-K for the Period Ending 12/31/20).)

2100. [redacted] (Conroy (Exact) Tr. 1559 (*in camera*)).

Response to Finding No. 2100:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2070 herein.

2101. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 135) (*in camera*)).

Response to Finding No. 2101:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2073, which Respondents incorporate herein.

2102. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 135-36) (*in camera*)).

Response to Finding No. 2102:

The proposed finding is hearsay and should be accorded little weight. Respondents also incorporate their responses to CCFF ¶¶ 2070 and 2073 herein.

2103. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 139) (*in camera*)).

Response to Finding No. 2103:

The proposed finding is hearsay and should be accorded little weight. Respondents also incorporate their responses to CCFF ¶¶ 2070 and 2073 herein.

2104. [redacted]

[redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 140-41) (*in camera*)).

Response to Finding No. 2104:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2070 and 2075, which Respondents incorporate herein.

6. [redacted]

2105. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 87) (*in camera*)).

Response to Finding No. 2105:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1912 herein.

2106. [redacted] (PX7091 (Lengauer (Third Rock Ventures) Dep. at 87) (*in camera*)).

Response to Finding No. 2106:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1912 herein.

2107. [redacted]).

Response to Finding No. 2107:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be

given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶ 1912 herein.

2108. [redacted] (PX7110 (Conroy (Exact) Dep. at 48) (*in camera*); PX8572 (Exact) at 033 (Exact, Innovation & Technology Committee Spring Meeting Presentation, Apr. 16, 2020) (*in camera*)).

Response to Finding No. 2108:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 1912 herein.

2109. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 50-51) (*in camera*); PX7058 (Conroy (Exact) IHT at 80-82) (*in camera*)).

Response to Finding No. 2109:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 929, 1912, 1938–39 and 2070 herein.

2110. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 50-51) (*in camera*)).

Response to Finding No. 2110:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 929, 1912, 1938–39 and 2070 herein.

2111. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 88) (*in camera*)).

Response to Finding No. 2111:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 929, 1912, 1938–39 and 2070 herein.

7. Prior to Acquiring Thrive and CancerSEEK, Exact Conducted MCED Research & Development, Dating Back to 2009

2112. Exact's principal collaboration for research and development efforts is with the Mayo Clinic. (Conroy (Exact) Tr. 1536-37).

Response to Finding No. 2112:

The proposed finding is vague and misleading to the extent it suggests that the CancerSEEK study was developed with the Mayo Clinic. Respondents note that since [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 144) (*in camera*); (Conroy (Exact) Tr. 1543).

2113. The Exact-Mayo Clinic partnership started in June 2009. (Conroy (Exact) Tr. 1536-37; PX7110 (Conroy (Exact) Dep. at 10) (*in camera*)).

Response to Finding No. 2113:

Respondents have no specific response except to note that Exact still has not commercialized any MCED test nearly 12 years later. (Conroy (Exact) Tr. 1621.) Exact's collaborative effort with Mayo Clinic has resulted in the development of Exact's Cologuard product for colorectal cancer screening, which uses PCR technology, not NGS. (Conroy (Exact) Tr. 1538–42, 1597.) Respondents note that since Thrive became part of Exact, Exact has stopped developing any separate test and is incorporating biomarkers from Exact's research into CancerSEEK. (PX7051 (Lengauer (Third Rock Ventures) IHT at 144) (*in camera*); (Conroy (Exact) Tr. 1543).

2114. [redacted] (PX7110 (Conroy (Exact) Dep. at 10) (*in camera*)).

Response to Finding No. 2114:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 357–58 and 2113 herein.

2115. [redacted] (PX7110 (Conroy (Exact) Dep. at 10) (*in camera*)).

Response to Finding No. 2115:

The proposed finding is inaccurate, incomplete and misleading, including because it seems to suggest that [redacted] (PX7110 (Conroy (Exact) Dep. at 10 (emphasis added).) There is no evidence that [redacted]. Respondents have also note that Exact still has not commercialized any MCED test even 10 years after identifying these putative biomarkers. (Conroy (Exact) Tr. 1621.) Respondents note that since [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 144) (*in camera*); (Conroy (Exact) Tr. 1543).

Respondents also incorporate their responses to CCFF ¶¶ 357–58 herein.

2116. The Exact-Mayo Clinic partnership has continued for 12 years. (Conroy (Exact) Tr. 1536-37).

Response to Finding No. 2116:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2112 herein.

2117. Dr. Dave Ahlquist was a gastroenterologist at Mayo Clinic. (Conroy (Exact) Tr. 1538-39).

Response to Finding No. 2117:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2112 herein.

2118. Dr. Ahlquist participated in the Exact-Mayo Clinic partnership. (Conroy (Exact) Tr. 1539-40).

Response to Finding No. 2118:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2112 herein.

2119. Mr. Conroy explained that Dr. Ahlquist's work was integral to Exact's product development. (Conroy (Exact) Tr. 1539-41).

Response to Finding No. 2119:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2112 herein.

2120. Dr. Ahlquist conducted research for years on colon cancer screening. (Conroy (Exact) Tr. 1538-39).

Response to Finding No. 2120:

Respondents have no specific response except to note that Dr. Ahlquist only had research data demonstrating the ability to detect colon cancer and precancerous polyps accurately from a stool sample. (Conroy (Exact) Tr. 1538–40.) Respondents also incorporate their responses to CCFF ¶¶ 357–58 and 2115–16 herein.

2121. Dr. Ahlquist looked for biomarkers that could identify colon cancer early. (Conroy (Exact) Tr. 1538-39).

Response to Finding No. 2121:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2112, 2115 and 2120 herein.

2122. Dr. Ahlquist looked for these colon cancer biomarkers in stool, blood, and other patient samples. (Conroy (Exact) Tr. 1538-39).

Response to Finding No. 2122:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2112, 2115 and 2120 herein.

2123. Dr. Ahlquist's research looked at data demonstrating the ability to detect colon cancer and even precancerous polyps accurately from a stool sample. (Conroy (Exact) Tr. 1539).

Response to Finding No. 2123:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2112, 2115 and 2120 herein.

2124. In March 2009, Dr. Ahlquist told Exact CEO, Mr. Conroy, of his vision for detecting many or most cancers from a simple blood draw. (Conroy (Exact) Tr. 1539).

Response to Finding No. 2124:

Respondents have no specific response except to note that both of Exact's "core tests", Cologuard and Oncotype DX, are built on what's called a PCR technology, and they don't require next-generation sequencing." (Conroy (Exact) Tr. 1597.) Respondents also note that Exact has not commercialized any MCED test. (Conroy (Exact) Tr. 1621.) (*See also* RRFF ¶¶ 929, 1912, 1938–39). Respondents also incorporate their responses to CCFF ¶¶ 2112, 2115 and 2120 herein.

2125. Dr. Ahlquist called this vision a "pan-cancer" test, which would look for tiny fragments of cancer DNA in a patient's blood. (Conroy (Exact) Tr. 1539-40).

Response to Finding No. 2125:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2112, 2115 and 2124 herein. In addition, there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.)

2126. Dr. Ahlquist's vision for a pan-cancer test became the genesis of Exact's mission to detect cancer earlier. (Conroy (Exact) Tr. 1540).

Response to Finding No. 2126:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2112, 2115 and 2124 herein. In addition, there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.)

2127. [redacted] (PX7058 (Conroy (Exact) IHT at 53-54) (*in camera*)).

Response to Finding No. 2127:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2112, 2115 and 2124, which Respondents incorporate herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2128. [redacted] (PX7058 (Conroy (Exact) IHT at 53-54) (*in camera*)).

Response to Finding No. 2128:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2112, 2115 and 2124, which Respondents incorporate herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Exact Sciences does not have any tests that use NGS technology and Exact Sciences was not an Illumina customer until its acquisition of Thrive. (*See* Conroy (Exact Sciences) Tr. 1542–43, 1597.) [redacted] (Conroy (Exact) Tr. 1597.)

2129. [redacted] (PX7058 (Conroy (Exact) IHT at 54) (*in camera*)).

Response to Finding No. 2129:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2112, 2115 and 2124, which Respondents incorporate herein. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2130. Exact has a development partnership with City of Hope. (Conroy (Exact) Tr. 1536-37).

Response to Finding No. 2130:

Respondents have no specific response.

2131. Exact has a partnership with Johns Hopkins University. (Conroy (Exact) Tr. 1536-37).

Response to Finding No. 2131:

Respondents have no specific response.

2132. Thrive has a collaboration agreement with Johns Hopkins University and Howard Hughes Medical Institute that involves sharing research between the organizations. (PX7101 (Vogelstein (Johns Hopkins University) Dep. at 37-38)).

Response to Finding No. 2132:

Respondents have no specific response.

2133. Exact is in the process of combining CancerSEEK with Exact and Dr. Ahlquist's biomarker research to bring the best of both of those technologies together to develop the best, most accurate MCED test for physicians and patients. (Conroy (Exact) Tr. 1543).

Response to Finding No. 2133:

Respondents have no specific response except to note that the cited testimony indicates that [redacted]. (Conroy (Exact) Tr. 1543, 1717.) Respondents incorporate their responses to CCFF ¶¶ 1912, 1953, 2112, 2115 and 2124 herein.

8. Background on Exact Sciences' Oncology Start-Up Pedigree: Product Development, Regulatory Success, and Salesforce Expansion

a) Exact's Cologuard Test

2134. The first test Exact developed was Cologuard. (PX7058 (Conroy (Exact) IHT at 20)).

Response to Finding No. 2134:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

Respondents note that Exact's Cologuard product is a stool-based (not blood-based) single cancer test for colorectal cancer screening, which uses PCR technology, *not* NGS. (Conroy (Exact) Tr. 1546–47, [redacted].)

2135. Exact has screened over 6 million people with its colon cancer screening test, Cologuard. (Conroy (Exact) Tr. 1541).

Response to Finding No. 2135:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2136. Of the 6 million Cologuard patients, approximately 200,000 people found precancerous polyps and had those polyps removed. (Conroy (Exact) Tr. 1541).

Response to Finding No. 2136:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2137. Of the 6 million Cologuard patients, approximately 30,000 people have been diagnosed with early, treatable-stage colon cancer versus later stage. (Conroy (Exact) Tr. 1541).

Response to Finding No. 2137:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2138. The goal of Cologuard is "to shift detection from late stage, which is largely where colon cancer is detected today, to early stage," where it frequently can be surgically cured without chemotherapy. (Conroy (Exact) Tr. 1540).

Response to Finding No. 2138:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2139. Cologuard is an FDA-approved test. (Conroy (Exact) Tr. 1547; PX6049 (Grail) at 036 [redacted]

Response to Finding No. 2139:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2140. Cologuard was the first product for which Exact obtained FDA approval. (Conroy (Exact) Tr. 1547).

Response to Finding No. 2140:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2141. To receive FDA approval for Cologuard, Exact ran a 10,000-patient study where every patient underwent a colonoscopy, took a Cologuard test, and took a fecal immunochemical test. (Conroy (Exact) Tr. 1547-48).

Response to Finding No. 2141:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2142. In the Cologuard 10,000 patient study, Exact was able to demonstrate the accuracy of Cologuard and the relative accuracy of its fecal immunochemical ("FIT") test. (Conroy (Exact) Tr. 1547-48).

Response to Finding No. 2142:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2143. Exact submitted the data from the Cologuard study in its PMA application to the FDA. (Conroy (Exact) Tr. 1547-48).

Response to Finding No. 2143:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2144. The Cologuard 10,000 patient study took over two years to complete. (Conroy (Exact) Tr. 1547-48).

Response to Finding No. 2144:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2145. To receive FDA approval for Cologuard, Exact provided extensive information to the FDA. (Conroy (Exact) Tr. 1548).

Response to Finding No. 2145:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2134 herein.

2146. Exact was required to provide the FDA information about Cologuard's third-party suppliers. (Conroy (Exact) Tr. 1548-49).

Response to Finding No. 2146:

Respondents have no specific response except to note that [redacted] (Conroy (Exact) Tr. 1597.) Respondents incorporate their responses to CCFF ¶ 2134 herein.

2147. The FDA inspected Guardant's "key suppliers," who are "critical" to the FDA approval process. (Conroy (Exact) Tr. 1548-49).

Response to Finding No. 2147:

The proposed finding is inaccurate, incomplete and misleading, and not supported by the cited evidence. Mr. Conroy did not testify that the FDA "inspected Guardant's 'key suppliers.'" (Conroy (Exact) Tr. 1548–49.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2148. Mr. Conroy testified at trial that "key suppliers are inspected by the FDA to help ensure that the quality measures are put into place and being followed prior to FDA approval and since FDA approval." (Conroy (Exact) Tr. 1548-49).

Response to Finding No. 2148:

The proposed finding is inaccurate, incomplete and misleading to the extent it is applied to the approval of an NGS-based MCED test, rather than about [redacted], which was the subject of Mr. Conroy's testimony. Respondents also incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2149. [redacted] (PX7110 (Conroy (Exact) Dep. at 29) (*in camera*)).

Response to Finding No. 2149:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2150. [redacted] (Conroy (Exact) Tr. 1629 (*in camera*)).

Response to Finding No. 2150:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2151. [redacted] (PX7058 (Conroy (Exact) IHT at 27-28) (*in camera*)).

Response to Finding No. 2151:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2152. "[T]he American Cancer Society and the U.S. Preventive Services Task Force did include Cologuard in those screening guidelines." (PX7058 (Conroy (Exact) IHT at 21)).

Response to Finding No. 2152:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2153. In June 2016, the USPSTF issued its final guidance document which approved Cologuard. (PX7058 (Conroy (Exact) IHT at 33)).

Response to Finding No. 2153:

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2154. [redacted] (PX7058 (Conroy (Exact) IHT at 28-29) (*in camera*)).

Response to Finding No. 2154:

The proposed finding is inaccurate, incomplete and misleading to the extent it is applied to the approval of an NGS-based MCED test, rather than about [redacted], which was the subject of Mr. Conroy's testimony. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2155. [redacted] (PX7058 (Conroy (Exact) IHT at 29) (*in camera*) [redacted]

Response to Finding No. 2155:

The proposed finding is inaccurate, incomplete and misleading to the extent it is applied to the approval of an NGS-based MCED test, rather than about [redacted], which was the subject of Mr. Conroy's testimony. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2156. [redacted]

[redacted] (PX7110 (Conroy (Exact) Dep. at 60-62) (*in camera*)).

Response to Finding No. 2156:

The proposed finding is inaccurate, incomplete and misleading to the extent it is applied to the approval of an NGS-based MCED test, rather than about [redacted] which was the subject of Mr. Conroy's testimony. The proposed finding is incomplete and misleading to the extent it may seem to suggest that [redacted]. Respondents incorporate their responses to CCFF ¶¶ 2089–2090, 2134 and 2146 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2157. When Exact went through the regulatory and reimbursement process for Cologuard, it was the first time Exact had ever gone through the regulatory process. (PX7058 (Conroy (Exact) IHT at 33)).

Response to Finding No. 2157:

The proposed finding is inaccurate, incomplete and misleading to the extent it is applied to the approval of an NGS-based MCED test, rather than about Exact's PCR-based Cologuard test, which was the subject of Mr. Conroy's testimony. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2158. [redacted] (PX7110 (Conroy (Exact) Dep. at 62-63) (*in camera*)).

Response to Finding No. 2158:

The proposed finding is inaccurate, incomplete and misleading to the extent it is applied to the approval of an NGS-based MCED test, rather than about Exact's PCR-based Cologuard test, which was the subject of Mr. Conroy's testimony. Respondents also incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

2159. [redacted] (PX7058 (Conroy (Exact) IHT at 58) (*in camera*)).

Response to Finding No. 2159:

The proposed finding is inaccurate, incomplete and misleading to the extent it is applied to the approval of an NGS-based MCED test, rather than about Exact's PCR-based Cologuard test, which was the subject of Mr. Conroy's testimony. The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶¶ 2134 and 2146 herein.

b) Exact Used Multiple Consultants to Aid Its Regulatory Approval

2160. To facilitate Cologuard's FDA approval, Exact worked with many regulatory consultants and biostatisticians who know the FDA process well. (Conroy (Exact) Tr. 1549-50; *see* PX7110 (Conroy (Exact) Dep. at 26-28) (*in camera*) [redacted]).

Response to Finding No. 2160:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests GRAIL could achieve the same acceleration benefits regarding Galleri's FDA approval through the use of consultants as it could by reuniting with Illumina. GRAIL could not achieve the same

acceleration benefits by hiring additional personnel or outside consultants because the pool of individuals with such experience is limited and it can take a long time for consultants to get up to speed on the specific needs in a new area such as NGS-based liquid biopsy tests for multiple cancer types. (*See* PFF ¶¶ 1175–[redacted] (Febbo (Illumina) Tr. 4365; Qadan (Illumina) Tr. 4167–68; [redacted]), 1175.4.3 (RX6000 (Carlton Trial Dep. at 61)), 1398 (Febbo (Illumina) Tr. 4365), 1482–84 (Qadan (Illumina) Tr. 4165–68), 1654 [redacted]**.)** The same cannot be said for the FDA approval process for Cologuard; colorectal cancer screening has an established standard-of-care and obtaining FDA approval only required demonstrating Cologuard's performance in comparison to colonoscopy. (PFF ¶ 145.3 (RX3723 (USPSTF, A and B Recommendations) at 3; Cance (ACS) Tr. 606; Cote Tr. 3729–30).)

2161. [redacted] (PX7110 (Conroy (Exact) Dep. at 27) (*in camera*)).

Response to Finding No. 2161:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

2162. [redacted] (PX7110 (Conroy (Exact) Dep. at 27) (*in camera*)).

Response to Finding No. 2162:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

2163. [redacted] (PX7110 (Conroy (Exact) Dep. at 28) (*in camera*)).

Response to Finding No. 2163:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

2164. Exact's consultants helped Exact set up quality systems as part of the FDA process. (Conroy (Exact) Tr. 1549-50).

Response to Finding No. 2164:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

2165. Exact decided to use consultants for the FDA process because these consultants are experts in working with the FDA, and it is "very hard to do that just internally." (Conroy (Exact) Tr. 1550).

Response to Finding No. 2165:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

2166. At trial, Mr. Conroy pointed to Exact's use of a biostatistician consultant as "critical" to Cologuard's FDA review: "For example, our biostatistician was somebody who had been in front of 50 FDA panel meetings. And we have never been in front of a panel meeting, so getting that type of input and support and help is just critical to having a smooth working relationship with FDA." (Conroy (Exact) Tr. 1550).

Response to Finding No. 2166:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

2167. These consultants helped "accelerate" and "enable" Cologuard's FDA approval process. (Conroy (Exact) Tr. 1550).

Response to Finding No. 2167:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

2168. [redacted] (PX7110 (Conroy (Exact) Dep. at 28) (*in camera*)).

Response to Finding No. 2168:

The proposed finding is inaccurate, incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2160, which Respondents incorporate herein.

c) Exact Built its Salesforce from Scratch, Expanding as Cologuard Received Regulatory Approvals and Reimbursement Status

2169. Today, Exact is a commercial company that has teams of people who educate healthcare providers about the tests Exact offers and provides clinical testing services. (Conroy (Exact) Tr. 1532-33).

Response to Finding No. 2169:

The proposed finding is irrelevant and misleading. Exact's commercial infrastructure has no relation to whether or not Illumina can accelerate GRAIL's ability to commercialize Galleri better than Galleri could on its own. Respondents also note that [redacted] Respondents also note that Illumina has a much larger sales force than GRAIL and Illumina would be able to leverage its international presence very directly even if the sales force were separate and that Illumina's infrastructure would dramatically accelerate GRAIL's ability to bring Galleri to other markets of the world and to do that quite quickly. (*See* PFF ¶¶ 1366 (Flatley (Illumina) Tr. 4083), 1368 (Flatley (Illumina) Tr. 4087–88).)

2170. Exact has a clinical sales force. (Conroy (Exact) Tr. 1534).

Response to Finding No. 2170:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

2171. [redacted] (PX7110 (Conroy (Exact) Dep. at 41-42) (*in camera*)).

Response to Finding No. 2171:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

2172. [redacted] (PX7110 (Conroy (Exact) Dep. at 42) (*in camera*)).

Response to Finding No. 2172:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

2173. [redacted] (PX7058 (Conroy (Exact) IHT at 36-37) (*in camera*)).

Response to Finding No. 2173:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2174. [redacted] (PX7058 (Conroy (Exact) IHT at 36-37) (*in camera*)).

Response to Finding No. 2174:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2175. [redacted] (PX7058 (Conroy (Exact) IHT at 37) (*in camera*)).

Response to Finding No. 2175:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2176. [redacted] (PX7058 (Conroy (Exact) IHT at 37) (*in camera*)).

Response to Finding No. 2176:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2177. [redacted] (PX7058 (Conroy (Exact) IHT at 37) (*in camera*)).

Response to Finding No. 2177:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2178. [redacted]

Response to Finding No. 2178:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2179. [redacted]

Response to Finding No. 2179:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2180. [redacted]

Response to Finding No. 2180:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2181. [redacted]

Response to Finding No. 2181:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

2182. [redacted]

Response to Finding No. 2182:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

2183. [redacted]

Response to Finding No. 2183:

The proposed finding is irrelevant and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2169, which Respondents incorporate herein.

2184. [redacted]

Response to Finding No. 2184:

Respondents have no specific response except to note that as an executive at Exact, Mr. Conroy lacks personal knowledge to opine on what Illumina's capabilities are.

The proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents incorporate their responses to CCFF ¶ 2169 herein.

9. [redacted].

2208. [redacted]

Response to Finding No. 2208:

Respondents have no specific response.

2209. [redacted]

Response to Finding No. 2209:

Respondents have no specific response. To the extent Complaint Counsel relies on its proposed findings in CCFF ¶¶ 2226-27, Respondents incorporate their responses to those proposed findings herein.

2210. [redacted]

Response to Finding No. 2210:

The proposed finding is vague and ambiguous as to what is meant by a [redacted]

2211. [redacted]

Response to Finding No. 2211:

The proposed finding is incomplete and misleading including insofar as it suggests that Natera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

The proposed finding is also incomplete and misleading as well as contradicted by the weight of the evidence. For example, [redacted]

2212. [redacted]

Response to Finding No. 2212:

[redacted]

[redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 2211 herein.

2213. [redacted]

Response to Finding No. 2213:

[redacted]

2214. [redacted]

Response to Finding No. 2214:

Respondents have no specific response.

2215. [redacted]

Response to Finding No. 2215:

The proposed finding is misleading to the extent it suggests [redacted]

(PFF ¶ 1375.) Further, despite Respondents' document subpoena (RX5022), [redacted]

3. [redacted]

2216. [redacted]

Response to Finding No. 2216:

[redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 341, 420, 422, 613, 774–75, 792, 794, 928 and 965 herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

To the extent Complaint Counsel relies on its proposed findings in CCFF ¶¶ 2217–56, Respondents incorporate their responses to those proposed findings herein.

2217. [redacted]

Response to Finding No. 2217:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2216, which Respondents incorporate herein. Respondents also note that [redacted]

2218. [redacted]

Response to Finding No. 2218:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2216 herein.

2219. [redacted]

Response to Finding No. 2219:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17, which Respondents incorporate herein. [redacted] which contradicts Complaint Counsel's assertion that putative "MCED test developers expect to market and sell their tests to primary

care physicians or other physicians conducting annual wellness screenings." (CCFF ¶¶ 709-11, 715-17.)

2220. [redacted]

Response to Finding No. 2220:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17, which Respondents incorporate herein.

2221. [redacted]

Response to Finding No. 2221:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17, which Respondents incorporate herein.

[redacted]

2222. [redacted]

Response to Finding No. 2222:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17, which Respondents incorporate herein.

The proposed finding is also misleading to the extent it suggests that [redacted]

[redacted] (PFF ¶ 526.2.) [redacted]. ***We're not focused on asymptomatic cancer [screening] or early detection.***" (PFF ¶ 526.3.)

Further, [redacted]: [redacted] 2223. [redacted]

Response to Finding No. 2223:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17 and 2222, which Respondents incorporate herein. Respondents also note that while [redacted] may have been focused on early detection in 2015, more than 7 years ago, it clearly shifted its focus to MRD [redacted] appears to have last mentioned its efforts in early detection in 2016 and 2017. (PFF ¶ 526.2.) By November 2015, Illumina had already formed GRAIL. (*See* PFF ¶ 44.)

Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 7), and therefore should be entitled to little weight.

2224. [redacted] (PX7113 (Rabinowitz (Natera) Dep. at 266) (*in camera*)).

Response to Finding No. 2224:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17 and 2222, which Respondents incorporate herein.

[redacted] which contradicts Complaint Counsel's assertion that "MCED test developers expect to market and sell their tests to primary care physicians or other physicians conducting annual wellness screenings." (CCFF ¶¶ 709–11, 715–17).

2225. [redacted]

Response to Finding No. 2225:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17 and 2222, which Respondents incorporate herein.

2226. [redacted]

Response to Finding No. 2226:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1099, 2216–17, 2222, and 2277, which Respondents incorporate herein.

Further, [redacted] CEO has stated publicly to [redacted] investors that [redacted] technology is not something that can be used for early detection." (PFF ¶ 516.2; *see also* [redacted]) [redacted] As Complaint Counsel has contended in multiple of its proposed findings and in its post-trial brief, MRD tests are not the same as MCED tests. (*See* CCFF ¶¶ 155, 624–628, 731; CC Post-Trial Br. at 51–52, 54–55.)

2227. [redacted]

Response to Finding No. 2227:

[redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2228. [redacted]

Response to Finding No. 2228:

[redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2229. [redacted]

Response to Finding No. 2229:

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222herein.

2230. [redacted]

Response to Finding No. 2230:

Respondents have no specific response.

2231. [redacted]

Response to Finding No. 2231:

[redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2232. [redacted]

Response to Finding No. 2232:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2216–17 and 2222, which Respondents incorporate herein. The significance of this prior work is undermined by [redacted] (PFF ¶¶ 526.1–526.3.) [redacted] own public statements show that while [redacted] may have been focused on early detection around the time of its IPO, it clearly shifted its focus to MRD and has only recently turned its focus back to early detection: until its recent shift, [redacted] appears to have last mentioned its efforts in early detection in 2016 and 2017. [redacted] discussing exploring breast and ovarian cancer screening); RX3491 [redacted] at 18.

2233. [redacted]

Response to Finding No. 2233:

[redacted]

[redacted]

2234. [redacted]

Response to Finding No. 2234:

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2235. [redacted]

Response to Finding No. 2235:

Respondents have no specific response.

2236. [redacted]

Response to Finding No. 2236:

[redacted]

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2237. [redacted]

Response to Finding No. 2237:

[redacted]

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2238. [redacted]

Response to Finding No. 2238:

[redacted]

(PFF ¶ 512–13 (RX3869 (Cote Expert Report) ¶ 228; [redacted] Therefore, there is no basis for the cited testimony and it should be discounted.

[redacted], even though [redacted] was served with a subpoena by both Complaint Counsel and Respondents. (RX5022-RX5023[redacted] Nor has Complaint Counsel identified such a document. Therefore, this cited testimony should be accorded little weight.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2239. [redacted]

Response to Finding No. 2239:

[redacted]

Without having conducted any clinical trial or published the results of any study, [redacted] cannot know what the specificity and other performance metrics are of its putative MCED test. (PFF ¶ 512–13 (RX3869 (Cote Expert Report) ¶ 228; [redacted] Therefore, there is no basis for the cited testimony and it should be discounted.

[redacted], even though [redacted] was served with a subpoena by both Complaint Counsel and Respondents. (RX5022-RX5023 [redacted] Nor has Complaint Counsel identified such a document. [redacted] Therefore, this cited testimony should be accorded little weight.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also incorporate their responses to CCFF ¶¶ 2216–17 and 2222 herein.

2240. [redacted]

[redacted]

Response to Finding No. 2240:

[redacted]

Respondents also incorporate their responses to CCFF ¶¶ 2216–17, 2222 and 2236–39 herein.

4. [redacted]

2241. [redacted]

Response to Finding No. 2241:

[redacted] even though [redacted] was served with a subpoena by both Complaint Counsel and Respondents. (RX5022-RX5023 [redacted] Nor has Complaint Counsel identified such a document. Therefore, this cited testimony should be accorded little weight.

2242. [redacted]

Response to Finding No. 2242:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2210, 2216–17, 2222 and 2236–39, which Respondents incorporate herein.

2243. [redacted]

Response to Finding No. 2243:

[redacted]

As Dr. Cote explained, "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers. While there may be overlap, one still needs to go through all of the [development] steps. If . . . the test developer has made the decision that they've already undergone biomarker discovery with the assay that they have, they still need to go through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer, and then has to go through a prospective trial depending on which cancer is being targeted." (PFF ¶ 328.1.)

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2210, 2216–17, 2222 and 2236–39, which Respondents incorporate herein.

2244. [redacted]

Response to Finding No. 2244:

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2210, 2216–17, 2222 and 2236–39 herein.

2245. [redacted]

[redacted]

2246. [redacted]

Response to Finding No. 2246:

[redacted]

2247. [redacted]

Response to Finding No. 2247:

The proposed finding relates to irrelevant subject matter because [redacted] has no bearing on Natera's clinical development of its putative MCED test.

2248. [redacted]

Response to Finding No. 2248:

The proposed finding relates to irrelevant subject matter becaue it does not relate to any putative MCED test.

2249. [redacted]

Response to Finding No. 2249:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF CCFF ¶¶ 2210, 2216–17, 2222, 2236–39 and 2244, which Respondents incorporate herein. Respondents also note that to the extent the proposed finding and CCFF ¶ 2248 suggest that [redacted]

5. [redacted]

2250. [redacted]

Response to Finding No. 2250:

[redacted]

2251. [redacted]

Response to Finding No. 2251:

Respondents have no specific response.

2252. [redacted]

Response to Finding No. 2252:

Respondents have no specific response.

2253. [redacted]

Response to Finding No. 2253:

Respondents have no specific response.

2254. [redacted]

Response to Finding No. 2254:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2210, 2216–17, 2222, 2236–39 and 2244, which Respondents incorporate herein.

2255. [redacted]

Response to Finding No. 2255:

The proposed finding is incomplete and misleading as well as contradicted by the weight of the evidence. *First*, [redacted].

[redacted]

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2210, 2216–17, 2222, 2236–39 and 2244, which Respondents incorporate herein.

2256. [redacted]

Response to Finding No. 2256:

[redacted]

[redacted]. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." . (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.) Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

6. [redacted]

C. GUARDANT HEALTH IS DEVELOPING AN MCED TEST CALLED LUNAR-2

1. Guardant Is An Established Oncology Test Developer

2257. Guardant—a publicly traded company—is headquartered in Redwood City, California. (PX0059 (Guardant) at 001 (Guardant Health FY 2019 Form 10-K)).

Response to Finding No. 2257:

Respondents have no specific response.

2258. Guardant is a clinical diagnostics company that is currently developing blood-based tests for oncology applications. (Chudova (Guardant) Tr. 1135).

Response to Finding No. 2258:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. Today, Guardant commercially offers only therapy selection tests and MRD tests, and is developing a single-cancer screening test focused on colorectal cancer. (PFF ¶ 486–92.)

2259. Guardant's mission is "to conquer cancer with data." (Getty (Guardant) Tr. 2488).

Response to Finding No. 2259:

Respondents have no specific response, except to note that the proposed finding relates to irrelevant subject matter.

2260. Guardant's R&D efforts include three oncology related clinical applications: a therapy selection test, a minimal residual disease test, and a cancer screening test. (Chudova (Guardant)Tr. 1138-39). These three applications span the different phases of a cancer diagnosis, from an undiagnosed patient to patients currently undergoing various stages of treatment. (Chudova (Guardant) Tr. 1138-39).

Response to Finding No. 2260:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. The cited testimony provides no relevant information as to the stage of development of each of the purported R&D efforts. According to Dr. Chudova's testimony, only Guardant's therapy selection test and minimal residual disease test are commercially available. (Chudova (Guardant) Tr. 1146–47.) The cited testimony provides no relevant information about

the development of Guardant's purported MCED test, and therefore, no relevant information about whether Guardant is presently a credible rival of GRAIL or is likely to become one in the foreseeable future.

2261. Guardant's flagship product, Guardant360, is a therapy selection test that helps clinicians choose the appropriate treatment for patients diagnosed with cancer based on an analysis of a blood sample. (Chudova (Guardant) Tr. 1146-47).

Response to Finding No. 2261:

Respondents have no specific response, except to note that the proposed finding relates to irrelevant subject matter because it concerns therapy selection tests, which are not multicancer screening tests.

2262. Guardant obtained breakthrough device status for Guardant 360 CDx on January 29, 2018. (PX8316 (Guardant) at 001 (Summary of Safety and Effectiveness Data (SSED), Dec. 21, 2020)).

Response to Finding No. 2262:

Respondents have no specific response, except to note that [redacted] This proposed finding also relates to irrelevant subject matter because it concerns therapy selection tests, which are not multicancer screening tests.

2263. [redacted] (*See* PX2046 (Illumina) (Email from P. Febbo, Illumina, to J. Leite, Illumina, et al, discussing Guardant 360 CDx FDA approval Cowen Press Release, Aug. 10, 2020) (*in camera*); RX3299 (FDA, Guardant360 CDx – P200010, https://www.fda.gov/medical-devices/recently-approved-devices/guardant360-cdx-p200010 (last visited Feb. 10, 2022)); PX7045 (Chudova (Guardant) IHT at 17-18)).

Response to Finding No. 2263:

Respondents have no specific response, except to note that the proposed finding relates to irrelevant subject matter because it concerns therapy selection tests, which are not multicancer screening tests.

2264. Guardant's therapy selection oncology application helps identify biomarkers that can be used to match cancer patients with relevant treatment options. (Chudova (Guardant) Tr. 1138-39).

Response to Finding No. 2264:

Respondents have no specific response, except to note that the proposed finding relates to irrelevant subject matter because it concerns therapy selection tests, which are not multicancer screening tests.

2265. LUNAR-1 is currently in clinical trials to obtain FDA approval. (PX7045 (Chudova (Guardant) IHT at 68-69)).

Response to Finding No. 2265:

Respondents have no specific response except to note that the proposed finding relates to irrelevant subject matter insofar as it concerns LUNAR-1, which is a minimal residual disease test, which is not a multicancer screening test.

2266. [redacted] (PX7040 (Getty (Guardant) IHT at 114) (*in camera*)).

Response to Finding No. 2266:

Respondents have no specific response except to note that the proposed finding relates to irrelevant subject matter because Guardant Reveal is "designed to detect minimal residual disease in colorectal cancer patients", and is not an MCED. (Chudova (Guardant) Tr. 1147.) Further, the proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine and should therefore be given no weight. (See Resps.' Post-Trial Br. at 275–76.)

2267. Dr. Chudova testified that Guardant plans to extend Guardant Reveal to detect additional cancers beyond colorectal and will launch a new version of the test with additional cancers shortly. (Chudova (Guardant) Tr. 1152).

Response to Finding No. 2267:

Respondents have no specific response except to note that the proposed finding relates to irrelevant subject matter because Guardant Reveal is not an MCED test: As Dr. Chudova notes, "[i]n the space of minimal residual disease or the Guardant Reveal test, the clinical setting is different" than that of an MCED. (Chudova (Guardant) Tr. 1150–51.)

2268. Guardant is developing early-stage cancer screening products with a current focus on screening for colorectal cancer. (PX7045 (Chudova (Guardant) IHT at 17-19)).

Response to Finding No. 2268:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

The proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2269. At trial, Dr. Chudova described Guardant's development of a cancer screening test as a "big area of development at the moment" for the company. (Chudova (Guardant) Tr. 1152).

Response to Finding No. 2269:

Respondents have no specific response, except to state that the cited testimony confirms that Guardant's cancer screening test is merely "in development" and has not advanced sufficiently to show that Guardant is currently a credible rival for GRAIL or will be in the foreseeable future. (*See* PFF ¶¶ 476–85.)

2270. Each of Guardant's clinical tests in development uses NGS sequencing in its workflow. (Chudova (Guardant) Tr. 1139-40).

Response to Finding No. 2270:

The proposed finding is inaccurate, incomplete and misleading, including because it appears to suggest that an NGS platform is required for Guardant's putative development of cancer screening tests. To the contrary, many test developers are pursuing cancer screening tests for multiple cancers using other analytes. For example, StageZero's Aristotle test is a microarray-based liquid biopsy test that interrogates mRNA to detect 10 cancers and Genesys Biolabs' OneTest is a proteomics-based test that measures seven cancer protein biomarkers to screen for lung, liver, pancreatic, ovarian, prostate and colon cancers. (*See* PFF ¶¶ 691–696.) Protein biomarkers have also been used for many years for early stage cancer detection and screening. (*See* PFF ¶¶ 155–157.) An increasing number of companies are developing "multi-omic" tests which combine information from multiple analytes, including DNA (genome), RNA (transcriptome) and protein (proteome) for increased sensitivity in cancer detection. (*See* PFF ¶¶ 169–169.3.) Respondents incorporate their responses to CCFF ¶ 344 herein.

2271. Illumina is Guardant's sole supplier of sequencer instruments and the sole supplier of repair services for Guardant's sequencer instruments. (Getty (Guardant) Tr. 2683).

Response to Finding No. 2271:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that only Illumina's sequencers and core consumables are suitable for Guardant's tests including its putative MCED test in development. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶¶ 341, 927–28, 940, 971, 980, 1115 and 1118 herein.

[redacted]

[redacted]

2. Guardant Is Developing an MCED Test Called LUNAR-2

2272. Guardant has spent several years developing a cancer screening test based on the technological platform used for its Guardant Reveal MRD test. (Chudova (Guardant) Tr. at 1152).

Response to Finding No. 2272:

Respondents note that the proposed finding is misleading to the extent that it implies the development of Guardant's cancer screening test is somehow complete. Dr. Chudova testified that "we're also working for a number of years now on extending that same technology platform . . . and that's another big area of development at the moment". (Chudova (Guardant) Tr. 1152 (emphasis added).) In particular, [redacted] (PFF ¶ 473; Chudova (Guardant) Tr. 1240, 1249; Getty (Guardant) Tr. 2580–82; RX3869 (Cote Expert Report) ¶ 201.).) Therefore, it has taken about [redacted] (PFF ¶ 474; RX3869 (Cote Expert Report) ¶ 201.)

2273. [redacted] (Getty, Tr. 2493-94; PX7100 (Chudova (Guardant) Dep. at 15-16); PX7045 (Chudova (Guardant) IHT at 17-19)).

Response to Finding No. 2273:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future.

[redacted]

Guardant produced no data or publications for cancer signal of origin, has no publications on cancer screening beyond colorectal cancer screening, has no cancer screening studies registered at *clinicaltrials.gov* beyond colorectal and lung cancer, [redacted]

[redacted]

Accordingly, there is no evidence that Guardant will launch in the foreseeable future a cancer screening test that is a close substitute to the Galleri test. (PFF ¶¶ 476–92.) Respondents also incorporate PFF ¶¶ 476–92 and their responses to CCFF ¶¶ 426–438, 611, 684, 927 and 1231 herein.

Respondents also note that the proposed finding relies in part on IH testimony, which Respondents had no opportunity to cross examine, and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2274. [redacted] (PX7105 (Getty (Guardant) Dep. at 13-14) (*in camera*)).

Response to Finding No. 2274:

The proposed finding is contradicted by the weight of the evidence. In the same cited deposition, [redacted] In addition, there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.) Therefore, test development for a multi-cancer screening test cannot proceed as Mr. Getty suggests: full biomarker discovery is

required to identify a panel of biomarkers for each new cancer to ensure the accuracy, specificity and sensitivity needed for an early cancer screening test. (PFF ¶ 309; Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 106; *see also* Aravanis (Illumina) Tr. 1883, 1896–98.)

The proposed finding is also misleading to the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." . (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.) To add new cancer types to an existing test is the same as if the test developer is starting over with a new test.

Respondents also incorporate their responses to CCFF ¶¶ 405 and 2273 herein.

2275. [redacted]
(Chudova (Guardant) Tr. 1243 (*in camera*)).

Response to Finding No. 2275:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, which Respondents incorporate herein.

[redacted]

[redacted]

Respondents also note that Guardant has not yet finalized which biomarkers it will analyze as part of its putative MCED test, [redacted]

Respondents also incorporate their responses to CCFF ¶ 427 herein.

2276. [redacted]
(Chudova (Guardant) Tr. 1243 (*in camera*)).

Response to Finding No. 2276:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2275, which Respondents incorporate herein. [redacted]

[redacted] (Chudova (Guardant) Tr. 1270.)

The cited testimony also confirms that [redacted]

2277. Dr. Chudova testified at trial that she is "focused on developing technology that could be used for detection of multiple cancer indications or precancer indications, any cancer." (Chudova (Guardant) Tr. 1179).

Response to Finding No. 2277:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2278, which Respondents incorporate herein. Respondents also note that Dr. Chudova also testified that Guardant's "clinical trial for colorectal cancer and the product for colorectal cancer is in the most advanced phase" (Chudova (Guardant) Tr. 1179); [redacted]; Chudova (Guardant) Tr. 1154; [redacted]).

2278. Guardant's cancer screening test is suitable for multiple cancer types. (Chudova (Guardant) Tr. 1179).

Response to Finding No. 2278:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277, which Respondents incorporate herein.

Further, the cited evidence does not support the proposed finding. Dr. Chudova claimed, without support, that "***the platform technology***" that Guardant has developed is suitable for multiple cancer types. (Chudova (Guardant) Tr. 1179 (emphasis added).) Neither Guardant's representatives nor Complaint Counsel have cited any evidence to suggest that Guardant has an operational cancer screening test, nor that it has been analytically or clinically validated to detect multiple types of cancer.

To the contrary, [redacted]

[redacted]

2279. Guardant's business strategy involves first creating a colorectal cancer ("CRC") test that will be rapidly adopted, then moving to a multi-cancer phase. (Getty (Guardant) Tr. 2495-96; *see* Chudova (Guardant) Tr. 1153-54 (stating that the initial version of Guardant's cancer screening test will screen for colorectal cancer)).

Response to Finding No. 2279:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein. Respondents also note that Guardant's purported "business strategy" is untested because only the CRC indication is undergoing clinical trials at this time (*i.e.*, the Eclipse trial).

2280. Dr. Chudova testified that the benefit of prioritizing cancers with existing screening modalities is that "clinically it's established that screening for those indications is beneficial for the patients." (Chudova (Guardant) Tr. 1153-54).

Response to Finding No. 2280:

Respondents have no specific response except to note that the cited testimony confirms that GRAIL and Guardant are taking distinct approaches, suggesting that if Guardant's test comes to market, it will be a complement to GRAIL's Galleri test, rather than a substitute. Respondents also note that [redacted]

[redacted] Respondents also incorporate their responses to ¶¶ 2273–74 and 2277–78 herein.

2281. [redacted] (PX7090 (Sood (Guardant) Dep. at 108) (*in camera*)).

Response to Finding No. 2281:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein. Respondents have no specific response, except to note that the cited testimony confirms the fact that [redacted] (Getty (Guardant) Tr. 2593, 2599; Chudova (Guardant) Tr. 1154, 1240.)

2282. For its MCED test, Guardant is initially focusing on cancers with existing screening modalities—including colorectal, lung, and breast cancer. (Chudova (Guardant) Tr. 1153-54; Getty (Guardant) Tr. 2499).

Response to Finding No. 2282:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2280–81, which Respondents incorporate herein.

2283. Dr. Chudova testified at trial that the benefits of prioritizing cancers with existing screening modalities is "clinically it's established that screening for those indications is beneficial for the patients." (Chudova (Guardant) Tr. 1153-54).

Response to Finding No. 2283:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2280–81, which Respondents incorporate herein.

2284. As Mr. Getty explained, starting with CRC makes "it a little bit easier to bring a test to market in a faster fashion," and Guardant's strategy of "pursuing a singular tumor and then adding on tumors is just a little bit of a different view of the same coin that Grail has." (PX7105 (Getty (Guardant) Dep. at 238)).

Response to Finding No. 2284:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2279, which Respondents incorporate herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2285. [redacted] (PX8503 (Guardant) at 066 [redacted] (*in camera*)).

Response to Finding No. 2285:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

[redacted]

[redacted]

Further, Guardant's proposed approach means that Guardant's test will not be a potential substitute to Galleri in the foreseeable future, given that Guardant will need to start anew to add additional cancer types to its colorectal cancer screening test in development. [redacted]

2286. [redacted] (Getty (Guardant) Tr. 2565-66, 2569-70 (*in camera*)).

Response to Finding No. 2286:

Respondents have no specific response except to note that the cited testimony confirms that Guardant and GRAIL are adopting different approaches, suggesting that if Guardant's test comes to market, it will be a complement to GRAIL's Galleri test, rather than a substitute.

Respondents also note that there is typically a tradeoff between specificity and sensitivity. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) Given the same conditions, a test applying cutoff thresholds that minimizes false positives, *i.e.*, higher specificity, may often have

a lower sensitivity than a test that results in a higher false positive rate. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).)

Despite Guardant's purported focus on sensitivity, however, Respondents also note that, In contrast, Galleri's current sensitivity rate for version 2 of its test (which is the version that is available as an LDT) is 51.5% for all cancer types across stages. (PFF ¶ 335.)

2287. Guardant plans to initiate MCED test clinical trials in the near future. (Getty (Guardant) Tr. 2497).

Response to Finding No. 2287:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

Respondents also note that the cited testimony confirms the fact that (Getty (Guardant) Tr. 2593, 2599; Chudova (Guardant) Tr. 1154, 1240.)

2288. Guardant's primary customer for its MCED test will be the primary care physician, including OB/GYN physicians who function as the primary caregiver for women. (Getty (Guardant) Tr. 2502).

Response to Finding No. 2288:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2285, which Respondents incorporate herein.

2289. The initial version of Guardant's cancer screening test will screen for colorectal cancer ("CRC"). (Chudova (Guardant) Tr. 1153-54).

Response to Finding No. 2289:

Respondents have no specific response, except to note that the cited testimony confirms that Guardant's current test is a single-cancer, CRC-only test. Respondents also incorporate their responses to CCFF ¶¶ 2273–74 and 2277–78 herein.

2290. Guardant's business strategy involves first creating a CRC test that will be rapidly adopted, then moving to a multi-cancer phase. (Getty (Guardant) Tr. 2495-96).

Response to Finding No. 2290:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2285, which Respondents incorporate herein.

Respondents also note that the cited source also observes that Guardant has not yet commenced a clinical trial for any additional cancer types beyond CRC. (Getty (Guardant) Tr. 2593.)

2291. [redacted] (Getty (Guardant) Tr. 2625 (*in camera*)).

Response to Finding No. 2291:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2285, which Respondents incorporate herein.

Respondents also note that the cited testimony confirms that Guardant's current test is a single-cancer, CRC-only test.

2292. [redacted] (PX7100 (Chudova (Guardant) Dep. at 22-23) (*in camera*)).

Response to Finding No. 2292:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

Respondents note that Guardant's 10-K warned its investors that "[t]here is no guarantee that the FDA will grant 510(k) clearance or a premarket approval of our products", that [t]he process of obtaining a PMA is a rigorous, costly, lengthy and uncertain process", and "[t]he FDA can delay, limit or delay clearance or approval of a device or approval of a device for many reasons". (PX0060 (Guardant) at 40.) Respondents also note that the cited testimony merely confirms the uncertain future of Guardant's potential MCED test: the high prevalence of CRC circulating tumor DNA in the bloodstream may make CRC easier to detect than other cancers. Accordingly, Guardant's ability to "add" more cancers to its test is highly contingent and uncertain.

2293. Guardant is currently conducting a clinical trial—called Eclipse—on the use of its screening test for colorectal cancer. (Chudova (Guardant) Tr. 1154-55).

Response to Finding No. 2293:

Respondents have no specific response, except to note that the proposed finding is evidence that [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2273–74 and 2277–78 herein.

2294. [redacted] (PX7040 (Getty (Guardant) IHT at 149) (*in camera*)).

Response to Finding No. 2294:

Respondents have no specific response except to note that Guardant's 10-K warned its investors that "[t]here is no guarantee that the FDA will grant 510(k) clearance or a premarket approval of our products", that [t]he process of obtaining a PMA is a rigorous, costly, lengthy and uncertain process", and "[t]he FDA can delay, limit or delay clearance or approval of a device or approval of a device for many reasons". (PX0060 (Guardant) at 40.) Respondents also note that the cited testimony confirms that [redacted] Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine, it should be given no weight. Respondents also incorporate their responses to CCFF ¶¶ 2273–74 and 2277–78 herein.

a) Guardant's MCED Test Is Based off the Technological Platform Used with Guardant Reveal

2295. Guardant has spent several years developing its cancer screening test based on the technological platform used with its MRD test. (Chudova (Guardant) Tr. 1152).

Response to Finding No. 2295:

Respondents have no specific response, except to note that the several years of development resulted only in a single-cancer, CRC-only test. Respondents also incorporate their responses to CCFF ¶¶ 2272–74 and 2277–78 herein.

2296. [redacted] (PX7100 (Chudova (Guardant) Dep. at 23-24) (*in camera*)).

Response to Finding No. 2296:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

Respondents have no specific response, except to note that the proposed finding is evidence of the fact that Guardant does not yet have a multicancer screening test; that Guardant's current test is a single-cancer, CRC-only test. In addition, there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.) Therefore, test development for a multi-cancer screening test cannot proceed as Dr. Chudova suggests: full biomarker discovery is required to identify a panel of biomarkers for each new cancer to ensure the accuracy, specificity and sensitivity needed for an early cancer screening test. (PFF ¶ 309; Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 106; *see also* Aravanis (Illumina) Tr. 1883, 1896–98.) To add new cancer types to an existing test is the same as if the test developer is starting over with a new test.

2297. [redacted] (Getty (Guardant) Tr. 2628 (*in camera*)).

Response to Finding No. 2297:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 435, 2273–74 and 2277–78, which Respondents incorporate herein.

[redacted]

[redacted]

2298. As Dr. Chudova explained, for LUNAR-2, "The platform in its foundation doesn't have anything specific for an individual cancer types other than the selection of the regions of the genomes that are most representative for that specific cancer. But that's a minor aspect of the technology, and it can be adapted to other cancer types." (PX7100 (Chudova (Guardant) Dep. at 24)).

Response to Finding No. 2298:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2296, which Respondents incorporate herein.

[redacted]

2299. [redacted] (PX7105 (Getty (Guardant) Dep. at 132-33) (*in camera*)).

Response to Finding No. 2299:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2296, which Respondents incorporate herein.

Respondents note that there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.) [redacted]

2300. Dr. Chudova testified that "Guardant has active plans to apply technology that we've developed for colorectal cancer to . . . multi-cancer screening context that involves cancers other than colorectal cancer." (PX7100 (Chudova (Guardant) Dep. at 23-24)).

Response to Finding No. 2300:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78, 2285 and 2296, which Respondents incorporate herein.

Respondents also note that the cited testimony confirms that Guardant has not yet ***actually*** translated its technology to a clinically-validated test for the detection of multiple cancers.

2301. [redacted] (PX7045 (Chudova (Guardant) IHT at 100) (*in camera*)).

Response to Finding No. 2301:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2296, which Respondents incorporate herein.

Respondents also note that the cited testimony confirms that [redacted]

2302. [redacted] (PX7100 (Chudova (Guardant) Dep. at 107) (*in camera*)).

Response to Finding No. 2302:

[redacted]

2303. [redacted] (PX7100 (Chudova (Guardant) Dep. at 139) (*in camera*)).

Response to Finding No. 2303:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

[redacted]

2304. [redacted] (PX7105 (Getty (Guardant) Dep. at 199-200) (*in camera*)).

Response to Finding No. 2304:

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. Mr. Getty is not a physician and has no knowledge as to how primary care physicians will choose among putative MCED test providers. The proposed finding also

relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

The proposed finding is also incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶ 699.

b) [redacted]

2305. [redacted] (PX7105 (Getty (Guardant) Dep. at 23); Chudova Tr. 1199-1200 (*in camera*); *see also* PX7100 (Chudova (Guardant) Dep. at 23-24, 147-48) (*in camera*)).

Response to Finding No. 2305:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2296, which Respondents incorporate herein.

[redacted]

2306. [redacted]

[redacted]
(Chudova (Guardant) Tr. 1200 (*in camera*)).

Response to Finding No. 2306:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2296, which Respondents incorporate herein. **Further,** [redacted]

2307. [redacted]
(Chudova (Guardant) Tr. 1201 (*in camera*)).

Response to Finding No. 2307:

The proposed finding is inaccurate, incomplete and misleading as well as contradicted by the weight of the evidence. [redacted] The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

2308. [redacted]

(PX8503 (Guardant) at 066 [redacted]

Response to Finding No. 2308:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2285, which Respondents incorporate herein.

2309. [redacted]
(PX8503 (Guardant) at 066 [redacted] (*in camera*)).

Response to Finding No. 2309:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2285, which Respondents incorporate herein.

Respondents also note that there is typically a tradeoff between specificity and sensitivity. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) Given the same conditions, a test applying cutoff thresholds that minimizes false positives, *i.e.*, higher specificity, may often have a lower sensitivity than a test that results in a higher false positive rate. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) [redacted]

Despite Guardant's purported focus on sensitivity, however, Respondents also note that, [redacted] In contrast, Galleri's current sensitivity rate for version 2 of its test (which is the version that is available as an LDT) is 51.5% for all cancer types across stages. (PFF ¶ 335.)

Further, [redacted]

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 64), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2310. [redacted] (Getty (Guardant) Tr. 2533, 2537 (*in camera*)).

Response to Finding No. 2310:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein. Respondents also note that the proposed finding is evidence of differentiation between Guardant's proposed MCED test and GRAIL's Galleri test, suggesting that if Guardant's test comes to market, it will be a complement to GRAIL's Galleri test, rather than a substitute.

[redacted]

2311. [redacted] (Getty (Guardant) Tr. 2533-34 (*in camera*)).

Response to Finding No. 2311:

Respondents have no specific response.

2312. [redacted] (Chudova (Guardant) Tr. 1309-10 (*in camera*)).

Response to Finding No. 2312:

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

[redacted]

[redacted]

2313. [redacted] (Chudova (Guardant) Tr. 1309-11 (*in camera*)).

Response to Finding No. 2313:

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

[redacted]

[redacted]

2314. [redacted] (Chudova (Guardant) Tr. 1200-01 (*in camera*)).

Response to Finding No. 2314:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2296, which Respondents incorporate herein. [redacted]

2315. [redacted] (Chudova (Guardant) Tr. 1205 (*in camera*)).

Response to Finding No. 2315:

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein.

The proposed finding is incomplete and misleading. [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 429 herein.

2316. [redacted] (PX7100 (Chudova (Guardant) Dep. at 150-51) (*in camera*)).

Response to Finding No. 2316:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2315, which Respondents incorporate herein.

Further, [redacted]

[redacted]

2317. Dr. Chudova testified at trial that Guardant's products "have been generating development data to [] date that suggests that [Guardant] will have a decent chance in being successful in this very, very complicated endeavor" of developing a cancer screening test. (Chudova (Guardant) Tr. 1154-55).

Response to Finding No. 2317:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein. Respondents also note that Dr. Chudova's testimony confirms that Guardant has not generated sufficient external-facing, validated data—the kind of data required even to launch an LDT and that is acceptable to regulators and payors—to suggest it is likely to succeed; rather it has generated internal data indicative of only a "decent chance" of success. The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. Dr. Chudova cannot know that Guardant "will be successful" given Guardant's current state of development.

[redacted]

[redacted]

3. [redacted]

2318. [redacted] (Getty (Guardant) Tr. 2529 (*in camera*); PX7040 (Getty (Guardant) IHT at 149) (*in camera*)).

Response to Finding No. 2318:

Respondents have no specific response, except to note that the cited testimony confirms that Guardant plans to introduce a single-cancer screening test to the market. The cited testimony says nothing about Guardant's proposed MCED. Moreover the timing of this introduction remains uncertain in light of contradictory statements from Guardant's personnel and ordinary course documents. (*See, e.g.*, RRFF ¶ 2321.) Respondents also note that the cited testimony confirms [redacted]

Respondents also note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2319. [redacted] (PX8503 (Guardant) at 065 (*in camera*)); *see* PX7100 (Chudova (Guardant) Dep. at 137-38) (*in camera*)) [redacted]).

Response to Finding No. 2319:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2285, which Respondents incorporate herein.

The proposed finding is incomplete and misleading as well as contradicted by the weight of the evidence. [redacted]

Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 64), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2320. [redacted] (*in camera*)).

Response to Finding No. 2320:

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 59), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

Respondents have no further, specific response, except to note that the proposed finding is evidence that [redacted]

Accordingly, the cited testimony confirms that GRAIL and Guardant are taking distinct approaches, suggesting that if Guardant's test ultimately comes to market, it will be a complement to GRAIL's Galleri test, rather than a substitute. Respondents also incorporate their responses to CCFF ¶ 2318 herein.

2321. [redacted] (Getty (Guardant) Tr. 2505, 2529 (*in camera*)).

Response to Finding No. 2321:

Respondents have no specific response, except to note that the cited testimony confirms that Guardant plans to introduce a single-cancer screening test to the market. The cited testimony says nothing about Guardant's proposed MCED. Moreover the timing of this introduction remains uncertain in light of contradictory statements from Guardant's personnel and ordinary course documents. (*See, e.g.*, RRFF ¶ 2318.)

2322. [redacted] (PX8309 (Guardant) at 016 [redacted] (*in camera*)).

Response to Finding No. 2322:

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein. Respondents also note that the proposed finding indicates that Guardant's best case projection does not suggest that Guardant is likely to receive approval for, let alone apply for approval of, its hypothetical MCED in the reasonably foreseeable future.

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 59), and therefore, the

document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2323. [redacted] (Chudova (Guardant) Tr. 1206 (*in camera*)).

Response to Finding No. 2323:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶ 2278 herein.

2324. [redacted] (Chudova (Guardant) Tr. 1202 (*in camera*)).

Response to Finding No. 2324:

The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74, 2277–78 and 2302, which Respondents incorporate herein. Further, [redacted]

Respondents note, however, that there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.)

4. Guardant Is Committed to Improving Its MCED Test Over Time

2325. [redacted] (Getty (Guardant) Tr. 2537-38 (*in camera*)).

Response to Finding No. 2325:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2273–74 and 2277–78, which Respondents incorporate herein. Further, there is no indication based on Guardant's work to date that [redacted]

2326. [redacted] (Getty (Guardant) Tr. 2539-40 (*in camera*)).

Response to Finding No. 2326:

Respondents have no specific response, except to note that the proposed finding is evidence that potential participants in the purported MCED market recognize the potential for differentiation as among putative MCED tests, resulting in the various offerings acting as complements to each other, rather than substitutes. Respondents also incorporate their responses to CCFF ¶¶ 2273–74 and 2277–78 herein.

2327. [redacted] (Getty (Guardant) Tr. 2540 (*in camera*)).

Response to Finding No. 2327:

Respondents have no specific response except to note that all agree that accelerating the adoption of a cancer screening test with save lives, the unrefuted evidence shows that reuniting Illumina and GRAIL will accelerate the adoption of the Galleri test. (PFF ¶¶ 476 (RX3869 (Cote Expert Report) ¶ 203), 1117.2-17.3 (*see e.g.* Conroy (Exact/Thrive) Tr. 1739; Chahine (Helio) Tr. 1132–33; [redacted] Fiedler (FMI) Tr. 4474; deSouza (Illumina) Tr. 2411; [redacted]

2328. Continually improving the performance of an MCED test will "catch more early stage disease" before it becomes aggressive and spreads, as well as "save [patients] the mental anguish of telling them they have a disease" when they do not. (PX7105 (Getty (Guardant) Dep. at 29-30)).

Response to Finding No. 2328:

Respondents have no specific response, except to note that the proposed finding supports the Respondents' arguments regarding GRAIL's lifesaving potential and incorporate their responses to CCFF ¶ 2327 herein.

2329. [redacted] (Getty, Tr. 2540 (*in camera*); PX7090 (Sood (Guardant) Dep. at 108); PX7100 (Chudova (Guardant) Dep. at 27)).

Response to Finding No. 2329:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 433, 2273–74 and 2277–78, which Respondents incorporate herein. Further, there is no

indication based on Guardant's work to date that [redacted] (PFF ¶¶ 476–92.)

2330. [redacted] (Getty (Guardant) Tr. 2540 (*in camera*)).

Response to Finding No. 2330:

Respondents have no specific response, except to note that there is typically a tradeoff between specificity and sensitivity. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) [redacted] Given the same conditions, a test applying cutoff thresholds that minimizes false positives, *i.e.*, higher specificity, may often have a lower sensitivity than a test that results in a higher false positive rate. (PFF ¶ 180 (RX3869 (Cote Expert Report) ¶ 95).) [redacted]

Despite Guardant's purported focus on sensitivity, however, Respondents also note that, [redacted]

[redacted] In contrast, Galleri's current sensitivity rate for version 2 of its test (which is the version that is available as an LDT) is 51.5% for all cancer types across stages. (PFF ¶ 335.)

2331. Mr. Getty testified regarding his expectation that a distributed model of cancer screening tests will be "important" and "oftentimes the preferred mode in certain markets, for certain customers." (PX7040 (Getty (Guardant) IHT at 162-163); *see* PX7105 (Getty (Guardant) Dep. at 246) (testifying a distributed model for its MCED test is "certainly something that we would have to explore at some point if the market conditions effectively pushed us in that direction.")).

Response to Finding No. 2331:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

[redacted]

The proposed finding is also misleading to the extent it implies that a distributed IVD model will be part of the pipeline in the foreseeable future for any putative MCED test. GRAIL has not expressed any intent to pursue a distributed IVD kit. (PFF ¶ 1417 (Goswami (Illumina) Tr. 3273).) Several features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) ¶ 359.) The test developer's decision whether to proceed with an

IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.)

2332. Mr. Getty explained that Guardant "would need to work with Illumina" in order to obtain FDA approval to sell Guardant's MCED test as a distributed IVD test. (Getty (Guardant) Tr. 2689).

Response to Finding No. 2332:

The proposed finding is incomplete and misleading. *First*, as Ms. Berry testified, Illumina's role in test developers' obtaining regulatory approval is quite limited: Beyond supplying standard documentation about the sequencing technologies that a customer is using, Illumina does not provide any support to its customers in obtaining regulatory approval. (Berry (Illumina) Tr. 847–49.) *Second*, Illumina's Open Offer specifically addresses any concerns related to IVD development and documentation. For example, under the Open Offer, Illumina may not withhold support of documentation and information for FDA approval, even from a customer who is a cancer screening competitor. (Berry (Illumina) Tr. 914–16.) *See generally* PFF ¶ 1026–35. In addition, as noted, there is no indication based on Guardant's work to date that [redacted]. (*See* RRFF ¶¶ 2273–74 and 2277–78). *Third,* the proposed finding is misleading to the extent it implies that a distributed IVD model will be part of the pipeline in the foreseeable future for any putative MCED test. GRAIL has not expressed any intent to pursue a distributed IVD kit. (PFF ¶ 1417 (Goswami (Illumina) Tr. 3273).) Several features of sequencing instruments and pipeline multi-cancer

screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) ¶ 359.) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.) Respondents also incorporate their response to CCFF ¶ 2965 herein.

5. [redacted]

2333. [redacted]

Response to Finding No. 2333:

Respondents have no specific response, except to note that the proposed finding is evidence that [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2273–74 and 2277–78 herein.

2334. [redacted] (Chudova (Guardant) Tr. 1156; PX7100 (Chudova (Guardant) Dep. at 127-28) (*in camera*)).

Response to Finding No. 2334:

The proposed finding is incomplete and misleading. The ECLIPSE clinical trial's stated purpose is exclusively to clinically validate the LUNAR-2 colorectal cancer assay. (Chudova (Guardant) Tr. 1155.) There is no evidence to suggest an alternative purpose for the ECLIPSE data. Respondents also incorporate their responses to CCFF ¶¶ 2273–74 and 2277–78 herein.

2335. [redacted] (PX7100 (Chudova (Guardant) Dep. at 31-32, 131) (*in camera*)).

Response to Finding No. 2335:

The proposed finding is incomplete and misleading. [redacted]

2336. [redacted]

Response to Finding No. 2336:

The proposed finding is inaccurate and misleading because the cited testimony only states that Guardant plans to complete "enrollment" by 2022, not the trial itself. (Chudova (Guardant) Tr. 1154–55). [redacted]

2337. [redacted]

Response to Finding No. 2337:

Respondents have no specific response except to note that Guardant does not have a final enrollment for the ECLIPSE trial. (*See* Chudova (Guardant) Tr. 1155.)

2338. [redacted] (PX7100 (Chudova (Guardant) Dep. at 34) (*in camera*)).

Response to Finding No. 2338:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2269, 2272, 2273–74, 2277–78 and 2285, incorporated herein.

[redacted]

2339. [redacted] (PX7100 (Chudova (Guardant) Dep. at 34) (*in camera*)).

Response to Finding No. 2339:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2269, 2272, 2273–74, 2277–78 and 2285, incorporated herein.

[redacted]

2340. [redacted] (PX7100 (Chudova (Guardant) Dep. at 34-35) (*in camera*)).

Response to Finding No. 2340:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2269, 2272, 2273–74, 2277–78 and 2285, incorporated herein.

Respondents also note that the proposed finding is evidence that Guardant has not yet initiated the requisite clinical trials to receive approval for and eventually launch a MCED test.

2341. [redacted] (Getty (Guardant) Tr. 2534-35 (*in camera*)).

Response to Finding No. 2341:

To the extent the proposed finding relies on Guardant's own internal approvals for a trial design, the proposed finding relates to irrelevant subject matter because there is no evidence that Guardant's internal criteria for a trial design will comport with the standards governing registrational clinical trials imposed by regulators, such as the FDA.

Respondents further note that the proposed finding is evidence that Guardant has not yet undertaken registrational clinical trials for any cancer types beyond CRC. Respondents also incorporate their responses to CCFF ¶¶ 2269, 2272, 2273–74, 2277–78 and 2285, herein.

2342. [redacted] (Chudova (Guardant) Tr. 1200 (*in camera*)).

Response to Finding No. 2342:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ ¶¶ 2269, 2272–74, 2277–78 and 2285, which Respondents incorporate herein.

[redacted]

(Chudova (Guardant) Tr. 1200 (*in camera*).)

[redacted]

[redacted]

2343. [redacted] (Chudova (Guardant) Tr. 1200 (*in camera*)).

Response to Finding No. 2343:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2269, 2272–74, 2277–78, 2285, incorporated herein. Respondents also note that the proposed finding supports Respondents' proposition that Guardant has not yet commenced clinical trials to test the performance of LUNAR-2 with respect to any cancers other than CRC.

2344. [redacted] (Chudova (Guardant) Tr. 1154-55, 1201) (*in camera*)).

Response to Finding No. 2344:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2269, 2272–74, 2277–78, 2285, incorporated herein. In addition, there is no evidence showing that Guardant actually started their clinical trials for other cancer types in Q4 2021. (PFF ¶ 485 [redacted]

Respondents also note that the proposed finding supports Respondents' proposition that Guardant has not yet commenced clinical trials to test the performance of LUNAR-2 with respect to any cancers other than CRC. [redacted] A test for three cancer types, particularly one that addresses only cancer types that have an existing standard of care screening test, is likely to be a complement to

GRAIL's Galleri test, not a substitute. (PFF ¶ 358 (RX0744 (GRAIL) at 76–90; [redacted] RX0867 (Clinical Overview Deck) at 15; PX7086 (Cance (ACS) Dep. at 50–53); [redacted] RX3869 (Cote Expert Report) ¶ 136.)

Respondents also note that [redacted]

2345. [redacted] (Chudova (Guardant) Tr. 1202 (*in camera*); PX7105 (Getty (Guardant) Dep. at 167) [redacted] (*in camera*)).

Response to Finding No. 2345:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2344, incorporated herein. In addition, there is no evidence showing that Guardant actually started their clinical trials for other cancer types in Q4 2021. (PFF ¶ 485 [redacted]

Respondents also note that the proposed finding is evidence that Guardant's hypothetical MCED test remains too ill-defined to be considered a competitor of GRAIL's Galleri.

Respondents further note that the proposed finding is evidence of differentiation between Guardant's proposed test and GRAIL's Galleri test, suggesting that if Guardant's test does come to market, it will be a complement to GRAIL's Galleri test, rather than a substitute.

2346. (Chudova (Guardant) Tr. 1204 (*in camera*)).

Response to Finding No. 2346:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2344, incorporated herein. In addition, there is no evidence showing that Guardant actually started their clinical trials for other cancer types in 2021. (PFF ¶ 485

Respondents also note that the proposed finding provides support for Respondents' proposition that Guardant has not yet commenced clinical trials to test the performance of LUNAR-2 with respect to any cancers other than CRC.

2347. (Chudova (Guardant) Tr. 1154-55).

Response to Finding No. 2347:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2344, incorporated herein. In addition, there is no evidence showing that Guardant actually started their clinical trials for other cancer types in Q4 2021. (PFF ¶ 485 [redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2348. [redacted] (Chudova (Guardant) Tr. 1205-06 (*in camera*)).

Response to Finding No. 2348:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2344, incorporated herein. In addition, there is no evidence showing that Guardant actually started their clinical trials for other cancer types in Q4 2021. (PFF ¶ 485 [redacted]

[redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2349. [redacted] (Chudova (Guardant) Tr. 1205-06 (*in camera*)).

Response to Finding No. 2349:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2344, incorporated herein. In addition, there is no evidence showing that Guardant actually started their clinical trials for other cancer types in Q4 2021. (PFF ¶ 485 [redacted]

Respondents also note that the proposed finding is evidence that Guardant's possible future clinical trials remain hypothetical, ill-defined and uncertain in outcome.

6. [redacted]

2350. [redacted] (PX7105 (Getty (Guardant) Dep. at 131-35) (*in camera*)).

Response to Finding No. 2350:

The proposed finding is incomplete and misleading.

2351. (Getty (Guardant) Tr. 2542 (*in camera*)).

Response to Finding No. 2351:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2350, which Respondents incorporate herein. Further, to the extent that

[redacted] *See* Getty (Guardant) Tr. 2542 (*in camera*); PFF ¶ 70 (PX0122 (Illumina) at 1).)

2352. [redacted] (PX8305 (Guardant) at 062 (Guardant Health Q3 2020 BOD Meeting, Nov. 2020) (*in camera*) [redacted] *see also* (PX7100 (Chudova (Guardant) Dep. at 27-28) (*in camera*)).

Response to Finding No. 2352:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2350, which Respondents incorporate herein. Further, to the extent that [redacted] (*See* PX8305 (Guardant) at 062 (Guardant Health Q3 2020 BOD Meeting, Nov. 2020) (*in camera*); PFF ¶ 70 (PX0122 (Illumina) at 1).)

7. [redacted]

D. FREENOME IS DEVELOPING AN MCED TEST AS AN EXPANSION OF ITS COLORECTAL CANCER SCREENING TEST

1. Background

2353. [redacted] (PX7055 (Otte (Freenome) IHT at 14) (*in camera*)).

Response to Finding No. 2353:

Respondents have no specific response.

2354. Freenome was founded in 2014. (PX7121 (Otte (Freenome) Dep. at 13)).

Response to Finding No. 2354:

Respondents have no specific response, [redacted]

2. Freenome's MCED Test Technological Platform Is Designed to Be Able to Host a Multi-Cancer Test

2355. [redacted] (PX7050 (Nolan (Freenome) IHT at 43-44) (*in camera*); PX7121 (Otte (Freenome) Dep. at 17-19) (*in camera*)).

Response to Finding No. 2355:

The proposed finding is incomplete and misleading without additional context including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future. As noted, even once a company has developed a cancer screening test for a single cancer type (which Freenome has not yet completed), it does not become easier to add additional cancer types.

Mr. Nolan testified that [redacted] (PX7094 (Nolan (Freenome) Dep. at 307).) Freenome's putative multiomics platform also has not demonstrated the ability to screen for multiple cancers simultaneously. (PFF ¶¶ 459-70.) [redacted]

Mr. Otte, Freenome's former CEO, also testified that [redacted]

Further while Freenome may aspire to develop a multiomics platform that could support both an MCED and single cancer test, Freenome has not published any clinical data showing that it is remotely close to achieving this objective. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 405, 439–440, 444, 666, 698, 801, 806, 945 and 1140 herein.

Accordingly, there is no indication based on Freenome's work to date that [redacted] (PFF ¶ 458 ([redacted]; RX3869 (Cote Expert Report) ¶ 193).)

Respondents also note that the proposed finding relies in part on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2356. [redacted] (Nolan (Freenome) Tr. 2748-49 (*in camera*)).

Response to Finding No. 2356:

The proposed finding is inaccurate, incomplete and misleading.

[redacted]

[redacted]

2357. [redacted] (Nolan (Freenome) Tr. 2748-49 (*in camera*)).

Response to Finding No. 2357:

The proposed finding is inaccurate, incomplete and misleading. [redacted]

[redacted]

2358. Freenome is developing cancer screening tests based on multiomics. (Nolan (Freenome) Tr. 2706).

Response to Finding No. 2358:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–57, which Respondents incorporate herein. While Freenome may be developing a single-cancer, blood-based CRC cancer screening test based on what it has termed its "multiomics platform", [redacted]

Respondents also note that the proposed finding provides support for Respondents' proposition that Freenome and GRAIL (which is using a targeted methylation approach) are adopting different approaches to the development of their respective tests, suggesting that if Freenome's test were to come to market, it would be a complement GRAIL's Galleri test, rather than a substitute.

2359. In general, multiomics describes a biological analysis approach that involves identifying and measuring "a range of analytes" such as DNA methylation, genomics, proteomics, and transcriptomics, among others. (Nolan (Freenome) Tr. 2710-11).

Response to Finding No. 2359:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–57, which Respondents incorporate herein.

Respondents also note that the proposed finding illustrates the breadth of potential analytes that ***may*** ultimately be included in Freenome's test. The proposed finding is evidence of

the highly uncertain nature of Freenome's hypothetical MCED test. Respondents also note that the proposed finding provides support for Respondents' proposition that Freenome and GRAIL (which is using a targeted methylation approach) are adopting different approaches to the development of their respective tests, suggesting that if Freenome's test were to come to market, it would be a complement GRAIL's Galleri test, rather than a substitute.

2360. [redacted] (PX7121 (Otte (Freenome) Dep. at 29-31) (*in camera*); PX7055 (Otte (Freenome) IHT at 44-47) (*in camera*); PX4048 (Grail) at 013 [redacted] (*in camera*)).

Response to Finding No. 2360:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–57, which Respondents incorporate herein. Respondents also note that the proposed finding provides support for Respondents' proposition that Freenome and GRAIL (which is using a targeted methylation approach) are adopting different approaches to the development of their respective tests, suggesting that if Freenome's test were to come to market, it would be a complement GRAIL's Galleri test, rather than a substitute.

2361. Freenome's multiomics platform is designed to detect tumor-derived biological signatures and non-tumor derived biological signatures. (Nolan (Freenome) Tr. 2712).

Response to Finding No. 2361:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–57, which Respondents incorporate herein.

Respondents have no specific response except to note that the proposed finding is evidence that Freenome and GRAIL are adopting different approaches to the development of

their respective tests, suggesting that if Freenome's putative MCED test were to come to market, it would be a complement GRAIL's Galleri test, rather than a substitute.

2362. [redacted] (PX8368 (Freenome) at 005 (Crossover Round Company Overview, 2020) (*in camera*)).

Response to Finding No. 2362:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–57, which Respondents incorporate herein. Further, [redacted]

a) Freenome Will Launch a Colorectal Cancer Screening Test First Before Expanding to an MCED Test

2363. Freenome's cancer screening test development has "start[ed] with [the] detection of colorectal cancer and advanced adenomas from a blood sample." (Nolan (Freenome) Tr. 2706).

Response to Finding No. 2363:

The proposed finding is incomplete and misleading including insofar as it suggests that Guardant is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. [redacted]

[redacted]

The proposed finding is misleading the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." . (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.) Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by

undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

2364. [redacted] (PX7055 (Otte (Freenome) IHT at 20-21) (*in camera*)).

Response to Finding No. 2364:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2363, which Respondents incorporate herein.

Respondents also note that the cited testimony confirms that [redacted]

Respondents further note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2365. Freenome CEO, Michael Nolan testified at trial that "[Freenome] started [with a colorectal cancer screening test] because it is well-characterized. Physicians know when to order it. The reimbursement and medical policy frameworks are supportive in that the unmet need is very clear." (Nolan (Freenome) Tr. 2708).

Response to Finding No. 2365:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2363, which Respondents incorporate herein.

Respondents also note that the cited testimony confirms that Freenome's test is being designed for a single-cancer indication, and that the test is differentiated from Galleri insofar as it is designed solely to detect a cancer for which an existing screening methodology (colonoscopy) is already in place. The cited testimony confirms that Freenome and GRAIL are adopting different approaches to the development of their respective tests, suggesting that if Freenome's

test were to come to market, it would be a complement GRAIL's Galleri test, rather than a substitute.

2366. Freenome expects that focusing initially on developing a colorectal cancer screening test will [redacted] (Nolan (Freenome) Tr. 2760 (*in camera*)).

Response to Finding No. 2366:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2363, which Respondents incorporate herein.

Respondents also note that the cited testimony confirms that Freenome expects to launch its test as a single-cancer, CRC-only test, [redacted]

2367. [redacted] (Nolan (Freenome) Tr. 2761 (*in camera*)).

Response to Finding No. 2367:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2366, which Respondents incorporate herein.

2368. [redacted] (Nolan (Freenome) Tr. 2762 (*in camera*); PX7050 (Nolan (Freenome) IHT at 72) (*in camera*)).

Response to Finding No. 2368:

The proposed finding is incomplete and misleading including because the cited source also observes [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 2366 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2369. [redacted] (Nolan (Freenome) Tr. 2765 (*in camera*)).

Response to Finding No. 2369:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2368, which Respondents incorporate herein. Further, the cited source also observes that [redacted]

2370. [redacted] (Nolan (Freenome) Tr. 2748 (*in camera*)).

Response to Finding No. 2370:

The proposed finding is incomplete and misleading. [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 2363 herein.

2371. [redacted] (PX7094 (Nolan (Freenome) Dep. at 26-28) (*in camera*)).

Response to Finding No. 2371:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2363, which Respondents incorporate herein.

The proposed finding also relates to irrelevant subject matter [redacted]. Respondents further note the proposed finding is evidence that Freenome and GRAIL are adopting different approaches to the development of their respective tests, suggesting that if Freenome's test were to come to market, it would be a complement GRAIL's Galleri test, rather than a substitute.

2372. [redacted] (PX7094 (Nolan (Freenome) Dep. at 26-27) (*in camera*)).

Response to Finding No. 2372:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2371, which Respondents incorporate herein.

b) [redacted]

2373. [redacted] (PX7121 (Otte (Freenome) Dep. at 17-18) (*in camera*)). At trial, Mr. Nolan testified that Freenome's multiomics platform is "built for the purpose of having application across a range of cancer types[.]" (Nolan (Freenome) Tr. 2709).

Response to Finding No. 2373:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. Respondents also note that [redacted] Accordingly, there is no indication based on Freenome's work to date that [redacted]

[redacted] (PFF ¶ 458 [redacted] RX3869 (Cote Expert Report) ¶ 193).)

2374. While developing its early detection colorectal cancer test, Freenome plans to "tak[e] a stepwise approach to get to other cancer types so that [Freenome] can deliver benefits of early detection across a range of different cancers." (Nolan (Freenome) Tr. 2706).

Response to Finding No. 2374:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2363, incorporated herein.

2375. [redacted] (Nolan (Freenome) Tr. 2751-52 (*in camera*)).

Response to Finding No. 2375:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. Respondents also note that [redacted]

[redacted] (PFF ¶ 458 [redacted]; RX3869 (Cote Expert Report) ¶ 193).)

2376. [redacted] (Nolan (Freenome) Tr. 2709; *see also* (Nolan (Freenome) Tr. 2747-48 (*in camera*)).

Response to Finding No. 2376:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2363, which Respondents incorporate herein.

[redacted]

[redacted]. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.) [redacted]

[redacted]

2377. [redacted] (Nolan (Freenome) Tr. 2761 (*in camera*)). Freenome's CEO testified that Freenome is then able to [redacted] (Nolan (Freenome) Tr. 2761 (*in camera*)).

Response to Finding No. 2377:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2363, which Respondents incorporate herein.

[redacted]

2378. [redacted] (PX7121 (Otte (Freenome) Dep. at 22) (*in camera*)).

Response to Finding No. 2378:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the

foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. Respondents also state that [redacted] To the extent that Freenome actually started looking at seven cancer types, Freenome has made minimal progress over the past five years. Freenome has published data only relating to a single cancer, colorectal, and has commenced additional clinical trials only relating to colorectal cancer screening. (PFF ¶ 457; RX3869 (Cote Expert Report) ¶ 192; [redacted]

2379. Freenome has [redacted] (Nolan (Freenome) Tr. 2748-50 (*in camera*)).

Response to Finding No. 2379:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. [redacted]

Freenome also has not published any data relating to cancers other than colorectal cancer and has not even registered for any clinical trials for any other cancer. PFF ¶ 457. At trial, Mr.

Nolan could not even identify what all ten of the cancer types that Freenome purportedly detects actually are. PFF ¶ 2766.

To the extent that Mr. Nolan contends that Freenome has [redacted] even though Freenome was served with a subpoena by both Complaint Counsel and Respondents. (RX5012-RX5013 (Freenome)). Nor has Complaint Counsel identified such a document. Neither Mr. Nolan nor Mr. Otte [redacted] (*See* Nolan (Freenome) Tr. 2816, 2811; [redacted] Therefore, this cited testimony should be accorded little weight.

2380. Freenome CEO Michael Nolan testified that [redacted] (Nolan (Freenome) Tr. 2749-50 (*in camera*)).

Response to Finding No. 2380:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2379, which Respondents incorporate herein. [redacted]

[redacted]

2381. Mr. Nolan explained at trial that the [redacted] (Nolan (Freenome) Tr. 2749 (*in camera*)).

Response to Finding No. 2381:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2379, which Respondents incorporate herein. [redacted]

[redacted] Respondents also refer to PFF ¶¶ 465–70.

2382. Mr. Nolan further testified that Freenome [redacted] (Nolan (Freenome) Tr. 2748 (*in camera*); *see also* Nolan (Freenome) Tr. 2766-67 (*in camera*)).

Response to Finding No. 2382:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379 and 2379, which Respondents incorporate herein. Respondents [redacted] This supports the proposition that Freenome's test is likely to be a complement to GRAIL's Galleri test.

2383. [redacted] (PX8368 (Freenome) at 014 (Crossover Round Company Overview, 2020) (*in camera*); *see* PX7121 (Otte (Freenome) Dep. at 168-69) (testifying that Freenome expects to launch a CRC screening test in 2022 and add additional cancers in 2023 and 2024)).

Response to Finding No. 2383:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. Respondents also note that [redacted]

[redacted]

2384. Freenome CEO, Michael Nolan, testified that Freenome plans to [redacted] (Nolan (Freenome) Tr. 2751 (*in camera*)).

Response to Finding No. 2384:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. [redacted]

2385. [redacted] (Nolan (Freenome) Tr. 2769 (*in camera*)). At trial, Freenome CEO, Michael Nolan, explained that Freenome is [redacted] (Nolan (Freenome) Tr. 2852-53 (*in camera*)).

Response to Finding No. 2385:

The proposed finding is inaccurate, incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2355–58 and 2379 herein.

2386. [redacted] (Nolan (Freenome) Tr. 2772 (*in camera*)).

Response to Finding No. 2386:

The proposed finding is incomplete and misleading without further context, as well as irrelevant to the adjudication of this Transaction. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2355–58 and 2379 herein.

The proposed finding is also misleading to the extent it implies that a distributed IVD model will be part of the pipeline in the foreseeable future for any putative MCED test. Several features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) PFF ¶ 359.) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, PFF ¶¶ 360–63.)

2387. At trial, Mr. Nolan explained that Freenome plans to start by offering its tests as an LDT out of its own laboratory. (Nolan (Freenome) Tr. 2706-07). Then, Freenome plans to "take a stepwise approach to add additional sites for operation resilience and also for very specific country-level access and then evolve from there" to offering its test as a distributed IVD test. (Nolan (Freenome) Tr. 2706-07).

Response to Finding No. 2387:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2386, which Respondents incorporate herein. [redacted]

[redacted]

2388. [redacted] (Nolan (Freenome) Tr. 2772 (*in camera*)).

Response to Finding No. 2388:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. Respondents [redacted]

2389. [redacted] (Nolan (Freenome) Tr. 2769-70) (*in camera*)).

Response to Finding No. 2389:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein.

2390. [redacted] (Nolan (Freenome) Tr. 2748 (*in camera*)).

Response to Finding No. 2390:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein.

[redacted]

2391. Freenome's CEO testified that Freenome plans on [redacted] (Nolan (Freenome) Tr. 2748 (*in camera*)).

Response to Finding No. 2391:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2390, which Respondents incorporate herein.

2392. Freenome is also [redacted] (Nolan (Freenome) Tr. 2709; *see also* Nolan (Freenome) Tr. 2766 (*in camera*)).

Response to Finding No. 2392:

The proposed finding is incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein.

3. [redacted]

2393. [redacted] (PX7050 (Nolan (Freenome) IHT at 67-68, 72) (*in camera*)).

Response to Finding No. 2393:

Respondents have no specific response [redacted] Respondents also note that the cited testimony supports Respondents' proposition that Freenome has only progressed in developing a single-cancer screening test and incorporate their responses to CCFF ¶¶ 2355–58 and 2379 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2394. [redacted] (PX7050 (Nolan (Freenome) IHT at 60-61)).

Response to Finding No. 2394:

Respondents have no specific response except to note that the cited testimony supports Respondents' proposition that Freenome has only progressed in developing a single-cancer screening test and incorporate their responses to CCFF ¶¶ 2355–58 and 2379 herein.

2395. [redacted] (Nolan (Freenome) Tr. 2799 (*in camera*)).

Response to Finding No. 2395:

Respondents have no specific response except to note that the cited testimony supports Respondents' proposition that Freenome has only progressed in developing a single-cancer screening test and incorporate their responses to CCFF ¶¶ 2355–58 and 2379 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2396. [redacted] (Nolan (Freenome) Tr. 2761-62 (*in camera*)).

Response to Finding No. 2396:

Respondents have no specific response except to note that the cited testimony supports Respondents' proposition that Freenome has only progressed in developing a single-cancer screening test and incorporate their responses to CCFF ¶¶ 2355–58 and 2379 herein. In addition, there is no evidence that Freenome in fact completed its clinical trials of its colorectal cancer early detection test in early 2022. (*See* RX3869 (Cote Expert Report) ¶ 200 (Clinicaltrials.gov, *Prevention of Colorectal Cancer Through Multiomics Blood Testing (PREEMPT CRC)*, at https://clinicaltrials.gov/ct2/show/study/NCT04369053).)

Respondents also [redacted] Respondents incorporate PFF ¶¶ 328–29 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony

and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2397. [redacted] (PX7055 (Otte (Freenome) IHT at 91) (*in camera*)).

Response to Finding No. 2397:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. [redacted] (*See* Nolan (Freenome) Tr. 2811.)

Further, [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2398. [redacted] (PX8368 (Freenome) at 015 (Crossover Round Company Overview, 2020) (*in camera*)). [redacted]

(PX8368 (Freenome) at 015 (Crossover Round Company Overview, 2020) (*in camera*)).

Response to Finding No. 2398:

The proposed finding is incomplete and misleading including insofar as it suggests that Freenome is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein. Further,

The proposed finding is also incomplete and misleading because it suggests the ability to detect "all cancers", but there is no such thing as a universal or pan-cancer marker. (*See* RRFF ¶ 2416; PFF ¶¶ 308–309 (Cote Tr. 3787; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106).)

The proposed finding is further misleading the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.) Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

4. [redacted]

2399. [redacted] (PX7121 (Otte (Freenome) Dep. at 96) (*in camera*)).

Response to Finding No. 2399:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2355–58 and 2379, which Respondents incorporate herein.

2400. [redacted] (PX7055 (Otte (Freenome) IHT at 16) (*in camera*)).

Response to Finding No. 2400:

Respondents have no specific response.

5. [redacted]

See Complaint Counsel's Proposed Findings of Fact Section VII.B.3.a.3.

E. SINGLERA HAS ALREADY CONDUCTED A 100,000 SAMPLE TRIAL FOR ITS MCED TEST IN DEVELOPMENT—PANSEER

1. Background

2401. Singlera is headquartered in Shanghai, China and has U.S. offices in La Jolla, California. (Gao (Singlera) Tr. 2870; PX7042 (Gao (Singlera) IHT at 21)).

Response to Finding No. 2401:

Respondents have no specific response.

2402. Singlera currently operates four laboratories. (Gao (Singlera) Tr. 2870).

Response to Finding No. 2402:

Respondents have no specific response.

2403. Dr. Gary Gao and Professor Kun Zhang cofounded Singlera Genomics in 2014. (Gao (Singlera) Tr. 2865, 2869; PX7042 (Gao (Singlera) IHT at 15)).

Response to Finding No. 2403:

Respondents have no specific response except to note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2404. Singlera is a test developer focused on early cancer detection using targeted DNA methylation technology for cell-free DNA. (Gao (Singlera) Tr. 2869-70).

Response to Finding No. 2404:

Respondents have no specific response except to note that though Singlera has been focusing on early cancer screening for seven years, it still views itself as "early in the run." (PX7102 (Gao (Singlera) Dep. at 17).) It appears that Singlera is in the research and development stage for a cancer screening test for five cancer types, and in the clinical stage for its ColonES colorectal cancer screening test. (RX3869 (Cote Expert Report) at ¶ 237.)

2405. "Based on next-generation sequencing platform, Singlera is a world leader on tissue and cfDNA methylation sequencing with patented proprietary technologies. Singlera has developed a series of methods for early screening, early-stage diagnosis and prevention of cancers, including lung cancer, colorectal cancer, gastric cancer, liver cancer, and esophageal cancer." (PX8517 (Singlera) at 001 (Company Overview)).

Response to Finding No. 2405:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2406. Dr. Gao testified that Singlera's "goal is to detect cancer early, all kinds of cancer." (PX7042 (Gao (Singlera) IHT at 21)).

Response to Finding No. 2406:

The proposed finding is incomplete and misleading. Although Singlera's "goal" may be to detect all kinds of cancer, Dr. Gao has also testified that Singlera is "far away" from starting

clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82; PFF ¶ 536.1.) By Dr. Gao's own calculation, PanSeer is at least eight to ten years away from potential launch in the United States, and Singlera does not currently have any clinical trials relating to screening for multiple cancers listed on clinicaltrials.gov. (PFF ¶¶ 536.1-36.2.) Accordingly, [redacted] Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 447, 451 and 982 herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2407. Singlera ultimately has the "goal [] to improve health standards for all." (PX8517 (Singlera) at 001 (Company Overview)).

Response to Finding No. 2407:

Respondents have no specific response except to note that the proposed finding is irrelevant as it does not relate to MCED tests.

2408. Illumina considers Singlera as a "[p]rovider of non-invasive oncology and reproductive health tests using single cell sequencing, DNA methylation, and machine learning technology." (PX2780 (Illumina) at 001 (Singlera Genomics - Overview)).

Response to Finding No. 2408:

Respondents have no specific response except to note that the proposed finding is irrelevant as it does not relate to MCED tests.

2. Singlera's Single-Cancer Screening Tests

2409. Singlera is developing four single-cancer screening tests and one MCED test in the United States. (Gao (Singlera) Tr. 2873, 2914).

Response to Finding No. 2409:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2406, which Respondents incorporate herein. Further, there is evidence of only two single-cancer tests being developed by Singlera in the record: Singlera is also developing single cancer screening tests for colorectal cancer and likely lung cancer. (PFF ¶ 537; Gao (Singlera) Tr. 2872–73; RX3869 (Cote Expert Report) ¶ 243.)

The ColonES test that Singlera is currently developing has a specific focus on early detection of only colorectal cancer in asymptomatic patients; Singlera does not have any clinical trial evidence that ColonES can detect more than one cancer. (Gao (Singlera) Tr. 2914–15, 2917; 2917–18; 2926–27, 2942–43, 2949.) Despite these efforts with clinical trials in China, Singlera believes that it is "far from" starting FDA clinical trials for ColonES in the United States. (PFF ¶ 542; PX7102 (Gao (Singlera) Dep. at 113).) Singlera testified that it will need a three to four year study for at least 10,000 people for the trial. (PX7102 (Gao (Singlera) Dep. at 120–21); Gao (Singlera) Tr. 2923.) In addition, Singlera is considering a qPCR version—not NGS—of the ColonES test to be launched in China first. (PX7042 (Gao (Singlera) IHT at 90–91); Gao (Singlera) Tr. 2911–12.) Therefore, by its own admission, Singlera appears to

anywhere from three to seven years away from completing clinical trials for ColonES, and likely even longer. (RX3869 (Cote Expert Report) ¶ 246; Gao (Singlera) Tr. 2923.)

2410. Singlera is developing single-cancer early detection tests for colorectal cancer, lung cancer, pancreatic cancer, and throat cancer. (Gao (Singlera) Tr. 2873, 2914).

Response to Finding No. 2410:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2409, which Respondents incorporate herein. The proposed finding is also irrelevant because it does not relate to MCED tests.

2411. Singlera's single cancer tests for lung cancer, pancreatic cancer, and throat cancer use DNA methylation to detect cancer. (Gao (Singlera) Tr. 2914).

Response to Finding No. 2411:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2410, which Respondents incorporate herein.

2412. Singlera's ColonES test is a blood-based early detection test for colorectal cancer. (Gao (Singlera) Tr. 2873-74).

Response to Finding No. 2412:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2410, which Respondents incorporate herein.

2413. ColonES uses DNA methylation to detect colorectal cancer. (Gao (Singlera) Tr. 2873-74).

Response to Finding No. 2413:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2410, which Respondents incorporate herein.

2414. "ColonES is currently the only colorectal product that can detect early adenoma." (PX8517 (Singlera) at 001 (Company Overview)). "Detecting early adenoma is necessary for preventing colorectal cancer (CRC)[.]" (PX8517 (Singlera) at 001 (Company Overview)).

Response to Finding No. 2414:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2410, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2415. Singlera's ColonES test is "the same targeted DNA methylation analysis" as used with its pan-cancer test, PanSeer. (Gao (Singlera) Tr. 2915).

Response to Finding No. 2415:

Respondents have no specific response except to note that there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.)

2416. Dr. Gao explained that Singlera is starting with a colorectal cancer early detection test because "the complexity to get FDA approval and reimbursement is also much lower, so we use it as a kind of test case scenario." (PX7042 (Gao (Singlera) IHT at 119-20)).

Response to Finding No. 2416:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2409, which Respondents incorporate herein.

The proposed finding is misleading the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics

needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.) Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

3. Singlera is Developing an MCED Test—PanSeer

2417. Singlera is currently developing an MCED test referred to as PanSeer. (PX7102 (Gao (Singlera) Dep. at 23-24)).

Response to Finding No. 2417:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406 and 2416, which Respondents incorporate herein. No analytical or clinical data that Singlera has collected provides support for the proposition that PanSeer can detect more than 5 cancer types. (Gao (Singlera) Tr. 2917–18; RX3869 (Cote Expert Report) ¶ 241; [redacted]) Singlera does not currently have any clinical trials relating to screening for multiple cancers listed on clinicaltrials.gov. (RX3869 (Cote Expert Report) ¶ 242.); Gao (Singlera) Tr. 2926; [redacted]

Accordingly, there is no indication based on Singlera's work to date that [redacted]

2418. Singlera's PanSeer test is a blood-based early detection test designed to detect multiple cancers. (Gao (Singlera) Tr. 2876, 2881-82).

Response to Finding No. 2418:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406 and 2416–17, which Respondents incorporate herein.

2419. Singlera has developed "PanSeer" technology, which in theory works for any type of cancer. (PX7102 (Gao (Singlera) Dep. at 94-95)).

Response to Finding No. 2419:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406 and 2416–17, which Respondents incorporate herein.

2420. From a test development perspective, Dr. Gao explained that ColonES and PanSeer both use the same method for detecting cancer: "That's the beauty of the methylation technology platform. It's the same methylation analysis, assay and software and algorithm, but your target is different." (PX7042 (Gao (Singlera) IHT at 117, 119-20)).

Response to Finding No. 2420:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the

foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406 and 2416–17, which Respondents incorporate herein.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2421. Singlera's PanSeer test is designed to detect all kinds of cancer, and not just the five cancers used in the Taizhou Longitudinal Study. (Gao (Singlera) Tr. 2881). Dr. Gao testified that Singlera's "goal is pan-cancer" for the PanSeer test. (Gao (Singlera) Tr. 2881).

Response to Finding No. 2421:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406 and 2416–17, which Respondents incorporate herein. While Dr. Gao may testify that Singlera's goal is "pan-cancer", there is no such thing as a universal or pan-cancer marker. (*See* RRFF ¶ 2416; PFF ¶¶ 308–309 (Cote Tr. 3787; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106).)

To date, Singlera has not shown in any publication or clinical trial the ability to detect more than five cancer types. (*See* PFF ¶ 532.) Singlera also has not registered for any clinical trials beyond colon and lung cancer. (*See* PFF ¶ 536.3–41.)

To the extent that Dr. Gao contends that Singlera has generated internal data relating to any additional cancer types, no such documentation or data was produced in this proceeding, even though Singlera was served with a subpoena by both Complaint Counsel and Respondents. (RX5035-RX5036 (Singlera)). Nor has Complaint Counsel identified such a document. Therefore, this cited testimony should be accorded little weight.

The characteristics of the PanSeer test in development are also far from being suitable for being used in a multi-cancer screening test. In a retrospective, observational study of 418 participants from part of the Taizhou Longitudinal Study with samples from 113 post-diagnosis cancer patients, 98 prediagnostic cancer patients, and 207 healthy individuals, PanSeer achieved a 96% specificity. (PFF ¶ 532; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2877–79.)

[redacted]

Consistent with their very early stage of development, Singlera testified that it is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (PFF ¶ 536.1; Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82.) By Dr. Gao's own calculation, PanSeer is at least eight to ten years away from potential launch in the United States. (PFF ¶ 536.2; Gao (Singlera) Tr. 2925–26; RX3869 (Cote Expert Report) ¶ 242.)

2422. PanSeer is the "[o]nly product in the [w]orld for multiple types of cancer early screening that was validated by healthy population studies." (PX8517 (Singlera) at 001 (Company Overview)).

Response to Finding No. 2422:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein. The proposed finding is

also inaccurate because it seems to suggest that PanSeer is the purportedly validated by healthy population studies, and not only that, that it is the *only* product to be so validated. However, the only purported validation of the PanSeer test (which is not commercialized (PFF ¶ 536)) is a retrospective, observational study of 418 participants from part of the Taizhou Longitudinal Study with samples from 113 post-diagnosis cancer patients, 98 pre-diagnostic cancer patients, and 207 healthy individuals. (PFF ¶ 532; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2877–79.) This study is by no means population scale, involving only 300 or so "healthy" individuals. By contrast, Galleri is a product (and unlike PanSeer, Galleri is available commercially) that is validated by healthy population studies, such as the PATHFINDER study, which was used in 6,662 participants. (*See* PFF ¶¶ 394–402.) Further, given that Singlera is continuing to develop PanSeer, whatever the final version of the PanSeer product has not been validated in any study of any kind, involving healthy populations or otherwise. Singlera plans to further develop the PanSeer test design before seeking FDA approval. (Gao (Singlera) Tr. 2881).

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2423. The PanSeer test can detect lung cancer, liver cancer, colorectal cancer, esophageal cancer, and gastric cancer. (PX8517 (Singlera) at 001 (Company Overview)).

Response to Finding No. 2423:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2424. PanSeer can detect lung cancer at a 93 percent sensitivity. (PX8517 (Singlera) at 001 (Company Overview)). PanSeer can detect liver cancer at a 94 percent sensitivity. (PX8517 (Singlera) at 001 (Company Overview)). PanSeer can detect colorectal cancer at 89 percent sensitivity. (PX8517 (Singlera) at 001 (Company Overview)). PanSeer can detect esophageal cancer at 89 percent sensitivity. (PX8517 (Singlera) at 001 (Company Overview)). PanSeer can detect gastric cancer at 70 percent sensitivity. (PX8517 (Singlera) at 001 (Company Overview)).

Response to Finding No. 2424:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2425. PanSeer "detects cancer [four] years earlier than conventional diagnoses." (PX8517 (Singlera) at 001 (Company Overview)).

Response to Finding No. 2425:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2426. The PanSeer test is also designed to detect tissue of origin. (Gao (Singlera) Tr. 2874).

Response to Finding No. 2426:

The proposed finding is inaccurate, incomplete and misleading. Singlera has not published any ability to identify a molecular cancer signal of origin. (RX3115 (Chen et al., 2020) at 6.) Singlera has stated that any patient testing positive on PanSeer would then undergo additional blood test and/or follow-up imaging to allow tissue of origin mapping. (RX3869 (Cote Expert Report) ¶ 239; RX3115 (Chen et al., 2020) at 6.) However, Singlera has not developed such a blood test. (RX3115 (Chen et al., 2020) at 6.)

2427. The PanSeer test uses targeted DNA methylation technology to analyze over 500 regions on a DNA sample. (Gao (Singlera) Tr. 2874-75; *see* PX7042 (Gao (Singlera) IHT at 21) (testifying that Singlera's "technology is based on analyzing DNA methylation pattern of cell-free ctDNA in the blood.”))

Response to Finding No. 2427:

Respondents have no specific response.

2428. PanSeer's technology can detect many types of cancer using methylation patterns as biomarkers. (PX7102 (Gao (Singlera) Dep. at 22-24)).

Response to Finding No. 2428:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera's PanSeer test has been shown to detect more than five types of cancer, or that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein.

2429. Dr. Gao testified that Singlera has spent between $60 million to $100 million on research and development efforts related to the PanSeer test. (Gao (Singlera) Tr. 2888-2889).

Response to Finding No. 2429:

Respondents have no specific response.

2430. While the PanSeer test is currently focused on screening for colorectal, lung, gastric, esophageal, and liver cancers, it may add more cancers prior to commercialization and

could end up detecting "any kind of cancer." (PX7042 (Gao (Singlera) IHT at 28-30); *see* Gao (Singlera) Tr. 2881).

Response to Finding No. 2430:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein.

2431. Dr. Gao testified that Singlera's "goal is pan-cancer" for the PanSeer test. (Gao (Singlera) Tr. 2881).

Response to Finding No. 2431:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein. While Dr. Gao may testify that Singlera's goal is "pan-cancer", there is no such thing as a universal or pan-cancer marker. (*See* RRFF ¶ 2416; PFF ¶¶ 308–309 (Cote Tr. 3787; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106).)

2432. Singlera plans to seek FDA approval for its PanSeer Test. (Gao (Singlera) Tr. 2881).

Response to Finding No. 2432:

The proposed finding is incomplete. Singlera testified that it is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82.) For a pan-cancer trial, Singlera estimates that a clinical trial would need to be for 100,000 or 200,000 people, somewhere around eight or 10 years. (Gao (Singlera) Tr. 2925–26; PX7102 (Gao (Singlera) Dep. at 122–23).) Therefore, by Dr. Gao's own calculation, PanSeer is at least eight to ten years away from potential launch in the United States. (Gao (Singlera) Tr. 2925–26;

RX3869 (Cote Expert Report) ¶ 242.) Respondents also incorporate their responses to CCFF ¶¶ 2406, 2416–17 and 2421 herein.

2433. Singlera plans to further develop the PanSeer test design before seeking FDA approval. (Gao (Singlera) Tr. 2881).

Response to Finding No. 2433:

Respondents have no specific response.

a) Singlera Plans to Launch PanSeer Using a Distributed Model

2434. Singlera's business model is to offer the PanSeer test as a distributed test in order to differentiate it from single-site tests. (PX7042 (Gao (Singlera) IHT at 109)).

Response to Finding No. 2434:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17, 2421 and 2432, which Respondents incorporate herein. Respondents also note that Singlera has testified that PanSeer is at least eight to ten years away from a potential launch in the United States.

The proposed finding is also misleading to the extent it implies that a distributed IVD model will be part of the pipeline in the foreseeable future for any putative MCED test. Several features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) ¶ 359.) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.)

2435. To turn the PanSeer test into a distributed model, Singlera must follow the "FDA clinical trial study protocol" which means running "at least three sites." (PX7042 (Gao (Singlera) IHT at 109-10)).

Response to Finding No. 2435:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2434, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Dr. Gao also testified, "when we're going to talk to FDA[,] we have no experience as a young startup company about a regulatory pathway". (PX7101 (Gao (Singlera) Dep. at 47).) Singlera noted that the "[t]est will be sold to and performed at external CLIA labs," "[u]nlimited number of labs can sell test assuming they have equipment and personnel," "CLIA labs responsible for running assay, reporting results, billing patients, QC, QA, etc." Singlera "must provide complete kits" meaning they "are responsible for kit manufacturing, QC, supply agreements, supply chain management[,] [and] upload[ing] software to Illumina's cloud." The FDA trial for a distributed test "must be performed in 3 CLIA labs." (PX8518 (Singlera) at 009 (FDA Update: PMA vs 510k)).

2436. Singlera noted that the "[t]est will be sold to and performed at external CLIA labs," "[u]nlimited number of labs can sell test assuming they have equipment and personnel," "CLIA labs responsible for running assay, reporting results, billing patients, QC, QA, etc." Singlera "must provide complete kits" meaning they "are responsible for kit manufacturing, QC, supply agreements, supply chain management[,] [and] upload[ing] software to Illumina's cloud." The FDA trial for a distributed test "must be performed in 3 CLIA labs." (PX8518 (Singlera) at 009 (FDA Update: PMA vs 510k)).

Response to Finding No. 2436:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2435, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 64), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2437. Dr. Gao testified that an advantage of offering a distributed IVD test is that "you can quickly convince partner – you know, LabCorp, Quest [] to quickly adopt your system instead of you building your capacity up, scale up, like Exact Sciences." (PX7042 (Gao (Singlera) IHT at 110)).

Response to Finding No. 2437:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2434–35, which Respondents incorporate herein.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Dr. Gao admitted that he is not an expert witness in this proceeding. (Gao (Singlera) Tr. 2937).

2438. Dr. Gao testified that selling the PanSeer test as a distributed test would allow Singlera to "quickly scale up to sell." (PX7042 (Gao (Singlera) IHT at 110-11); *see* PX8518 (Singlera) at 011 (FDA Update: PMA vs 510k)).

Response to Finding No. 2438:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2437, which Respondents incorporate herein.

2439. Dr. Gao testified that the customers of a distributed IVD test would be the same as the customers of a single-site test because "the customer won't care [about] your business model, [] they only care about result." (PX7042 (Gao (Singlera) IHT at 111)).

Response to Finding No. 2439:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2437, which Respondents incorporate herein.

2440. In order for a non-Singlera lab to run a Singlera test on an Illumina sequencer, Illumina must authorize the use of its sequencer. (PX7042 (Gao (Singlera) IHT at 112-13)).

Response to Finding No. 2440:

The proposed finding is incomplete to the extent that Dr. Gao is referring to marketing a distributed version of a Singlera test using an Illumina sequencer. It is possible to run an IVD test on the RUO side of an Illumina instrument, instead of the Dx side, which would not require Illumina's authorization. (*See* PFF ¶ 678.2.) In any event, under the Open Offer, any oncology customer may enter into an IVD agreement with Illumina to develop a distributed version of its oncology test. (*See* PFF ¶¶ 1026–1035.3.)

2441. Dr. Gao testified that "a distributed model will have an advantage" for Singlera, and without a distributed model, Singlera would be at a competitive disadvantage to other pan-cancer screening companies that were authorized to sell a distributed IVD test. (PX7042 (Gao (Singlera) IHT at 114-15)).

Response to Finding No. 2441:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2437, which Respondents incorporate herein.

[redacted]

(*See, e.g.*, PFF ¶ 1736; Chahine (Helio) Tr. 1065-66).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

b) Singlera Hired Consulting Firm CSSi to Aid Its FDA and Commercial Development

2442. CSSi Life Sciences is a consulting company which helps its clients take a product from discovery to the clinical research and FDA review/approval stage of development. (*See* PX8656 (Singlera) at 002 (CSSi Life Sciences: Accelerating Discovery to Commercialization)).

Response to Finding No. 2442:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 68), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2443. Singlera contracted with CSSi in February 2019 for "regulatory, preclinical, CMC, clinical, CRO, and/or other services" relating to Singlera's "blood-based colon cancer in vitro diagnostic (IVD) that uses Next Generation Sequencing (NGS) for methylation haplotype analysis of cell-free DNA." (PX8657 (Singlera) at 001, 013 (CSSi Life Sciences Service Agreement, Feb. 1, 2019)).

Response to Finding No. 2443:

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 68), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2444. Singlera hired CSSi because Singlera is "a small company [and] do[es] not have the expertise to go through [the] FDA [alone] for the first time." (PX7102 (Gao (Singlera) Dep. at 41)).

Response to Finding No. 2444:

The proposed finding is misleading to the extent it suggests that GRAIL could accelerate its FDA approval by hiring a vendor like CSSi. Contrary to Complaint Counsel's unproven contention, GRAIL could not achieve FDA approval by hiring additional personnel or outside consultants because the pool of individuals with such experience is limited and it can take a long time for consultants to get up to speed on the specific needs in a new area such as screening (PFF ¶¶ 1175.1–1175.2.4), and Illumina and GRAIL witnesses testified that they could not contract for these efficiencies if they were separate entities because Illumina does not provide such services

to any third party entities and doing so would require GRAIL to share its confidential information with Illumina (PFF ¶ 1175.3).

Respondents also note that Singlera's experience with CSSi was overall extremely negative. Dr. Gao testified that Singlera "spent a lot of money on . . . consultancy . . . to prepare documents to have an FDA pre-meeting", "hundreds of thousands of dollars already", and yet "are still not in in the . . . starting clinical trial state". (PX7102 (Gao (Singlera) Dep. at 81–82); *see generally id.* at 115–18 (explaining how Singlera's consultants failed to inform Singlera that a supply agreement was required for 510K clearance from the FDA, causing Singlera to miss their ColonES FDA approval timeline by at least a year).) In fact, as Dr. Gao testified, Singlera testified that it is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82.) For a pan-cancer trial, Singlera estimates that a clinical trial would need to be for 100,000 or 200,000 people, somewhere around eight or 10 years. (Gao (Singlera) Tr. 2925–26; PX7102 (Gao (Singlera) Dep. at 122–23).) Therefore, by Dr. Gao's own calculation, PanSeer is at least eight to ten years away from potential launch in the United States. (Gao (Singlera) Tr. 2925–26; RX3869 (Cote Expert Report) ¶ 242.) By contrast, GRAIL expects that Illumina's assistance will accelerate the adoption and availability of the Galleri test by at least one year. (Febbo (Illumina) Tr. 4345–46, 4360.)

2445. CSSi helps reduce a product's "[t]ime to market and development costs" and "[r]isk for late-stage failures and post authorization action" while increasing "[c]ommercial success and early adoption" and "[s]takeholder value and return." (PX8656 (Singlera) at 004 (CSSi Life Sciences: Accelerating Discovery to Commercialization)).

Response to Finding No. 2445:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2444, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 68), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2446. Dr. Gao testified that CSSi was "very expensive" to use. (PX7102 (Gao (Singlera) Dep. at 41)). The hourly rate for CSSi's regulatory and clinical strategy personnel was $400. (PX8657 (Singlera) at 016 (CSSi Life Sciences Service Agreement, Feb. 1, 2019)).

Response to Finding No. 2446:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2444, which Respondents incorporate herein.

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 68), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2447. CSSi "basically tell[s] [Singlera] what needs to be done, prepare documents, [] call a meeting with the FDA. So they are more like [a] consultancy." (PX7102 (Gao (Singlera) Dep. at 41)). In other words, CSSi walked Singlera through the FDA regulatory approval process. (PX7102 (Gao (Singlera) Dep. at 41-42) ("Q. Okay. So CSSi can walk the company like Singlera through the FDA regulatory approval process. Is that – did I understand that correctly? A. Yes. They are more hand-h[o]lding us through the jungle of regulatory, you know. So they will help out to coordinate study center, write up the plan, and communicate with FDA doing statistics. So that we call CIO.")).

Response to Finding No. 2447:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2444, which Respondents incorporate herein.

2448. As part of CSSi's "health authority interactions" services they assist a company with "FDA/EMA Advisory Committee and Panel preparation," "[o]ral explanation preparation," "[m]ilestone meetings," "[h]ealth authority responses to questions," "[r]esolution and response to safety issues," and "[r]epresentation with FDA and National Competent Authorities." (PX8656 (Singlera) at 018 (CSSi Life Sciences: Accelerating Discovery to Commercialization)).

Response to Finding No. 2448:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2444, which Respondents incorporate herein. Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 68), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2449. Dr. Gao explained that Singlera did not need to have its own in-house FDA expertise to go through the FDA regulatory process. Singlera instead hired CSSi. (PX7102 (Gao (Singlera) Dep. at 42)).

Response to Finding No. 2449:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2444, which Respondents incorporate herein.

4. Singlera's PanSeer Completed a 100,000 Sample Clinical Trial

2450. Singlera completed a proof-of-concept study of its PanSeer test in China on 100,000 people, identifying lung, esophageal, liver, colorectal, and gastric cancers at least four years before conventional diagnosis. (PX7042 (Gao (Singlera) IHT at 28-30)).

Response to Finding No. 2450:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein. The proposed finding is also inaccurate because it states that PanSeer was studied in 100,000 people (RX3115 (Chen et al., 2020) at 4, Table 1); PanSeer was only studied in an retrospective, observational study of 418 participants. (PFF ¶ 534; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2877–79.)

2451. Singlera's PanSeer clinical study was called the Taizhou Longitudinal study. (Gao (Singlera) Tr. 2877-78).

Response to Finding No. 2451:

Respondents have no specific response.

2452. Singlera's PanSeer test detected a total of five different types of cancers four years before participants showed symptoms in the Taizhou study. (Gao (Singlera) Tr. 2878-79).

Response to Finding No. 2452:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2450, which Respondents incorporate herein.

2453. The PanSeer test demonstrated the ability to detect stomach cancer, esophageal cancer, liver cancer, colorectal cancer, and lung cancer in the Taizhou study. (Gao (Singlera) Tr. 2884).

Response to Finding No. 2453:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein.

2454. The Taizhou study demonstrated the PanSeer test has a sensitivity of "88 to 90 percent and [a] specificity of 96 percent" for the cancers used in the study. (Gao (Singlera) Tr. 2876).

Response to Finding No. 2454:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein. [redacted]

[redacted]

2455. Singlera's Taizhou study took place in Taizhou, China. (Gao (Singlera) Tr. 2878).

Response to Finding No. 2455:

Respondents have no specific response.

2456. Singlera's Taizhou study involved 123,115 participants. (RX2717 (Singlera) at 001 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2456:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein. The proposed finding is also inaccurate because it suggests that PanSeer was studied in 123,115 people (RX3115 (Chen et al., 2020) at 4, Table 1); PanSeer was only studied in an retrospective, observational study of 418 participants. (PFF ¶ 534; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2877–79.)

2457. "In the Taizhou Longitudinal Study (TZL), 123,115 healthy subjects provided plasma samples for long-term storage and were then monitored for cancer occurrence." (RX2717 (Singlera) at 001 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2457:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein. The proposed finding is also inaccurate because it suggests that PanSeer was studied in 123,115 people (RX3115 (Chen et al., 2020) at 4, Table 1); PanSeer was only studied in an retrospective, observational study of 418 participants. (PFF ¶ 534; RX3637 (Singlera) at 1–6; Gao (Singlera) Tr. 2877–79.)

2458. Singlera published the results of the Taizhou study in the peer-reviewed Nature Communications Journal in 2020. (Gao (Singlera) Tr. 2879-80).

Response to Finding No. 2458:

Respondents have no specific response.

2459. At trial, Dr. Gao also explained that all data associated with the Taizhou study, including "all the original sequencing data [and] design data[,]" were made publicly available "so any statistician, biologist, any computer scientist can download, analyze themselves, to see if the results we published agree with the data." (Gao (Singlera) Tr. 2880).

Response to Finding No. 2459:

Respondents have no specific response.

2460. The Nature article reported "the preliminary results of PanSeer, a noninvasive blood test based on circulating tumor DNA methylation, on TZL plasma samples from 605 asymptomatic individuals, 191 of whom were later diagnosed with stomach, esophageal, colorectal, lung or liver cancer within four years of blood draw." (RX2717 (Singlera) at 001 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2460:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein. Respondents also note that of the 605 TZL plasma samples, 414 were from health individuals, and only 98 of the pre-diagnosis samples were used for validation of the PanSeer test. (RX3115 (Chen et al., 2020) at 4, Table 1.)

2461. The five cancer types studied in Taizhou "account for 261,530 yearly cancer deaths in the US and 2.1 million yearly cancer deaths in China; early detection could greatly reduce deaths from these diseases." (RX2717 (Singlera) at 007 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2461:

Respondents have no specific response.

2462. "The PanSeer assay was able to successfully detect five cancer types using a common set of methylation markers regardless of tissue-of-origin. As such, the genes included in the LR classifier represent a core epigenetic signature common to multiple cancer types."

(RX2717 (Singlera) at 005 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2462:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein.

2463. The PanSeer "assay is most likely identifying patients who already have cancerous growths but who remain asymptomatic to current detection methods and standard of care, as many cancers do not cause the appearance of symptoms until late in disease development." (RX2717 (Singlera) at 006 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2463:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2406, 2416–17 and 2421 herein.

2464. "The PanSeer assay was solely developed to detect cancer regardless of the tissue-of-origin by targeting a limited number of genomic regions that are commonly aberrantly methylated across different cancer types, allowing it to be used as a potential first-line inexpensive cancer screen; it also requires a comparatively small amount of input DNA (from only a single tube of blood)." (RX2717 (Singlera) at 006 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2464:

The proposed finding is inaccurate, incomplete and misleading. Singlera has not published any ability to identify a molecular cancer signal of origin. (RX3115 (Chen et al., 2020) at 6.) Singlera has stated that any patient testing positive on PanSeer would then undergo additional blood test and/or follow-up imaging to allow tissue of origin mapping. (RX3869 (Cote Expert Report) ¶ 239; RX3115 (Chen et al., 2020) at 6.) However, Singlera has not developed such a blood test. (RX3115 (Chen et al., 2020) at 6.)

2465. "The PanSeer assay provides a preliminary demonstration of early detection of multiple cancer types four years prior to conventional diagnosis in a robust manner, and lays the foundation for a non-invasive blood test for early detection of cancer in a high-risk (or

average-risk in the future) population." (RX2717 (Singlera) at 006-007 (Non-invasive early detection of cancer four years before conventional diagnosis using a blood test, July 21, 2020)).

Response to Finding No. 2465:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2406, 2416–17 and 2421 herein.

2466. Dr. Gao testified at trial that Singlera has received recognition from industry publications for its PanSeer test after publishing the results of the Taizhou study. (Gao (Singlera) Tr. 2880).

Response to Finding No. 2466:

Respondents have no specific response.

2467. Singlera plans to showcase the PanSeer test's ability to detect more cancers than the five demonstrated in the Taizhou study. (Gao (Singlera) Tr. 2881-82).

Response to Finding No. 2467:

The proposed finding is incomplete and misleading including insofar as it suggests that Singlera is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2406, 2416–17 and 2421, which Respondents incorporate herein.

2468. Dr. Gao testified at trial that demonstrating the ability to detect additional cancers will require a prospective study. (Gao (Singlera) Tr. 2881).

Response to Finding No. 2468:

Respondents have no specific response.

2469. Singlera hopes to start its FDA trial for PanSeer in two to three years. (PX7042 (Gao (Singlera) IHT at 96)).

Response to Finding No. 2469:

Respondents have no specific response.

2470. Dr. Gao testified at trial that the study designs for the clinical studies conducted using Grail's Galleri test and PanSeer are different. (Gao (Singlera) Tr. 2885).

Response to Finding No. 2470:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that GRAIL has not demonstrated the ability of the Galleri test to screen for 50 cancer types, while Singlera has shown the ability of the PanSeer test to screen for five cancer types. Unlike PanSeer, where an earlier version has been studied in a small retrospective study (*See* RRFF ¶¶ 2406, 2416–17 and 2421), Galleri has been studied in several, large prospective trials.

GRAIL's CCGA study is a *prospective*, multi-center, case-control, observational study with longitudinal follow-up of 15,254 participants. (PFF ¶ 370 (RX3409 (Klein 2021) at 2; (RX3430 (Liu 2020) at 1; Ofman (GRAIL) Tr. 3291–95; [redacted] RX0744 (GRAIL) at 47–48).) It is believed to be the largest case-control study that there has ever been for early detection. (Ofman (GRAIL) Tr. 3291.) The study was unique because the samples were prospectively collected. As Dr. Cote explained: "[The] case-control trial was actually prospectively collected, and it was done under a strict protocol for the collection of all of these samples. That makes it unique in terms of the case-control study, and . . . it was designed that way to provide sample collection under circumstances that would be similar to an actual clinical collection of samples." (Cote Tr. 3794–95.)

Respondents note that GRAIL's PATHFINDER study is a prospective, interventional study of 6,662 participants over the age of 50 with a cohort with additional risk of a positive cancer result (3695; ~55% of total enrollment), and another cohort containing participants without any heightened risk (2934). (PFF ¶¶ 394 (RX3044 (GRAIL) at 1–2), 399 (Ofman (GRAIL) Tr. 3293; RX0744 (GRAIL) at 73), 1290 (Aravanis (Illumina) Tr. 1891–92).) In February 2021, GRAIL released interim prospective interventional study (PATHFINDER) results that were positive and largely confirmed the previous studies. (Ofman (GRAIL) Tr.

3293; [redacted] The results also showed that Galleri detected three cancer types for which stage designation is not applicable (lymphoid leukemia, plasma cell neoplasm, and Waldenstrom macroglobulinemia), one recurrent cancer type at the "local" stage (prostate), and one cancer for which the stage was unknown (colon or rectum). (RX3041 at 005 (Thomasz Beer, Interim Results of Pathfinder, a Clinical Use Study Using a Methylation-Based Multi-Cancer Early Detection Test, June 4, 2021).

Galleri has been shown to detect the largest number of cancer types in a prospective clinical trial.

Respondents further note that GRAIL's STRIVE study is a prospective, observational, longitudinal study of approximately 100,000 women undergoing mammography (PFF ¶ 403 (Ofman (GRAIL) Tr. 3293–95; RX0744 (GRAIL) at 71), GRAIL's SUMMIT study is a prospective, observational study of approximately 13,000 participants between the ages of 50–77 with a substantial smoking history (PFF ¶¶ 407–409 (RX3291 (GRAIL) at 1; RX0744 (GRAIL) at 46–47, 72), and [redacted] and a prospective, real-world, pragmatic, randomized clinical study in the U.K. with the NHS in 140,000 screening-eligible individuals (PFF ¶¶ 1603 (Ofman (GRAIL) Tr. 3291–300), 1648 (Freidin (GRAIL) Tr. 3008)).

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper

Lay Witness Opinion Testimony (Aug. 5, 2021).) Dr. Gao admitted that he is not an expert witness in this proceeding. (Gao (Singlera) Tr. 2937).

2471. At trial, Dr. Gao explained that Grail conducted a case control study on individuals already diagnosed with cancer, but Singlera conducted its Taizhou study on asymptomatic individuals. (Gao (Singlera) Tr. 2885-87).

Response to Finding No. 2471:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2470, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 2406, 2416–17 and 2421.

5. Singlera Has Invested Approximately $250 Million on PanSeer's Development

2472. Singlera has raised over $250 million from investors to date, including a $150M fundraising round in 2020. (PX7042 (Gao (Singlera) IHT at 22-24)).

Response to Finding No. 2472:

Respondents have no specific response except to note that the cited source confirms that investment has poured into cancer test development since the time that Illumina announced its agreement to acquire GRAIL. (PFF ¶ 929.) In December 2020, Singlera obtained $150 million in financing, which it planned to utilize "mainly to expand the company's early cancer screening product research and development pipeline and focus on promoting product registration and commercialization." (PFF ¶ 929.3; RX3633 (PR Newswire) at 1); [redacted]

[redacted]

2473. Dr. Gao testified that Singlera has spent between $60 million to $100 million on research and development efforts related to the PanSeer test. (Gao (Singlera) Tr. 2888-2889).

Response to Finding No. 2473:

Respondents have no specific response.

2474. Singlera is working to "reduce cost, improve accuracy, and improve convenience" of its test. (PX7042 (Gao (Singlera) IHT at 100)).

Response to Finding No. 2474:

Respondents have no specific response except to note that the proposed finding confirms that Singlera's development of its PanSeer test is only at the very early stages. Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

6. Singlera Expects to Launch PanSeer in the U.S. in 2028 and Will Not Offer PanSeer as an LDT in the U.S.

2475. Singlera expects to launch PanSeer in the United States around 2028 as an FDA approved test. (PX7042 (Gao (Singlera) IHT at 96)).

Response to Finding No. 2475:

The proposed finding is inaccurate, incomplete and misleading. Dr. Gao subsequently testified at trial that Singlera is "far away" from starting clinical trials for PanSeer in the United States, and that it is "still not in the really starting clinical trial state." (PFF ¶ 536.1; Gao (Singlera) Tr. 2926; PX7102 (Gao (Singlera) Dep. at 113–14, 81–82.) For a pan-cancer trial, Singlera estimates that a clinical trial would need to be for 100,000 or 200,000 people, somewhere around eight or 10 years. (PFF ¶ 536.1; Gao (Singlera) Tr. 2925–26; PX7102 (Gao (Singlera) Dep. at 122–23).). Therefore, PanSeer would not be launched in the United States before 2029 at the earliest. (PFF ¶ 536.1; Gao (Singlera) Tr. 2925–26; PX7102 (Gao (Singlera) Dep. at 122–23).).

2476. Dr. Gao testified that it is "very possible [Singlera] will be able to market [the] PanSeer" test in the Chinese market as an LDT "in the next . . . two to three years." (Gao (Singlera) Tr. 2892).

Response to Finding No. 2476:

Respondents have no specific response except to note that the proposed finding is irrelevant because Complaint Counsel contends that the relevant market is the United States.

2477. Dr. Gao testified that he is not aware of any path under which the FDA would allow Singlera to market the "PanSeer in the U.S. without FDA approval." (Gao (Singlera) Tr. 2892).

Response to Finding No. 2477:

The proposed finding is inaccurate and misleading because test developers may market their tests in the United States under the LDT framework.

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Dr. Gao admitted that he is not an expert witness in this proceeding. (Gao (Singlera) Tr. 2937).

7. Singlera and Grail Consider One Another Competitors in MCED

See Complaint Counsel's Proposed Findings of Fact Section VII.B.3.a.4.

F. HELIO HEALTH IS DEVELOPING ITS MCED TEST ON THE SAME PLATFORM AS ITS HELIOLIVER TEST

1. Background

2478. Helio Health, Inc. ("Helio") is a healthcare company focused on the early detection of cancer using blood specimens. (Chahine (Helio) Tr. 1000; PX7077 (Chahine (Helio) Dep. at 12)).

Response to Finding No. 2478:

Respondents have no specific response.

2479. Helio previously operated under the name Laboratory for Advanced Medicine ("LAM"). (Chahine (Helio) Tr. 1001-02).

Response to Finding No. 2479:

Respondents have no specific response.

2480. [redacted] (PX8655 (Helio) at 006 [redacted] (*in camera*)).

Response to Finding No. 2480:

Respondents have no specific response except to note that despite working in this area for more than seven years, [redacted]

2481. [redacted] (Chahine (Helio) Tr. 1058-59 (*in camera*)).

Response to Finding No. 2481:

Respondents have no specific response except to note that the cited testimony confirms that Helio has ambitions to create a multicancer test, but does not presently have a multicancer test. Dr. Chahine also testified that [redacted] (Chahine (Helio) Tr. 1090, 1092–93.) Further, Dr. Chahine testified that [redacted]

Accordingly, there is no indication based on Helio Health's [redacted] (PFF ¶ 498.) Respondents also incorporate their responses to CCFF ¶¶ 454–60, 774–75, 777 and 1177 herein.

2482. Dr. Chahine, Helio's former CEO, testified that Helio is "probably one of the earlier companies in the category." (Chahine (Helio) Tr. 1001).

Response to Finding No. 2482:

Respondents have no specific response, except to note that in this proposed finding, Complaint Counsel appear to concede, as Dr. Chahine and FTC expert Dr. Scott Morton both concede, that [redacted] (PX6090 (Scott Morton Expert Report) ¶¶ 118–119; PX7077 (Chahine (Helio) Dep. at 31) (*in camera*).)

2483. Helio has operations in the United States and China. (Chahine (Helio) Tr. 1025).

Response to Finding No. 2483:

Respondents have no specific response, except to note that Complaint Counsel concedes that Helio has operations in China, and accordingly Complaint Counsel's contention that BGI should be disregarded as a competing sequencing provider for Helio is baseless. Helio has partnered with Chinese collaborators in the past as part of its work to validate its liver test, further undermining Complaint Counsel's argument that Chinese competitors such as BGI are off-limits to potential MCED developers. (RX3308 (Helio) at 1.) Respondents incorporate their responses to CCFF ¶¶ 1269–1345 herein.

2484. [redacted] (*in camera*)).

Response to Finding No. 2484:

The proposed finding is not supported by the cited evidence. Page 20 of PX8655 lists an [redacted] as a [redacted] but neither of the cited pages of PX8655 identifies [redacted] (PX8655 (Helio) at 19, 20, 45 (*in camera*).)

2. HelioLiver Test

2485. [redacted] (Chahine (Helio) Tr. 1000-01, 1009-10; PX7077 (Chahine (Helio) Dep. 15-17) (*in camera*)).

Response to Finding No. 2485:

Respondents have no specific response except to note that the cited testimony confirms that Helio is developing a single-cancer screening test.

2486. When still operating as LAM, Helio used the name "IvyGene" for the liver cancer screening test now known as HelioLiver. (Chahine (Helio) Tr. 1001-02).

Response to Finding No. 2486:

Respondents have no specific response.

2487. [redacted] (Chahine (Helio) Tr. 1010-11; 1057-58 (*in camera*)); PX7077 (Chahine (Helio) Dep. at 15-16) (*in camera*)).

Response to Finding No. 2487:

Respondents have no specific response.

2488. [redacted] (Chahine (Helio) Tr. 1069 (*in camera*)).

Response to Finding No. 2488:

Respondents have no specific response.

2489. Helio currently performs the sequencing for the HelioLiver test at its own certified lab as well as third-party labs. (Chahine (Helio) Tr. 1011-12).

Response to Finding No. 2489:

Respondents have no specific response.

2490. Helio chose to develop a liver cancer screening test because of the large market opportunity in the United States and China, which has the largest number of liver cancer cases in the world. (Chahine (Helio) Tr. 1025).

Response to Finding No. 2490:

Respondents have no specific response except to note that the cited testimony confirms that Helio is developing a single-cancer screening test.

2491. [redacted] (PX6049 (Grail) at 038 (Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 2491:

Respondents have no specific response except to note that the cited testimony confirms that Helio is developing a single-cancer screening test, not an MCED test.

2492. [redacted] (PX7077 (Chahine (Helio) Dep. at 16-17) (*in camera*); Chahine (Helio) Tr. 1050 (*in camera*)).

Response to Finding No. 2492:

Respondents have no specific response except to note that the cited testimony confirms that Helio is developing a single-cancer screening test.

2493. [redacted] (Chahine (Helio) Tr. 1050 (*in camera*)).

Response to Finding No. 2493:

Respondents have no specific response except to note that the cited testimony confirms that Helio is developing a single-cancer screening test.

a) [redacted]

2494. [redacted] (Chahine (Helio) Tr. 1064-65 (*in camera*)).

Response to Finding No. 2494:

The proposed finding is incomplete and misleading, and is vague and ambiguous as to the meaning of the "tests" to which it refers. When asked at trial, [redacted] (Chahine (Helio) Tr. 1064 (*in camera*).) The proposed finding is also misleading to the extent it implies that a distributed IVD model will be part of the pipeline in the foreseeable future for any putative MCED test. Several features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶ 675; RX3869 (Cote Expert Report) ¶ 359.) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.)

2495. [redacted] (Chahine (Helio) Tr. 1065-66 (*in camera*)).

Response to Finding No. 2495:

Respondents have no specific response except incorporates their responses to CCFF ¶ 2494 herein.

2496. [redacted] (Chahine (Helio) Tr. 1066 (*in camera*)).

Response to Finding No. 2496:

Respondents have no specific response except incorporates their responses to CCFF ¶ 2494 herein.

2497. [redacted] (Chahine (Helio) Tr. 1064-65 (*in camera*)).

Response to Finding No. 2497:

Respondents have no specific response except incorporates their responses to CCFF ¶ 2494 herein.

2498. [redacted] (Chahine (Helio) Tr. 1050-51 (*in camera*)).

Response to Finding No. 2498:

The proposed finding is incomplete and misleading, and appears to be based on inadmissible speculation and hearsay. Dr. Chahine testified at trial that the referenced [redacted] (Chahine (Helio) Tr. 1050-52 (*in camera*).)

2499. [redacted] (Chahine (Helio) Tr. 1051-52 (*in camera*)).

Response to Finding No. 2499:

The proposed finding is incomplete and misleading, and appears to be based on inadmissible speculation and hearsay. Dr. Chahine testified at trial that he [redacted] (Chahine (Helio) Tr. 1052

(*in camera*) (emphasis added).) Respondents also incorporate their responses to CCFF ¶ 2498 herein.

2500. [redacted] (Chahine (Helio) Tr. 1052 (*in camera*)).

Response to Finding No. 2500:

The proposed finding is incomplete and misleading, and appears to be based on inadmissible speculation and hearsay. Dr. Chahine testified at trial that he [redacted] (Chahine (Helio) Tr. 1052 (*in camera*) (emphasis added).) Respondents also incorporate their responses to CCFF ¶¶ 2498–99 herein.

3. Helio Is Developing an MCED Test on the HelioLiver Technological Platform

2501. [redacted] (Chahine (Helio) Tr. 1057 (*in camera*)).

Response to Finding No. 2501:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶ 2481, which Respondents incorporate herein. The proposed finding is also incomplete and misleading to the extent it suggests Helio has or is close to developing an "MCED test". In fact, Dr. Chahine and FTC expert Dr. Scott Morton conceded that [redacted] (PX6090 (Scott Morton Expert Report) ¶¶ 118–119; PX7077 (Chahine (Helio) Dep. at 31) (*in camera*).)

2502. Helio is researching additional cancers to add to the HelioLiver test platform. (Chahine (Helio) Tr. 1039).

Response to Finding No. 2502:

The proposed finding is not supported by the cited evidence. The proposed finding mischaracterizes the cited testimony, in which Dr. Chahine testified that Helio is "interested in" other cancers, not that Helio plans to add cancers to its liver test. (PX7077 (Chahine (Helio) Dep. at 15 ("Q. What blood-based cancer screening products is Helio currently developing? A. Our lead product is in liver, but we have a pipeline of other cancers that we're interested in, including colon, breast, lung.").) Further, the cited testimony confirms that Helio is only "interested in" other cancers but has not in fact developed a test that screens for multiple cancer types simultaneously. In the cited trial testimony Dr. Chahine referred to "many others [i.e., cancer types] that we have done, you know, very limited research on" and noted that "ovarian cancer is a huge killer" and "[e]sophageal cancer is another one" but did not refer to a "HelioLiver test platform" or specifically discuss adding those or other cancer types to any such platform. (Chahine (Helio) Tr. 1039.) Respondents also incorporate their responses to CCFF ¶¶ 455 and 2481 herein.

2503. [redacted] (Chahine (Helio) Tr. 1000-01). (PX8655 (Helio) at 019 [redacted] (*in camera*)).

Response to Finding No. 2503:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502, which Respondents incorporate herein. The proposed finding is also not

supported by the cited evidence. In the cited trial testimony Dr. Chahine mentions Helio's [redacted] but does not state [redacted] and the cited portion of PX8655 [redacted] (Chahine (Helio) Tr. 1000-01; PX8655 (Helio) at 019) (*in camera*).) Further, as Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.)

The proposed finding is also misleading to the extent it implies that Helio has any plans to launch a broad MCED test that would compete with Galleri. In fact, Dr. Chahine testified that Helio's intent is to proceed by [redacted] (PX7077 (Chahine (Helio) Dep. at 30–31) (*in camera*); Chahine (Helio) Tr. 1084 (*in camera*).) [redacted]

Dr. Chahine also testified that [redacted] 2504. [redacted] (Chahine (Helio) Tr. 1056-57 (*in camera*)).

Response to Finding No. 2504:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2503, which Respondents incorporate herein.

2505. [redacted] (Chahine (Helio) Tr. 1056-57 (*in camera*)).

Response to Finding No. 2505:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2503, which Respondents incorporate herein.

2506. [redacted] (Chahine (Helio) Tr. 1056-57 (*in camera*)).

Response to Finding No. 2506:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein. In fact, Dr. Chahine and FTC expert Dr. Scott Morton conceded that [redacted] (PX6090 (Scott Morton Expert Report) ¶¶ 118–119; PX7077 (Chahine (Helio) Dep. at 31) (*in camera*).) Moreover, Dr. Chahine has testified that Helio's intent is to proceed by [redacted] (PX7077 (Chahine (Helio) Dep. at 30–31) (*in camera*); Chahine (Helio) Tr. 1084 (*in*

camera).) [redacted] (Chahine (Helio) Tr. 1090-93.)

The proposed finding is also misleading the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.) Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five years for each cancer; to develop a 50-cancer test one cancer at a time a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

2507. [redacted] (PX7077 (Chahine (Helio) Dep. at 33-34 (*in camera*))).

Response to Finding No. 2507:

The proposed finding is not supported by the cited evidence. The quotation from the cited deposition testimony is accurate, but Dr. Chahine did not make reference in the cited deposition testimony [redacted] (PX7077 (Chahine (Helio) Dep. at 33-34) (*in camera*).) Respondents also incorporate their responses to CCFF ¶¶ 2481 and 2502–03 herein.

2508. [redacted] (PX7077 (Chahine (Helio) Dep. at 34 (*in camera*))).

Response to Finding No. 2508:

The proposed finding is not supported by the cited evidence. The quotations from the cited deposition testimony are accurate, but Dr. Chahine did not state in the cited deposition testimony [redacted] (PX7077 (Chahine (Helio) Dep. at 34) (*in camera*).)

The proposed finding is also based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

2509. [redacted] (Chahine (Helio) Tr. 1058-59 (*in camera*)).

Response to Finding No. 2509:

Respondents have no specific response.

2510. [redacted] (Chahine (Helio) Tr. 1057-58 (*in camera*)).

Response to Finding No. 2510:

The proposed finding is incomplete and not supported by the cited evidence. Dr. Chahine stated in the cited trial testimony that [redacted] but he did not state in the cited trial testimony [redacted] (Chahine (Helio) Tr. 1057-58 (*in camera*).) The proposed finding is also misleading to the extent that it suggests Helio has or is close to developing a MCED test that could compete with Galleri. In fact, Dr. Chahine and FTC expert Dr. Scott Morton both conceded that [redacted] (PX6090 (Scott Morton Expert Report) ¶¶ 118–119; PX7077 (Chahine (Helio) Dep. at 31) (*in camera*).) Respondents also incorporate their responses to CCFF ¶¶ 2481 and 2502–03 herein.

2511. When considering which cancers to add to HelioLiver, Helio has prioritized by reviewing the research conducted on other cancer types and the cost to conduct a clinical trial for each cancer. (Chahine (Helio) Tr. 1039-40). Helio also considers the prevalence of a cancer and the corresponding market size for a test that detects that cancer when considering what cancers to add to its screening test. (Chahine (Helio) Tr. 1040-41). In addition, Helio considers the lethality of a cancer when considering what cancers to add to its cancer screening test. (Chahine (Helio) Tr. 1041).

Response to Finding No. 2511:

The proposed finding is not supported by the cited evidence. The cited portions of Dr. Chahine's trial testimony do not discuss "add[ing]" cancers "to HelioLiver". (Chahine (Helio) Tr. 1039-41.) The proposed finding is also vague, ambiguous and misleading to the extent it refers vaguely to "other cancer types". Respondents also incorporate their responses to CCFF ¶¶ 2481 and 2502–03 herein.

2512. [redacted] (PX7077 (Chahine (Helio) Dep. at 15); PX8655 (Helio) at 013 [redacted] (*in camera*)).

Response to Finding No. 2512:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein.

The proposed finding is also not supported by the cited evidence. Neither the cited portion of Dr. Chahine's deposition testimony nor the cited portion of PX8655 reflects [redacted] To the contrary, the cited portion of PX8655 [redacted] and Dr. Chahine stated in his deposition testimony that [redacted]. (PX7077 (Chahine (Helio) Dep. at 15); PX8655 (Helio) at 013 (*in camera*).)

2513. [redacted] (*in camera*)).

Response to Finding No. 2513:

The proposed finding is not supported by the cited evidence. Although the quotations from the [redacted] the file name of the [redacted]

[redacted] PX8655 (Helio) at 001, 027 (*in camera*).) Moreover, Helio's recent announcements, as well as its prior work on IvyGene, show that it has only ever studied breast, colon, liver, nasopharyngeal and lung cancers. (RX3302 (Hao et al., 2017); RX3308 (Helio) at 2); RX3616 (Roy et al., 2019).) Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.) Respondents also incorporate their responses to CCFF ¶¶ 2481 and 2502–03 herein.

2514. Helio told its investors that Helio intends to develop an MCED test by adding additional cancers to its single-cancer HelioLiver test. (Chahine (Helio) Tr. 1037).

Response to Finding No. 2514:

The proposed finding is not supported by the cited evidence. The cited portion of Dr. Chahine's trial testimony does not discuss Helio "adding additional cancers to its single-cancer HelioLiver test." Instead, when asked at trial, "has Helio told investors that it's developing an MCED test?" Dr. Chahine testified, "It has" but clarified that "the strategy as I've communicated it to investors . . . is . . . that, you know, ultimately the category is going in this direction **but that we're choosing to, for the reasons I've mentioned, doing a single test first**." (Chahine (Helio) Tr. 1037 (emphasis added).)

2515. Per Dr. Chahine, Helio has not set a limit on the number of cancers it plans to include in its MCED test. (Chahine (Helio) Tr. 1043).

Response to Finding No. 2515:

Respondents have no specific response, except to note that Helio's recent announcements, as well as its prior work on IvyGene, show that it has only ever studied breast, colon, liver, nasopharyngeal and lung cancers. (RX3302 (Hao et al., 2017); RX3308 (Helio) at 2); RX3616 (Roy et al., 2019).) Further, as Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Respondents also incorporate their responses to CCFF ¶¶ 2481 and 2502–03 herein.

2516. [redacted] (Chahine (Helio) Tr. 1069-70 (*in camera*)).

Response to Finding No. 2516:

The proposed finding is inaccurate and not supported by the cited evidence. Dr. Chahine testified at trial that, contrary to the [redacted] (Chahine (Helio) Tr. 1069-70 (*in camera*).)

2517. [redacted] (PX7077 (Chahine (Helio) Dep. at 15-16 (*in camera*))).

Response to Finding No. 2517:

The proposed finding is not supported by the cited evidence. In the cited deposition testimony Dr. Chahine testified that the [redacted] but the cited deposition testimony contained no discussion of [redacted] (PX7077 (Chahine (Helio) Dep. at 15-16) (*in camera*).)

2518. [redacted] (Chahine (Helio) Tr. 1058 (*in camera*)).

Response to Finding No. 2518:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein.

2519. [redacted] (PX8655 (Helio) [redacted] (*in camera*)). (*See* PX8655 (Helio) at 045 [redacted] (*in camera*)).

Response to Finding No. 2519:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein. Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.)

Respondents also note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 68), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2520. [redacted] (*in camera*)).

Response to Finding No. 2520:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein.

Respondents also note that Helio's recent announcements, as well as its prior work on IvyGene, show that it has only ever studied breast, colon, liver, nasopharyngeal and lung cancers. (RX3302 (Hao et al., 2017); RX3308 (Helio) at 2); RX3616 (Roy et al., 2019).)

Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.)

2521. [redacted] (*in camera*)).

Response to Finding No. 2521:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein. Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.)

2522. [redacted] (PX8655 (Helio) at 024 [redacted] (*in camera*)).

Response to Finding No. 2522:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein. Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted]

[redacted] (Chahine (Helio) Tr. 1085.)

2523. [redacted] (RX0894 (Helio) at 015, 022 (Helio Health, May 31, 2021) (*in camera*)).

Response to Finding No. 2523:

The proposed finding is irrelevant because the [redacted] (RX0894 (Helio) at 015, 022 (*in camera*).)

2524. [redacted] (PX8655 (Helio) at 018 [redacted] (*in camera*)).

Response to Finding No. 2524:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2481 and 2502–03 herein.

2525. [redacted] (RX0894 (Helio) at 25 (Helio Health, May 31, 2021) (*in camera*)).

Response to Finding No. 2525:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein. Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218);

RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.)

2526. [redacted] (PX8655 (Helio) at 028 [redacted] (*in camera*)).

Response to Finding No. 2526:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481 and 2502–03, which Respondents incorporate herein. Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.)

[redacted]

[redacted]

In addition, to the extent that Helio intends to launch a putative MCED test with these described features (which it does not), this test would have serious issues. *First*, the test does not report a specificity across different types of cancer. Further, [redacted]

[redacted]

).)

2527. [redacted] (RX0894 (Helio) at 19 (Helio Health, May 31, 2021) (*in camera*)).

Response to Finding No. 2527:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481, 2502–03 and 2526, which Respondents incorporate herein.

2528. [redacted] (*in camera*)).

Response to Finding No. 2528:

The proposed finding is misleading and contradicted by the weight of the evidence to the extent it suggests that [redacted]. For example, Dr. Chahine and FTC expert Dr. Scott Morton both conceded that [redacted] (PX6090 (Scott Morton Expert Report) ¶¶ 118–119; PX7077 (Chahine (Helio) Dep. at 31) (*in camera*).) Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.) Respondents also incorporate their responses to CCFF ¶¶ 2481, 2502–03 and 2526 herein.

2529. [redacted] (*in camera*)). [redacted]

(PX8655 (Helio) at 038 (*in camera*)).

Response to Finding No. 2529:

Respondents have no specific response except to note that it appears that the first citation to PX8655 (Helio) should be to page 038, not page 031. Respondents also incorporate their responses to CCFF ¶¶ 2481, 2502–03 and 2526 herein.

2530. (PX8655 (Helio) at 039 (*in camera*)).

Response to Finding No. 2530:

Respondents have no specific response. Respondents also incorporate their responses to CCFF ¶¶ 2481, 2502–03 and 2526 herein.

a)

2531. (Chahine (Helio) Tr. 1061-62 (*in camera*)).

Response to Finding No. 2531:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481, 2502–03 and 2526, which Respondents incorporate herein.

[redacted]

2532. [redacted] (Chahine (Helio) Tr. 1061-63 (*in camera*)).

Response to Finding No. 2532:

The proposed finding is inaccurate and misleading. In the cited trial testimony Dr. Chahine testified about [redacted]

(Chahine (Helio) Tr. 1061-63 (*in camera*).)

2533. [redacted] (*in camera*)).

Response to Finding No. 2533:

Respondents have no specific response.

2534. [redacted] (Chahine (Helio) Tr. 999, 1061 (*in camera*)).

Response to Finding No. 2534:

Respondents have no specific response.

2535. [redacted] (PX8655 (Helio) at 031 (*in camera*)).

[redacted] (PX8655 (Helio) at 031 [redacted] (*in camera*)).

Response to Finding No. 2535:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481, 2502–03 and 2526, which Respondents incorporate herein.

Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified that [redacted] (Chahine (Helio) Tr. 1085.) Respondents also incorporate their responses to CCFF ¶¶ 2481, 2502–03 and 2526 herein.

2536. [redacted] (Chahine (Helio) Tr. 1061-62 (*in camera*)).

Response to Finding No. 2536:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481, 2502–03 and 2526, which Respondents incorporate herein.

[redacted]

2537. [redacted] (Chahine (Helio) Tr. 1062 (*in camera*)).

Response to Finding No. 2537:

Respondents have no specific response, except to note that in this proposed finding Complaint Counsel concedes that [redacted] Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) For example, Natera and BGI Genomics formed a partnership to commercialize Natera's Signatera NGS-based cancer monitoring test on BGI's DNBSEQ platform in China, and has now launched a version of the Signatera test in China "that incorporates MGI sequencing platforms." [redacted] RX3062 (BGI) at 1.)

BGI already has a commercially available NGS platform. (PFF ¶¶ 777–777.5.) BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted]

[redacted]

RX3869 (Cote Expert Report) ¶ 287; [redacted]**.)** BGI also recently won a jury verdict that held three of Illumina's patents to be invalid meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) [redacted]

2538. [redacted] (Chahine (Helio) Tr. 1062-63 (*in camera*)).

Response to Finding No. 2538:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481, 2502–03 and 2526, which Respondents incorporate herein.

b) Helio's Definition of "Cancer Type" Is Narrower Than the One Grail Uses When Grail Claims It Can Detect 50 Cancers

2539. [redacted]

[redacted] (*in camera*)).

Response to Finding No. 2539:

The proposed finding is not supported by the cited evidence. Although the cited portion of PX8655 contains the quoted [redacted], and the cited portion of PX8655 contains no statement that [redacted]. (PX8655 (Helio) at 031 (*in camera*).) Helio's recent announcements, as well as its prior work on IvyGene, show that it has only ever studied breast, colon, liver, nasopharyngeal and lung cancers. (RX3302 (Hao et al., 2017); RX3308 (Helio) at 2); RX3616 (Roy et al., 2019).) Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.)

The proposed finding is also incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481, 2502–03 and 2526, which Respondents incorporate herein.

2540. Dr. Chahine testified at trial that "broadly in the category" people define cancer types based on the organ where the cancer is located but it's "far more complicated than that" because

"even within a certain organ you could have different cancer types and even different algorithms that would identify a certain cancer type or not." (Chahine (Helio) Tr. 1042).

Response to Finding No. 2540:

Respondents have no specific response.

2541. Grail uses the American Joint Committee on Cancer's definition of cancer types. (RX2770 (2021 ASCO CCGA Poster)).

Response to Finding No. 2541:

Respondents have no specific response.

2542. [redacted] (PX8655 (Helio) at 031 [redacted] (*in camera*)); RX2770 (2021 ASCO CCGA Poster); *see infra* Section X, Appendix B (Galleri Has Not Been Clinically Shown to Provide Early Detection of More Than 50 Cancers in an Asymptomatic Population)).

Response to Finding No. 2542:

The proposed finding is not supported by the cited evidence. PX8655 [redacted] . (PX8655 (Helio) at 031) (*in camera*); RX2770 (2021 ASCO CCGA Poster).) Helio's recent announcements, as well as its prior work on IvyGene, show that it has only ever studied breast, colon, liver, nasopharyngeal and lung cancers. (RX3302 (Hao et al., 2017); RX3308 (Helio) at 2); RX3616 (Roy et al., 2019).)

The proposed finding is also incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF

¶¶ 2481, 2502–03, 2526 and 2539, which Respondents incorporate herein. Further, the cited source is outdated as it is from 2019. As Dr. Chahine testified, Helio abandoned those earlier multi-cancer efforts by LAM on the IvyGene test. (PFF ¶ 501.1; PX7077 (Chahine (Helio) Dep. at 218); RX3417 (Helio); RX3263 (GenomeWeb) at 1; RX3869 (Cote Expert Report) n. 334.) Since then, Dr. Chahine testified [redacted] (Chahine (Helio) Tr. 1085.)

Respondents also note that Complaint Counsel chose not to discuss PX8655 at trial, (CC Exhibit Index at 68), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

4. HelioLiver Is Undergoing an FDA Clinical Trial Now

2543. Helio is conducting one clinical trial on its HelioLiver test, which is available on ClinicalTrials.gov. (Chahine (Helio) Tr. 1031).

Response to Finding No. 2543:

Respondents have no specific response.

2544. [redacted] (PX7077 (Chahine (Helio) Depo at 16-17, 20) (*in camera*)).

Response to Finding No. 2544:

Respondents have no specific response.

2545. Helio is currently in the last phase of clinical development for its HelioLiver test with the FDA. (Chahine (Helio) Tr. 1020).

Response to Finding No. 2545:

Respondents have no specific response.

5. [redacted]

2546. Dr. Chahine testified at trial that the R&D process to develop a screening test is "extremely expensive," and the two major costs are "acquiring actual samples" to conduct the analysis and the sequencing the samples. (Chahine (Helio) Tr. 1035-36).

Response to Finding No. 2546:

Respondents have no specific response.

2547. [redacted] (PX7077 (Chahine (Helio) Dep. at 28-29) (*in camera*)).

Response to Finding No. 2547:

Respondents have no specific response.

2548. [redacted] (PX7077 (Chahine (Helio) Dep. at 40-41) (*in camera*)) [redacted]

Response to Finding No. 2548:

Respondents have no specific response.

2549. [redacted] (PX7077 (Chahine (Helio) Dep. at 33-34) (*in camera*)).

Response to Finding No. 2549:

The proposed finding is not supported by the cited evidence. In the cited deposition testimony Dr. Chahine was asked [redacted]

[redacted] (PX7077 (Chahine (Helio) Dep. at 33-34) (*in camera*).) Respondents also incorporate their responses to CCFF ¶¶ 2481, 2502–03, 2526, 2539 and 2542 herein.

6. [redacted]

2550. [redacted] (PX7077 (Chahine (Helio) Dep. at 16-17) (*in camera*)).

Response to Finding No. 2550:

Respondents have no specific response.

2551. [redacted] (PX7077 (Chahine (Helio) Dep. at 31) (*in camera*)).

Response to Finding No. 2551:

Respondents have no specific response, except to note that in this proposed finding Complaint Counsel concedes that [redacted] (PX7077 (Chahine (Helio) Dep. at 31) (*in camera*)). Respondents also incorporate their responses to CCFF ¶¶ 2481, 2502–03, 2526, 2539 and 2542 herein.

2552. [redacted] (Chahine (Helio) Tr. 1061 (*in camera*)).

Response to Finding No. 2552:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2481, 2502–03, 2526, 2539 and 2542 herein.

2553. [redacted] (Chahine (Helio) Tr. 1062-63 (*in camera*)).

Response to Finding No. 2553:

Respondents have no specific response, except to note that the quoted testimony reads [redacted] not [redacted]. (Chahine (Helio) Tr. 1062 (*in camera*).) Respondents also incorporate their responses to CCFF ¶¶ 2481, 2502–03, 2526, 2539 and 2542 herein.

2554. [redacted] (Chahine (Helio) Tr. 1063 (*in camera*)).

Response to Finding No. 2554:

Respondents have no specific response.

2555. [redacted] (Chahine (Helio) Tr. 1063 (*in camera*)).

Response to Finding No. 2555:

Respondents have no specific response except incorporate their responses to CCFF ¶¶ 2481, 2502–03, 2526, 2539 and 2542 herein.

2556. [redacted] (Chahine (Helio) Tr. 1061-62 (*in camera*)).

Response to Finding No. 2556:

The proposed finding is incomplete and misleading including insofar as it suggests that Helio is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future, including for the reasons explained in Respondents' responses to CCFF ¶¶ 2481, 2502–03 and 2526, which Respondents incorporate herein.

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2562 and 2565 herein.

2569. [redacted]

Response to Finding No. 2569:

Respondents have no specific response except to note that [redacted] lacks personal knowledge to opine on what Illumina's motivations and incentives might

be. In addition, the record evidence shows that despite Illumina's competitive position vis-à-vis [redacted], Illumina has continued to support [redacted] for their working relationship. [redacted]

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2570. [redacted]

Response to Finding No. 2570:

The proposed finding is incomplete and misleading including insofar as it suggests that [redacted], including for the reasons explained in Respondents' responses to CCFF ¶ 2562, which Respondents incorporate herein.

Further, [redacted]

[redacted]

2571. [redacted]

Response to Finding No. 2571:

[redacted], including for the reasons explained in Respondents' responses to CCFF ¶¶ 2562 and 2570, which Respondents incorporate herein.

The proposed finding is also misleading the extent it suggests that it is a viable option to convert from a single cancer screening test to a multi-cancer screening test. To the contrary, even once a company has developed a cancer screening test for a single cancer type, it does not become easier to add additional cancer types, because "[t]he development of biomarkers for a particular cancer will not be adequate for other cancers" and "[w]hile there may be overlap, one still needs to go through all of the [development] steps," including "go[ing] through the case-control verification to determine whether or not the assay has the performance characteristics needed . . . for the new target cancer," and "go[ing] through a prospective trial depending on which cancer is being targeted." (Cote Tr. 3787; RX3869 (Cote Expert Report) ¶ 123; PFF ¶¶ 328–328.1.)

Dr. Aravanis testified that GRAIL considered developing a single cancer screening test as a route to multicancer screening test but abandoned it because it would take far too long; building a multicancer test by developing single cancer tests seriatim could take four or five

years for each cancer; to develop a 50-cancer test one cancer at a time a developer would need to do a research study, discovery study and collect relevant samples, determine the right technology, go into a new test development phase and clinical trials for each new cancer; GRAIL was able to develop a test capable of detecting 50 cancer types simultaneously directly by undergoing a much more intensive process to develop a test for 50 cancer types at the same time. (Aravanis (Illumina) Tr. 1895–97.)

2572. [redacted]

Response to Finding No. 2572:

[redacted], including for the reasons explained in Respondents' responses to CCFF ¶¶ 2562 and 2570–71, which Respondents incorporate herein.

2573. [redacted]

Response to Finding No. 2576:

The proposed finding is inaccurate, incomplete and misleading to the extent it suggests that [redacted]

[redacted]

Respondents have no specific response except to note that Complaint Counsel chose not to discuss this document at trial, (CC Exhibit Index at 62), or in any deposition, and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents also incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

3. [redacted] 2577. [redacted]

Response to Finding No. 2577:

The proposed finding is misleading and incomplete. [redacted] currently do not have any clinical trials relating to screening for multiple cancers listed on clinicaltrials.gov. (RX3869 (Cote Expert Report) ¶ 189.) Ms. Perettie also testified at her deposition that [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2578. [redacted]

Response to Finding No. 2578:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2577, which Respondents incorporate herein.

2579. [redacted].

Response to Finding No. 2579:

Respondents have no specific response.

2580. [redacted]

Response to Finding No. 2580:

Respondents have no specific response.

2581. [redacted] (*in camera*)).

Response to Finding No. 2581:

The proposed finding is inaccurate, incomplete, misleading and contradicted by the weight of the evidence. [redacted]

[redacted]

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2582. [redacted]

Response to Finding No. 2582:

The proposed finding is misleading and incomplete. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2583. [redacted]

Response to Finding No. 2583:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2584. [redacted]

Response to Finding No. 2584:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2585. [redacted]

Response to Finding No. 2585:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2586. [redacted]

Response to Finding No. 2586:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2587. [redacted]

Response to Finding No. 2587:

Respondents have no specific response except to incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2588. [redacted]

Response to Finding No. 2588:

Respondents have no specific response except to note that [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2562 and 2570–71 herein.

2589. [redacted]

Response to Finding No. 2589:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2588.

2590. [redacted]

Response to Finding No. 2590:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2588.

2591. [redacted]

Response to Finding No. 2591:

Respondents have no specific response except to incorporate their responses to CCFF ¶ 2588.

4. [redacted]

2592. [redacted]

Response to Finding No. 2592:

The proposed finding is inaccurate, incomplete, misleading and contradicted by the weight of the evidence. [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2562, 2570–71, 2577 and 2588 herein.

2593. [redacted]

Response to Finding No. 2593:

The proposed finding is inaccurate, incomplete, misleading and contradicted by the weight of the evidence. With respect to its [redacted] RX3869 (Cote Expert Report) ¶ 185.) [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2562, 2570–71, 2577 and 2588 herein.

2594. [redacted]

Response to Finding No. 2594:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2562, 2570–71, 2577 and 2588, which Respondents incorporate herein.

5. [redacted]

H. OTHER MCED TEST DEVELOPERS

1. [redacted]

2595. [redacted]

Response to Finding No. 2595:

[redacted]

[redacted]

[redacted].

2596. [redacted]

Response to Finding No. 2596:

[redacted]

[redacted].

[redacted] As numerous witnesses testified, GRAIL would not compete with a purported MCED test screened for few than ten cancers. (PFF ¶¶ 709–09.6.)

2597. [redacted]

Response to Finding No. 2597:

[redacted]

[redacted] The proposed finding is also misleading to the extent of its use of the term "Grail's intelligence" and relies entirely on unreliable speculation and hearsay. Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 38), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

[redacted], which are not reflective of, or generalizable to, the populations of United States, and thus is unlikely to be acceptable to the FDA as support for a PMA application.

In addition, there is no such thing as a "pan-cancer test" because there is no such thing as a universal cancer biomarker. (PFF ¶ 308; Aravanis (Illumina) Tr. 1883, 1896–98; RX3869 (Cote Expert Report) ¶ 106.)

2598. [redacted]

Response to Finding No. 2598:

The proposed finding is irrelevant because it relates to a putative Chinese cancer test developer that Complaint Counsel has not shown will enter the U.S. market in the foreseeable future. The proposed finding is also misleading to the extent of its use of the term "Grail's

competitive intelligence" and relies entirely on unreliable speculation and hearsay. Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 38), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. [redacted] Respondents also note that [redacted] press release states that "In the future, [redacted] will continue to seek NMPA approvals for its IVD products based on NextSeq™ 550Dx *and other sequencing systems* to promote the implementation of tumor NGS products in hospitals and benefit more cancer patients." (*Id.* (emphasis added).) Respondents further note that BGI is a NGS sequencing system provider based in China. (PFF ¶ 587 (RX3060 (BGI) at 1).)

2599. [redacted] (PX4139 (Grail) at 002, 005 (Email from A. Tosti, Grail, to E. Mann, Grail, May 28, 2020, attaching press release, "2019 AACR Breakthrough in Application of Methylation Ultra-deep Sequencing in Liquid Biopsy for Early Lung Cancer Screening," Aug. 26, 2019).

Response to Finding No. 2599:

The proposed finding is irrelevant because it relates to a [redacted] The proposed finding is also misleading to the extent of its use of the term "Grail's

competitive intelligence" and relies entirely on unreliable speculation and hearsay. Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 38), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. [redacted]

The proposed finding is also inaccurate because Ms. Tosti indicated that one presentation would not be made until June 2022 and the presentations only mentioned lung cancer and ovarian cancer. (PX4139 (GRAIL) at 002.)

2600. [redacted] **(*in camera*)).**

Response to Finding No. 2600:

The proposed finding is irrelevant because it relates to a [redacted] The proposed finding is also incomplete and misleading. Respondents note that the cited presentation by Illumina is [redacted] (PX2163 (Illumina) at 008 (Project Valor, Aug. 4, 2020).)

2601. [redacted] (PX7085 (Harada (Exact) Dep. at 76, 227) (*in camera*)).

Response to Finding No. 2601:

The proposed finding is irrelevant because it relates to a putative Chinese cancer test developer that Complaint Counsel has not shown will enter the U.S. market in the foreseeable future. The proposed finding is also incomplete and misleading to the extent it seems to suggest that [redacted] (*See* PFF ¶¶ 418–421.) Respondents also incorporate their response to CCFF ¶ 1905. Respondents further note that [redacted] (PX7085 (Harada (Exact) Dep.) at 227.) [redacted]

Respondents also note that PX4139 shows that [redacted] appears to be pursuing, at best, a test for three cancer types, one of which is a cancer that has an existing cancer screening test. As numerous witnesses testified, GRAIL would not compete with a purported MCED test screened for few than ten cancers. (PFF ¶¶ 709–09.6.)

Complaint Counsel also did not mention [redacted] during discovery or at trial in this case. Complaint Counsel did not subpoena or notice any witnesses from [redacted]. Nor has [redacted] reached out to the Commission to address this Transaction. Therefore, the finding should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2602. [redacted]

Response to Finding No. 2602:

The proposed finding is irrelevant because it relates to a [redacted] (Cance (American Cancer Society) Tr. 611.) Further, Complaint Counsel has never even mentioned [redacted].

2. [redacted]

2603. [redacted] (PX7050 (Nolan (Freenome) IHT at 280-82) (*in camera*); PX7089 (Naclerio (Illumina) Dep. at 16); PX7094 (Nolan (Freenome) Dep. at 261) (*in camera*)).

Response to Finding No. 2603:

The proposed finding relies in part on on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) [redacted]

2604. [redacted] (PX7050 (Nolan (Freenome) IHT at 280-82) (*in camera*)).

Response to Finding No. 2604:

The proposed finding is misleading to the extent it suggests that [redacted] Respondents note that there is no indication based on Freenome's work to date that [redacted] (PFF ¶ 458 [redacted] RX3869 (Cote Expert Report) ¶ 193).) Respondents note that [redacted] (PFF ¶¶ 459-70.) Respondents also incorporate their response to CCFF ¶¶ 2355–62. Respondents also note that Mr. Nolan testified that [redacted] (PX7094 (Nolan (Freenome) Dep. at 307).)

Respondents also note that the proposed finding relies on speculation and inadmissible hearsay. Mr. Nolan testified that [redacted] (PX7094 (Nolan (Freenome) Dep.) at 261.)

The proposed finding relies in part on on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) [redacted]

[redacted]

2605. [redacted] (PX7094 (Nolan (Freenome) Dep. at 261) (*in camera*)).

Response to Finding No. 2605:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2604, which Respondents incorporate herein.

3. [redacted]

2606. [redacted]

Response to Finding No. 2606:

Respondents have no specific response except to note that Mr. Bishop was answering Complaint Counsel's question regarding companies he was aware of that are developing [redacted], not developing an MCED test. (PX7069 (Bishop (Grail) IHT) at 124–25.)

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Further, Complaint Counsel has never even mentioned the putative MCED test developer, Adaptive. Complaint Counsel did not subpoena or notice any witnesses from Adaptive. Nor has Adaptive reached out to the Commission to address this Transaction.

VII. THE PROPOSED MERGER WILL SUBSTANTIALLY LESSEN COMPETITION IN THE U.S. MCED TEST MARKET

A. ILLUMINA HAS THE ABILITY TO HARM GRAIL'S RIVALS

2607. As discussed in detail above in Section V., MCED test developers testified that they have no viable alternatives and that they need and rely on Illumina as their only NGS option.

Response to Finding No. 2607:

To the extent Complaint Counsel refers to the proposed findings in Section V,

Respondents hereby incorporate by reference their responses to those proposed findings.

1. Illumina Has the Ability to Identify and Discriminate Against MCED Test Developers Posing Competitive Threats to Grail's Galleri Test and the Tools to Foreclose or Reduce the Competitiveness of Grails' Rivals

a) Illumina Designs and Offers Products Tailored for Customers to Use in Certain Applications, Including Providing Custom Kits Not Just for Specific Applications but Also for Specific Customers

2608. Nicole Berry, Illumina's Senior Vice President and General Manager of the Americas Commercial Region, testified that Illumina classifies customers based on segments such as reproductive health, genetic disease testing, and oncology on the clinical side, and cell and molecular biology research, genetic disease research, cancer research, and microbiology on the research side. (PX7076 (Berry (Illumina) Dep. at 54-57); *see infra* Complaint Counsel's Proposed Findings of Fact ¶¶ 2694-2701 (identifying Illumina oncology customers as part of Illumina's post-transaction announcement outreach)).

Response to Finding No. 2608:

Respondents have no specific response.

2609. [redacted] (Berry (Illumina) Tr. 792-793) (*in camera*)). For example, Ms. Berry testified that [redacted] (Berry (Illumina) Tr. 795) (*in camera*)).

Response to Finding No. 2609:

Respondents have no specific response.

2610. [redacted] (Berry (Illumina) Tr. 795) (*in camera*)).

Response to Finding No. 2610:

Respondents have no specific response.

2611. Ms. Berry explained that Illumina offers "12 to 15 different kit configurations" for its NovaSeq sequencing instrument, so that it offers enough variety in reagents for "performance attributes that may be important to a particular customer." (Berry (Illumina) Tr. 827).

Response to Finding No. 2611:

The proposed finding is incomplete and misleading without additional context. Ms. Berry stated that those 12 to 15 different kit configurations were "general-purpose reagents, so we [Illumina] don't do custom versions of those kits". (Berry (Illumina) Tr. 827.) Illumina's reagent kits are thus designed to appeal to a majority of customers' needs. The use of the phrase "a particular customer", when read in light of the entire cited passage, does not mean "a specific, singular customer".

2612. Customers will provide Illumina with details on their tests so that Illumina can recommend which of its consumables the customers should purchase. (*See* PX7076 (Berry (Illumina) Dep. at 62-64)).

Response to Finding No. 2612:

The proposed finding is incomplete and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the putative MCED tests Complaint Counsel claims are in development are unknown to Illumina

even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; (Rabinowitz (Natera) Tr. 425; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL.

(PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted].)

2613. Ms. Berry admitted at trial that Illumina sells custom library kits to its NGS sequencing customers. (Berry (Illumina) Tr. 928 (stating that Illumina "sell[s] some very specific SKUs that . . . are absolutely marketed and designed for customers to, you know, specify their own specific content that they want to interrogate" and that "we [Illumina] will make a product specific to a customer's request")).

Response to Finding No. 2613:

The proposed finding is irrelevant because it relates to library preparation kits and not NGS sequencing. Respondents note that liquid biopsy test developers do not use Illumina technology for library preparation. (Berry (Illumina) Tr. 815 (stating that the library preparation step "is very unique and specific to the particular test provider's sort of approach of methodology" and that there are "hundreds and hundreds of library preparation methods" and "potentially hundreds of providers of library preparation technology or kits").)

Further, while Illumina is willing to customize its library prep kits for use in an NGS workflow (Berry (Illumina) Tr. 928), this is a narrow application of customization, and a relatively rare practice. Ms. Berry testified that, in the Americas "customizing [a] product" is something that Illumina has "almost never, never done" and that she herself had "never personally been part of a discussion with a customer whereby [Illumina] w[as] creating a customized version of, say, a core consumable or an instrument for an Americas customer". (Berry (Illumina) Tr. 881–82; 844.)

2614. Guardant's Mr. Getty testified that Illumina provides Guardant with "customization and optimization of our reagents." (PX7105 (Getty (Guardant) Dep. at 60-62)).

Response to Finding No. 2614:

The proposed finding is inaccurate, incomplete and misleading. At trial, Mr. Getty admitted that he "would not be the person to answer technical questions about the sequencers

and reagents used by Guardant in its lab" and that he would "defer to Ms. Chudova on that". (Getty (Guardant) Tr. 2635.) [redacted]

2615. [redacted]
(PX2541 (Illumina) at 008 (Illumina, Interim Review K2-Grail (aka Grail "Pendragon"), Feb. 2, 2017) (*in camera*); s*ee infra* Section VII.D.3. (While Illumina Had Majority-Ownership, Grail Received Preferential Treatment)).

Response to Finding No. 2615:

The proposed finding relates to irrelevant subject matter because benefits that Illumina purportedly provided to GRAIL under its original supply agreement—when GRAIL was formed and controlled by Illumina—are irrelevant to evaluating the effects of the transaction on competition. At the time of GRAIL's formation, the objective of creating a cancer screening test was a moonshot concept, and Illumina believed that without a deep discount, it would be impossible for GRAIL to successfully develop a cancer test. *See* PFF ¶ 980. There was ***no one else*** pursuing the same goal as Illumina and GRAIL at that time: Because there were no rivals, any special pricing at that time could not have put any rivals at a disadvantage. *See* PFF ¶ 980.3.

The proposed finding is also misleading to the extent it suggests that GRAIL will receive access to sequencing instruments and core consumables, as well as associated services, that are unavailable to other putative MCED test developers. This is incorrect. Any customer that signs the Open Offer shall have the same access to services that GRAIL or any other For-Profit Entity has access to, at the same prices. (PFF ¶ 1004; [redacted]; Berry

(Illumina) Tr. 865–66; deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.)). Similarly, the Open Offer provides customers the same access to purchase sequencing instruments and core consumables to which GRAIL has access. (PFF ¶ 1005; [redacted]; Berry (Illumina) Tr. 878–79; deSouza (Illumina) Tr. 2434–35, 2437–38; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) Further, the timing of the access to these services and sequencing products shall be the same for GRAIL as it is for its putative rivals: the Open Offer requires that "Customer shall have access to the Supplied Products for purchase that GRAIL . . . has access, within 5 days of when GRAIL . . . is offered such access (if not earlier) for purchase." (PFF ¶ 1005.1; RX3935 (Illumina) at 2.) Respondents also incorporate their responses to CCFF ¶¶ 23 and 47 herein.

(1) Illumina Has the Tools to Identify Customers That Develop MCED Tests Likely to Compete with Grail's Galleri Test

(a) Illumina Has a Variety of Means and Sources to Access Information about Its Customers' Products and Activities

(i) Illumina Learns about Its Customers' Products and Development Plans from Conversations with Its Customers

2616. Ms. Berry admitted at trial that Illumina identifies many customers that are buying its products for the purpose of developing or performing oncology tests through sales and service interactions with customers. (Berry (Illumina) Tr. 657-58).

Response to Finding No. 2616:

Respondents have no specific response, except to note that Illumina identifies such customers based on information that those customers voluntarily provide to Illumina.

2617. Ms. Berry explained that customers provide details about their tests to Illumina so that Illumina can recommend the appropriate consumables that they should purchase from Illumina. (PX7076 (Berry (Illumina) Dep. at 62-64)).

Response to Finding No. 2617:

The proposed finding is incomplete and misleading. At trial, Ms. Berry testified that the way that Illumina's sales team may help customers to figure out which of Illumina's products best suit their end use it to "talk to the customer about the various performance attributes . . . that [Illumina's] general-purpose reagents have, for example, or [Illumina's] sequencing instruments have". (Berry (Illumina) Tr. 658.) Information about performance attributes that a particular developer may require are not, as the proposed finding implies, specific "details" about the particulars of a given test. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the putative MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted]; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted]; deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted]

2618. Ms. Berry described how customers may inform Illumina's sales team of their desired read length, analytes that they are detecting, and what platform they are using, among other things, to get input on which Illumina consumables meet their requirements. (PX7076 (Berry (Illumina) Dep. at 62-64)).

Response to Finding No. 2618:

The proposed finding is incomplete and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit

detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2617 herein.

2619. Ms. Berry testified that sometimes when troubleshooting sequencing problems for a customer, a customer will provide Illumina with context about what they are using the sequencer for. (PX7076 (Berry (Illumina) Dep. at 32-35)).

Response to Finding No. 2619:

The proposed finding is incomplete and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2617 herein.

2620. Illumina can learn information about tests from sources other than the test developer itself, such as lab customers, which can provide Illumina with information about the tests that lab customers are running. (*See* PX7049 (Bailey (PGDx) IHT at 175-76) (explaining that PGDx's lab customers buy NGS products directly from Illumina, and testifying, "I do know examples of where [lab customers] have provided [the specific test] information. And because there is a lack of IVD kits on the market outside of ours it is not hard to figure out.

I mean, if they need the Dx reagents there is nothing else right now really that would require that so I think it's sort of understood when they are ordering those.")).

Response to Finding No. 2620:

The proposed finding is incomplete and misleading. Though Illumina may have an understanding of the *applications* a customer is developing or marketing, in most cases it does not know the specific *tests* that customers are developing. (Berry (Illumina) Tr. 849–53.) Illumina is unaware of many of the tests to which Complaint Counsel has referred in this proceeding, let alone the technical characteristics of those tests. (RX6000 (Carlton Trial Dep.) at 24, 26–27.) The weight of the evidence suggests that it is uncommon for Illumina to learn information about tests—much less the kind of detailed technical information that would allow it to assess competitive potential—from sources other than developers.

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; ; deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10;

2621. (PX7056 (Silvis (Tempus) IHT at 91-94) (*in camera*)). (PX7056 (Silvis (Tempus) IHT at 91-94) (*in camera*)).

Response to Finding No. 2621:

The proposed finding is irrelevant because Complaint Counsel does not even allege that Tempus is a putative MCED test developer. (*See* CC's Posthearing Br. at 18–23.)

The proposed finding is inaccurate and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2617 herein.

[redacted] The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted] Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted]

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2622. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 134-35) (*in camera*)).

Response to Finding No. 2622:

The proposed finding is incomplete and misleading without additional context.

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2617 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2623. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 136-38) (*in camera*)).

Response to Finding No. 2623:

The proposed finding is incomplete and misleading without additional context.

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2612, 2617 and 2622 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2624. [redacted] (PX7085 (Harada (Exact) Dep. at 218) (*in camera*)).

Response to Finding No. 2624:

The proposed finding is inaccurate and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2617 herein.

2625. Mr. Getty testified that Guardant works with Illumina to optimize Illumina reagents for the applications Guardant is using the reagents for. (PX7040 (Getty (Guardant) IHT at 59-61)).

Response to Finding No. 2625:

The proposed finding is inaccurate, incomplete and misleading. At trial, Mr. Getty admitted that he "would not be the person to answer technical questions about the sequencers and reagents used by Guardant in its lab" and that he would "defer to Ms. Chudova on that". (Getty (Guardant) Tr. 2635.) [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2614 and 2685 herein.

2626. As Illumina CEO Mr. deSouza told investors, Illumina works with their liquid biopsy customers to help plan the customers' "path to a regulated [product] offering." (PX2544 (Illumina) at 019 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching JPM Life Sciences CEO Conference Call Transcript, Sept. 5, 2019)).

Response to Finding No. 2626:

The proposed finding is incomplete and misleading. Illumina's role in helping customers is extremely limited. For example, Illumina does not provide market access and regulatory consulting services to its customers. (Febbo (Illumina) Tr. 4371.) Beyond supplying standard documentation about the sequencing technologies that a customer is using, Illumina does not provide any support to its customers in obtaining regulatory approval. (Berry (Illumina) Tr. 847–49.)

Further, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

In any event, Illumina takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and

generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted]; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted]

The Open Offer requires Illumina, on a customer's request, to enter into a separate agreement with the customer based on standardized terms to develop IVD test kits for use on Illumina's platforms. (PFF ¶¶ 1026–33; [redacted] deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 8; PX0087 (Illumina); PX0088 (Illumina); PX0089 (Illumina); [redacted] These requirements in the Open Offer prevent Illumina from withholding support as putative MCED test developers seek FDA approval. (PFF ¶ 1035; RX6002 (Guerin-Calvert Trial Dep. at 74).)

2627. Illumina CEO Mr. deSouza explained to investors that Illumina made structural changes to its operations to facilitate Illumina's ability to "catalyze [] clinical opportunity" for its customers. (PX2544 (Illumina) at 019-020 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching JPM Life Sciences CEO Conference Call Transcript, Sept. 5, 2019)). Mr. deSouza remarked during his investor call discussion with JP Morgan's Tycho Peterson that the Illumina clinical group has "no commercial components" but rather is designed to assist Illumina customers' "clinical enablement." (PX2544 (Illumina) at 020 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching JPM Life Sciences CEO Conference Call Transcript, Sept. 5, 2019)). Illumina's clinical group works with Illumina's clinical affairs, medical affairs, and regulatory teams. (PX2544 (Illumina) at 021 (Email from T. Peterson, JP Morgan, to F. deSouza, Illumina, attaching JPM Life Sciences CEO Conference Call Transcript, Sept. 5, 2019)).

Response to Finding No. 2627:

The proposed finding is incomplete and misleading. Mr. deSouza's comments are referring to *indirect* forms of assistance to customers: "enablement functions to drive clinical markets going forward and to engage as peers into the medical community". (PX2544 (Illumina) at -021 (Email from T. Peterson, JP Morgan to F. deSouza, Illumina, attaching JPM Life Sciences CEO Conference Call Transcript, Sept. 5, 2019).) "Enablement functions" refers to efforts by Illumina to engage with various stakeholders in the clinical market to increase the uptake and use of lifesaving clinical genomics technologies. Encouraging stakeholders' acceptance for applications of genetic sequencing technology in the clinic benefits ***all*** Illumina clinical customers who leverage Illumina's platform to design tests and therapies. (*See, e.g.*, Febbo (Illumina) Tr. 4354–55 ("So we have really set the stage for the UK to be aggressive with next-generation sequencing, and I believe strongly that their familiarity with our technology probably played very—was weighted heavily in the success that GRAIL found.").)

(ii) When Illumina Negotiates Supply Agreements and Offers Prices to Customers, It Examines Customers' Applications, Industry Segments, and Product Developments

2628. Nicole Berry testified at trial that Illumina typically "talk[s] to the customer about the various performance attributes that . . . our general-purpose reagents have . . . or our sequencing instruments have, and . . . that conversation could lead to an outcome whereby a particular instrument platform or sequencing kit could be identified as likely to be best suited to their needs." (Berry (Illumina) Tr. 658).

Response to Finding No. 2628:

Respondents have no specific response, except to note that the proposed finding is evidence that Illumina does not solicit information about developers' prospective tests; rather,

Illumina offers information about *its own products' performance attributes* in order to find the best match vis-à-vis a customer's specific needs.

2629. In her deposition, Ms. Berry testified that Illumina learns of customers' goals from supply agreement negotiations. (PX7076 (Berry (Illumina) Dep. at 52-55)).

Response to Finding No. 2629:

The proposed finding is misleading to the extent it suggests that a customer's high-level goals are sensitive information. To the contrary, virtually every contract negotiation involves some degree of agreement about the parties' mutual goals. Respondents note that the proposed finding merely supports the proposition that in the ordinary course of business, customers volunteer information about their goals to Illumina. Respondents further note that a company's goals are typically public information and are unlikely to incorporate competitively sensitive information. (*See, e.g.*, RX3748 (Guardant form 10-K) at 2 (explaining high level goal of developing blood-based screening test) ("We are also developing screening tests from our LUNAR-2 program intended for early detection of cancer.").)

Indeed, GRAIL acting alone—in fact, any test developer—can use public information, including public announcements and publications to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no special advantage in obtaining this information about GRAIL's putative rivals.

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding

complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2617 herein.

2630. [redacted] (PX7060 (Naclerio (Illumina) IHT at 126-27) (*in camera*)).

Response to Finding No. 2630:

The proposed finding is inaccurate, incomplete and misleading. Although Dr. Naclerio left Illumina in 2016, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect.

[redacted]

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

The Open Offer also applies to "*all fields of use*, specifically excluding any use that (i) is not in accordance with the product's specifications or documentation (it being understood that specifications and documentation shall not undermine or limit Customer's rights under this Supply Agreement), (ii) is a reuse of a previously used consumable, (iii) is the disassembling, reverse-engineering, reverse-compiling, or reverse-assembling of the Supplied Product, (iv) is the separation, extraction, or isolation of components of consumables or other unauthorized analysis of the consumables, (v) gains access to or determines the methods of operation of the Supplied Product, or (vi) is the transfer to a third party of, or sub-licensing of, software or third-party software." (PX0064 (Illumina) at 3 (emphasis added).)

In any event, Respondents also note that the described pricing practice followed the standard market approach in the industry. [redacted]

[redacted] In his deposition, Dr. Naclerio similarly testified that "all supply agreements have some definition of a field of use in them. It is not uncommon to." (PX7060 (Naclerio Dep. 226).) Dr. Goswami testified that "field definition" is "very standard for any kind of contract . . . because it identifies what is allowable within a field"; "if there are any exclusions, they are called out as well, so each party knows exactly what it is getting as part of that contract". (Goswami (Illumina) Tr. 3234.)

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2631. Dr. Naclerio testified that Illumina has included "field of use" restrictions in its supply agreements to "reserve the right to charge a higher test fee" in future markets that may develop with tests that "would be priced at a much higher price." (PX7060 (Naclerio (Illumina) IHT at 137)).

Response to Finding No. 2631:

The proposed finding is incomplete and misleading. Although Dr. Naclerio left Illumina in 2016, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect. Respondents incorporate their responses to CCFF ¶ 2630 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2632. [redacted] (PX7057 (Flatley (Illumina) IHT at 95) (*in camera*); PX2241 (Illumina) at 001 [redacted]

Response to Finding No. 2632:

The proposed finding is incomplete and misleading. Although this letter dates to 2014, the proposed finding appears to suggest that, even today, eight years later, Illumina applies the same approach. This is incorrect. Respondents incorporate their responses to CCFF ¶¶ 2630–31 herein.

Respondents further note that Illumina's activity in the NIPT space had decidedly procompetitive effects in that market. Respondents also refer to Resps.' Post-Trial Br. at § II.F.1.

The proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2633. [redacted] (PX7060 (Naclerio (Illumina) IHT at 119-20, 186) (*in camera*)).

Response to Finding No. 2633:

The proposed finding is incomplete and misleading. Although Dr. Naclerio left Illumina in 2016, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect.

Specifically, [redacted]

[redacted]

[redacted] Respondents incorporate their responses to CCFF ¶¶ 2630–31 herein.

The proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2634. [redacted] (PX7060 (Naclerio (Illumina) IHT at 121) (*in camera*)).

Response to Finding No. 2634:

The proposed finding is incomplete and misleading. Although Dr. Naclerio left Illumina in 2016, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect.

[redacted] Respondents incorporate their responses to CCFF ¶¶ 2630–31 and 2633 herein.

Further, to the extent that the proposed finding relates to [redacted], the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. [redacted]; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25.

The proposed finding relies on IH testimony, which Respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2635. During supply agreement negotiations with [redacted] (*See* PX7076 (Berry (Illumina) Dep. at 258-66) (*in camera*); PX2301 (Illumina) at 001 [redacted] (*in camera*)).

Response to Finding No. 2635:

The proposed finding is incomplete and misleading without additional context. [redacted]

[redacted] Respondents also incorporate their response to CCFF ¶ 1089 herein.

In any event, while Mr. Elliott volunteered the above information, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2)

training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted]; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted] Respondents also incorporate their responses to CCFF ¶¶ 1089 and 2612 herein.

The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

The Open Offer also applies to "*all fields of use*, specifically excluding any use that (i) is not in accordance with the product's specifications or documentation (it being understood that specifications and documentation shall not undermine or limit Customer's rights under this Supply Agreement), (ii) is a reuse of a previously used consumable, (iii) is the disassembling, reverse-engineering, reverse-compiling, or reverse-assembling of the Supplied Product, (iv) is the separation, extraction, or isolation of components of consumables or other unauthorized analysis of the consumables, (v) gains access to or determines the methods of operation of the Supplied Product, or (vi) is the transfer to a third party of, or sub-licensing of, software or third-party software." (PX0064 (Illumina) at 3 (emphasis added).)

2636. [redacted] (Berry (Illumina) Tr. 771-73) (*in camera*)).

Response to Finding No. 2636:

The proposed finding is incomplete and misleading. [redacted]

In any event, [redacted] Respondents also refer to RRFF ¶ 2633.

Further, to the extent that the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue.. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

Respondents incorporate their responses to CCFF ¶¶ 1089, 2612, 2630–31 and 2633 herein.

2637. [redacted] (PX8387 (Exact) at 001 [redacted] (*in camera*)).

Response to Finding No. 2637:

Respondents have no specific response, except to note that the cited source provides support for the proposition that *Exact*, not *Illumina*, sought to obtain special discounts that were product-specific. Respondents incorporate their responses to CCFF ¶¶ 1089 and 2636 herein.

Further, because the proposed finding relates to [redacted], the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

2638. [redacted] (PX7058 (Conroy (Exact) IHT at 229-30) (*in camera*)).

Response to Finding No. 2638:

Respondents have no specific response, except to note that the the Open Offer requires Illumina, on a customer's request, to enter into a separate agreement with the customer based on standardized terms to develop IVD test kits for use on Illumina's platforms. (PFF ¶¶ 1026–33; [redacted] deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 8; PX0087 (Illumina); PX0088 (Illumina); PX0089 (Illumina); [redacted]) These requirements in the Open Offer prevent Illumina from withholding support as putative MCED test developers seek FDA approval. (PFF ¶ 1035; RX6002 (Guerin-Calvert Trial Dep. at 74).)

Dr. Goswami testified that an IVD kit offering is extremely rare; due to the burdens associated with IVD kits, developers tend to stay with an LDT model instead of seeking to provide an IVD kit. For example, Exact Sciences' Cologuard test has not been offered as an IVD kit. (Goswami (Illumina) Tr. 3196.)

Respondents also note that features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶¶ 675–678.5 (RX3869 (Cote Expert Report) ¶¶ 359–363; Goswami (Illumina) Tr. 3189–92, 3194–95).) Respondents also incorporate their responses to CCFF ¶¶ 1089, 2612, 2617, 2620 and 2636 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2639. [redacted]

(PX7076 (Berry (Illumina) Dep. at 260-61) (*in camera*)).

Response to Finding No. 2639:

The proposed finding is incomplete and misleading. [redacted]

Second, [redacted] Respondents incorporate their responses to CCFF ¶¶ 1089, 2630 and 2636 herein.

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

2640. Singlera's Dr. Gao explained that Singlera had to tell Illumina about its PanSeer test while negotiating a contract: "We – in order to do this negotiation [with Illumina], we had to tell them what we are using it for, so they understand the customer need." (PX7042 (Gao (Singlera) IHT at 81)).

Response to Finding No. 2640:

The proposed finding is incomplete and misleading, and contradicted by the weight of the evidence. In the portion of his IH cited here, Dr. Gao testified to facts that indicate that his characterization of Singlera's relationship with Illumina has no basis. For example, Dr. Gao testified that once Singlera seriously began pursuing a supply agreement with Illumina, Illumina "quickly turn[ed] around a draft proposal of [a] supply agreement", which was a "standard boilerplate" agreement. (PX7042 (Gao (Singlera) IHT at 74–75).) Dr. Gao testified that Singlera was "happy" to receive a standardized agreement because Singlera's "only request [was] to have a standard supply agreement". (PX7042 (Gao (Singlera) IHT at 75).) Finally, Dr. Gao admitted that Illumina "provided us with [a draft supply agreement], expect[ed] us to negotiate I'm sure, but we never went back" to negotiate with Illumina. (PX7042 (Gao (Singlera) IHT at 87).) Thus, Dr. Gao's testimony shows that, after Singlera proposed entering a supply agreement with Illumina, Illumina sent a boilerplate agreement, which was exactly what Singlera wanted, and yet Singlera refused to even engage with Illumina on the draft agreement. Therefore, Dr. Gao's recounting of his negotiations with Illumina are unreliable and should be accorded no weight.

As Ms. Berry explained, Illumina supplies "general-purpose reagents that enable a sample that's prepared in an infinite number, hundreds and hundreds and hundreds, of different ways to be read by our sequencer." (Berry (Illumina) Tr. 845.) But, as Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the

MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted]; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted])

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2641. Singlera's Dr. Gao explained that as part of supply agreement negotiations, Singlera told Illumina that Singlera planned to seek FDA approval for its ColonES test. (PX7042 (Gao (Singlera) IHT at 81-82)).

Response to Finding No. 2641:

The proposed finding is incomplete and misleading, and contradicted by the weight of the evidence. In the portion of his IH cited here, Dr. Gao testified to facts that indicate that his characterization of Singlera's relationship with Illumina has no basis. For example, Dr. Gao testified that once Singlera seriously began pursuing a supply agreement with Illumina, Illumina "quickly turn[ed] around a draft proposal of [a] supply agreement", which was a "standard boilerplate" agreement. (PX7042 (Gao (Singlera) IHT at 74–75).) Dr. Gao testified that Singlera was "happy" to receive a standardized agreement because Singlera's "only request [was] to have a standard supply agreement". (PX7042 (Gao (Singlera) IHT at 75).) Finally, Dr. Gao admitted that Illumina "provided us with [a draft supply agreement], expect[ed] us to negotiate I'm sure, but we never went back" to negotiate with Illumina. (PX7042 (Gao (Singlera) IHT at 87).) Thus, Dr. Gao's testimony shows that, after Singlera proposed entering a supply agreement with Illumina, Illumina sent a boilerplate agreement, which was exactly what Singlera wanted, and yet Singlera refused to even engage with Illumina on the draft agreement.

Therefore, Dr. Gao's recounting of his negotiations with Illumina are unreliable and should be accorded no weight.

The proposed finding is also misleading to the extent it suggests that Illumina requires information from Singlera about its products to enter into a supply agreement. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. Respondents also incorporate their responses to CCFF ¶¶ 1174, 2617, 2620 and 2640 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (See Resps.' Post-Trial Br. at 275–76.)

2642. Singlera's Dr. Gao testified that in supply agreement negotiations with Illumina, Illumina proposed different fees for Singlera's different uses of Illumina sequencers. For example, Illumina proposed a cap of $4 million in market access fees relating to colorectal cancer tests, but a cap of $10 million in market access fees relating to pan-cancer testing. (PX7042 (Gao (Singlera) IHT at 78-80)).

Response to Finding No. 2642:

The proposed finding is incomplete and misleading, and contradicted by the weight of the evidence. In the portion of his IH cited here, Dr. Gao testified to facts that indicate that his characterization of Singlera's relationship with Illumina has no basis. For example, Dr. Gao testified that once Singlera seriously began pursuing a supply agreement with Illumina, Illumina "quickly turn[ed] around a draft proposal of [a] supply agreement", which was a "standard boilerplate" agreement. (PX7042 (Gao (Singlera) IHT at 74–75).) Dr. Gao testified that Singlera was "happy" to receive a standardized agreement because Singlera's "only request [was] to have a standard supply agreement". (PX7042 (Gao (Singlera) IHT at 75).) Finally, Dr. Gao admitted that Illumina "provided us with [a draft supply agreement], expect[ed] us to

negotiate I'm sure, but we never went back" to negotiate with Illumina. (PX7042 (Gao (Singlera) IHT at 87).) Thus, Dr. Gao's testimony shows that, after Singlera proposed entering a supply agreement with Illumina, Illumina sent a boilerplate agreement, which was exactly what Singlera wanted, and yet Singlera refused to even engage with Illumina on the draft agreement. Therefore, Dr. Gao's recounting of his negotiations with Illumina are unreliable and should be accorded no weight.

Dr. Gao's testimony is unsubstantiated as he does not explain what products he is referring to or what prices, or even what timeframe he is describing. In any event, the practices articulated in Dr. Gao's testimony, to the extent they existed, have been preempted by the Open Offer.

Illumina does not charge market access fees for colorectal cancer tests or for tests for pan-cancer testing and has never charged such fees. (*See, e.g.*, PX7093 (Young (Illumina) Dep.) at 31–32 (explaining distinct, oncology customer fee structure applicable to IVD agreements).**)** The Open Offer does not describe any such fees. (PX0064 (Illumina).). To the contrary, the Open Offer applies a universal grid under which all customers, regardless of application, pays the same price for sequencing. (PX0064 (Illumina) 6–7.) Respondents also incorporate their responses to CCFF ¶ 2640 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2643. [redacted] (PX7040 (Getty (Guardant) IHT at 88-89) (*in camera*)).

Response to Finding No. 2643:

The proposed finding relates to irrelevant subject matter because the concerns articulated in the cited testimony have been preempted by the terms of the Open Offer.

The Open Offer requires Illumina, on a customer's request, to enter into a separate agreement with the customer based on standardized terms to develop IVD test kits for use on Illumina's platforms. (PFF ¶¶ 1026–33; [redacted] deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 8; PX0087 (Illumina); PX0088 (Illumina); PX0089 (Illumina); [redacted] These requirements in the Open Offer prevent Illumina from withholding support as putative MCED test developers seek FDA approval. (PFF ¶ 1035; RX6002 (Guerin-Calvert Trial Dep. at 74).)

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2644. Mr. Getty testified that if Guardant were to order 10 new sequencers from Illumina, it would give Illumina a "very clear perspective[] that [Guardant was] expanding [its] business." (PX7105 (Getty (Guardant) Dep. at 97-99)).

Response to Finding No. 2644:

The proposed finding is incomplete and misleading. The purchase of additional sequencers does not, by itself, conclusively evidence an intention to expand a business. Moreover, Complaint Counsel has adduced no evidence that Illumina has or would analyze such information systematically.

Further, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee

training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.) Respondents also incorporate their responses to CCFF ¶ 1612 herein.

2645. Invitae's CEO Sean George testified that Illumina seeks different prices for its products depending on what Invitae intends to use Illumina's sequencers for. (PX7046 (George (Invitae) IHT at 67-73, 121)).

Response to Finding No. 2645:

The proposed finding is incomplete and misleading. The proposed finding is incomplete and misleading. Mr. George's testimony is unsubstantiated as he does not explain what products he is referring to or what prices, or even what timeframe he is describing. (PX7046 (George (Invitae) IHT) at 67–73; 121.) Moreover, Mr. George conceded that "most companies" differentiate price "in the context of geographies or channels or cost of doing business in a given area". (PX7046 (George (Invitae) IHT) at 71.) In any event, the practices articulated in Mr. George's testimony, to the extent they existed, have been preempted by the Open Offer.

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2646. Invitae's Megan Bailey testified that Illumina requires Invitae to provide information on its development plans to Illumina as part of Invitae's IVD agreement, including "the scope of [Invitae's] studies, . . . the number of samples, what data parameters [Invitae] will look at, [and] some aspects of the study protocols needed to validate the kit." (PX7049 (Bailey (Invitae) IHT at 130-31)).

Response to Finding No. 2646:

The proposed finding is inaccurate and misleading, including because it states that Megan Bailey is affiliated with Invitae. Megan Bailey is the CEO of PGDx. Respondents will respond to CCFF as if it referred to PGDx.

The proposed finding is also irrelevant. [redacted] (RX3869 (Cote Expert Report) ¶¶ 359–363; Goswami (Illumina) Tr. 3189–92, 3194–95).)

Even if Ms. Bailey's testimony related to an IVD for a distributed kit version of an MCED test, which is not part of any putative MCED test developer's plan for the foreseeable future, it appears to relate to standard terms that are used by all IVD platform developers and is not limited to Illumina. [redacted]

[redacted] Such information is necessary for Illumina to ensure that a given test is compatible with its FDA-approved sequencers and that support is available. (Goswami (Illumina) Tr. 3219–20, 3226–27.) For example, if a given test developer is seeking to develop a test with capabilities that Illumina's NextSeqDx does not have, Illumina will need to let the test developer know so that the test developer can pursue its options with either a different test or with a different sequencing platform that can meet their needs.

In any event, Illumina takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; (Rabinowitz (Natera) Tr. 425; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted]

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (See Resps.' Post-Trial Br. at 275–76.)

2647. Invitae's Megan Bailey testified that revenue share reporting requirements in Invitae's IVD agreement with Illumina could provide Illumina the opportunity to extrapolate Invitae's pricing strategy. (PX7049 (Bailey (Invitae) IHT at 132-33)).

Response to Finding No. 2647:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2647, which Respondents incorporate herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (See Resps.' Post-Trial Br. at 275–76.)

2648. Kenneth Chahine, former Ancestry Executive VP, testified that when Ancestry sought to launch a health business, it informed Illumina of the change and requested to have Illumina perform NGS processing on Ancestry's health-related samples, similar to the way Illumina already processed Ancestry's genealogy samples on microarrays. (PX7077 (Chahine (Helio) Dep. at 72)). Illumina refused to process Ancestry's health-related samples on NGS because of a conflict with Illumina's relationship with another company, Helix. (PX7077 (Chahine (Helio) Dep. at 72-74)).

Response to Finding No. 2648:

The proposed finding is incomplete and misleading. [redacted] Accordingly, the concerns cited by Complaint Counsel were time-limited and were not borne out by subsequent developments.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

(iii) Illumina Learns about Its Customers' Products and Development Plans from Public Information

2649. Ken Song, former CEO of Ariosa Diagnostics, testified that Ariosa provided Illumina with "a fair amount of detail" regarding Ariosa's operations, in part because Illumina was an "important strategic supplier" for Ariosa's NIPT business. (PX7071 (Song (Omniome) IHT at 65)). During meetings where Ariosa provided Illumina with "confidential update[s] on [Ariosa's] progress, what [Ariosa] thought about putting in the tests, the cost structure, launch plans, [and] future product development plans," the Illumina personnel responsible for negotiating Ariosa's supply agreement were present. (PX7071 (Song (Omniome) IHT at 71-72)).

Response to Finding No. 2649:

The proposed finding is inaccurate and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.) Respondents also incorporate their responses to CCFF ¶¶ 2612, 2617 and 2620 herein.

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted] Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted]; deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted].)

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2650. Dr. Song testified that during negotiations relating to Ariosa's supply agreement with Illumina, Ariosa and Illumina discussed the specific allowable uses of Ariosa's NIPT offerings. (PX7071 (Song (Omniome) IHT at 73-77)).

Response to Finding No. 2650:

The proposed finding is inaccurate, incomplete, and misleading. Although Dr. Song worked at Ariosa until 2015 (at which point Ariosa was acquired by Roche) and the negotiations that he refers to took place in 2013-2014, the proposed finding appears to suggest that, even today, seven years later, Illumina applies the same approach. This is incorrect.

At the time that Ariosa negotiated the supply agreement, there was a lot of uncertainty about whether Illumina would be permitted to sell sequencing instruments and core consumables for clinical uses. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).) Specifically, NIPT was the first clinical area which used Illumina's sequencing instruments and core consumables, and there was uncertainty about whether the same research-use only products could be used for clinical uses or whether Illumina would need to develop higher quality reagents for clinical applications. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).) To avoid running afoul of the FDA regulations, in these early agreements, Illumina restricted the potential fields of use in early agreements. Respondents also incorporate their responses to RRFF ¶¶ 2630–32 herein.

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to

volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2651. Ms. Berry testified that Illumina learns of customers' activities from customers' public disclosures. (PX7076 (Berry (Illumina) Dep. at 54-55, 57-58)).

Response to Finding No. 2651:

Respondents have no specific response except to state that the cited testimony shows that Illumina learns information about its customers through widely distributed, public-facing material. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals.

In any event, GRAIL acting alone—in fact, any test developer—can use public information, including public announcements and publications to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no special advantage in obtaining this information about GRAIL's putative rivals. Respondents also incorporate their responses to CCFF ¶ 2612 herein.

2652. Illumina identifies many of its customers that are buying its products for the purpose of developing or performing oncology tests through public information. (Berry (Illumina) Tr. 655-56). For example, Illumina reviews company websites and regulatory filings to gather this information. (Berry (Illumina) Tr. 655-56).

Response to Finding No. 2652:

Respondents have no specific response except to state that the cited testimony shows that Illumina may learn information about its customers through widely distributed, public-facing

material. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals.

In any event, GRAIL acting alone—in fact, any test developer—can use public information, including company websites and regulatory information to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no special advantage in obtaining this information about GRAIL's putative rivals. Respondents also incorporate their responses to CCFF ¶ 2612 herein.

2653. Ms. Berry testified that she's aware of which companies purchase Illumina products for use with oncology tests based on public information as well as her interactions with customers. (PX7063 (Berry (Illumina) IHT at 34-35)).

Response to Finding No. 2653:

The proposed finding is incomplete and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.) Respondents also incorporate their responses to CCFF ¶¶ 2612, 2617 and 2620 herein.

Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals.

Respondents also note that the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and therefore the cited testimony should be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2654. Illumina CEO Francis deSouza testified at trial that Illumina tracks investment activity in MCED testing companies. (deSouza (Illumina) Tr. 2392).

Response to Finding No. 2654:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. Most of the putative MCED developers identified by Complaint Counsel, including Guardant, Freenome, [redacted] Helio and [redacted], do not expect (and none can reasonably be expected) to launch a test capable of screening for more than one cancer simultaneously in the foreseeable future (PFF ¶¶ 701–06) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also state that the cited testimony shows that Illumina may learn information about putative cancer screening test developers using widely available, public-facing material. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612 and 4201 herein.

2655. [redacted] (deSouza (Illumina) Tr. 2429; PX7072 (deSouza (Illumina) IHT at 243-44) (*in camera*)).

Response to Finding No. 2655:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future**.** [redacted]

[redacted] and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also note that [redacted] In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Respondents also incorporate their responses to CCFF ¶¶ 2612 and 4201 herein.

2656. [redacted] (PX7072 (deSouza (Illumina) IHT at 125-26) (*in camera*)).

Response to Finding No. 2656:

Respondents have no specific response except to state that cited testimony shows that Illumina may learn information about potential MCED tests using widely available, public-facing material. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals.

In any event, GRAIL acting alone—in fact, any test developer—can use public information, including company websites and regulatory information to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no special advantage in obtaining this information about GRAIL's putative rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2655 and 4201 herein.

2657. [redacted] (PX7059 (Scagnetti (Illumina) IHT at 70-71) (*in camera*); PX5030 (Illumina) at 012 [redacted] (*in camera*)).

Response to Finding No. 2657:

The proposed finding is incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. [redacted] and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

Respondents also states that the cited testimony shows that Illumina learns information about putative cancer screening test developers using widely available, public-facing material. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals.

In any event, GRAIL acting alone—in fact, any test developer—can use public information, including company websites and regulatory information to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no special advantage in obtaining this information about GRAIL's putative rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2655 and 4201 herein.

2658. [redacted] (PX7050 (Nolan (Freenome) IHT at 293-295) (*in camera*)).

Response to Finding No. 2658:

The proposed finding is inaccurate and misleading to the extent it suggests that a putative MCED test developer can begin clinical studies on a test *before* posting a clinical trial is posted to clinicaltrials.gov. To the extent there is any delay, it would be only a matter of days.

To the extent this unproven contention is true, it merely suggests that Illumina may learn some information about Freenome from public sources that Freenome itself has publicized. This is irrelevant and does not evidence any particular ability to identify and/or discriminate against alleged rivals.

In any event, GRAIL acting alone—in fact, any test developer—can use public information, including company websites and regulatory information to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no special advantage in obtaining this information about GRAIL's putative rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612 and 4201 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. The proposed finding also relies on improper lay opinion testimony and accordingly, should be given no weight. (*See* Resps.' Motion *in Limine* to Exclude Improper Lay Witness Opinion Testimony (Aug. 5, 2021).) Respondents also incorporate CCFF ¶¶ 405, 439–440, 444, 666, 698, 801, 806, 945, 1140, and 2355–2400 herein.

2659. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 92-93) (*in camera*)).

Response to Finding No. 2659:

Respondents have no specific response except to state that the proposed finding merely suggests that Illumina may learn some information about Thrive from public sources that Thrive

itself has publicized. This is irrelevant and does not evidence any particular ability to identify and/or discriminate against rivals.

In any event, GRAIL acting alone—in fact, any test developer—can use public information, including company websites and regulatory information to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no special advantage in obtaining this information about GRAIL's putative rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2655 and 4201 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2660. [redacted]

Response to Finding No. 2660:

Respondents have no specific response except to state that the proposed finding is evidence that GRAIL learns information about putative MCED test developers using widely available, public-facing material. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against rivals. To the extent that Complaint Counsel relies on its proposed findings in Sections §§ III.C.5.c & VII.B.3.b (CCFF ¶¶ 792–95, 3389–3468), Respondents incorporate their responses to those Proposed Findings herein.

In any event, GRAIL acting alone—in fact, any test developer—can use public information, including company websites and regulatory information to glean information about other test developers' progress in developing putative MCED tests. Thus, Illumina has no

special advantage in obtaining this information about GRAIL's putative rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2655 and 4201 herein.

The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. [redacted] and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

(2) Illumina Has Tools to Track How Customers Use Illumina NGS Products and for What Downstream Product

(a) Illumina Learns about Its Customers' Products and Development Plans from Customers' Purchase History

2661. [redacted] (PX6056 (*in camera*)).

Response to Finding No. 2661:

The proposed finding is incomplete and misleading. While Illumina may request forecasting information, Ms. Berry testified that this is not required: order forecasting information is retained only for those customers who choose to disclose it. (Berry (Illumina) Tr. 849–50.)

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its

customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).) Moreover, Illumina's instruments and consumables are multi-use products that can be and often are used by Illumina customers for a variety of sequencing applications. (PFF ¶¶ 6–11.)

In any event, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL

subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted] (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted].)

2662. [redacted] (PX6056 (Illumina) at 050 [redacted] (*in camera*)).

Response to Finding No. 2662:

The proposed finding is incomplete and misleading without additional context. While Illumina may request forecasting information, Ms. Berry testified that this is not required: order forecasting information is retained only for those customers who choose to disclose it. (Berry (Illumina) Tr. 849–50.) Respondents also incorporate their responses to CCFF ¶ 2661 herein.

2663. Ms. Berry testified that Illumina can learn customers' end uses from their purchase history. (PX7076 (Berry (Illumina) Dep. at 54-57)).

Response to Finding No. 2663:

The proposed finding is incomplete and misleading For example, at trial, Ms. Berry testified as follows [redacted]

[redacted] (Berry (Illumina) Tr. 785–86.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2661 herein.

2664. Illumina is able to learn its customers' end uses from purchase history because certain Illumina consumables are better suited for certain applications. (PX7076 (Berry (Illumina) Dep. at 54-57); PX7063 (Berry (Illumina) IHT at 220-221)).

Response to Finding No. 2664:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2612, 2661 and 2663, which Respondents incorporate herein.

2665. Ms. Berry testified that Illumina's relationships with its customers give Illumina insight into how its customers are using Illumina products. (*See* PX7076 (Berry (Illumina) Dep. at 54-57); PX6056 (Illumina) at 051 [redacted]).

Response to Finding No. 2665:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2612, 2661 and 2663, which Respondents incorporate herein.

2666. Ms. Berry testified that the volume of samples a customer requires and therefore the volume of reagents purchased could increase if the customer is pursuing a clinical trial or commercializing a product. (Berry (Illumina) Tr. 664-65; PX7076 (Berry (Illumina) Dep. at 24)).

Response to Finding No. 2666:

Respondents have no specific response, except to note that a clinical trial or intended commercialization are not the only reasons that a customer might purchase a higher volume of reagents. Accordingly, this information would support at most a conjectural assessment of

another test developer's progress. . Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661 and 2663 herein.

2667. [redacted] (*See* PX7076 (Berry (Illumina) Dep. at 24); PX7072 (deSouza (Illumina) IHT at 125-26) (*in camera*); PX2386 (Illumina) at 004 (Email from G. Shariat, Illumina, to N. Berry, Illumina, attaching Invitae 2020 NovaSeq Run Rate, Dec. 1, 2020) (*in camera*) ([redacted]).

Response to Finding No. 2667:

The proposed finding is incomplete and misleading. *First*, GRAIL acting alone—in fact, any test developer—can use public information, including public announcements and publications to glean information about other test developers' progress in developing MCED tests. Thus, Illumina has no special advantage in obtaining his information about GRAIL's putative rivals.

And, while Illumina may request forecasting information, Ms. Berry testified that this is not required: order forecasting information is retained only for those customers who choose to disclose it. (Berry (Illumina) Tr. 849–50.)

Second although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).) Moreover,

Illumina's instruments and consumables are multi-use products that can be and often are used by Illumina customers for a variety of sequencing applications. (PFF ¶¶ 6–11.)

Third, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Illumina also takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted] Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted]

Accordingly, even if Illumina could access sufficiently detailed information about GRAIL's putative rivals (it cannot without the consent of the putative rival's consent), Illumina is prohibited from disclosing that information to GRAIL.

The proposed finding is also irrelevant. [redacted] (Stahl (Invitae) Dep. at 22, 44, [redacted])

Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661 and 2663 herein.

2668. [redacted] (PX2314 (Illumina) at 002 (Email from C. Jennings, Illumina, to N. Berry, Illumina, Dec. 17, 2020 (*in camera*))).

Response to Finding No. 2668:

The proposed finding is incomplete and misleading.

[redacted]

[redacted] Therefore, it is improper to attempt to extrapolate from this email from a settlement agreement to Illumina's actions with respect to ordinary course purchases for sequencing instruments and consumables. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661 and 2663 herein.

2669. [redacted] (PX7063 (Berry (Illumina) IHT at 219) (*in camera*)).

Response to Finding No. 2669:

The proposed finding is incomplete and misleading. For example, at trial, Ms. Berry testified as follows [redacted] (Berry (Illumina) Tr. 785–86.) In any event, Complaint Counsel refers to an example relating to NIPT consumables, which are irrelevant to any determinations made by Illumina with respect to oncology or screening consumables. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661 and 2663 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2670. [redacted]

[redacted] (PX2227 (Illumina) at 006 (Email from J. Flatley, Illumina, to A. Pierce, Illumina, attaching NIPT Update, Jan. 24, 2014) (*in camera*) (*see* inset); *see also infra* Section VII.D.3. (Illumina Identified and Used Similar Tools in the NIPT Market)).

[redacted]

Response to Finding No. 2670:

The proposed finding is incomplete and misleading. The information shown in PX2227 is not from "selling the instrument consumable and service information Illumina kept as part of its customer sales." [redacted] (PX7079 (Flatley (Illumina) Dep. at 190–92); PX7089 (Naclerio (Illumina) Dep. at 58–59).) [redacted] (PX7089 (Naclerio (Illumina) Dep.) at 63–65.) Given that Illumina does not collect any test fee from any oncology test developer,

Illumina does not track the type of information shown in PX2227 for oncology customers and the proposed finding should be accorded little weight. (*See, e.g.*, PX7093 (Young (Illumina) Dep.) at 31–32 (explaining distinct, oncology customer fee structure applicable to IVD agreements).) Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661 and 2663 herein.

Complaint Counsel also did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 34), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

To the extent that Complaint Counsel relies on its Proposed Findings in Section VII.D.3 (CCFF ¶¶ 4081–4164), Respondents incorporate their responses to those Proposed Findings herein.

2671. [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 59) (*in camera*)).

Response to Finding No. 2671:

The proposed finding is vague, incomplete and misleading. *First*, the cited testimony does not state what Illumina [redacted] It merely suggests that Illumina would know the volume of sequencing consumables and instruments that Thrive is purchasing, which is information that Illumina would come to know subsequently when Thrive made its next purchase. [redacted] Respondents

further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661 and 2663 herein.

Second, as noted in CCFF ¶ 2667, which Respondents incorporate herein, even if Illumina could access sufficiently detailed information about GRAIL's putative rivals (it cannot without the consent of the putative rival's consent), Illumina is prohibited from disclosing that information to GRAIL.

2672. [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 58) (*in camera*)). [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 58-59) (*in camera*)).

Response to Finding No. 2672:

The proposed finding is vague, incomplete and misleading. *First*, the cited testimony does not state what purported [redacted] Illumina would learn. It merely suggests that Illumina would know the volume of sequencing consumables and instruments that Thrive is purchasing, which is information that Illumina would come to know subsequently when Thrive made its next purchase. Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661 and 2663 herein.

Second, as noted in CCFF ¶ 2667, which Respondents incorporate herein, even if Illumina could access sufficiently detailed information about GRAIL's putative rivals (it cannot

without the consent of the putative rival's consent), Illumina is prohibited from disclosing that information to GRAIL.

Third, given that all oncology test developers are now receiving pricing under universal grid in the Open Offer (unless they have grandfathered pricing, which Thrive does not), all oncology test developers and members of the public have the same knowledge of their pricing structure that Illumina does. (PFF ¶ 1014; Berry (Illumina) Tr. 892; PX0064 (Illumina) at 7.) In addition, GRAIL also purchases instruments and consumables under the same universal grid in the Open Offer. (PX0064 (Illumina) at 8.)

(b) Illumina Learns about Its Customers' Products through Embedded Software in Its NGS Platforms

2673. Illumina CEO Mr. deSouza testified at trial that some Illumina customers' sequencers connect to Illumina via the internet to monitor the instrument or connect to Illumina's cloud-based data storage service. (deSouza (Illumina) Tr. 2383-85).

Response to Finding No. 2673:

The proposed finding is incomplete and misleading. Mr. deSouza was unequivocal in testifying that customers could run their sequencers with an "airgap"—that is, they can "completely just run it on their own and don't have any connection to the Internet at all." (deSouza (Illumina) Tr. 2383–84.) The Proactive monitoring service and the cloud storage services are both voluntary, opt-in programs for customers. (*See also* PX7076 (Berry (Illumina) Dep. at 30.) Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2678 herein.

2674. Mr. deSouza testified that customers' Illumina sequencers can connect to Illumina remotely in two ways. The instrument can connect to Illumina to provide Illumina instrumentation metrics and for Illumina to "monitor the health of the instrument and

proactively let [the customer] know if something is looking off." A customer also can connect its sequencers to Illumina's cloud-based data storage service. (deSouza (Illumina) Tr. 2383-85).

Response to Finding No. 2674:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2673, which Respondents incorporate herein. Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2678 herein.

2675. Ms. Berry explained that Illumina's customers can choose to turn on "Proactive," a data sharing software embedded in Illumina's instruments. (PX7076 (Berry (Illumina) Dep. at 30)).

Response to Finding No. 2675:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2673, which Respondents incorporate herein. Respondents also note that the cited testimony is evidence that the Proactive solution is a voluntary option, which customers are not required to use in order to reap the benefits of Illumina's technology. . Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2678 herein.

2676. By turning on Illumina's data-sharing Proactive software, a customer receives improved service from Illumina. (PX7076 (Berry (Illumina) Dep. at 36-37)).

Response to Finding No. 2676:

The proposed finding is incomplete and misleading without additional context. The extent of the "improved service" that a customer receives from using Proactive is the Proactive service itself. Proactive "allows Illumina to have visibility into specific instrument sort of physical states to try to understand when an instrument is likely to requires service." (Berry (Illumina) Tr. 850–852.) The only added service benefit to the Proactive user is a notice from Illumina that its machines are likely to require service. Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶ 2678 herein.

The proposed finding is also incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2612 and 2673, which Respondents incorporate herein.

2677. Ms. Berry testified that about 68 to 70 percent of Illumina instruments capable of connecting to Proactive are connected to the service. (Berry (Illumina) Tr. 853).

Response to Finding No. 2677:

Respondents have no specific response, except to note that the cited testimony is evidence that the Proactive service is voluntary and that customers opt-in to the information sharing service at a relatively high rate. Respondents also incorporate their responses to CCFF ¶ 2673 herein. Respondents note that this testimony, in turn, supports an inference that customers do not perceive significant privacy concerns arising out of the use of the Proactive service. Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina

even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2678 herein.

2678. [redacted] (*See* PX7076 (Berry (Illumina) Dep. at 38-39); PX2386 (Illumina) at 004 (Email from G. Shariat, Illumina, to N. Berry, Illumina, attaching Invitae 2020 NovaSeq Run Rate, Dec. 1, 2020) (*in camera*) [redacted]

Response to Finding No. 2678:

The proposed finding is incomplete and misleading. Illumina collects three different types of instrument performance data as part of its Proactive program. The first category is "Run Performance data" which is "Q-scores, error rates and instrument operational logs". This category of data is used for "failure risk prediction" and "failure detection". The second category is "Instrument configuration data", which is "instrument serial number, [and] software version". This category of data is used for "run troubleshooting". The last category is "Run configuration data", which is "run parameters, reagent and flow cell lot numbers, primary analysis set-up and configuration". This category of data is used for "run troubleshooting". (RX1478 (Illumina) at 002 (Illumina Proactive Technical Note).) Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.)

The proposed finding is also incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2612 and 2673, which Respondents incorporate herein.

2679. [redacted] (PX7055 (Otte (Freenome) IHT at 77) (*in camera*)).

Response to Finding No. 2679:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2673, which Respondents incorporate herein. In particular, if Mr. Otte contends [redacted], this shows that Freenome has *voluntarily and affirmatively* elected to use the Proactive service.

Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2678 herein.

2680. [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 59-60) (*in camera*)).

Response to Finding No. 2680:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2673, which Respondents incorporate herein. Contrary to Complaint Counsel's unproven contention, Illumina does not offer a [redacted] Illumina's Proactive tool collects a limited amount of data, none of which is reveals the genomic information or specific experiments that customers are conducting. Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2678 herein.

2681. [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 59-60) (*in camera*)).

Response to Finding No. 2681:

The proposed finding is inaccurate, incomplete and misleading. Proactive is a complimentary monitoring tool that customers can opt-in to using on their Illumina sequencers. Using Proactive does not result in discounts to customers. To the contrary, under the Open Offer, there is no purchase or status requirement to receive access to pricing under the universal grid. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 7–8.) For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL, "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.) The universal grid does not provide any discounts to customers for using Proactive. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 7–8.)

Contrary to Mr. Daly's unsubstantiated testimony, Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.) As stated, the data to which Illumina has access is only instrument physical state data—things like the temperature of the instrument or the laser power, which is not competitively sensitive. Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2678 herein.

2682. [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 60-61) (*in camera*)).

Response to Finding No. 2682:

The proposed finding relates to irrelevant subject matter because a particular test developer's beliefs—founded on completely inaccurate factual assumptions about Illumina's Proactive feature—say nothing about whether Illumina could share sensitive sequencing data with GRAIL.

The extent of the "improved service" that a customer receives from using Proactive is the Proactive service itself. Proactive "allows Illumina to have visibility into specific instrument sort of physical states to try to understand when an instrument is likely to requires service." (Berry (Illumina) Tr. 850–852.) The only added service benefit to the Proactive user is a notice from Illumina that its machines are likely to require service. In any event, putative test developers are welcome to voluntarily opt-out of the Proactive system. Respondents incorporate their responses to CCFF ¶¶ 2612, 2673, 2676 and 2678 herein.

(c) Illumina Learns about Its Customers' Products and Development Plans from Servicing Its Customers

2683. [redacted] (PX7076 (Berry (Illumina) Dep. at 32-34) (*in camera*)).

Response to Finding No. 2683:

Respondents have no specific response, except to note that customers are not requires to supply specific, technical information to Illumina in the course of troubleshooting. Respondents further note that Illumina treats information relating to troubleshooting and "quality records" as confidential information. (Berry (Illumina) Tr. 850.) Accordingly, that data is subject to Illumina's rigorous data privacy restrictions, which include regular training and supervision by management, but also a need-to-know limitation on accessing data outside the purview of an

individual's role. (Berry (Illumina) Tr. 853–55.) Respondents also note that it is "an important bright line" for Illumina to "never access or look at or review any customer's genomic data", which customers do not provide to Illumina even if they are connected to the Proactive service. (deSouza (Illumina) Tr. 2385.)

Specifically, Illumina takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; [redacted] Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted]; deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted]) Respondents incorporate their responses to CCFF ¶¶ 2612, 2673, 2676 and 2678 herein.

2684. Ms. Berry testified that Illumina "may learn about . . . the market segment that the customer is wishing to use our products for, in a service and support interaction. It could be tech support . . . we may ask them some questions about, you know, what performance attributes

are important to you, and you know, the customer may or may not disclose to us specifics about their intended use." (PX7063 (Berry (Illumina) IHT at 35-36)).

Response to Finding No. 2684:

The proposed finding is incomplete and misleading. In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.) The cited testimony also confirms that some customer choose not to disclose specifics about their intended use, which does not change Illumina's approach to that customer. (*See* (Berry (Illumina) Tr. 785–86 [redacted].)

Further, this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.) Respondents incorporate their responses to CCFF ¶¶ 2612, 2673, 2676 and 2678 herein.

2685. Ms. Berry testified at trial that Illumina also provides "troubleshooting" help to customers for issues with NGS instruments and "chemistry problem[s]." (Berry (Illumina) Tr. 846). Ms. Berry explained, "So, yeah, we -- we support the customer with respect to the pieces of the workflow whereby they're using, you know -- that are absolutely dependent on the Illumina -- the parts of the workflow that we provide essentially, so the core sequencing piece primarily." (Berry (Illumina) Tr. 846).

Response to Finding No. 2685:

The proposed finding is misleading.

First, the cited testimony confirms that Illumina's support to customers is cabined to the "core sequencing" activities, and that other activities are kept totally secret from Illumina. In particular all the parts of the workflow except for core sequencing are not provided by Illumina. (*See* Berry (Illumina) Tr. 814 (Illumina not used for blood or fluid sample collection), 815 (library preparation). 821–22 (analysis to identify the presence of cancer or other clinically relevant conclusion)). For example, Ms. Berry testified that in the commercial space, information about specific biomarkers is "very proprietary and secret, so we don't get into that, that type of support with customers in the commercial space typically". (Berry (Illumina) Tr. 846–47.)

Second, the proposed finding is misleading to the extent it suggests that customers always use Illumina for their core sequencing needs. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.)

2686. Guardant relies on Illumina for service and support, as well as for "customization and optimization of our reagents." (PX7105 (Getty (Guardant) Dep. at 60-62) ("Illumina provides support to us as a partner in sequencing" and "we rely on [Illumina] as we advance our technology. So more forward-looking technology aspects versus the day-to-day, you know, if we have, let's say, reagent X and reagent X needs to be customized, maybe in the future state, you know, reagent Y could be created through a partnership with Illumina.").

Response to Finding No. 2686:

The proposed finding is inaccurate, incomplete and misleading. At trial, Mr. Getty admitted that he "would not be the person to answer technical questions about the sequencers and reagents used by Guardant in its lab" and that he would "defer to Ms. Chudova on that". (Getty (Guardant) Tr. 2635.) [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 2614 and 2685 herein.

2687. [redacted] (PX7105 (Getty (Guardant) Dep. at 61-62) (*in camera*) [redacted]; PX7094 (Nolan (Freenome) Dep. at 156-157) (*in camera*) ([redacted])).

Response to Finding No. 2687:

Respondents have no specific response except to note that the Open Offer ensures that customers will continue to receive access to the same product and support services to which they had access before the Transaction. (*See* PFF ¶¶ 1004.1, 1004.9; [redacted]; Berry (Illumina) Tr. 865–66; deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 6; RX6002 (Guerin-Calvert Trial Dep. at 58).) The Open Offer also requires Illumina to provide customers with the same access to services that GRAIL or any other For-Profit Entity has access to, and at the same prices. (PFF ¶ 1004; [redacted] Berry (Illumina) Tr. 865–66; deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.)

As Ms. Berry testified, "the open offer obligates Illumina to provide access to a customer to not only the same [product and support] services for which the customer had before the transaction but also any [product and support] services . . . that GRAIL has so that there will be absolutely no disadvantage to a customer signing this agreement on what they can access as relates to services". (Berry (Illumina) Tr. 865–66.).

2688. [redacted] (PX7056 (Silvis (Tempus) IHT at 91-94) (*in camera*)).

Response to Finding No. 2688:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2621, which Respondents incorporate herein.

In the ordinary course of business, Illumina's customers may volunteer high-level information about their tests to Illumina. Illumina does not require customers to report that information, and Illumina does not solicit detailed, technical information from its customers. As Ms. Berry explained, "we don't get into designing assays with customers." (Berry (Illumina) Tr. 845.)

Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).) Moreover, Illumina's instruments and consumables are multi-use products that can be and often are used by Illumina customers for a variety of sequencing applications. (PFF ¶¶ 6–11.)

Respondents also incorporate their responses to CCFF ¶¶ 2612, 2663 and 2684 herein.

The proposed finding relies on IH testimony, which respondents had no opportunity to cross examine, and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

(3) Illumina Has Used Its Tools to Identify MCED Test Customers

(a) Illumina's Customer Database and Supply Terms Classify Customers into Segments, Including Ones Related to MCED and Cancer Screening

2689. Illumina tracks every product that its customers order using databases containing customer order and shipment history, and prices. (Berry (Illumina) Tr. 647). Illumina also tracks the services that it provides to customers. (Berry (Illumina) Tr. 647).

Response to Finding No. 2689:

Respondents have no specific response, except to note that this information is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored in the databases (Berry (Illumina) Tr. 853–55.)

Respondents also note that the proposed finding is irrelevant and does not evidence any particular ability to identify and/or discriminate against alleged rivals. Further, although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).) Moreover, Illumina's instruments and consumables are multi-use products that can be and often are used by Illumina customers for a variety of sequencing applications. (PFF ¶¶ 6–11.)

In any event, Illumina takes extensive precautions to protect the confidentiality of information it receives from developers including: (1) setting up confidentiality agreements with partners, (2) training staff and requiring them to sign confidentiality agreements, (3) separating teams who might work on similar products, (4) using document control processes and (5) providing legal guidance if individuals request access to protected documents. (PFF ¶¶ 1040–1040.5; Goswami (Illumina) Tr. 3227–30.) These practices are standard in the industry and generally accepted by companies that serve multiple clients in the same industry. (PFF ¶ 1040.8; Goswami (Illumina) Tr. 3228–29.)

The Open Offer requires that to the extent that Illumina has access to customer confidential information, Illumina shall not share such information with GRAIL, any GRAIL subsidiary or any employee who works within GRAIL. (PFF ¶ 1038; (Rabinowitz (Natera) Tr. 425; Berry (Illumina) Tr. 916–17; PX0064 (Illumina) at 9.)

Under the Open Offer, Illumina must establish a firewall to protect customers' confidential information by prohibiting the flow of information between Illumina and GRAIL. (PFF ¶ 1039; [redacted] deSouza (Illumina) Tr. 2404–05; PX0064 (Illumina) at 9–10; [redacted].) Respondents also incorporate their responses to CCFF ¶¶ 2612 herein.

2690. Illumina utilizes Salesforce.com, a customer relationship management database, to store customer contact information, track sales opportunities, and generate price quotes. (Berry (Illumina) Tr. 659-660).

Response to Finding No. 2690:

Respondents have no specific response, except to note that Salesforce is a widely used customer relationship management database, and that the information enumerated in the proposed finding would likely be of little benefit to a putative competitor. Respondents also note

that the proposed finding is irrelevant and does not evidence any particular ability to identify and/or discriminate against alleged rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2689 herein.

2691. Illumina's customer database classifies customers based on the market segments in which they participate. (Berry (Illumina) Tr. 660-61; PX7076 (Berry (Illumina) Dep. at 54-57)). Illumina classifies customers in "approximately 10 or 12 segments," including oncology testing. (Berry (Illumina) Tr. 660-61).

Response to Finding No. 2691:

The proposed finding is irrelevant and does not evidence any particular ability to identify and/or discriminate against alleged rivals. In particular, oncology testing is an extremely broad category, and attempting to target all oncology testing customers would have a significant negative impact on Illumina's bottom line. Although Illumina may have an understanding of the types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).)

Respondents also note that the information described in Ms. Berry's testimony is not widely available to Illumina employees. For example. Illumina takes measures to protect any customer information that it treats as confidential—including order history, pending purchase orders and order forecasts—including employee training and viewing restrictions on data stored

in the databases (Berry (Illumina) Tr. 853–55.) Respondents also incorporate their responses to CCFF ¶¶ 2612 and 2689 herein.

2692. Ms. Berry explained that Illumina classifies customers based on segments such as reproductive health, genetic disease testing, and oncology testing on the clinical side, and cell and molecular biology research, genetic disease research, cancer research, and microbiology on the research side. (PX7076 (Berry (Illumina) Dep. at 54-57)).

Response to Finding No. 2692:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶ 2691, which Respondents incorporate herein.

2693. Illumina's Ms. Berry testified that, "I'm not familiar with all of the companies that offer oncology tests, but I'm, you know, familiar with the companies that purchase products from Illumina for the purposes of offering oncology tests." (PX7063 (Berry (Illumina) IHT at 30-31)).

Response to Finding No. 2693:

The proposed finding is irrelevant for the reasons explained in Respondents' responses to CCFF ¶ 2691, which Respondents incorporate herein.

(b) Revealing Its Knowledge of Its MCED Customers [redacted]

2694. After the announcement of the Acquisition, Illumina decided to contact its "largest onc[ology] testing customers or those specifically participating in the early detection space" to inform them of the Acquisition and offer them long-term supply agreements, in an attempt to alleviate their concerns about the transaction. (PX2302 (Illumina) at 001 (Email from N. Berry, Illumina, to C. Fideler, M. Gallad, et al., Illumina, Sept. 21, 2020)).

Response to Finding No. 2694:

The proposed finding is incomplete and misleading to the extent it suggests that Illumina identified customers specifically because they were MCED developers. [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 2612 herein.

2695. [redacted] (Berry (Illumina) Tr. 752-53 (*in camera*)).

Response to Finding No. 2695:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2694, which Respondents incorporate herein.

2696. [redacted] (Berry (Illumina) Tr. 753 (*in camera*)).

Response to Finding No. 2696:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2694, which Respondents incorporate herein. [redacted]

[redacted]

2697. [redacted] (Berry (Illumina) Tr. 938 (*in camera*)).

Response to Finding No. 2697:

The proposed finding is incomplete and misleading. [redacted] Respondents also incorporate their responses to CCFF ¶ 2694 herein.

2698. [redacted] (Berry (Illumina) Tr. 750-51 (*in camera*)).

Response to Finding No. 2698:

The proposed finding is irrelevant and does not evidence any particular ability to identify and/or discriminate against alleged rivals. Although Illumina may have an understanding of the

types of applications a customer is developing or marketing, in many cases it does not know what specific tests are in its customers' development pipeline. (Berry (Illumina) Tr. 849–53.) For example, many of the MCED tests Complaint Counsel claims are in development are unknown to Illumina even today—much less their specific attributes that would allow Illumina to predict with confidence whether any test will be a close substitute to Galleri, or, instead, a market-expanding complement, foreclosure of which would cause no material diversion to Galleri but would result in substantial lost upstream sales. (RX6000 (Carlton Trial Dep. at 24, 26–27).) Respondents also incorporate their responses to CCFF ¶ 2694 herein.

2699. [redacted] (Berry (Illumina) Tr. 753-55 (*in camera*)).

Response to Finding No. 2699:

Respondents have no specific response.

2700. Mr. deSouza's comments at the Cowen Liquid Biopsy Summit on September 24, 2020 revealed that Illumina analyzed which of its customers a combined Illumina/Grail would compete with: "[A]bout 20 [Illumina] customers out of about 6,600 have said that they have an interest in exploring [the early detection of cancer] space. Those 20 customers represent roughly about 2% of our revenue." (PX2575 (Illumina) at 065 (Email from T. Friedman, Illumina, to J. Cunningham, Illumina, attaching Edited Transcript, ILMN.OQ – Illumina Inc at Cowen Liquid Biopsy Summit (Virtual), Sept. 29, 2020); *see also* deSouza (Illumina) Tr. 2220-22). Mr. deSouza confirmed that those 20 customers include Guardant, Roche, Freenome, Singlera, Exact/Thrive, and Grail. (deSouza (Illumina) Tr. 2220-23; PX2575 (Illumina) at 065 (Email from T. Friedman, Illumina, to J. Cunningham, Illumina, attaching Edited Transcript, ILMN.OQ – Illumina Inc at Cowen Liquid Biopsy Summit (Virtual), Sept. 29, 2020); PX2031 (Illumina) at 005 n.2 (Illumina, Cowen Liquid Biopsy Summit with Francis deSouza, Sept. 24, 2020) (listing Guardant, Thrive, Freenome, Singlera, Exact, and Grail)).

Response to Finding No. 2700:

The proposed finding is incomplete and misleading. The 20 customers representing roughly 2% of revenue is a reflection of Illumina's *historical* business with those test developers,

and Illumina's NGS profits from clinical testing lie largely in the future. (PFF ¶ 857.) The proposed finding is also misleading to the extent it describes [redacted] (RX3869 (Cote Expert Report ¶¶ 174 (Exact/Thrive), 184 ([redacted]), 193 (Freenome), 202 (Guardant), 217 (Helio), 227 ([redacted], 238 (Singlera)).) [redacted] Respondents also incorporate their responses to CCFF ¶¶ 2612, 2649–2660 and 2694.

2701. In a text message dated September 16, 2020, four days prior to the announcement of Illumina's proposed acquisition of Grail, Ms. Berry stated in an exchange with Jeremy Preston, Illumina's Vice President of Global Regional Marketing, that she thought that Illumina's acquisition of Grail would result in Illumina being perceived as competing with their customers in the same segment, including Guardant, Thrive, Freenome, Natera, Tempus, and FMI. (PX2158 (Illumina) at 001 (Mobile text chain between N. Berry, Illumina, and J. Preston, Illumina, Sept. 16, 2020) ("[Preston:] "Do you think grail will be perceived as competing with our customers? [Berry:] Yes for those that are in the same segment [Preston:] Guardant, Thrive, Freenome, Natera, Tempus, FMI. . . [Berry:] Yes exactly"); *see also* (Berry (Illumina) Tr. 743-44 (*in camera*))). Ms. Berry texted that "[w]e've already gotten some WTF emails from customers." (PX2158 (Illumina) at 001 (Text message between N. Berry, Illumina, and J. Preston, Illumina, Sept. 16, 2020)).

Response to Finding No. 2701:

The proposed finding is incomplete and misleading. *First*, [redacted]

[redacted] (Berry (Illumina) Tr. 749.)

The proposed finding is also misleading to the extent it describes [redacted] (RX3869 (Cote Expert Report ¶¶ 174 (Exact/Thrive), 184 (FMI/Roche), 193 (Freenome), 202 (Guardant), 217 (Helio), 227 (Natera), 238 (Singlera)).) [redacted]

2. Illumina Has a Multitude of Tools to Foreclose or Reduce the Competitiveness of Grail's MCED Test Rivals

2702. Illumina knows that "[s]creening represents the largest market opportunity within the broader ctDNA market, but the key bottleneck to market development is the cost of sequencing." (PX2712 (Illumina) at 029 (Email from P. Scagnetti, Illumina, to M. Nguyen, Illumina, attaching Python: A Revolution in Early Cancer Detection Presentation, Dec. 3, 2019)).

Response to Finding No. 2702:

The proposed finding is incomplete and misleading. Although the email chain cited in this proposed finding is from 2019, the quoted attachment is from December of 2015. (PX2712 (Illumina) at 1.) As Illumina's contemporaneous internal documents noted, in 2015, Illumina believed that "no customer has the ability to implement a pan-cancer screening test responsibly and economically anytime in the next 5 years"; therefore, to accelerate the growth of the

segment, Illumina "felt an imperative to organize an entity" focused on that moon-shot mission. (PFF ¶ 980.2; RX1088 (Illumina) at 7; (Flatley (Illumina) Dep. at 111–12).) These considerations from the time of GRAIL's formation no longer exist for many reasons, including because the cost of sequencing has come down substantially since 2015. (PFF ¶¶ 21, 981.)

Indeed, contrary to Complaint Counsel's unproven contention, the only evidence in the record on NGS costs as a percentage of future downstream MCED revenues and margins shows that NGS costs will be a very small percentage of MCED test revenues and margins in the future. (PFF ¶ 884; RX6000 (Carlton Trial Dep.) at 30–31.)

2703. As documented in Section V. above, each MCED witness testified that they only have one option for NGS supplier—Illumina.

Response to Finding No. 2703:

Respondents have no specific response. To the extent Complaint Counsel relies on its Proposed Findings in Section V, paragraphs 1053–1200, Respondents incorporate their responses to those Proposed Findings herein.

a) Illumina Can Increase Prices of Its Instruments and Reagents

2704. [redacted] (*See* PX7051 (Lengauer (Third Rock Ventures) IHT at 127-28) (*in camera*); PX7047 (Cooper (Progenity) IHT at 54)).

Response to Finding No. 2704:

The proposed finding is inaccurate, incomplete and misleading. Contrary to Complaint Counsel's unproven contention, the only evidence in the record on NGS costs as a percentage of future downstream MCED revenues and margins shows that NGS costs will be a very small percentage of MCED test revenues and margins in the future. (PFF ¶ 884; RX6000 (Carlton Trial Dep.) at 30–31.)

To the extent Complaint Counsel relies on its Proposed Findings in Section V.C.3, Respondents incorporate their responses to those Proposed Findings herein.

2705. [redacted] (PX6090 (Scott Morton Report) ¶ 178 (*in camera*)).

Response to Finding No. 2705:

The proposed finding is incomplete and misleading on both counts: [redacted]

First, [redacted] in light of the Open Offer, Illumina cannot increase prices it charges to putative GRAIL rivals. Specifically, "there's a provision in the open offer that prevents Illumina from raising prices over the term of the agreement beyond those that would be allowable relative to inflation adjustments or cost of goods sold". (Berry (Illumina) Tr. 899; *see also* PFF ¶ 1021; [redacted] Conroy (Exact/Thrive) Tr. 1731; PX0064 (Illumina) at 7; [redacted].) "[T]he impact [of this provision] would be that customers are essentially protected against price increases over the term" of the Open Offer. (Berry (Illumina) Tr. 900.) According to economic expert Ms. Guerin-Calvert, "taken in their totality with regard to shorter term, medium term, and longer term" concerns, the Open Offer's pricing provisions "provide[] [customers] fair treatment . . . across customers" and give customers "fair treatment in terms of advance knowledge and information" about pricing. (RX6002 (Guerin-Calvert Trial Dep. at 53).)

Second, the proposed finding is incomplete and misleading with respect to the statement that [redacted]. Contrary to Complaint Counsel's unproven

contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.)

For example, Natera and BGI Genomics formed a partnership to commercialize Natera's Signatera NGS-based cancer monitoring test on BGI's DNBSEQ platform in China, and has now launched a version of the Signatera test in China "that incorporates MGI sequencing platforms." [redacted] RX3062 (BGI) at 1.)

BGI already has a commercially available NGS platform. (PFF ¶¶ 777–777.5.) [redacted] BGI also recently won a jury verdict that held three of Illumina's patents to be invalid, meaning that these patents do not prevent BGI from launching its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.)

[redacted]. (PFF ¶¶ 778–778.2; 2085.) Thermo Fisher's Ion Torrent sequencers are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) [redacted]

[redacted]

Oxford Nanopore is also a viable alternative for putative MCED test developers. (RX3521 (NCM) at 50-51; RX3869 (Cote Expert Report) ¶¶ 293, 295-98.) Oxford Nanopore's instruments reportedly will compete with Illumina on throughput, accuracy and cost. Oxford Nanopore states that its highest throughput instrument, PromethION, has a higher throughput than the highest performance instrument and flow cell currently offered by Illumina, the NovaSeq 6000 with the S4 flow cell. (RX3543 (ONT); RX1205 (Illumina): RX3869 (Cote Expert Report) ¶ 294.) Oxford Nanopore states that its instruments have similar accuracy to Illumina. (*Compare* RX3541 (ONT) at 1 *with* RX3368 (Illumina).)

Singular commercially launched the G4 NGS sequencer at the end of 2021 and will begin shipping the G4 NGS systems in the first half of 2022. (PFF ¶ 607; Velarde (Singular) Tr. 4515–16, 4522; *see also* PX8561 (Singular) at 1–2; [redacted] (PFF ¶ 609-609.6.)

Respondents also note that several other sequencers that are capable of supporting MCED development are arriving in the near future. [redacted]

[redacted] (PX7119 (Lauer (Ultima) Dep. at 49–50); [redacted]

Omniome, which was acquired by PacBio for $800 million in July 2021, is developing a NGS sequencer. (RX3533 (Omniome).) Omniome expects that, at launch, its NGS sequencer will have higher accuracy, longer sequence read and lower reagent costs than Illumina's sequencers. (PX7096 (Song (Omniome) Dep. at 43, 58, 68–72)**;** [redacted]

Roche expects to bring to market an NGS nanopore sequencer by the 2024 time frame. (RX3614 (Roche).)

Dr. Aravanis testified that GRAIL considered BGI, Thermo Fisher, Oxford Nanopore and Genapsys NGS sequencers for GRAIL's Galleri test, and determined that many of them would be a viable alternative. (PFF ¶ 1311 (Aravanis (Illumina) Tr. 1862–63).) Dr. Aravanis also

testified that BGI's systems are used for liquid biopsy applications; BGI has an NGS sequencing product that could be used for multicancer screening; BGI competes with Illumina for liquid biopsy applications in the countries in which it operates; BGI markets its NGS offerings as an alternative to Illumina. (PFF ¶ 1306 (Aravanis (Illumina) Tr. 1852–54).) Dr. Aravanis also testified that Thermo Fisher's Ion Torrent can be us as an alternative for many Illumina applications; that the Ion Torrent platform is adequate in terms of the type of sequencing data it produces, the accuracy and the cost and that Thermo Fisher markets the Ion Torrent as an alternative to Illumina. (PFF ¶ 1305 (Aravanis (Illumina) Tr. 1848–52).) Dr. Aravanis further testified that it is possible to do short-read sequencing on Oxford Nanopore's platforms at very low cost; the Oxford Nanopore platform is a very high-output sequencing platform; the amount of data and cost per data is comparable to the high-end Illumina systems; Oxford Nanopore's NGS sequencing product can be used and have been for liquid biopsy oncology testing; Oxford Nanopore markets its NGS offering as an alternative to Illumina and Illumina views Oxford Nanopore as a competitor in NGS sequencing. (PFF ¶ 1308 (Aravanis (Illumina) Tr. 1856–59).) (*See also* PFF ¶¶ 1304–1310.)

Purported MCED test developers treat these NGS platforms as viable substitutes for Illumina's NGS platform. (PFF ¶ 780.) Dr. Vogelstein, a founder of Thrive, stated, [redacted]

[redacted] Dr. Gao of Singlera testified that the PanSeer test can be run using Thermo Fisher equipment. (PFF ¶ 780.4.) [redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) [redacted]

Mr. Stahl of Invitae also recognized that Thermo Fisher (along with Oxford Nanopore, BGI, and PacBio) is a participant in the NGS field and that there would be "no way to predict" which NGS company would be successful over the next five or ten years. (PX7075 (Stahl (Invitae) Dep. at 43).) Mr. Stahl also testified that BGI's and Illumina's technologies are "very similar". (PX7075 (Stahl (Invitae) Dep. at 75.)

The proposed finding also relies on improper expert testimony. Dr. Scott Morton lacks the expertise to opine on scientific, technical, regulatory and reimbursement issues, rendering her opinions unreliable. (*See* Resps.' Post-Trial Br. at 261–62.)

2706. All pricing programs must be approved by Illumina's Pricing Committee. (PX6056 (Illumina) at 038 (Illumina, Narrative Response to Second Request, Mar. 1, 2021); PX7072 (deSouza (Illumina) IHT at 13-14 (*in camera*)).

Response to Finding No. 2706:

Respondents have no specific response.

2707. [redacted] (PX7123 (Fellis (Illumina) Dep. at 18) (*in camera*)).

Response to Finding No. 2707:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2708. The pricing committee approves Illumina's pricing strategy. "As product managers in the product management function develop[] a pricing strategy around a given set of products, that would go to the pricing committee for review and approval." (PX7123 (Fellis (Illumina) Dep. at 20)). With very few exceptions, the pricing committee approves all pricing strategies provided by product managers. (PX7123 (Fellis (Illumina) Dep. at 20)).

Response to Finding No. 2708:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2709. [redacted] PX7072 (deSouza (Illumina) IHT at 15) (*in camera*)).

Response to Finding No. 2709:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2710. [redacted] PX6056 (Illumina) at 038 (Illumina, Narrative Response to Second Request, Mar. 1, 2021) (*in camera*)).

Response to Finding No. 2710:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2711. [redacted] (PX7072 (deSouza (Illumina) IHT at 14) (*in camera*)). [redacted] (PX7072 (deSouza (Illumina) IHT at 15) (*in camera*)).

Response to Finding No. 2711:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2712. [redacted] (PX7072 (deSouza (Illumina) IHT at 17) (*in camera*)); PX7123 (Fellis (Illumina) Dep. at 24-25) (*in camera*)).

Response to Finding No. 2712:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2713. [redacted] (PX7123 (Fellis (Illumina), Dep. at 21, 30 (*in camera*) [redacted]

Response to Finding No. 2713:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2714. [redacted] (PX7123 (Fellis (Illumina), Dep. at 22) (*in camera*) [redacted] .

Response to Finding No. 2714:

Respondents incorporate their response to CCFF ¶ 2706 herein.

2715. Guardant's Mr. Getty testified that "whatever terms, conditions, and pricing they [Illumina] want to put forward, they can do so. And they can use their monopoly power in order to . . . drive to whatever conclusion they'd like." (PX7105 (Getty (Guardant) Dep. at 67-68)).

Response to Finding No. 2715:

The proposed finding is incomplete and misleading. Specifically, contrary to Mr. Getty's testimony, Illumina cannot use any alleged "monopoly power" to impose conditions on Guardant or any other customer because customers who were unhappy with proposed conditions could switch to one of Illumina's competitors in the NGS space. (*See* PFF ¶¶ 578–674; *see also* RRFF ¶ 2705.) Thus, as Mr. deSouza testified, [redacted]

Further, [redacted] (*See* Berry (Illumina) Tr. 938–43.) [redacted] (Berry (Illumina) Tr. 938.) [redacted] As Mr. Getty testified, the [redacted] This would not have been the case if Guardant had very little leverage in negotiating with Illumina.

[redacted]

[redacted] Guardant attached the amended supply agreement to its 2020 10–K because the amended agreement represented a material and

important contract for Guardant. (PFF ¶ 1075.4; Getty (Guardant) Tr. 2668–69; PX0060 (Guardant) at 151.)

Finally, the public availability of the Open Offer increases Guardant's (and other customers') negotiating power, which, as outlined above, was already significant. As economist and President of the Center for Healthcare Economics and Policy and Senior Managing Director at FTI Consulting, Margaret Guerin-Calvert, explained, "by providing customers and the marketplace with increased information on the contracting provisions that Illumina is willing to negotiate with regard to pricing, access, technology and other terms, the Open Offer changes bargaining dynamics in favor of third parties [like Guardant] after the Transaction." (RX3865 (Guerin-Calvert Expert Report) ¶ 44.)

Respondents also incorporate their responses to CCFF ¶¶ 927, 1115, 1118, 1129 and 1139 herein.

2716. [redacted] (Getty (Guardant) Tr. 2524, 2629-30 (*in camera*)).

Response to Finding No. 2716:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2715, which Respondents incorporate herein.

2717. Guardant's CEO testified that, "as customer for Illumina, we are an important customer, but we do not drive, you know, a significant portion of their revenue such that, you know, they would be dependent on Guardant." (Getty (Guardant) Tr. 2524).

Response to Finding No. 2717:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2715, which Respondents incorporate herein. Respondents also note that Mr. Getty is not Guardant's CEO. Mr. Getty is the senior vice president of commercial for the Screening Division at Guardant. (Getty (Guardant) Tr. 2482.)

While Respondents served a subpoena on Guardant's CEO, Helmy Eltouky, he declined to testify.

2718. [redacted] (PX7110 (Conroy (Exact) Dep. at 182-83) (*in camera*)).

Response to Finding No. 2718:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 1084 and 1089, which Respondents incorporate herein.

[redacted] After Illumina announced its agreement to reacquire GRAIL, Exact entered into an agreement to acquire Thrive for $2.1 billion. (PFF ¶ 929.1.) [redacted]

[redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶¶ 4338–99.

2719. Dr. Gao testified that in negotiations with Illumina, "their [Illumina's] way is my way or the highway. If you gave [Illumina] that profit margin, well, [Illumina] -- you know, [Illumina] can allow you to survive. If not, you just die." (PX7042 (Gao (Singlera) IHT at 87-88)).

Response to Finding No. 2719:

The proposed finding is incomplete and misleading, and contradicted by the weight of the evidence. In the portion of his IH cited here, Dr. Gao testified to facts that indicate that his characterization of Singlera's relationship with Illumina has no basis. For example, Dr. Gao testified that once Singlera seriously began pursuing a supply agreement with Illumina, Illumina "quickly turn[ed] around a draft proposal of [a] supply agreement", which was a "standard boilerplate" agreement. (PX7042 (Gao (Singlera) IHT at 74–75).) Dr. Gao testified that Singlera was "happy" to receive a standardized agreement because Singlera's "only request [was] to have a standard supply agreement". (PX7042 (Gao (Singlera) IHT at 75).) Finally, Dr. Gao admitted that Illumina "provided us with [a draft supply agreement], expect[ed] us to negotiate I'm sure, but we never went back" to negotiate with Illumina. (PX7042 (Gao (Singlera) IHT at 87).) Thus, Dr. Gao's testimony shows that, after Singlera proposed entering a supply agreement with Illumina, Illumina sent a boilerplate agreement, which was exactly what Singlera wanted, and yet Singlera refused to even engage with Illumina on the draft agreement.

Further, even though Singlera stopped engaging with Illumina on a supply agreement, Illumina extended the Open Offer to Singlera (as well as all U.S. oncology customers). (*See* PX0064 (Illumina) at 1, 3.) The Open Offer specifically addresses the concerns identified in the

portion of Dr. Gao's IH in which he discussed Singlera's desire for a supply agreement. In his IH, Dr. Gao identified two primary reasons why Singlera sought a supply agreement with Illumina: (1) to ensure that "Illumina will [not] discontinue the product line" that Singlera uses and (2) to ensure that Illumina does not increase the costs of sequencing equipment for Singlera. (PX7042 (Gao (Singlera) IHT at 71–72).) The Open Offer addresses each of these concerns. *First*, Illumina is prohibited from discontinuing products that any oncology customer has purchased in the prior year. (PFF ¶ 1011; [redacted] Berry (Illumina) Tr. 883; PX0064 (Illumina) at 6; [redacted] *Second*, the Open Offer expressly forbids Illumina from raising prices over the entire 12-year term and affirmatively requires Illumina to lower the price of sequencing by at least 43% by 2025. (PFF ¶ ¶ 1021 –23; [redacted] Berry (Illumina) Tr. 899, 901 –04; Conroy (Exact/Thrive) Tr. 1731 –32; deSouza (Illumina) Tr. 2403; PX0064 (Illumina) at 7; [redacted] Even though Dr. Gao claimed these concerns drove Singlera's requests for a supply agreement, Dr. Gao testified at trial that he was "*not even aware of the first open – open offer* until [his] lawyer told [him]", let alone the amended version, which provides even greater protections. (Gao (Singlera) Tr. 2952 (emphasis added).) Respondents also incorporate their responses to CCFF ¶¶ 1174 and 2642 herein.

Respondents also note that the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2720. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 180-81) (*in camera*)).

Response to Finding No. 2720:

The proposed finding is incomplete and misleading.

[redacted] Illumina is not the sole supplier of NGS equipment and faces stiff competition from current and future NGS providers. (*See* PFF ¶¶ 578–674.) [redacted]

[redacted]

Further, Dr. Vogelstein, the founder of Thrive stated, [redacted]

[redacted] The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928 and 2833, which Respondents incorporate herein.

Third, "there's a provision in the open offer that prevents Illumina from raising prices over the term of the agreement beyond those that would be allowable relative to inflation adjustments or cost of goods sold". (Berry (Illumina) Tr. 899; *see also* PFF ¶ 1021; [redacted] Conroy (Exact/Thrive) Tr. 1731; PX0064 (Illumina) at 7; [redacted].) "[T]he impact [of this provision] would be

that customers are essentially protected against price increases over the term" of the Open Offer. (Berry (Illumina) Tr. 900.) [redacted]

Fourth, The proposed finding is incomplete and misleading insofar as it suggests that Exact is an actual competitor to GRAIL today or will be a competitor to GRAIL in the foreseeable future for the reasons explained in Respondents' responses to CCFF ¶¶ 414 and 418, which Respondents incorporate herein. Respondents note that CancerSEEK is still under development (PFF ¶ 417 (Lengauer (Exact/Thrive) Tr. 158)), that [redacted] (Conroy (Exact) Tr. 1717), and that CancerSEEK is combined with a whole-body PET-CT, which [redacted] (*See*, *e.g.*, Lengauer (Exact/Thrive) Tr. 248; RX3419 (Lennon et al., 2020) at 3; Lengauer (Exact/Thrive) Tr. 226–27; PFF ¶¶ 419, [redacted] 739, 760, [redacted], 841.3, [redacted], 1723–24.) Respondents also note that [redacted] (Conroy (Exact) Tr. 1621.)

[redacted] Exact/Thrive also admitted that, based on the DETECT-A trial, "[a]t present, we cannot be certain that the DETECT-A blood test"—the CancerSEEK test—"helped any participant." (RX3419 at 11.)

Finally, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2721. In an internal Grail e-mail, Grail's Research Operations Manager Minyong Chung wrote with regard to price negotiations with Illumina that "[n]egotiating with ILMN alone is very tricky because of their unique market position (basically a monopoly) . . . ." (PX4019 (Grail) (Email from M. Chung, Grail, to J. Wong, Grail, Sept. 29, 2018)).

Response to Finding No. 2721:

The proposed finding is inaccurate, incomplete and misleading with respect to the statement that [redacted]. Contrary to Complaint Counsel's unproven contention that all MCED tests use Illumina's NGS platforms, there are several other NGS platforms that can support putative MCED tests in development. (PPF ¶¶ 776–781.) Respondents also incorporate their responses to CCFF ¶ 2705 herein.

Complaint Counsel also did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 34), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Further, neither individual in the cited email was a witness in this case and was not subject to cross examination regarding their knowledge of Illumina's market position or customers' ability to negotiate with Illumina. Moreover, Complaint Counsel has done nothing to establish that Minyong Chung, who is a *Research Operations Manager* at GRAIL, has any personal knowledge of Illumina's pricing negotiations with its customers. Thus, there is no foundation for Mr. Chung's statements about such negotiations. Therefore, this statement and the cited source should be given little weight.

(1) [redacted]

2722. [redacted] (PX2608 (Illumina) at 001, 003 [redacted] (*in camera*); *see* PX7123 (Fellis (Illumina) Dep. at 72-73) (*in camera*)).

Response to Finding No. 2722:

The proposed finding is incomplete and misleading. [redacted]

2723. [redacted] (PX2608 (Illumina) at 003 [redacted] (*in camera*)).

Response to Finding No. 2723:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2722, which Respondents incorporate herein.

2724. [redacted] (PX2608 (Illumina) at 001, 004 [redacted] (*in camera*)).

Response to Finding No. 2724:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2722, which Respondents incorporate herein.

(a) Illumina Offers Customers Discretionary Discounts Outside of Its Supply Agreements and Pricing Grids

2725. [redacted] (*See e.g.*, PX2306 (Illumina) at 011 [redacted] (*in camera*); see PX2387 (Illumina) at 002 (Email from WF-BATCH, Illumina, to N. Berry, Illumina, Apr. 19, 2018) (*in camera*) [redacted].

Response to Finding No. 2725:

The proposed finding is incomplete and misleading without additional context. [redacted] (PX2306 (Illumina) at 11.) Thus, the discounts referred to in the amended supply agreement are based on standardized considerations and are aimed at achieving overall commercial terms that are substantially similar across similarly situated customers. Moreover, as Ms. Berry testified, under the Open Offer, if GRAIL or an equivalent customer "gets a discretionary discount", "Illumina would be obliged to reduce the price to [other customers] under this agreement to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 893–94.)

2726. [redacted] (PX7076 (Berry (Illumina) Dep. at 115-116, 169-170) (*in camera*); *see* PX7123 (Fellis (Illumina) Dep. at 53-54) (*in camera*)).

Response to Finding No. 2726:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' response to CCFF ¶ 2725, which Respondents incorporate herein.

2727. [redacted] (PX7076 (Berry (Illumina) Dep. at 172-173, 177) (*in camera*).

Response to Finding No. 2727:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' response to CCFF ¶ 2725, which Respondents incorporate herein. Under the Open Offer, discounts do not vary based on the customer's application. (*See* PX0064 (Illumina) at 6–7, 12–14.)

2728. [redacted] (PX6056 (Illumina) at 022 [redacted] (*in camera*)).

Response to Finding No. 2728:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' response to CCFF ¶ 2725, which Respondents incorporate herein.

Respondents also note that for a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL, "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

2729. [redacted] (*in camera*)).

Response to Finding No. 2729:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

Respondents also note that for a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including, [redacted], "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

2730. [redacted] (*in camera*)).

Response to Finding No. 2730:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including customer-level discounts), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

2731. [redacted] (Berry (Illumina) Tr. 774) (*in camera*).

Response to Finding No. 2731:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

2732. [redacted] (Berry (Illumina) Tr. 775-76) (*in camera*).

Response to Finding No. 2732:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including discounts for whether customers paid in advance), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

Under this universal pricing grid in the Open Offer, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL or an equivalent customer. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 7–8.)

2733. [redacted] (Berry (Illumina) Tr. 776) (*in camera)*.

Response to Finding No. 2733:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL, "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

2734. [redacted] (PX2688 (Illumina) at 001 (Email from WF-BATCH, Illumina, to R. Graff, Illumina, attaching Quote Approval Request, Feb. 1, 2018) (*in camera*)).

Response to Finding No. 2734:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

Customers who sign the Open Offer can choose (for each product purchased) to use the pricing they had before the Transaction or to use pricing under the same universal grid that GRAIL uses. (PFF ¶ 1014; Berry (Illumina) Tr. 892; PX0064 (Illumina) at 7.) Since Freenome received as 12 percent discount in 2018, which is before the Transaction, Freenome can keep their 12 percent discount. (PFF ¶ 1014; Berry (Illumina) Tr. 892; PX0064 (Illumina) at 7.)

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 28), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2735. [redacted] (Berry (Illumina) Tr. 780) (*in camera*). [redacted] PX7076 (Berry (Illumina) Dep. at 115-119); *see also* PX7123 (Fellis (Illumina) Dep. at 58-59) (*in camera*)).

Response to Finding No. 2735:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including those for "qualitative reasons"), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

2736. Illumina often provides the customer with [redacted] (PX7076 (Berry (Illumina) Dep. at 155-156) (*in camera*)). [redacted] (PX2631 (Illumina) at 001 (Quote Approval Request, Feb. 26, 2018) (*in camera*)).

Response to Finding No. 2736:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL, "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

2737. [redacted] PX2379 (Illumina) at 001 (Email from N. Berry, Illumina, to D. Blevins et al., Illumina, attaching Quote Approval Request, Feb. 14, 2019) (*in camera*) [redacted]); PX2631 (Illumina) at 001 (Email from WF-BATCH, Illumina, to N. Berry, Illumina, attaching Quote Approval Request, Feb. 26, 2018) (*in camera*) [redacted]).

Response to Finding No. 2737:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including those for "upgrad[ing] to new Illumina technology"), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

2738. [redacted] (PX2377 (Illumina) at 001 (Email from WF-BATCH, Illumina, to N. Berry, Illumina, attaching Quote Approval Request, Oct. 17, 2018) (*in camera*)).

Response to Finding No. 2738:

The pricing in the Open Offer is not contingent on the customer purchasing any other products: any customer buying sequencing reagents for use with a cancer screening test will pay the Open Offer price, regardless of whether that customer is also buying another product. (PX0064 (Illumina) at 6–7, 12–27; Berry (Illumina) Tr. 864:16-865:6.)

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including those for "bundl[ing] multiple products"), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price

that was offered to either GRAIL or an equivalent customer"—even if the customer *did not* purchase the "bundled product". (Berry (Illumina) Tr. 894.) Additionally, the pricing in the Open Offer is standardized and is not contingent on a customer purchasing any other products: any customer buying a Supplied Product will pay the Open Offer price, regardless of whether that customer is also buying the Galleri test. (PX0064 (Illumina) at 6–7, 12–27; Berry (Illumina) Tr. 864–65.)

Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 17), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it. Respondents further incorporate their response to CCFF ¶ 2728 herein.

2739. [redacted] (PX2378 (Illumina) at 001-02 (Email from WF-BATCH, Illumina, to N. Berry, Illumina, attaching Quote Approval Request, Dec. 27, 2018) (*in camera*)).

Response to Finding No. 2739:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including those for "hiring a full-time on-site Illumina service engineer"), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer"—even if the customer *did not* hire the full-time service engineer. (Berry (Illumina) Tr. 894.)

2740. [redacted] (Berry (Illumina) Tr. 779) (*in camera*)). [redacted] (Berry (Illumina) Tr. 779) (*in camera*)).

Response to Finding No. 2740:

Respondents have no specific response. Respondents also incorporate their response to CCFF ¶ 2728 herein.

2741. [redacted] (Berry (Illumina) Tr. 779) (*in camera*)).

Response to Finding No. 2741:

Respondents have no specific response. Respondents also incorporate their response to CCFF ¶ 2728 herein.

2742. [redacted] (PX7076 (Berry (Illumina) Dep. at 174) (*in camera*)).

Response to Finding No. 2742:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2728, which Respondents incorporate herein.

2743. As detailed below in Section VII.D.2.c.4.a.iii., [redacted]

Response to Finding No. 2743:

The pricing in the Open Offer is not contingent on the customer purchasing any other products: any customer buying sequencing reagents for use with a cancer screening test will pay the Open Offer price, regardless of whether that customer is also buying another product, such as TSO-500. (PX0064 (Illumina) at 6–7, 12–27; Berry (Illumina) Tr. 864:16-865:6.)

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (including those for "bundl[ing] multiple products"), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer"—even if the customer *did not* purchase the TSO-500 therapy selection test. (Berry (Illumina) Tr. 894.)

To the extent Complaint Counsel relies on its Proposed Findings in Section VII.D.2.c.4.a.iii, paragraphs 4044–50, Respondents incorporate their responses to those Proposed Findings herein. Respondents also incorporate their response to CCFF ¶ 2728 herein.

(b) [redacted]

2744. [redacted] (Berry (Illumina) Tr. 789-790) (*in camera*); PX7076 (Berry (Illumina) Dep. at 177) (*in camera*)).

Response to Finding No. 2744:

Respondents have no specific response.

2745. [redacted] (PX7076 (Berry (Illumina) Dep. at 177) (*in camera*) [redacted]; PX7076 (Berry (Illumina) Dep. at 174) (*in camera*) [redacted]

Response to Finding No. 2745:

The proposed finding is incomplete and misleading without additional context. In the portion of Ms. Berry's testimony immediately before that cited, Ms. Berry explained that [redacted]

[redacted]

In any event, Illumina's pricing for oncology customers is constrained by the Open Offer which allows customers to choose (for each product purchased) to use the pricing they had before the GRAIL acquisition or to use pricing under a universal grid. (PFF ¶ 1014; Berry (Illumina) Tr. 892; PX0064 (Illumina) at 7.) Pricing for segments other than oncology is irrelevant to this case, which is about Illumina's alleged ability to foreclose putative GRAIL rivals.

In addition, Respondents note that the pricing that oncology customers receive is for all of their sequencing purchases; if they use their purchases for a different application, they will still receive the same price. Specifically, The Open Offer applies to "*all fields of use*, specifically excluding any use that (i) is not in accordance with the product's specifications or documentation (it being understood that specifications and documentation shall not undermine or limit Customer's rights under this Supply Agreement), (ii) is a reuse of a previously used consumable, (iii) is the disassembling, reverse-engineering, reverse-compiling, or reverse-assembling of the Supplied Product, (iv) is the separation, extraction, or isolation of components of consumables or other unauthorized analysis of the consumables, (v) gains access to or determines the methods of operation of the Supplied Product, or (vi) is the transfer to a third party of, or sub-licensing of, software or third-party software." (PX0064 (Illumina) at 3 (emphasis added).)

2746. [redacted]

[redacted] (PX7076 (Berry (Illumina) Dep. at 177) (*in camera*)).

Response to Finding No. 2746:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶ 2745, which Respondents incorporate herein.

2747. Illumina uses the different price sensitivities of different segments in determining how to price its products. (PX7076 (Berry (Illumina) Dep. at 174).

Response to Finding No. 2747:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶¶ 2728 and 2745, which Respondents incorporate herein.

2748. [redacted] (PX7076 (Berry (Illumina) Dep. at 173-74)); (Berry (Illumina) Tr. 784-85) (*in camera*).

Response to Finding No. 2748:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶¶ 2728 and 2745, which Respondents incorporate herein.

2749. [redacted] (PX2391 (Illumina) at 001 (Email from N. Berry, Illumina, to P. Dueppen, Illumina, Jan. 29, 2021) (*in camera*)).

Response to Finding No. 2749:

Respondents have no specific response except to note that pricing for segments other than oncology is irrelevant to this case, which is about Illumina's alleged ability to foreclose potential

GRAIL rivals. Respondents also note that this January 2021 email was prepared before the Open Offer went into effect and therefore is irrelevant in interpreting how the Open Offer will be administered.

(c) Illumina and Illumina's Oncology Customers Confirm Illumina Uses Different Pricing and Discounting Based on Its Customers' Product Lines, Including Pricing MCED Tests Differently from Single-cancer Tests

2750. Sean George, CEO of Invitae, a customer of Illumina, testified that Illumina charges "different pricing or price tiers or price volume tiers, depending on what we're doing." (PX7081 (George (Invitae) Dep. at 82-85)). Mr. George testified that "there's always been a kind of differential pricing for that – the core components of the Illumina sequencing based on what the application was, based on what you were using the sequencing for." (PX7081 (George (Invitae) Dep. at 82-85)).

Response to Finding No. 2750:

Respondents have no specific response except to note that customers who sign the Open Offer can choose (for each product purchased) to use the pricing they had before Illumina's acquisition of GRAIL or to use pricing under a universal grid. (PFF ¶ 1014; Berry (Illumina) Tr. 892; PX0064 (Illumina) at 7.) Under the universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 7–8.)

Further, Respondents note that Sean George, the CEO of Invitae stated that Illumina is a "trusted partner" of Invite and that "Invitae does not oppose Illumina's transaction to acquire GRAIL and looks forward to Illumina's continued role as a partner in developing NGS-applications including oncology-focused tests." (RX1100 (Invitae) ¶¶ 6, 17.)

2751. Matthew Cooper, Chief Scientific Officer at Progenity, a customer of Illumina, testified that "we have to buy the fancy reagents in a different-colored box to run an NIPT versus

cheap reagents for research use in doing [product] discovery purposes." (PX7082 (Cooper (Progenity) Dep. at 124-25)).

Response to Finding No. 2751:

The proposed finding is incomplete and misleading. At the time that Progenity negotiated the supply agreement, there was a lot of uncertainty about whether Illumina would be permitted to sell sequencing instruments and core consumables for clinical uses. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).) Specifically, NIPT was the first clinical area which used Illumina's sequencing instruments and core consumables, and there was uncertainty about whether the same research-use only products could be used for clinical uses or whether Illumina would need to develop higher quality reagents for clinical applications. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).) To avoid running afoul of the FDA regulations, Illumina restricted the potential fields of use and required NIPT customers to buy clinical grade reagents and core consumables rather than research use products. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).)

2752. [redacted] (PX7076 (Berry (Illumina) Dep. at 260-61) (*in camera*)).

Response to Finding No. 2752:

The proposed finding is incomplete and misleading without additional context for the reasons explained in Respondents' responses to CCFF ¶¶ 2728 and 2745, which Respondents incorporate herein.

2753. [redacted] (*See* PX7076 (Berry (Illumina) Dep. at 260-61) (*in camera*)).

Response to Finding No. 2753:

The proposed finding is incomplete and misleading. *First*, the proposed finding makes no sense because Cologuard is a PCR-based test. (PFF ¶¶ 162, 1743; RX3869 (Cote Expert Report) ¶ 81; Lengauer (Exact/Thrive) Tr. 238–40.) Therefore, there is no reason whatsoever for Exact receiving access to pricing for *sequencing* to include Cologuard.

Second, [redacted] Respondents incorporate their responses to CCFF ¶¶ 1089, 2630, 2636 and 2639 herein.

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. In any event, under the Open Offer, [redacted] discounts are based on a customer's volume of purchases of sequencing consumables and instruments and do not vary based on the specific tests in development by the customer. (*See* PX0064 (Illumina) at 12, 14.)

2754. [redacted]

[redacted].

Response to Finding No. 2754:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2753, which Respondents incorporate herein.

2755. Illumina sent Singlera a draft IVD rights term sheet, which included a $40 per sample "Market Access Fee" (in addition to other fees and a 10 percent revenue share). (PX7042 (Gao (Singlera) IHT at 78-80); *see* PX8516 (Singlera) at 006 (Singlera, Email attaching Singlera-Illumina Draft IVD NextSeqDX Term Sheet, June 20, 2020)).

Response to Finding No. 2755:

The proposed finding is incomplete and misleading. At trial, Mr. Leite, the former vice president of clinical business development at Illumina, testified that Illumina included upfront fees for IVD agreements based on "a combination of a number of factors. One, there was a recognition and quantification of the value that our own Dx platforms created, and we wanted to participate in that value creation. There was significant monetary investment from Illumina in the developments and the FDA approval of those systems that we wanted to recoup. And there was a potential for downside risk that we needed to offset through some financial consideration." (Leite (Illumina) Tr. 2163.)

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The Open Offer requires Illumina, on a customer's request, to enter into a separate agreement with the customer based on standardized terms to develop IVD test kits for use on Illumina's platforms. (PFF ¶¶ 1026–33; [redacted] deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 8; PX0087 (Illumina); PX0088 (Illumina); PX0089 (Illumina); [redacted]

[redacted] Those standard terms in the IVD Agreements *do not* include a $40 per sample "Market Access Fee" and do not include a 10 percent revenue share. (PX0064 (Illumina) at 29–30; PX0087 (Illumina) at 21; PX0088 (Illumina) at 18; PX0089 (Illumina) at 18.)

Further, the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2756. Illumina's "Market Access Fee" distinguished between a single-cancer test like Singlera's ColonES and a pan-cancer test like Singlera's PanSeer. (PX7042 (Gao (Singlera) IHT at 78-80); *see* PX8516 (Singlera) at 006 (Email from J. Leite, Illumina, to G. Gao, Singlera, attaching Singlera-Illumina Draft IVD NextSeqDX Term Sheet, June 20, 2020) (assigning a payment structure for each cancer indication, capping "pan-cancer Class III claims" at $10 million)).

Response to Finding No. 2756:

The proposed finding is incomplete and misleading. Under the Open Offer, customers interested in entering an IVD agreement can choose from three template agreements—an All-Platforms Agreement, a NextSeq Agreement or a NovaSeq Agreement. (Goswami (Illumina) Tr. 3208; PX0064 (Illumina) at 28–40; PX0087 (Illumina); PX0088 (Illumina); PX0089 (Illumina).) The financial terms (and other terms) for each agreement are consistent and do not vary based on the type of test a customer is developing. (*See* PFF ¶ 1032; Goswami (Illumina) Tr. 3212–13; PX0064 (Illumina) at 29–30; PX0087 (Illumina) at 20–22; PX0088 (Illumina) at 18–19; PX0089 (Illumina) at 18–19.) Further, the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2757. Under Illumina's proposed terms to Singlera, a "pan-cancer" test would cost 2.5 times more than a single-cancer test. (PX7042 (Gao (Singlera) IHT at 78-81); *see* PX8516 (Singlera) at 006 (Email from J. Leite, Illumina, to G. Gao, Singlera, attaching Singlera-Illumina Draft IVD NextSeqDX Term Sheet, June 20, 2020) (assigning a payment structure for each indication, capping "pan-cancer Class III claims" at $10 million)).

Response to Finding No. 2757:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2756, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

(d) Illumina Can Target MCED Customers Via Field-of-use Restrictions that Illumina Includes in Its Agreements with Customers.

2758. [redacted] (Felton Tr. 2062 (*in camera*).

Response to Finding No. 2758:

The proposed finding is inaccurate, incomplete and misleading because it relies on testimony from Dr. Felton, an employee of Thermo Fisher, to attempt to opine about field of use restrictions for Illumina contracts. Specifically, the proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. In any event, the cited testimony shows that the described pricing practice followed the standard market approach in the industry.

Further, the proposed finding relates to irrelevant subject matter because Illumina has committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to

GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

The Open Offer applies to "*all fields of use*, specifically excluding any use that (i) is not in accordance with the product's specifications or documentation (it being understood that specifications and documentation shall not undermine or limit Customer's rights under this Supply Agreement), (ii) is a reuse of a previously used consumable, (iii) is the disassembling, reverse-engineering, reverse-compiling, or reverse-assembling of the Supplied Product, (iv) is the separation, extraction, or isolation of components of consumables or other unauthorized analysis of the consumables, (v) gains access to or determines the methods of operation of the Supplied Product, or (vi) is the transfer to a third party of, or sub-licensing of, software or third-party software." (PX0064 (Illumina) at 3 (emphasis added).) Respondents also incorporate their responses to CCFF ¶¶ 2630–31 herein.

2759. [redacted] (PX7079 (Flatley (Illumina) Dep. at 127) (*in camera*)).

Response to Finding No. 2759:

The proposed finding is incomplete and misleading. Although Mr. Flatley stepped down as CEO, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect.

As Ms. Berry testified at trial, [redacted]

Respondents incorporate their response to CCFF ¶ 2758 herein.

2760. [redacted] (PX7053 (Fesko (Natera) IHT at 57-58) (*in camera*)).

Response to Finding No. 2760:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 27, which Respondents incorporate herein.

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2761. Mr. Flatley explained that Illumina has invoked the field of use clause when Illumina was [redacted] (PX7079 (Flatley (Illumina) Dep. at 127) (*in camera*)).

Response to Finding No. 2761:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2758, which Respondents incorporate herein. Although Mr. Flatley stepped down as CEO, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect.

For a customer who signs the Open Offer, if Illumina granted a discretionary discount to an equivalent customer or to GRAIL (for example, an "unusual discount"), "Illumina would be obliged to reduce the price to the [Open Offer signatory] to match the price that was offered to either GRAIL or an equivalent customer." (Berry (Illumina) Tr. 894.)

(i) Illumina Has Previously Used Field-of-Use Restrictions to Limit Discounts to Product Lines that Did Not Compete with an Illumina Business Line

2762. [redacted] (PX7060 (Naclerio (Illumina) IHT at 126-28) (*in camera*)).

Response to Finding No. 2762:

The proposed finding is incomplete and misleading. Although Dr. Naclerio left Illumina in 2016, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect. Respondents incorporate their responses to CCFF ¶¶ 2630–31 herein.

As Ms. Berry testified at trial, [redacted] finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to

GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

The Open Offer applies to "*all fields of use*, specifically excluding any use that (i) is not in accordance with the product's specifications or documentation (it being understood that specifications and documentation shall not undermine or limit Customer's rights under this Supply Agreement), (ii) is a reuse of a previously used consumable, (iii) is the disassembling, reverse-engineering, reverse-compiling, or reverse-assembling of the Supplied Product, (iv) is the separation, extraction, or isolation of components of consumables or other unauthorized analysis of the consumables, (v) gains access to or determines the methods of operation of the Supplied Product, or (vi) is the transfer to a third party of, or sub-licensing of, software or third-party software." (PX0064 (Illumina) at 3 (emphasis added).)

In any event, Respondents also note that the described pricing practice followed the standard market approach in the industry. [redacted] As Dr. Goswami testified, "field definition is . . . very standard for any kind of contract . . . because it identifies what is allowable within a field." (Goswami (Illumina) Tr. 3234.) [redacted] (PX7060 (Naclerio (Illumina) Dep. at 125).)

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.) Respondents also incorporate their response to CCFF ¶ 2758 herein.

2763. [redacted] (PX7076 (Berry (Illumina) Dep. at 216-17) (*in camera*)).

Response to Finding No. 2763:

The proposed finding is irrelevant, incomplete and misleading. In NIPT, unlike in oncology, Illumina settled Verinata's litigation with Sequenom, and as part of that settlement, Illumina and Sequenom created a patent pool, where NIPT competitors could pay a single test fee and practice the key IP for NIPT from five different entities. [redacted]; PX7089 (Naclerio (Illumina) Dep. at 58–59).) Illumina is responsible for collecting the test fees and administering the patent pool agreement. (*See* deSouza (Illumina) Tr. 2470–71.)

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. Specifically, Illumina's oncology supply agreements are not restricted to specific substantive fields of use. As noted in Respondents' responses to CCFF ¶ 2762, which Respondents incorporate herein, customers under the Open Offer may purchase sequencing instruments and core consumables for "all fields of use".

Respondents further note that the proposed finding does not evidence any particular ability to identify and/or discriminate against alleged rivals. Respondents also incorporate their responses to CCFF ¶¶ 2612, 2661, 2663 and 2758 herein.

2764. [redacted] (PX2441 (Illumina) at 003 (Email from N. Naclerio, Illumina, to M. Rabinowitz, Natera, et al. attaching Natera NIPT Supply Agreement Terms, May 4, 2013)) (*in camera*)).

Response to Finding No. 2764:

The proposed finding is irrelevant, incomplete and misleading. At the time that Natera negotiated the supply agreement in 2013, there was a lot of uncertainty about whether Illumina would be permitted to sell sequencing instruments and core consumables for clinical uses. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).) Specifically, NIPT was the first clinical area which used Illumina's sequencing instruments and core consumables, and there was uncertainty about whether the same research-use only products could be used for clinical uses or whether Illumina would need to develop higher quality reagents for clinical applications. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).) To avoid running afoul of the FDA regulations, Illumina restricted the potential fields of use and required NIPT customers to buy clinical grade reagents and core consumables rather than research use products. (*See* PX7060 (Naclerio (Illumina) Dep. at 150–52).)

In addition, as noted in Respondents' responses to CCFF ¶ 2763, which Respondents incorporate herein, Illumina is responsible for administering the test fee as part of the NIPT Patent Pool Agreement, which requires tracking the field of use for NIPT customers.

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. Specifically, Illumina's oncology supply agreements are not restricted to specific substantive fields of use. As noted in Respondents' responses to CCFF ¶ 2762, which Respondents incorporate herein, customers

under the Open Offer may purchase sequencing instruments and core consumables for "all fields of use".

Respondents also incorporate their responses to CCFF ¶¶ 2630–31 and 2650 herein.

2765. [redacted] (PX7113 (Rabinowitz (Natera) Dep. at 114) (*in camera*)).

Response to Finding No. 2765:

The proposed finding is irrelevant, inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2762–64, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 2630–31 and 2650 herein.

2766. [redacted] (*in camera*)). [redacted] (PX8379 (Natera) at 023 [redacted] (*in camera*)).

Response to Finding No. 2766:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2762–64, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 2630–31 and 2650 herein.

2767. [redacted] (RX1899 (Illumina) at 003 [redacted]; PX2241 (Illumina) at 001 (Letter from C. Moehle, Illumina, to K. Song, Ariosa, Jan. 10, 2014)).

Response to Finding No. 2767:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2650, 2762–64, which Respondents incorporate herein. Respondents also incorporate their responses to CCFF ¶¶ 2630–31 and 2650 herein.

2768. According to Illumina, the Customer Field of Use provisions in Ariosa's supply agreement prohibited Ariosa from performing fetal gender determination using Illumina products. (PX2241 (Illumina) at 001 (Letter from C. Moehle, Illumina, to K. Song, Ariosa, Jan. 10, 2014)). On January 10, 2014, Illumina sent a breach letter to Ariosa alleging, among other things, that Ariosa's sale of a sequencing-based prenatal test that reported fetal gender represented a breach of its Sale and Supply Agreement with Illumina. (PX2241 (Illumina) at 001 (Letter from C. Moehle, Illumina, to K. Song, Ariosa, Jan. 10, 2014)).

Response to Finding No. 2768:

The proposed finding is irrelevant, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2650, 2762–64, which Respondents incorporate herein. Although the agreement and the breach letter date to 2014, the proposed finding appears to suggest that, even today, eight years later, Illumina applies the same approach. This is incorrect.

At the time that Ariosa negotiated the supply agreement, there was a lot of uncertainty about whether Illumina would be permitted to sell sequencing instruments and core consumables for clinical uses. (*See* PX7060 (Naclerio (Illumina) Dep. at 51–53).) [redacted] (*See* RX1899 (Illumina) at 2.) Despite these representations, [redacted] (*See* PX7057 (Flatley (Illumina) IHT at 95).) Respondents also incorporate their responses to CCFF ¶¶ 2630–32 herein.

Further, because the proposed finding relates to prior pricing practices, the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an

Open Offer, the terms of which expressly address this issue. Specifically, Illumina's oncology supply agreements are not restricted to specific substantive fields of use. As noted in Respondents' responses to CCFF ¶ 2762, which Respondents incorporate herein, customers under the Open Offer may purchase sequencing instruments and core consumables for "all fields of use".

2769. [redacted]

Response to Finding No. 2769:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2758 and 2770, which Respondents incorporate herein. Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 9), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

In any event, Respondents also note that the described pricing practice followed the standard market approach in the industry. [redacted] As Dr. Goswami testified, "field definition is . . . very standard for any kind of

contract . . . because it identifies what is allowable within a field." (Goswami (Illumina) Tr. 3234.) Dr. Naclerio similarly testified that "field of use" is "a standard term of art that's in practically I think every license or supply agreement". (PX7060 (Naclerio (Illumina) Dep. at 125).)

2770. [redacted] PX2200 (Illumina) at 002 (Email from J. Leite, Illumina, to M. Van Oene et al., Illumina, Nov. 3, 2020) [redacted]

Response to Finding No. 2770:

The proposed finding is irrelevant, incomplete and misleading.

First, the proposed finding is also irrelevant because it relates to distributed IVD kits for therapy selection, which do not relate to the availability of sequencing instruments and core consumables for oncology testing.

Second, the proposed finding is incomplete and misleading to the extent it suggests that Illumina restricted certain rights for distributed IVD kits for therapy selection because of competition concerns. To the contrary, at trial, Mr. Leite, the former vice president of clinical business development at Illumina, explained that [redacted]

[redacted]

Third, Illumina's oncology supply agreements are not restricted to specific substantive fields of use. As noted in Respondents' responses to CCFF ¶ 2762, which Respondents incorporate herein, customers under the Open Offer may purchase sequencing instruments and core consumables for "all fields of use".

The Open Offer also requires Illumina, on a customer's request, to enter into a separate agreement with the customer based on standardized terms to develop IVD test kits for use on Illumina's platforms. (PFF ¶¶ 1026–33; Rabinowitz (Natera) Tr. 423–24; deSouza (Illumina) Tr.

2404; PX0064 (Illumina) at 8; PX0087 (Illumina); PX0088 (Illumina); PX0089 (Illumina);

[redacted]

Specifically, the standardized IVD agreements under the Open Offer provide the ability of oncology test developers to pursue distributed IVD kits (also known as "IVD test kits") for "genetic testing of human samples in the field of oncology, including risk assessment, predisposition, *screening*, diagnosis, stating, prognosis, prediction, monitoring, and treatment selection". (PX0087 (Illumina) at 4; PX0088 (Illumina) at 3; PX0089 (Illumina) at 3; Goswami (Illumina) Tr. 3234.)

Respondents also note that features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶¶ 675–678.5 (RX3869 (Cote Expert Report) ¶¶ 359–363; Goswami (Illumina) Tr. 3189–92, 3194–95).)

Finally, Complaint Counsel did not present the Guardant draft term sheet (PX2134) cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 9), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

In any event, Respondents also note that the described pricing practice followed the standard market approach in the industry. [redacted]

[redacted] As Dr. Goswami testified, "field definition is . . . very standard for any kind of contract . . . because it identifies what is allowable within a field." (Goswami (Illumina) Tr. 3234.) Dr. Naclerio similarly testified that "field of use" is "a standard term of art that's in practically I think every license or supply agreement". (PX7060 (Naclerio (Illumina) Dep. at 125).)

2771. [redacted]

PX2200 (Illumina) at 002 (Email from J. Leite, Illumina, to M. Van Oene, Illumina, Nov. 3, 2020) [redacted]

Response to Finding No. 2771:

The proposed finding is incomplete and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2770, which Respondents incorporate herein.

2772. As explained in detail below in Sections VII.D.2. (Illumina Identified and Used Similar Tools in the Oncology Therapy Selection Market**)** and VII.D.3. (Illumina Identified and Used Similar Tools in the NIPT Market), when vertically integrated, Illumina has used many tools to inhibit its NGS customers that also compete with Illumina's clinical product portfolio.

Response to Finding No. 2772:

The proposed finding is improper because it treats Complaint Counsel's inaccurate, misleading and argumentative headers as purported facts. To the extent Complaint Counsel relies on its Proposed Findings in Sections VII.D.2 and VII.D.3, ¶¶ 3749–4164, Respondents incorporate their responses to those Proposed Findings herein.

(2) Illumina's Pricing Strategy Gives It the Ability to Increase Prices Anywhere along the Value Chain—from the Sale of Instruments and Consumables to the Provision of Services—and Target Specific Applications or Customers by Altering the Discounts it Offers

2773. [redacted] (PX7123 (Fellis (Illumina) Dep. at 27-28, 29, 30, 35) (*in camera*)).

Response to Finding No. 2773:

The proposed finding relates to [redacted] and therefore relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, which includes extensive pricing terms. The Open Offer includes a list of standardized prices for Illumina's sequencing instruments and core consumables. (PX0064 (Illumina) at 15–27.) The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

2774. [redacted] (*See e.g.*, PX2306 (Illumina) at 011-12 [redacted] (*in camera*)).

Response to Finding No. 2774:

The proposed finding is directed to irrelevant subject matter, including for the reasons identified in the response to CCFF ¶ 2773, which Respondents incorporate herein.

2775. [redacted] (PX7089 (Naclerio (Illumina) Dep. at 196-197) (*in camera*)).

Response to Finding No. 2775:

The proposed finding is incomplete and misleading. Although Dr. Naclerio left Illumina in 2016, the proposed finding appears to suggest that, even today, six years later, Illumina applies the same approach. This is incorrect. As discussed in Respondents responses to CCFF ¶¶ 2630–31, which Respondents incorporate herein, Illumina does not charge a premium for using Illumina's sequencing platform in a commercial clinical setting. Instead, as discussed below, the universal pricing grid applies.

Further, because the proposed finding relates to [redacted] the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

2776. [redacted] (PX7089 (Naclerio (Illumina) Dep. at 199-200) (*in camera*)).

Response to Finding No. 2776:

The proposed finding is incomplete and misleading. Although Dr. Naclerio left Illumina in 2016, the proposed finding appears to suggest that, even today, six years later, Illumina

applies the same approach. This is incorrect. As discussed in Respondents responses to CCFF ¶¶ 2630–31, which Respondents incorporate herein, Illumina does not charge a premium for using Illumina's sequencing platform in a commercial clinical setting. Instead, as discussed below, the universal pricing grid applies.

Further, because the proposed finding relates to [redacted], the proposed finding relates to irrelevant subject matter because Illumina has subsequently committed to an Open Offer, the terms of which expressly address this issue. The terms of the Open Offer require that Illumina treat customers equitably relative to GRAIL and any other for-profit entity in terms of pricing. (deSouza (Illumina) Tr. 2402–03; PX0064 (Illumina) at 7–8.) Respondents also refer to PFF ¶¶ 1013–25. Under this universal pricing grid, customers receive most-favored-nations (MFN) pricing protections, which ensure that the customer has access to volume-based prices "that are no less favorable (i.e., the same or better) than" those provided to GRAIL. (PFF ¶ 1018; Berry (Illumina) Tr. 893; PX0064 (Illumina) at 5, 7–8.) GRAIL also receives pricing under a universal pricing grid. (PFF ¶ 1016.5; Berry (Illumina) Tr. 894.)

2777. [redacted]
(*See, e.g.*, PX7042 (Gao (Singlera) IHT at 76-77) (noting Illumina's "technology access fee of $3 million"); PX7049 (Bailey (PGDx) IHT at 121-125) (*in camera*) [redacted]).

Response to Finding No. 2777:

The proposed finding is incomplete and misleading. At trial, Mr. Leite, the former vice president of clinical business development at Illumina, testified that Illumina included upfront fees for IVD agreements based on "a combination of a number of factors. One, there was a recognition and quantification of the value that our own Dx platforms created, and we wanted to participate in that value creation. There was significant monetary investment from Illumina in

the developments and the FDA approval of those systems that we wanted to recoup. And there was a potential for downside risk that we needed to offset through some financial consideration." (Leite (Illumina) Tr. 2163.)

The Open Offer requires Illumina, on a customer's request, to enter into a separate agreement with the customer based on standardized terms to develop IVD test kits for use on Illumina's platforms. (PFF ¶¶ 1026–33; Rabinowitz (Natera) Tr. 423–24; deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 8; PX0087 (Illumina); PX0088 (Illumina); PX0089 (Illumina); [redacted] Those standard terms include a "Tech Access Fee", fees for certain development milestones and a 6% revenue share. Contrary to Complaint Counsel's unproven contention, the standard terms *do not* include fees for different diagnostic claims. (*See* PX0087 (Illumina) at 20–22; PX0088 (Illumina) at 18–19; PX0089 (Illumina) at 18–19.)

In any event, Respondents also note that the described pricing practice followed the standard market approach in the industry. [redacted] As Dr. Goswami testified, "field definition is . . . very standard for any kind of contract . . . because it identifies what is allowable within a field." (Goswami (Illumina) Tr. 3234.) Dr. Naclerio similarly testified that "field of use" is "a standard term of art that's in

practically I think every license or supply agreement". (PX7060 (Naclerio (Illumina) Dep. at 125).)

Respondents also note that the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2778. As described in Sections VII.D.2. (Illumina Identified and Used Similar Tools in the Oncology Therapy Selection Market**)** and VII.D.3. (Illumina Identified and Used Similar Tools in the NIPT Market), Illumina has previously used fees—in various forms—when vertically integrated in the therapy selection and NIPT markets to control and customize the price of its instruments, consumables, and services.

Response to Finding No. 2778:

The proposed finding is improper because it treats Complaint Counsel's inaccurate, misleading and argumentative headers as purported facts. To the extent Complaint Counsel relies on its Proposed Findings in Section VII.D.2 and VII.D.3, paragraphs 3749–4164, Respondents incorporate their responses to those Proposed Findings herein.

2779. [redacted]

(PX6090 (Scott Morton Report) ¶ 182 (*in camera*)).

Response to Finding No. 2779:

The proposed finding is incomplete and misleading. Contrary to Dr. Scott Morton's conclusion, the weight of the evidence shows that, post-acquisition, customers are protected from Illumina increasing input costs in a way that materially disadvantages their test development efforts. As Margaret Guerin-Calvert testified, "[t]he open offer[‘s pricing section] has a number of provisions that specifically address to me, as an economist, the conditions that keep prices from being increased" for customers. (RX6002 (Guerin-Calvert Trial Dep. at 34).) Ms. Guerin-Calvert explained that Dr. Scott Morton's opinion on Illumina's ability to use pricing to increase potential GRAIL rivals' costs is flawed because "it really didn't take into consideration an evaluation of all of the aspects" of the Open Offer that "specifically address Illumina's ability to raise price or to price in such a way across its products to . . . competitively disadvantage rivals". (RX6002 (Guerin-Calvert Trial Dep. at 39).) For example, the Open Offer provides that the prices that a customer has access to "will not be changed or increased, other than by inflation adjustment, for the 12 years [of the Open Offer agreement]. So that is a straightforward limitation on price change." (RX6002 (Guerin-Calvert Trial Dep. at 35).) Additionally, customers "if they choose, can stay with the prices that they have premerger", meaning that their prices will not increase relative to the premerger status quo. (RX6002 (Guerin-Calvert Trial Dep. at 35–36).)

Furthermore, the evidence shows that NGS costs will be a very small part of any commercialized MCED test's revenues. (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).)

The proposed finding is also incomplete and misleading to the extent that it suggests that any test developers other than GRAIL are anywhere close to launching an MCED test in the foreseeable future. [redacted]

[redacted] (PFF ¶¶ 701–06) and Galleri is the only multi-cancer early detection test capable of detecting anywhere near 50 cancer types on the market (PFF ¶ 698). Respondents further note that the proposed finding does not suggest that all "MCED tests" as Complaint Counsel defines it are reasonably interchangeable.

(3) With Its Price Control, Illumina Could Offer Less Favorable Terms to MCED Test Developers, Affecting Their Profitability and Competitiveness, and Harming Innovation

2780. Dr. William Cance, Chief Medical and Scientific Officer at American Cancer Society, stated in a Declaration, "If development costs increase, companies that would otherwise have worked towards developing these tests may struggle to carry their ideas forward to where they can become a reality for doctors and patients." (PX8398 (Cance (American Cancer Society) Decl. at ¶ 12)).

Response to Finding No. 2780:

Respondents have no specific response except to note that the Open Offer, which Illumina extended to all of its U.S. oncology customers, "prevents Illumina from being able to raise prices over the term of the agreement of any of the existing products" and further protects customers "from being charged higher prices for new versions of sequencing products or instruments or consumables". (Berry (Illumina) Tr. 901–02; *see also* PFF ¶ 1021–22.)

Furthermore, the evidence shows that NGS costs will be a very small part of any commercialized MCED test's revenues. (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶ 2779 herein.

2781. William Getty, Senior Vice President of the Commercial Screening Division at Guardant, testified that Illumina has the ability to act so that "profitability is squeezed for other manufacturers such that over time, those manufacturers are rendered nonexistent. And ultimately then innovation slows down because there's no advantage for Illumina to

advance their technology" and "patients will be negatively impacted." (PX7105 (Getty (Guardant) Dep. at 74-76)).

Response to Finding No. 2781:

The proposed finding is incomplete and misleading. The Open Offer, which Illumina extended to all of its U.S. oncology customers, [redacted] "prevents Illumina from being able to raise prices over the term of the agreement of any of the existing products" and further protects customers "from being charged higher prices for new versions of sequencing products or instruments or consumables". (Berry (Illumina) Tr. 901–02; *see also* PFF ¶ 1021–22.)

Furthermore, the evidence shows that NGS costs will be a very small part of any commercialized MCED test's revenues. (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶ 2779 herein.

The proposed finding is based on testimony for which the witness lacks personal knowledge or foundation. As a Guardant executive, Mr. Getty has no basis to know about Illumina's incentive to advance its technology. To the contrary, Illumina has developed its reputation by investing substantial amounts into innovation and dramatically lowering sequencing costs over time. (PFF ¶ 855; Aravanis (Illumina) Tr. 1922; (RX1100 (George (Invitae) Decl. ¶ 8).) Today, Illumina's brand is synonymous with innovative, low-cost sequencing systems. (PFF ¶ 855.1; s*ee* Berry (Illumina) Tr. 811–12.) Illumina has cultivated a reputation as a trusted supplier of NGS technology. (PFF ¶ 853; *see* PX7101 (Vogelstein (Johns Hopkins) Dep. at 57–58) ("Illumina makes fantastic instruments. I mean, they are unbelievably good . . . it's amazing what they've done.").)

2782. [redacted] (PX7105 (Getty (Guardant) Dep. at 72-73) (*in camera*)).

Response to Finding No. 2782:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2781, which Respondents incorporate herein.

2783. Mr. Getty explained that "as a public company . . . profitability is critical to our shareholders. And very quickly we would find it very difficult to invest in the R&D necessary or the commercialization necessary to make, you know, improvements and impact patients' lives." (PX7105 (Getty (Guardant) Dep. at 32-33)).

Response to Finding No. 2783:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2781, which Respondents incorporate herein.

2784. [redacted] (PX7055 (Otte (Freenome) IHT at 110) (*in camera*)).

Response to Finding No. 2784:

The proposed finding is incomplete and misleading. The Open Offer, which Illumina extended to all of its U.S. oncology customers, [redacted] "prevents Illumina from being able to raise prices over the term of the agreement of any of the existing products" and further protects customers "from being charged higher prices for new versions of sequencing products or instruments or consumables". (Berry (Illumina) Tr. 901–02; *see also* PFF ¶ 1021–22.)

Furthermore, the evidence shows that NGS costs will be a very small part of any commercialized MCED test's revenues. (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶ 2779 herein.

Further, the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2785. Dr. Gary Gao, Co-Founder and Scientific Advisor for Singlera, expressed that "Illumina can jack up the price of [its] reagent or machine . . . and then we will not be able to compete." (PX7042 (Gao (Singlera) IHT at 130)).

Response to Finding No. 2785:

The proposed finding is incomplete and misleading. The Open Offer, which Illumina extended to all of its U.S. oncology customers, including Singlera (*see* deSouza (Illumina) Tr. 2338), "prevents Illumina from being able to raise prices over the term of the agreement of any of the existing products" and further protects customers "from being charged higher prices for new versions of sequencing products or instruments or consumables". (Berry (Illumina) Tr. 901–02; *see also* PFF ¶ 1021–22.)

Furthermore, the evidence shows that NGS costs will be a very small part of any commercialized MCED test's revenues. (PFF ¶ 884 (RX6000 (Carlton Trial Dep.) at 30–31).) Respondents also incorporate their responses to CCFF ¶ 2779 herein.

Further, the proposed finding relies on IH testimony which is hearsay and which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2786. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 194) (*in camera*)).

Response to Finding No. 2786:

The proposed finding is misleading. [redacted]

[redacted] Respondents also incorporate their responses to CCFF ¶ 977 herein.

The proposed finding is also incomplete and misleading with respect to Exact/Thrive's purported reliance on Illumina's NGS systems. Dr. Lengauer testified at trial that [redacted] (Lengauer (Exact/Thrive) Tr. 238–40.)

[redacted]

[redacted]

[redacted] The proposed finding is also inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 928–29, 1532, 1536 and 2833, which Respondents incorporate herein.

2787. [redacted] (PX8324 (Roche) at 003 [redacted] (*in camera*)).

Response to Finding No. 2787:

The proposed finding is incomplete and misleading. The Open Offer, which Illumina extended to all of its U.S. oncology customers, [redacted] "prevents Illumina from being able to raise prices over the term of the agreement of any of

the existing products" and further protects customers "from being charged higher prices for new versions of sequencing products or instruments or consumables". (Berry (Illumina) Tr. 901–02; *see also* PFF ¶ 1021–22.)

On March 4, 2021, after Roche submitted this set of objections to the FTC, Dr. Severin Schwan, the CEO of Roche stated in a letter that [redacted]

Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 59), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2788. [redacted] (*in camera*)).

Response to Finding No. 2788:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2787, which Respondents incorporate herein.

Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 59), and

therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

2789. [redacted] (*in camera*)).

Response to Finding No. 2789:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2787, which Respondents incorporate herein.

Further, Complaint Counsel did not present the exhibit cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 59), and therefore, the document should be accorded little weight and Complaint Counsel should not be permitted to rely on any inferences from it.

b) Illumina Can Delay or Foreclose MCED Rivals' Access to New NGS Technology and Favor and Advantage Grail to the Exclusion and Disadvantage of Grail's MCED Rivals

(1) Illumina Regularly Releases New Sequencers, Reagents, and Upgrades to its NGS Technology

2790. Illumina continuously makes improvements and updates to the performance and feature set of its existing platforms:

> JUDGE CHAPPELL: Do you know if there are frequent – I'm not sure of the terminology – but software updates or something that would need to be added to make the machine perform properly?
>
> THE WITNESS [Nicole Berry, Illumina Senior Vice President and General Manager of the Americas Commercial Region]: Sure. So we are continuously seeking to improve performance and, you know, the feature set of our instruments and user friendliness as it relates to things like software. So, yes, software updates are something that we would typically provide and make part of our continuous sort of update and improvement process.

> Those oftentimes could be actually administered remotely. If the customer opted into sort of, you know, a remote connectivity, we could potentially just push an update to the customer's instrument without having to actually go into the lab and, you know, sit at it and put disks in a hard drive, you know, the old-fashioned way.

(Berry (Illumina) Tr. 675-76).

Response to Finding No. 2790:

Respondents have no specific response.

2791. Illumina's Ms. Berry testified about Illumina's "track record in terms of our technology innovation and new product introduction process," stating that Illumina has introduced new instrument platforms and new chemistries within instrument platforms "on a very regular basis." (Berry (Illumina) Tr. 714).

Response to Finding No. 2791:

Respondents have no specific response.

2792. [redacted] (PX7072 (deSouza (Illumina) IHT at 247) (*in camera*)).

Response to Finding No. 2792:

Respondents have no specific response.

2793. Illumina updates its sequencers' software from time to time. (deSouza (Illumina) Tr. 2383).

Response to Finding No. 2793:

Respondents have no specific response.

2794. [redacted] (*See* PX2169 (Illumina) at 024 (Illumina Strategic Plan 2021-2025: Board Discussion Document, Oct. 23, 2020) (*in camera*)).

Response to Finding No. 2794:

Respondents have no specific response.

2795. [redacted] (*See* PX7107 (deSouza (Illumina) Dep. at 271) (*in camera*)). [redacted] (PX2558 (Illumina) at 005-06 (Email from E. Milsovic, Illumina, to F. deSouza, Illumina, attaching Board of Directors Executive Session, Feb. 9, 2021) (*in camera*); *see also* PX2560 (Illumina) at 007 [redacted] (*in camera*); PX7067 (Blanchett (Illumina) IHT at 194-95) (*in camera*)).

Response to Finding No. 2795:

Respondents have no specific response.

2796. [redacted] (RX1994 (Illumina) at 023 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching Illumina 2021-2025 Strategic Plan Presentation, Nov. 5, 2020) (*in camera*)).

Response to Finding No. 2796:

Respondents have no specific response.

2797. [redacted] (deSouza (Illumina) Tr. 2277 (*in camera*)).

Response to Finding No. 2797:

Respondents have no specific response.

2798. [redacted] (deSouza (Illumina) Tr. 2269 (*in camera*)).

Response to Finding No. 2798:

Respondents have no specific response.

2799. As detailed above in Section V.G.4. (Even if Another NGS Platform Entered the U.S. Market Comparable to Illumina's Current Platform, Illumina Plans to Continue to Improve its Existing Platform), [redacted]

Response to Finding No. 2799:

The proposed finding is improper because it treats Complaint Counsel's inaccurate, misleading and argumentative headers as purported facts. To the extent Complaint Counsel

relies on its Proposed Findings in Section V.G.4, Respondents incorporate their responses to those Proposed Findings herein.

2800. [redacted] (RX1994 (Illumina) at 025 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching Illumina 2021-2025 Strategic Plan Presentation, Nov. 5, 2020) (*in camera*)).

[redacted]

Response to Finding No. 2800:

Respondents have no specific response.

2803. [redacted] (RX1994 (Illumina) at 037 (Email from S. Muppaneni, Illumina, to P. Febbo, Illumina, attaching Illumina 2021-2025 Strategic Plan Presentation, Nov. 5, 2020) (*in camera*)).

Response to Finding No. 2803:

Respondents have no specific response.

2804. [redacted] (*See* PX7076 (Berry (Illumina) Dep. at 211-212) (*in camera*)).

Response to Finding No. 2804:

Respondents have no specific response.

(2) When Illumina Releases New NGS Equipment, MCED Customers Rely on Illumina for Installation, Technical Support, and Product Development

2805. When customers seek to upgrade their NGS instruments, Illumina will send a technician to get the new instruments "up and running and to assist in troubleshooting matters." (PX7082 (Cooper (Progenity) Dep. at 87)).

Response to Finding No. 2805:

Respondents have no specific response.

2806. Illumina's Nicole Berry testified that Illumina "work[s] with a customer to confirm that the instrument is performing to spec and the general purpose reagents, the sequencing kits that they buy from us to sequence samples using their assay, are performing to our specifications." (PX7076 (Berry (Illumina) Dep. at 151-152)).

Response to Finding No. 2806:

Respondents have no specific response.

2807. When Illumina releases a new product, Illumina provides customers with support for "how to validate" the new product's functionality. (PX7080 (Silvis (Tempus) Dep. at 131)). Tempus's Lauren Silvis testified, "it could be very difficult to run a successful validation if there were questions we couldn't figure out or troubleshoot on our own and . . . [Illumina]

wouldn't answer questions about what the issues might be or how to solve them." (PX7080 (Silvis (Tempus) Dep. at 131)).

Response to Finding No. 2807:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2808, which Respondents incorporate herein.

2808. [redacted] (PX7076 (Berry (Illumina) Dep. 154) (*in camera*)).

Response to Finding No. 2808:

The proposed finding is incomplete and misleading. In the portion of Ms. Berry's deposition cited here, Ms. Berry explained that [redacted]

2809. At trial, Illumina CEO Mr. deSouza referred to helping customers with installing machines as a frequent issue. (deSouza (Illumina) Tr. 2442).

Response to Finding No. 2809:

Respondents have no specific response.

(3) Illumina Can Delay or Foreclose MCED Rivals' Access to New Technology to Advantage Grail and Disadvantage Grail's Rivals

2810. Illumina's Nicole Berry testified that Section 4(c) of the Open Offer does not prevent Grail from having knowledge of Illumina's new technology before other companies developing oncology tests. (Berry (Illumina) Tr. 708).

Response to Finding No. 2810:

The proposed finding is incomplete and misleading. Although section 4(c) of the Open Offer does not provide customers with protections relating to access to information, section 4(f) does. Specifically, section 4(f) of the Open Offer requires Illumina to provide customers, within 5 days, with the same information that GRAIL receives about final product specifications of any sequencing instruments or core consumables. (PFF ¶ 1006; RX3935 (Illumina) at 2; deSouza (Illumina) Tr. 2405–06.) Respondents also incorporate their responses to CCFF ¶ 2811 herein.

2811. Under the Open Offer, Grail can learn the specifications of new Illumina sequencers before its rival MCED test developers. (Berry (Illumina) Tr. 708).

Response to Finding No. 2811:

The proposed finding is incomplete and misleading. In the portion of Ms. Berry's testimony cited here, Ms. Berry provided context for this answer: She testified that it "clearly is not [Illumina's] intent" to provide specifications to GRAIL before potential GRAIL rivals and that Illumina's "intent with this offer is to, you know, create a level playing field" between customers. (Berry (Illumina) Tr. 708.) Moreover, the cited portion of Ms. Berry's testimony is from August 26, 2021, but the Open Offer was amended to provide additional protections on September 8, 2021. (*See* PFF ¶ 996; RX3935 (Illumina) at 1; deSouza (Illumina) Tr. 2405–06.) These additional protections included section 4(f) of the Open Offer, which requires Illumina to provide customers, within 5 days, with the same information that GRAIL receives about final

product specifications of any sequencing instruments or core consumables. (PFF ¶ 1006; RX3935 (Illumina) at 2.)

2812. As discussed below in Section VIII.A.3. (Illumina's Open Offer Fails to Remedy Anticompetitive Harm from the Merger), [redacted] (Getty (Guardant) Tr. 2552-53 (*in camera*)).

Response to Finding No. 2812:

The proposed finding is improper because it treats Complaint Counsel's inaccurate, misleading and argumentative headers as purported facts. To the extent Complaint Counsel relies on its Proposed Findings in Section VII.A.3, Respondents incorporate their responses to those Proposed Findings herein.

2813. Dr. Bert Vogelstein testified that advanced knowledge of "future product developments and refinements" from Illumina "could substantially alter research and development in the field and the nature of the test products that are eventually produced." (PX8400 (Vogelstein (John Hopkins University) Decl. ¶ 9)).

Response to Finding No. 2813:

Respondents have no specific response except to note that the Open Offer requires Illumina to provide customers, within 5 days, with the same information that GRAIL receives about final product specifications of any sequencing instruments or core consumables. (PFF ¶ 1006; RX3935 (Illumina) at 2.)

2814. Guardant's Bill Getty testified that "it is not any bit speculative" that Illumina could provide new technology to Grail to aid Grail's test over its rivals:

> [S]o it is not any bit speculative to believe to that as Illumina continues to advance their technology, that they would advance that technology and allow for a subsidiary or partner, however it's structured, in GRAIL access to that technology, which may convey a benefit to them around their testing in terms of sensitivity and specificity, which their advancements in sequencing have done over time.
>
> So there is largely a precedent there for their advancement. And so giving early access to an organization that you are tied up with translates into a highly-advantaged test in the marketplace, thus, you know, patient and potentially --

> not potentially -- but physician preference -- potentially patient preference, I should say, and therefore you maintain further your competitive advantage as Illumina.

(PX7105 (Getty (Guardant) Dep. at 73-74)).

Response to Finding No. 2814:

The proposed finding is inaccurate, incomplete and misleading. Contrary to Mr. Getty's testimony, under the Open Offer [redacted] Illumina cannot favor GRAIL in developing new products. As Mr. deSouza testified: "[I]n this offer letter we're saying that any product that's available for GRAIL will be available for everyone. So we're not allowed to make a product only for GRAIL. . . . JUDGE CHAPPELL: All right, thank you. And I think you told me earlier, do you make specific products with your sequencers today? Do you make specific products for your customers? THE WITNESS: No, we do not. We sell to everyone the same portfolio." (deSouza (Illumina) Tr. 2434–35.)

Further, even though Illumina typically has not provided support in the development or commercialization of customers' products, to provide additional benefits to customers, the Open Offer requires Illumina to enter into development agreements, on a customer's request, to design or modify Illumina's products to optimize interoperability with the customer's tests. (PFF ¶ 1010; Berry (Illumina) Tr. 844–47, 881; PX0064 (Illumina) at 6.) This not only prevents Illumina from disadvantaging putative GRAIL rivals, but also requires Illumina to act in a particular way to support rivals developing their own products. (PFF ¶ 1010.9; RX6002 (Guerin-Calvert Trial Dep. at 68).)

2815. Bill Getty of Guardant testified that Illumina could "provide favored status or development opportunities to their internal partners in Grail, which would convey potentially a lack of opportunity for us to advance our technology at a faster rate, and . . . thus hurt us competitively." (PX7105 (Getty (Guardant) Dep. at 69-71)).

Response to Finding No. 2815:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2814, which Respondents incorporate herein.

2816. Guardant's Bill Getty testified that without access to Illumina's latest technology, Guardant will not be able to offer patients the best performing or the lowest cost test. (PX7105 (Getty (Guardant) Dep. at 74-75)).

Response to Finding No. 2816:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2814, which Respondents incorporate herein.

2817. Mr. Getty described the scenario where "the profitability is squeezed for other manufacturers such that over time, those manufacturers are rendered nonexistent. And ultimately then innovation slows down because there's no advantage for Illumina to advance their technology such that patients will be negatively impacted." (PX7105 (Getty (Guardant) Dep. at 74-76)).

Response to Finding No. 2817:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2781, which Respondents incorporate herein.

2818. [redacted] (Getty (Guardant) Tr. 2543 (*in camera*)).

Response to Finding No. 2818:

The proposed finding is incomplete and misleading. Specifically, the Open Offer requires Illumina to provide customers with access to new products within 5 days of GRAIL receiving access. (PFF ¶ 1007; Berry (Illumina) Tr. 878–79; deSouza (Illumina) Tr. 2434–35, 2437–38; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) The Open Offer's access provisions specifically address the concern that Illumina could delay access to products because they level the playing field and prevent individual customers from lagging behind in terms of the products available to them. (PFF ¶ 1009.4; RX6002 (Guerin-Calvert Trial Dep. at 61–62).)

2819. One of Mr. Getty's concerns about the Proposed Acquisition is that advanced notice of information about a new sequencer in development from Illumina could give Grail a "significant head start" on developing the next version of its MCED assay. (Getty (Guardant) Tr. 2518-19).

Response to Finding No. 2819:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶¶ 2814 and 2818, which Respondents incorporate herein.

2820. [redacted] (PX7058 (Conroy (Exact) IHT at 241-242) (*in camera*)).

Response to Finding No. 2820:

Respondents incorporate their response to CCFF ¶ 2813 herein. [redacted] Finally, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2821. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 88-89) (*in camera*)).

Response to Finding No. 2821:

The proposed finding is incomplete and misleading without additional context. Specifically, under the Open Offer, [redacted] Illumina is prohibited from discontinuing products that any oncology customer has purchased in the prior year. (PFF ¶ 1011; [redacted] Berry (Illumina)

Tr. 883; PX0064 (Illumina) at 6; [redacted].) This provision adequately addresses the concern that Illumina could advantage GRAIL by simply no longer providing a product and ensures that customers as "certainly no worse off than in the current world". (PFF ¶¶ 1011.7–.8; RX6002 (Guerin-Calvert Trial Dep. at 71–73).)

Additionally, the Open Offer requires Illumina to provide customers, within 5 days, with the same information that GRAIL receives about final product specifications of any sequencing instruments or core consumables. (PFF ¶ 1006; RX3935 (Illumina) at 2.) Further, even though Illumina typically has not provided support in the development or commercialization of customers' products, to provide additional benefits to customers, the Open Offer requires Illumina to enter into development agreements, on a customer's request, to design or modify Illumina's products to optimize interoperability with the customer's tests. (PFF ¶ 1010; Berry (Illumina) Tr. 844–47, 881; PX0064 (Illumina) at 6.) This not only prevents Illumina from disadvantaging putative GRAIL rivals, but also requires Illumina to act in a particular way to support rivals developing their own products. (PFF ¶ 1010.9; RX6002 (Guerin-Calvert Trial Dep. at 68).)

Finally, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2822. [redacted]

Response to Finding No. 2822:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2821, which Respondents incorporate herein.

[redacted]

(Lengauer (Third Rock Ventures) Tr. 197-98 (*in camera*)).

2823. [redacted] (PX7085 (Harada (Exact) Dep. at 204-205) (*in camera*)).

Response to Finding No. 2823:

The proposed finding is incomplete and misleading. Specifically, the Open Offer [redacted] requires Illumina to provide customers with access to new products within 5 days of GRAIL receiving access. (PFF ¶ 1007; Berry (Illumina) Tr. 878–79; deSouza (Illumina) Tr. 2434–35, 2437–38; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) The Open Offer's access provisions specifically address the concern that Illumina could delay access to products because they level the playing field and prevent individual customers from lagging behind in terms of the products available to them. (PFF ¶ 1009.4; RX6002 (Guerin-Calvert Trial Dep. at 61–62).) Respondents also incorporate their responses to CCFF ¶ 2821 herein.

2824. [redacted] (PX2598 (Illumina) at 002 (Email from D. Daly, Illumina, to L. Leigh, Illumina, et al., Apr. 11, 2018) (*in camera*)).

Response to Finding No. 2824:

The proposed finding is incomplete and misleading. Specifically, the Open Offer [redacted] requires Illumina to provide customers with access to new products within 5 days of GRAIL receiving access. (PFF

¶ 1007; Berry (Illumina) Tr. 878–79; deSouza (Illumina) Tr. 2434–35, 2437–38; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) The Open Offer's access provisions specifically address the concern that Illumina could delay access to products because they level the playing field and prevent individual customers from lagging behind in terms of the products available to them. (PFF ¶ 1009.4; RX6002 (Guerin-Calvert Trial Dep. at 61–62).) Respondents also incorporate their responses to CCFF ¶¶ 2814 and 2818 herein.

2825. [redacted] (PX2152 (Illumina) at 001 (Text message from S. Tousi, Illumina, Apr. 23, 2020) (*in camera*)).

Response to Finding No. 2825:

The proposed finding is incomplete and misleading. When shown this document at his IH, Dr. Goswami, Illumina's Senior Vice President of Corporate Development and Strategic Planning—who is the text recipient—disagreed with Complaint Counsel's suggestion that this email indicated that Illumina could provide preferential technology to GRAIL, describing it as "patently wrong." (PX7064 (Goswami (Illumina) IH at 215).) He explained that "working with GRAIL will help us improve our technology", but that any improved technology will be "available to all our customers across the RUO and clinical spectrum, and that will include GRAIL's competitors as well." (PX7064 (Goswami (Illumina) IH at 215).) He also testified that "if we want to improve and bring innovations, we don't choose who we bring that innovation to . . . [and] we have all the incentives to bring those innovations as quickly as possible to market." (PX7064 (Goswami (Illumina) IH at 225).)

Further, under the Open Offer, Illumina cannot favor GRAIL in product improvements. As Mr. deSouza testified at trial: "[I]n this offer letter we're saying that any product that's

available for GRAIL will be available for everyone. So we're not allowed to make a product only for GRAIL. . . . JUDGE CHAPPELL: All right, thank you. And I think you told me earlier, do you make specific products with your sequencers today? Do you make specific products for your customers? THE WITNESS: No, we do not. We sell to everyone the same portfolio." (deSouza (Illumina) Tr. 2434–35.)

To the extent that Complaint Counsel attempts to use this proposed finding to suggest that Mr. deSouza's testimony cited in CCFF ¶ 2826 is untrue, this is attempt is misguided. In the portion of Mr. deSouza's testimony cited in CCFF ¶ 2826, Mr. deSouza was asked, "[I]f you made one of these improvements [to Illumina's sequencing equipment]] to time, throughput, or reducing cost, is there any way to limit that to one particular user or customer?" (deSouza (Illumina) Tr. 2446.) Mr. deSouza responded in relevant part that "contractually we're committing [that] [a]nything that GRAIL gets, the entire market will get." (deSouza (Illumina) Tr. 2447.) That is, in light of the Open Offer, even if Illumina wanted to develop products specifically for GRAIL, it would be required to make them available to all Open Offer customers. It supersedes whatever statement Ms. Tousi made in 2020—which was before the Illumina even decided to acquire GRAIL.

Further, even though Illumina typically has not provided support in the development or commercialization of customers' products, to provide additional benefits to customers, the Open Offer requires Illumina to enter into development agreements, on a customer's request, to design or modify Illumina's products to optimize interoperability with the customer's tests. (PFF ¶ 1010; Berry (Illumina) Tr. 844–47, 881; PX0064 (Illumina) at 6.) This not only prevents Illumina from disadvantaging putative GRAIL rivals, but also requires Illumina to act in a

particular way to support rivals developing their own products. (PFF ¶ 1010.9; RX6002 (Guerin-Calvert Trial Dep. at 68).)

2826. Illumina's CEO told the Court at trial that Illumina cannot, and will not, make improvements to technology specifically geared toward Grail. (deSouza (Illumina) Tr. 2443-44; 2446-47).

Response to Finding No. 2826:

Respondents have no specific response.

2827. [redacted] (PX2541 (Illumina) at 008 (Illumina, Interim Review K2-Grail (aka Grail "Pendragon"), Feb. 2, 2017) (*in camera*)).

Response to Finding No. 2827:

The proposed finding is incomplete and misleading.

[redacted] (PX7107 (deSouza (Illumina) Dep. at 243–44.) Complaint Counsel nonetheless chose not to ask Mr. Aravanis or any other witness about that document.

[redacted]

[redacted] (PX7065 (Aravanis (Illumina) IHT at 56–60).) Dr. Aravanis also explained that, to achieve those operational efficiencies, Illumina made "some minor alterations to the reagents for the purposes of developing this assay", and ultimately, "the discussion about the K2/Napa activity was a very minor, minor part of the R&D activities at GRAIL and a very minor, minor part of the R&D activities at Illumina when put in context of the overall R&D activities and overall activities of the company almost – again, kind of a very early, minor activity in the company's history . . . ." (PX7065 (Aravanis (Illumina) IHT 61–62).)

Third, there is nothing anticompetitive about Illumina collaborating with GRAIL in ways it has not and would not with an arm's-length customer; to the contrary, that is an efficiency of vertical integration that benefits competition and consumers. To the extent the proposed finding is meant to suggest otherwise, it is wrong. Further, under the Open Offer, upon customer request, Illumina must enter into a development agreement on commercially reasonable terms relating to the design or modification of sequencing products to optimize interoperability with the customer's tests. (*See* PFF ¶¶ 1005, 1008, 1010.) Illumina has not historically collaborated with customers on such optimization, and so, in this regard, customers who see value in optimization are better off under the Open Offer than they were under the pre-Transaction status quo. (Berry (Illumina) Tr. 844.)

2828. As discussed below in Sections VII.A.2.e. (Illumina Can Alter its NGS Products to Disadvantage Grail's MCED Rivals), VIII.A.3.c.1. (Illumina Can Customize Its Consumables to Favor Grail), and VII.A.3.n.1. (Rather Than Refusing to Sell MCED Test Developer Reagents Outright, Illumina Can Gradually Optimize Its Reagents to Work Best on Galleri Without Optimizing Its Reagents for Other MCED Tests), MCED customers testified that Illumina may develop new NGS products that favor Grail and harm its rivals.

Response to Finding No. 2828:

The proposed finding is improper because it treats Complaint Counsel's inaccurate, misleading and argumentative headers as purported facts. To the extent Complaint Counsel relies on its Proposed Findings in Sections VII.A.2.e, VIII.A.3.c.1 and VII.A.3.n.1, Respondents incorporate their responses to those Proposed Findings herein.

c) Illumina Can Reduce the Quality of its Supply, Support, and Service to Grail's Rivals

(1) MCED Test Developers Rely on Illumina as a Partner from Product Development through Commercialization

2829. Illumina's Nicole Berry, Senior Vice President and General Manager for Illumina's Americas Commercial Region [redacted] (PX7076 (Berry (Illumina) Dep. at 179-181) (*in camera*)).

Response to Finding No. 2829:

Respondents have no specific response except to note that the proposed finding is misleading to the extent it implies that Illumina takes an active role in customers' test development. In the cited testimony, Ms. Berry observed that [redacted] This testimony confirms that Illumina is interested in seeing its customers succeed. It does not, however, suggest that Illumina takes an active role in customers' development efforts. To the contrary, Illumina typically does not provide support in the development or commercialization of customers' products. (PFF ¶¶ 1010.4–1010.7; Berry (Illumina) Tr. 844–47.); *see also* PFF ¶¶ 1735, 1879 [redacted].) For example, [redacted]

[redacted]

[redacted] Likewise, Mr. Getty of Guardant admitted that Illumina did not help Guardant develop the LUNAR-2 assay and did not brainstorm with Guardant on how it could improve the LUNAR-2 assay. (Getty (Guardant) Tr. 2645–46.)

2830. [redacted] (PX7058 (Conroy (Exact) IHT at 174-177) (*in camera*)).

Response to Finding No. 2830:

The proposed finding is inaccurate, incomplete and misleading. As Mr. Conroy admitted,

[redacted]

[redacted] Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2831. [redacted]

(PX7058 (Conroy (Exact) IHT at 221-22) (*in camera*); *see* PX8387 (Exact) at 001 [redacted] (*in camera*)).

Response to Finding No. 2831:

The proposed finding is inaccurate, incomplete and misleading. The cited testimony confirms that Illumina's role in Exact's is limited to that of a "consistent supplier". For example, as Mr. Conroy acknowledged, [redacted]

Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2832. [redacted]

[redacted]

(Conroy (Exact) Tr. 1588-89 (*in camera*)).

Response to Finding No. 2832:

The proposed finding is inaccurate, incomplete and misleading. The Open [redacted] requires Illumina to allocate supply in an equitable manner among its customers in the event of a supply shortage. (PFF ¶ 1012; Berry (Illumina) Tr. 885–86; PX0064 (Illumina) at 9.) The Open Offer specifically ensures that customers with the greatest need—those whose lots are expiring earliest—will receive allocations of short supply first. (PFF ¶ 1012.4; RX6002 (Guerin-Calvert Trial Dep. at 77).) Further, [redacted] (*See* PX7058 (Conroy (Exact/Thrive) IHT at 65; PX7051 (Lengauer (Exact/Thrive) IHT at 120–22).)

2833. [redacted] (Conroy (Exact) Tr. 1596 (*in camera*)).

Response to Finding No. 2833:

The proposed finding is inaccurate, incomplete and misleading. Illumina is not the sole supplier of NGS [redacted] and faces stiff competition from current and future NGS providers. (*See* PFF ¶¶ 578–674; 1704.) Respondents also incorporate their response to CCFF ¶ 2830 herein.

2834. [redacted]

[redacted] (Conroy (Exact) Tr. 1596-97 (*in camera*)).

Response to Finding No. 2834:

The proposed finding is inaccurate, incomplete and misleading. While Mr. Conroy testified [redacted] Respondents also incorporate their responses to CCFF ¶ 1089, incorporated herein.

[redacted] In any event, Exact/Thrive can sign the Open Offer at any time and thereby have a supply agreement for the next twelve years with Illumina. Even though Exact has received a copy of the Open Offer ([redacted]; Conroy (Exact) Tr. 1724 25), at trial, Mr. Conroy had not actually read the Open Offer, and so his

testimony should be given little weight. (PFF ¶¶ 1073, 1073.2; Conroy (Exact/Thrive) Tr. 1725–27.)

2835. [redacted] (PX7051 (Lengauer (Third Rock Ventures) IHT at 201) (*in camera*)).

Response to Finding No. 2835:

The proposed finding is incomplete and misleading without additional context. In the portion of Dr. Lengauer's testimony immediately after the cited portion, Dr. Lengauer explained that [redacted] Further, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2836. Helio's former CEO, Dr. Chahine, testified that he envisioned "a million different ways" that Illumina and Helio could have strategically collaborated "to work as a partner to try to solve the consumer's products and not have to be guarded about your plans and your strategy and your consumer data and your physician data and things like that." He also testified that if the Illumina-Grail transaction closed, "this is obvious – I'd just have to be more guarded." (PX7077 (Chahine (Helio) Dep. at 65-67)).

Response to Finding No. 2836:

The proposed finding is misleading to the extent that it implies that Illumina has an active role in development of customers' products. Illumina typically does not provide support in the development or commercialization of customers' products. (PFF ¶¶ 1010.4–1010.7; Berry (Illumina) Tr. 844–47.) Dr. Chahine's testimony is entirely hypothetical: Illumina and Helio have never, in fact, collaborated on any projects. [redacted] Further, to the extent that the proposed finding suggests that Illumina would use customers' confidential information to disadvantage putative GRAIL rivals, it fails to take account of the Open Offer's confidentiality protections, which prevent such use of confidential information. (*See* PFF ¶¶ 1038–42.)

(2) MCED Test Developers Testified that Illumina Controls the NGS Supply Chain, and Developers' Reliance on Illumina Creates Continuing Business Risk

2837. [redacted] (PX7109 (Daly (Singular Genomics) Dep. at 56) (*in camera*)).

Response to Finding No. 2837:

The proposed finding is inaccurate, incomplete and misleading. The Open Offer expressly prohibits Illumina from favoring GRAIL in a supply shortage and requires Illumina instead to allocate short supply equitably across customers, including GRAIL. (PFF ¶ 1012; Berry (Illumina) 885–87; PX0064 (Illumina) at 9.) The Open Offer specifically ensures that

customers with the greatest need—those whose lots are expiring earliest—will receive allocations of short supply first. (PFF ¶ 1012.4; RX6002 (Guerin-Calvert Trial Dep. at 77).)

2838. [redacted] (PX7090 (Sood (Guardant) Dep. at 119-21) (*in camera*)).

Response to Finding No. 2838:

Respondents have no specific response except to note that [redacted]

2839. William Getty, Guardant's Senior Vice President of Commercial, Cancer Screening Core, expressed that if Illumina stopped supplying Guardant, or failed to supply products in a timely manner, then Guardant's business "would be nonexistent." (PX7105 (Getty (Guardant) Dep. at 58)).

Response to Finding No. 2839:

The proposed finding is inaccurate, incomplete and misleading. Illumina is not the sole supplier of NGS equipment [redacted] and faces stiff competition from current and future NGS providers. (*See* PFF ¶¶ 578–674, 1823.)

The proposed finding is misleading to the extent it suggests that only Illumina's NovaSeq instrument is suitable for supporting Guardant's putative MCED test. [redacted] Dr.

Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) Respondents also incorporate their responses to CCFF ¶ 927 herein.

Additionally, [redacted]

Further, the cited testimony fails to take account of the protections of the Open Offer [redacted] The Open Offer ensures consistent supply of Illumina's products and prohibits Illumina from refusing to supply its sequencing products to cancer screening customers in a timely manner. (*See* PFF ¶¶ 1005, 1007–08, 1011–12.) As Ms. Berry testified, "if Illumina deliberately delayed fulfilling a purchase order for a customer or somehow, you know, monkeyed with supply", "Illumina would be in breach of the [Open Offer] agreement". (Berry (Illumina) Tr. 878–79.)

2840. Mr. Getty testified that any disruption in Guardant's relationship with Illumina could adversely affect Guardant's ability to conduct its business and generate revenue. (Getty (Guardant) Tr. 2684).

Response to Finding No. 2840:

The proposed finding is inaccurate, incomplete, and misleading for the reasons explained in Respondents' responses to CCFF ¶ 2839, which Respondents incorporate herein.

2841. [redacted] (PX7045 (Chudova (Guardant) IHT at 105-109) (*in camera*)).

Response to Finding No. 2841:

The proposed finding is incomplete and misleading. [redacted] requires Illumina to consistently supply its customers with reagents at a consistent level of quality. (PFF ¶¶ 1005, 1007, 1009.4; RX6002 (Guerin-Calvert Trial Dep. at 61–62).) As Ms. Berry testified, "we are not permitted to [supply lower-quality reagents to customers] under the open offer." (Berry (Illumina) Tr. 878.)

Finally, the proposed finding relies on IH testimony which Respondents had no opportunity to cross examine and should therefore be given no weight. (*See* Resps.' Post-Trial Br. at 275–76.)

2842. [redacted] (PX7100 (Chudova (Guardant) Dep. at 85) (*in camera*)). [redacted] (PX7100 (Chudova (Guardant) Dep. at 85-87) (*in camera*)). [redacted] (PX7100 (Chudova (Guardant) Dep. at 86-87) (*in camera*)). [redacted]

[redacted] (PX7100 (Chudova (Guardant) Dep. at 87) (*in camera*)).

Response to Finding No. 2842:

The proposed finding is inaccurate, incomplete and misleading, the Open Offer [redacted] prohibits Illumina from providing customers with lower quality instruments or consumables. (PFF ¶ 1092.1; Berry (Illumina) Tr. 878–79.) As Ms. Berry testified, "we are not permitted to [supply lower-quality reagents to customers] under the open offer." (Berry (Illumina) Tr. 878.) The Open Offer ensures that MCED test developers will have a consistent quality of supply because, as new, higher quality products are released, they must be made available to all customers. (PFF ¶ 1009.3; RX6002 (Guerin-Calvert Trial Dep. at 61).) In addition, Complaint Counsel's example relates to therapy selection and describes an incident that allegedly happened long before the announcement of the Transaction and is therefore irrelevant. Respondents also incorporate their response to CCFF ¶ 2844 herein.

2843. Mr. Getty explained that Guardant's dependence on Illumina creates business risk "[b]ecause Illumina is a sole supplier for us and our business rests on our ability to sequence and leverage [Illumina's] services in order to maintain those sequencers." (Getty (Guardant) Tr. 2684-85).

Response to Finding No. 2843:

The proposed finding is incomplete and misleading without additional context. Illumina is not the sole supplier of NGS equipment [redacted] and faces stiff competition from current and future NGS providers. (*See* PFF ¶¶ 578–674, 1823.)

The proposed finding is misleading to the extent it suggests that only Illumina's NovaSeq instrument is suitable for supporting Guardant's putative MCED test. [redacted]

[redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) Respondents also incorporate their responses to CCFF ¶ 927 herein.

Further, [redacted]

Additionally, the Open Offer [redacted] ensures that customers will continue to receive access to the same product and support services to which they had access before the Transaction. (*See* PFF ¶¶ 1004.1, 1004.9; [redacted] Berry (Illumina) Tr. 865–66; deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 6; RX6002 (Guerin-Calvert Trial Dep. at 58).) The Open Offer requires Illumina to provide customers with the same access to services that GRAIL or any other For-Profit Entity has access to, and at the same prices. (PFF ¶ 1004; [redacted]; Berry (Illumina) Tr. 865–66; deSouza (Illumina) Tr. 2404; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.) As Ms. Berry, the senior vice president and general manager of the Americas commercial team at Illumina, testified, "the open offer obligates Illumina to provide

access to a customer to not only the same [product and support] services for which the customer had before the transaction but also any [product and support] services . . . that GRAIL has so that there will be absolutely no disadvantage to a customer signing this agreement on what they can access as relates to services". (Berry (Illumina) Tr. 865–66.)

2844. Mr. Getty expressed that Illumina is "in a position where they could take significant advantage by kneecapping our ability to run our lab, which would of course flow through to our inability to compete." (PX7105 (Getty (Guardant) Dep. at 68-69)).

Response to Finding No. 2844:

The proposed finding is incomplete and misleading because it fails to take into account to protections of the Open Offer [redacted]

[redacted] Guardant attached the amended supply agreement to its 2020 10-K because the amended agreement represented a material and important contract for Guardant. (PFF ¶ 1075.4; Getty (Guardant) Tr. 2668–69; PX0060 (Guardant) at 151.) And during its negotiations with Illumina, Guardant never indicated to Illumina that Guardant viewed its amended supply agreement as unenforceable or worthless. (Getty (Guardant) Tr. 2669.)

Finally, the Open Offer [redacted] provides for [redacted] as well as additional protections relating to various topics such as pricing for similarly situated customers and access to information about new products. (*See* PFF ¶¶ 1000–57; PX0064 (Illumina); RX3935 (Illumina).). The Open Offer also requires Illumina to provide customers with a consistent source of supply of sequencing instruments and core consumables. (*See* PFF ¶¶ 1000, 1005, 1007, 1009, 1011, 1037; [redacted]; Berry (Illumina) Tr. 690–91, 864, 878–79, 883; Conroy (Exact/Thrive) 1725; deSouza (Illumina) Tr. 2402, 2434–35, 2437–38; PX0064 (Illumina) at 5–6, 9; RX3935 (Illumina) at 2; RX6002 (Guerin-Calvert Trial Dep. at 59–60, 77–79.). As Ms. Berry testified, "if Illumina deliberately delated fulfilling a purchase order for a customer or somehow . . . monkeyed with supply", "Illumina would be in breach of the agreement". (Berry (Illumina) Tr. 878-79.) As economist and President of the Center for Healthcare Economics and Policy and Senior Managing Director at FTI Consulting, Margaret

Guerin-Calvert, explained, the Open Offer provides the economically necessary terms to prevent the alleged anticompetitive harms from the transaction in both the short term and the long term. (RX6002 (Guerin-Calvert Trial Dep. at 21–22).) The Open Offer also represents an improvement for customers over the premerger status quo. (RX6002 (Guerin-Calvert Trial Dep. at 37, 52–53, 57).)

2845. [redacted] (PX7040 (Getty (Guardant) IHT 88 (*in camera*))).

Response to Finding No. 2845:

The proposed finding is inaccurate, incomplete and misleading. Mr. Getty's testimony that Guardant cannot develop a distributable kit without Illumina is incorrect, as Illumina is not the sole supplier of NGS equipment [redacted] and faces stiff competition from current and future NGS providers. (*See* PFF ¶¶ 578–674, 1823.) Respondents also incorporate their responses to CCFF ¶ 927 herein.

The proposed finding is incomplete and misleading without additional context. Specifically, in the portion of Mr. Getty's testimony immediately after the cited portion, Mr. Getty provided context for this answer: Mr. Getty explained that, in the regulatory process, Guardant relies on Illumina "as a manufacturer" to provide information on Illumina's products. (Getty (Guardant) Tr. 2515.) Further, Mr. Getty admitted that Illumina did not have a role in developing Guardant's LUNAR-2 assay and has not been involved in any FDA review or consideration of the LUNAR-2 assay. (Getty (Guardant) Tr. 2645.)

Additionally, the Open Offer requires Illumina to provide to provide documentation to assist customers with FDA approval or marketing authorization to sell a for-profit, clinical test

using Illumina's sequencing instruments and core consumables. (PFF ¶ 1027; PX0064 (Illumina) at 8; PX0087 (Illumina) at 23; PX0088 (Illumina) at 20; PX0089 (Illumina) at 20; PX7093 (Young (Illumina) Dep. at 68).) The Open Offer includes a right of reference to any relevant Illumina regulatory documentation for Illumina's IVD partners. (PFF ¶ 1027.2; Leite (Illumina/InterVenn) Tr. 2156; PX0064 (Illumina) at 39; PX0087 (Illumina) at 23; PX0088 (Illumina) at 20; PX0089 (Illumina) at 20; [redacted] Under this right, a partner developing on Illumina systems may reference Illumina's files in their regulatory submission. (PFF ¶ 1027.2; PX0064 (Illumina) at 39; PX0087 (Illumina) at 23; PX0088 (Illumina) at 20; PX0089 (Illumina) at 20; [redacted]

Respondents also note that features of sequencing instruments and pipeline multi-cancer screening tests suggest that distributable IVDs would not be an appropriate option for MCED tests. (PFF ¶¶ 675–678.5 (RX3869 (Cote Expert Report) ¶¶ 359–363; Goswami (Illumina) Tr. 3189–92, 3194–95).) The test developer's decision whether to proceed with an IVD kit as opposed to a centralized model is an economic decision driven by test-specific factors. (Goswami (Illumina) Tr. 3197.) IVD kits are most suitable for tests that have precious samples, that present shipping challenges and require fast turnaround times. (Goswami (Illumina) Tr. 3196–3200; *see also* RX3869 (Cote Expert Report) § XI, ¶¶ 360–63.) Respondents also note that Illumina's NovaSeq is not yet available as Dx instrument. (Goswami (Illumina) Tr. 3194.)

Finally, the proposed finding relies on impermissible lay opinion testimony. Mr. Getty was not called as an expert witness on the FDA approval process and his opinion on that process should be disregarded.

2846. In its annual report, Guardant identified Illumina as its "sole supplier of sequencers and as the sole provider of maintenance and repair services for these sequencers," and indicated that "[a]ny disruption in operations of Illumina . . . could materially and adversely impact our supply chain and laboratory operations of our precision oncology platform and thus our ability to conduct our business and generate revenue." (PX0153 at 47 (Guardant 2020 Form 10-K, Feb. 25, 2021)).

Response to Finding No. 2846:

Respondents have no specific response except to note that Illumina is not the sole supplier of NGS equipment**,** as Mr. Getty of Guardant acknowledged (Getty (Guardant) Tr. 2642), and faces stiff competition from current and future NGS providers**.** (*See* PFF ¶¶ 578–674, 1823; *see also* PFF ¶ 1812; [redacted].)

[redacted] Dr. Chudova also stated that Guardant could use alternative sequencing platforms for its LUNAR-2 screening test in development that meet the throughput, error, time, and sequencing cost requirements. (PX7045 (Chudova (Guardant) IHT at 44–47.) BGI also markets its NGS technology in many other countries and is expected to enter the U.S. market in the near future. [redacted]; RX3869 (Cote Expert Report) ¶ 287; [redacted]**.)** BGI also recently won a jury verdict that held three of Illumina's patents to be invalid such that BGI can legally launch its sequencing instruments and related reagents in the United States. Jury Verdict at 14–16, ECF No. 407, *Complete Genomics, Inc. v. Illumina, Inc.*, No. CV-19-970 (MN) (D. Del. May 6, 2022). BGI may enter the United States market as soon as August 2022. (PFF ¶¶ 777-777.3.) Respondents also incorporate their responses to CCFF ¶¶ 927–28 herein.

2847. [redacted] (Conroy (Exact) Tr. 1585 (*in camera*)).

Response to Finding No. 2847:

The proposed finding is incomplete and misleading. Illumina is not the sole supplier of NGS equipment, [redacted] and faces stiff competition from other NGS providers. (*See* PFF ¶¶ 578–674, 1704–05.) [redacted] Respondents also incorporate their responses to CCFF ¶¶ 928–29 herein.

2848. [redacted] (Conroy (Exact) Tr. 1585 (*in camera*)).

Response to Finding No. 2848:

The proposed finding is inaccurate, incomplete and misleading. The Open Offer [redacted] requires Illumina to provide customers with a consistent source of supply of sequencing instruments and core consumables. (*See* PFF ¶¶ 1000, 1005, 1007, 1009, 1011, 1037; [redacted]; Berry

(Illumina) Tr. 690–91, 864, 878–79, 883; Conroy (Exact/Thrive) 1725; deSouza (Illumina) Tr. 2402, 2434–35, 2437–38; PX0064 (Illumina) at 5–6, 9; RX3935 (Illumina) at 2; RX6002 (Guerin-Calvert Trial Dep. at 59–60, 77–79.). As Ms. Berry testified, "if Illumina deliberately delated fulfilling a purchase order for a customer or somehow . . . monkeyed with supply", "Illumina would be in breach of the agreement". (Berry (Illumina) Tr. 878-79.)

2849. Dr. Gao testified that Illumina is "obviously the 800-pound gorilla in the room." (Gao (Singlera) Tr. 2947-48). Dr. Gao explained, "Illumina control[s] the supply chain for all the NGS-based early cancer detection technology, not only for Singlera, but for other companies, too. So I don't think I'm alone in this -- seeing this 800-pound gorilla." (Gao (Singlera) Tr. 2947-48, 2951).

Response to Finding No. 2849:

The proposed finding is inaccurate, incomplete and misleading. Illumina is not the only supplier of NGS equipment and faces stiff competition from other NGS providers. (*See* PFF ¶¶ 578–674.) Dr. Gao admitted, for example, that Singlera's PanSeer test was not designed to solely on Illumina equipment and it is compatible with Thermo Fisher's NGS systems, including the Ion Torrent S5. (PFF ¶ 1893; Gao (Singlera) Tr. 2928; *see also* RX3637 (Singlera) at 5; RX3869 (Cote Expert Report) ¶ 239.)

[redacted]. (PFF ¶¶ 778–778.2; 2085.) Thermo Fisher's Ion Torrent sequencers are suitable for certain MCED tests. (RX3869 (Cote Expert Report) ¶ 285.) [redacted]

Respondents also incorporate their responses to CCFF ¶ 1171 herein.

2850. Dr. Gao explained his concerns related to Illumina's "control" of the supply chain:

> [T]he problem is . . . cost is very essential for any -- basically marketing any product or any investor. Illumina can choose the price, set the price of the sequencer, and also the reagent, but Grail is a -- if it's part of the Illumina public company, they can lose on the reagent and Grail can still charge whatever -- Illumina can charge them a high price. They don't care. They are one company. But for us, we cannot have another cost center to transfer the cost, so we have to eat the high reagent and equipment cost. We -- you know, we cannot decrease our price or we will lose.

(Gao (Singlera) Tr. 2951).

Response to Finding No. 2850:

The proposed finding is inaccurate, incomplete and misleading. *First*, the Open Offer, which Singlera had an opportunity to sign (*see* deSouza (Illumina) Tr. 2338), prohibits Illumina from raising the price of its sequencing products beyond inflation for the Open Offer's 12-year term. (PFF ¶¶ 1021–22.) Further, the Open Offer requires Illumina to reduce the price of sequencing by at least 43% by 2025. (PFF ¶ 1023; Berry (Illumina) Tr. 712–13, 897, 903–04; PX0064 (Illumina) at 7).)

Second, contrary to Complaint Counsel's unproven contention, the only evidence in the record on NGS costs as a percentage of future downstream MCED revenues and margins shows that NGS costs will be a very small percentage of MCED test revenues and margins in the future. (PFF ¶ 884; RX6000 (Carlton Trial Dep.) at 30–31.)

2851. Dr. Gao testified that "Grail [is] doing something similar in direct competition with [Singlera and] Illumina is supplying . . . all essential equipment and reagents. [Illumina] could potentially . . . prevent us from develop[ing the PanSeer test] and delivering a cost-effective product." (Gao (Singlera) Tr. 2901-02).

Response to Finding No. 2851:

The proposed finding is inaccurate, incomplete and misleading. Dr. Gao's testimony disregards the fact that the Open Offer, which Singlera had an opportunity to sign (*see* deSouza (Illumina) Tr. 2338), prevents Illumina from interfering with customers' test development. (PFF ¶ 997; RX6002 (Guerin-Calvert Trial Dep. at 21–22).) The Open Offer requires Illumina to

provide customers with a consistent source of supply of sequencing instruments and core consumables. (*See* PFF ¶¶ 1000, 1005, 1007, 1009, 1011, 1037; [redacted]; Berry (Illumina) Tr. 690–91, 864, 878–79, 883; Conroy (Exact/Thrive) 1725; deSouza (Illumina) Tr. 2402, 2434–35, 2437–38; PX0064 (Illumina) at 5–6, 9; RX3935 (Illumina) at 2; RX6002 (Guerin-Calvert Trial Dep. at 59–60, 77–79.) As Ms. Berry testified, "if Illumina deliberately delated fulfilling a purchase order for a customer or somehow . . . monkeyed with supply", "Illumina would be in breach of the agreement". (Berry (Illumina) Tr. 878-79.)

Further, Dr. Gao admitted that Singlera's PanSeer test was not designed to solely on Illumina equipment and it is compatible with Thermo Fisher's NGS systems, including the Ion Torrent S5. (PFF ¶ 1893; Gao (Singlera) Tr. 2928; *see also* RX3637 (Singlera) at 5; RX3869 (Cote Expert Report) ¶ 239.)

2852. [redacted] (Fiedler (FMI) Tr. 4498 (*in camera*)).

Response to Finding No. 2852:

The proposed finding is misleading and incomplete without additional context. Dr. Fiedler also testified that FMI, which competes with Illumina's TSO500 product, has never had any concerns in its relationship with Illumina. (PFF ¶ 1749; Fiedler (FMI) Tr. 4469–70.) He testified that: FMI has been a customer of Illumina since FMI was started; FMI's first supply agreement with Illumina was signed in 2013; since 2019, FMI has purchased well over a hundred million, probably 140 million, in NGS products from Illumina; and during the time that FMI has been an Illumina customer FMI has had no issues or problems with Illumina servicing the Illumina instruments that FMI uses. (PFF ¶ 1749; Fiedler (FMI) Tr. 4470.) Dr. Fiedler has never known Illumina to delay providing services or replacement parts to FMI; Illumina has

acted in good faith with respect to its obligations under the 2013 supply agreement; Illumina has never "monkeyed with supply"; Illumina has never interrupted supply to FMI because it claimed FMI had infringed on Illumina's intellectual property; Illumina has never reneged on a commitment it made to FMI; FMI is a satisfied customer and FMI trusts Illumina to abide by its commitments. (PFF ¶ 1749; Fiedler (FMI) Tr. 4471–72.)

Dr. Fielder also testified that [redacted]

2853. In its annual report, Natera expressed, "Illumina is currently the sole supplier of our sequencers and related reagents for [our tests]. . . . Without sequencers and the related reagents, we would be unable to run our tests and commercialize our products." (PX0155 at 39 (Natera 10-K, Feb. 25, 2021)).

Response to Finding No. 2853:

Respondents have no specific response except to note that Illumina is not the sole supplier of NGS equipment and faces stiff competition from other NGS providers. (See PFF ¶¶ 578–674.) For example, Natera's Signatera test was initially validated on Illumina's HiSeq 2500 NGS platform but now uses BGI's DNBSEQ Platform in China. (PFF ¶ 652; RX3499 (Natera) at 6; [redacted]; RX3062 (BGI) at 1.)

2854. In its annual report, Natera acknowledged that Illumina's acquisition of Grail might add to the risks associated with Illumina being its sole supplier of sequencers and reagents. (PX0155 at 40 (Natera 10-K, Feb. 25, 2021)).

Response to Finding No. 2854:

The proposed finding is incomplete and misleading without additional context. The Open Offer [redacted] addresses any potential concerns that Illumina would disadvantage Natera or other customers after the acquisition and, in fact, represents an improvement for customers over the pre-merger status quo. (*See* PFF ¶¶ 997–99.) For example, the Open Offer [redacted] ensures a continued source of supply for sequencing instruments and core consumables. (*See* [redacted] PX0064 (Illumina) at 9.)

(3) MCED Customers Rely on Illumina for Assistance, Service, and Support of Illumina's NGS Products

2855. [redacted] (Conroy (Exact) Tr. 1583-84 (*in camera*)).

Response to Finding No. 2855:

Respondents have no specific response except to note that Illumina has service engineers who perform any necessary maintenance on Illumina's products, and that the Open Offer [redacted] requires that Illumina provide customers with the same access to services that GRAIL or any other For-Profit Entity has access to, at the same prices. (PFF 1004; Berry (Illumina) Tr. 668–69, 865–66; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.)

2856. [redacted] (Conroy (Exact) Tr. 1583-84 (*in camera*)).

Response to Finding No. 2856:

Respondents have no specific response except to note that the Open Offer [redacted] requires that Illumina provide customers with the same access to services that GRAIL or any other For-Profit Entity has access to, at the same prices. (PFF 1004; Berry (Illumina) Tr. 668–69, 865–66; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2.)

2857. Pre-Acquisition, when there was an issue with a customer's purchase or supply, Illumina claims to "do our best to resolve customer issues quickly." (PX7076 (Berry (Illumina) Dep. at 83-84)).

Response to Finding No. 2857:

The proposed finding is incomplete and misleading without additional context. While Illumina worked to resolve customer issues quickly pre-acquisition, Illumina will *continue* to resolve customer issues quickly post-acquisition both because failure to do so would place Illumina in breach of the Open Offer and because failing to service instruments as necessary would be bad for Illumina's business. (PFF ¶ 1004.7; Berry (Illumina) Tr. 871–72, 879.) As Ms. Berry testified, "if Illumina deliberately delayed or even refused to service an instrument that belonged to a test developer who signed the open offer", "we'd be in breach of the agreement." (Berry (Illumina) Tr. 871.) Further, Ms. Berry explained that, both before and after the acquisition, "when instruments are down, customers aren't buying kits from us . . . so there's absolutely a disincentive" for Illumina to delay service. (Berry (Illumina) Tr. 872.)

In order to ensure that it satisfies its obligations when a customer orders a service SKU, Illumina measures its customer support using key performance indicators (KPIs). (PFF ¶ 1004.6; Berry (Illumina) Tr. 867–68.) These KPIs include metrics like instrument downtime or the

length of time between when a case is opened to when it is closed. (PFF ¶ 1004.6; Berry (Illumina) Tr. 867–68.) These KPIs enable Illumina to compare how it performs in terms of service and support across individual customers or groups of customers. (PFF ¶ 1004.6; Berry (Illumina) Tr. 868.)

As economist and President of the Center for Healthcare Economics and Policy and Senior Managing Director at FTI Consulting, Ms. Guerin-Calvert, explained, the Open Offer's equal-services commitment ensures that customers will receive at least the same level of service that they did before the merger. (PFF ¶ 1004.9; RX6002 (Guerin-Calvert Trial Dep. at 58).)

2858. Pre-Acquisition, Illumina tried to assist customers by making sure that products get to its customers when they want them. (PX7076 (Berry (Illumina) Dep. at 85-86); *see e.g.*, PX2601 (Illumina) at 002-004 (Email exchange between J. Gripp, Illumina, S. Verbeek, Illumina, T. Curti, Illumina, et al., Nov. 13, 2021) (*in camera*) ([redacted]).

Response to Finding No. 2858:

The proposed finding is incomplete and misleading without additional context because, post-Transaction, Illumina will continue to provide its products to customers as quickly as possible. Specifically, the Open Offer requires Illumina to provide customers with a consistent source of supply of sequencing instruments and core consumables. (*See* PFF ¶¶ 1000, 1005, 1007, 1009, 1011, 1037; [redacted]; Berry (Illumina) Tr. 690–91, 864, 878–79, 883; Conroy (Exact/Thrive) 1725; deSouza (Illumina) Tr. 2402, 2434–35, 2437–38; PX0064 (Illumina) at 5–6, 9; RX3935 (Illumina) at 2; RX6002 (Guerin-Calvert Trial Dep. at 59–60, 77–79.) As Ms. Berry testified, "if Illumina deliberately delated fulfilling a purchase order for a customer or somehow . . . monkeyed with supply", "Illumina would be in breach of the agreement". (Berry (Illumina) Tr. 878-79.)

Further, Respondents note that [redacted]

2859. Mr. Getty testified that a portion of Guardant's product "portfolio is dependent on Illumina and their sequencers and reagents, service." (Getty (Guardant) Tr. 2517).

Response to Finding No. 2859:

Respondents have no specific response except to note that the Open Offer [redacted] requires Illumina to continue to provide customers with the same access to products and services that they had prior to the Transaction, and that the Open Offer requires Illumina to provide customers with the same access to products and services to which GRAIL or any other For-Profit Entity has access. (See PFF ¶¶ 1004–09, 1011–12; Berry (Illumina) Tr. 865–72, 878–86; PX0064 (Illumina) at 6, 9; RX3935 (Illumina) at 2.) Respondents also note that [redacted] Respondents further incorporate their response to CCFF ¶ 2844 herein.

(a) MCED Test Developers Testified that the Speed and Quality of Illumina's Customer, Technical, Product Development, and Regulatory Support Can Alter the Quality, Development, and Delivery of Developers' Products

(i) Illumina Testimony and Ordinary Course Documents Show that Illumina's Customer, Technical, and Regulatory Support Can Alter the Speed, Quality, Development, and Delivery of Developers' Products

2860. Illumina's service and support team installs Illumina's equipment in customers' laboratories. (Berry (Illumina) Tr. 646).

Response to Finding No. 2860:

Respondents have no specific response.

2861. Illumina services Illumina equipment that customers purchase. (Berry (Illumina) Tr. 646).

Response to Finding No. 2861:

Respondents have no specific response.

2862. Illumina provides customers with technical support to resolve any problems with Illumina products. (Berry (Illumina) Tr. 646).

Response to Finding No. 2862:

Respondents have no specific response.

2863. Illumina provides customers with field application scientists who administer "training to enable the customer to successfully use" Illumina instruments. (Berry (Illumina) Tr. 670).

Response to Finding No. 2863:

Respondents have no specific response.

2864. Illumina's field application scientists train customers after a customer purchases an Illumina instrument and subsequently upon a customer's request. (Berry (Illumina) Tr. 669-70).

Response to Finding No. 2864:

Respondents have no specific response.

2865. Illumina provides customers with field service engineers to perform routine maintenance and repair customers' instruments. (Berry (Illumina) Tr. 668-69).

Response to Finding No. 2865:

Respondents have no specific response.

2866. Illumina's Nicole Berry testified that Illumina's field service engineers service a customer's NovaSeq 6000 once a month on average. (Berry (Illumina) Tr. 675).

Response to Finding No. 2866:

Respondents have no specific response.

2867. Illumina provides customers with field service engineers to perform "break/fix service" when instruments experience a failure that prevents customers from operating the instruments. (Berry (Illumina) Tr. 668).

Response to Finding No. 2867:

Respondents have no specific response.

2868. [redacted] (PX2378 (Illumina) at 003 (Illumina, Quote Approval Request, Dec. 27, 2018) (*in camera*); Berry (Illumina) Tr. 682-83).

Response to Finding No. 2868:

Respondents have no specific response except to note that the Open Offer requires Illumina to continue to provide customers with the same access to the services that they had prior to the Transaction, and that the Open Offer requires Illumina to provide customers with the same access to services to which GRAIL or any other For-Profit Entity has access. (See PFF 1004; PX0064 (Illumina) at 6; RX3935 (Illumina) at 2; Berry (Illumina) Tr. 865–66; RX6002 (Guerin-Calvert Trial Dep. at 57–59).) Additionally, the Open Offer requires that customers receive access to the same pricing to which GRAIL has access for the equivalent level of service, or to which the customer had access before the Transaction, at the customer's option. (PFF ¶ 1004.2; RX3935 (Illumina) at 2.) Also, under the Open Offer, any discounts received by a customer,

must be extended to all Equivalent customers. (PFF ¶ 1017.4; Berry (Illumina) Tr. 893–94; RX6002 (Guerin-Calvert Trial Dep. at 38–39).)

2869. Ms. Berry testified that some Illumina customers have Illumina service engineers working full time at the customers' labs:

> We have got some customers that are very large and with many, many, many instruments, and the economics and also just the practical reality of what it takes to support very large fleets lends itself oftentimes to not only an onsite but an onsite with multiple FTEs, or full-time equivalents, for -- to provide the labor.

(Berry (Illumina) Tr. 682-83).

Response to Finding No. 2869:

Respondents have no specific response.

2870. [redacted] (*See, e.g.*, PX2598 (Illumina) at 002-003 (Email from D. Krebbel, Illumina, to D. Daly, Illumina, et al., Apr. 13, 2018) (*in camera*) ([redacted]); PX2602 (Illumina) at 009 (Email from T. Trinh, Illumina, to ILMN-Com-Instrument Service, Nov. 16, 2020) (*in camera*) ([redacted]); PX7063 (Berry (Illumina) IHT at 108-109) (*in camera*); PX7105 (Getty (Guardant) Dep. at 6)).

Response to Finding No. 2870:

The proposed finding is incomplete and misleading without additional context. Specifically, the proposed finding fails to acknowledge that the Open Offer requires consistent treatment of customers, including in terms of access to existing and new Illumina products and access to equivalent pricing. (*See* PFF ¶¶ 1005–20.)

2871. Illumina's internal documents show that [redacted] (*See, e.g.*, PX2599 (Illumina) at 003 (Email from L. Leigh, Illumina, to M. Gallina, Illumina, et al., Oct. 9, 2020) (*in camera*) [redacted]

[redacted]); PX2597 (Illumina) (Email from W. Caceres, Illumina, to E. Chen, Illumina, et al., Mar. 25, 2018) (discussing Illumina's assistance with the installation of sequencers); PX2603 (Illumina) (Email from G. Nunn, Illumina, to L. Tonkin, Illumina, et al., May 11, 2016) (*in camera*) [redacted].

Response to Finding No. 2871:

The proposed finding is incomplete and misleading without additional context. Complaint Counsel did not present the exhibits cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 25), and therefore should not be entitled to rely on them to establish anything beyond the words on the page. Further, the Open Offer ensures that putative GRAIL rivals will continue to receive access to the same product and support services to which they had access before the Transaction. (*See* PFF ¶¶ 1004.1, 1004.9; Berry (Illumina) Tr. 865–66; PX0064 (Illumina) at 6; RX6002 (Guerin-Calvert Trial Dep. at 58).) As Ms. Berry testified, "the open offer obligates Illumina to provide access to a customer to not only the same [product and support] services for which the customer had before the transaction but also any [product and support] services . . . that GRAIL has so that there will be absolutely no disadvantage to a customer signing this agreement on what they can access as relates to services". (Berry (Illumina) Tr. 865–66.)

(ii) MCED Test Developers Testified that the Speed and Quality of Illumina's Customer and Technical Support can Alter the Quality, Development, and Delivery of Developers' Products

2872. [redacted] (PX7105 (Getty (Guardant) Dep. at 55-56); PX2599 (Illumina) at 003 (Email from L. Leigh, Illumina, to M. Gallina, Illumina, et al., Oct. 9, 2020) (*in camera*); PX2597(Illumina) (Email from W. Caceres, Illumina, to E. Chen, Illumina, Mar. 25, 2018); PX2603 (Illumina) (Email from G. Nunn, Illumina, to L. Tonkin, Illumina, et al., May 11, 2016) (*in camera*)).

Response to Finding No. 2872:

The proposed finding is incomplete and misleading without additional context. Complaint Counsel did not present the exhibits cited in the proposed finding to any fact witnesses during discovery or at trial in this case, (CC Exhibit Index at 25), and therefore should not be entitled to rely on them to establish anything beyond the words on the page. Further, the Open Offer ensures that customers will continue to receive access to the same product and support services to which they had access before the Transaction. (*See* PFF ¶¶ 1004.1, 1004.9; Berry (Illumina) Tr. 865–66; PX0064 (Illumina) at 6; RX6002 (Guerin-Calvert Trial Dep. at 58).) As Ms. Berry testified, "the open offer obligates Illumina to provide access to a customer to not only the same [product and support] services for which the customer had before the transaction but also any [product and support] services . . . that GRAIL has so that there will be absolutely no disadvantage to a customer signing this agreement on what they can access as relates to services". (Berry (Illumina) Tr. 865–66.)

2873. MCED witnesses also testified that they rely on Illumina for service and support. (PX7105 (Getty (Guardant) Dep. at 61-62) (explaining that Guardant relies on Illumina for service and support on a daily basis). For example, Guardant relies upon Illumina to service its sequencers. (Getty (Guardant) Tr. 2509).

Response to Finding No. 2873:
